LEAGUE CITES MEMBERSHIP GROWTH

Thee ARRL Letter says that its membership in the
League is up and the trend is toward continued
growth. Customer Service Manager Amy Hurtado, KB1NXO,
says the League now has close to 152,000 members.

Hurtado credits the rise in membership in part to
the FCC rule changes earlier this year that
eliminated Morse code testing for the General and
Amateur Extra license classes. She says that
since more people are upgrading their licenses as
a result of there being no Morse code
requirement, the League is now successfully able
to show them the benefits of being an ARRL member.

Okay, so it's true they were somewhat relunctant to allow digital
communications such as, and perhaps namely, packet to take place on the
bands. But look what's happened in the end. Not only have digital
communications become an acceptable form of communications (Thankfully
spearheaded by the work of TAPR BTW), digital communications have been
EMBRACED as a means of PROMOTING Amateur Radio. When was the last time you
proudly told someone that you can work the International Space Station? My
last time was just this afternoon while on the bus enroute back home from
the "candy store" (Hi...Hi).

That's because ARRL *IS* a PAC (And a SIG). I doubt ARRL denies that.

SOME ARRL types. Not all.

And despite your efforts to "break free" from ARRL, you will ALWAYS have members who will gleefully rush out to their mailbox to retrieve that shiny new edition of QST each month. And there's NO WAY you will EVER be able to stop that.

Just my honest opinion....

Cheers & 73 :D

John-

I think it should work but my 706 is kaput, so I can't try it.

When I bought the IC 7000, the old IC 180 tuner wouldn't work with it
until I did a reset with the tuner attached. I don't recall how, but it
may be mentioned in the manual.

Irish Radio Transmitters Society
Radio News Bulletin

Sunday June 24th 2007

Condolences

We are very sorry to have to tell you of the death of Maurice Moore of Kilmeedy Co. Limerick the father of Dave EI4BZ. Maurice was taken ill and died suddenly in hospital early on Friday the 15th of June.

Dave was on his way by car to the continent for a holiday, which would have included the Friedrichshafen rally. He was just outside London early on the Friday morning when he got a telephone call about the sudden death of his father. He returned home and the funeral was held on Monday last. To Dave and to his family we extend our deepest sympathy and may Maurice rest in peace.

International Museums Weekend

International Museums Weekend took place on Saturday and Sunday last. The Howth Martello Radio Group activated EI0MAR from the vintage radio museum in Howth. Band conditions weren't good, however those who attended enjoyed a very sociable event. After the station went QRT on Saturday, some of the group QSYed to the Yacht in Clontarf to end the day suitably with a meal.

The Howth Peninsula Festival takes place next weekend and EI0MAR will once again be active on Sunday and possibly Saturday. Many of the events taking place during the festival are family orientated with open-air music, dancing, magic and puppet shows. A full listing of events is available at howthpeninsula.com.

AFRI75

During the IRTS Jubilee expedition to Swaziland the team met with the Scout Association and agreed to

support their Thirst for Life Programme, which helps Aids orphans in Swaziland. You will find details of the project on the Afri75 page of the IRTS website. The team is pleased to announce that the first initial funding for the project of 350 Euro is on its way to Swaziland and this will fund the purchase of chickens for their farm. The money was raised by donations included with direct QSL cards received from stations worked around the world, together with funds raised from the sale of Afri75 caps at the AGM in Cork. The team are still anxious to continue support for the project, and if you think you can help please contact Paul EI2CA.

Hong Kong Special Prefix

Approval has been granted for the use of the Special Prefix "VR10" in addition to "VR2" for Hong Kong Radio Amateurs starting from the 1st of July 2007 to the 30th of June 2008 for the 10th anniversary of Hong Kong's reunification with China.

More details are available in the OFTA letter for Hong Kong Radio Amateurs, which can be found at www.ofta.gov.hk/en/amateur/ama-cir200706.pdf.

HARTS is also going to use the special callsign "VR10HK" as HARTS HQ Station especially during the IARU HF Contest (14-15/7/2007).

For further information, please contact the Award and Contest Manager VR2XNG (Dawood Ng) through email at
�excom2007 at harts dot org dot hk�.

---

2 Metre News Bulletin

Tony, EI5EM paid a visit to Sean, EI5GH regular Sunday two-metres newsreader last Friday. Sean has been ill now for several months in St. Vincent's Hospital in Dublin. Sean was in good form and was glad to receive all the latest news from Tony who passed on the good wishes of all those who listen to the news. Sean sends his regards to all and hopefully he will be well enough soon to return home.

Tony and John EI7JG have been trying to keep the news going during Sean's absence on an ad hoc basis. Unfortunately, both will be away next weekend and this means that there probably will be no two-metre news next Sunday. Normal service should be resumed the

following week. Perhaps there are some other operators out there who would like to assist in keeping this long-standing service going. The IRTS would be glad to hear from any volunteers.

Limerick Radio Club

Limerick Radio Club has been invited by the Foynes Flying-Boat Museum to operate a special Amateur Radio Station in conjunction with the commemorative Transatlantic Re-Enactment Flight 1937 from Newfoundland Canada to Foynes Ireland. A special call sign has been allocated to the station EI-70-FOY. The station will be on the air from the 6th to the 8th of July 2007. On HF the station will operate from 80 to 10 metres. It will also operate on VHF / UHF using the EI70FOY call sign.

A special QSL card, commemorating the Re-Enactment Flight, will be sent to all stations worked over the three-day event. All QSL cards should be sent to the Club's QSL Manager Alan Cronin EI8EM at QTHR. Limerick Radio Club can be contacted at ei4lrc at eircom dot net or at www.qsl.net/ei4lrc.

South Eastern Amateur Radio Group

The next general meeting will take place on Monday the 25th of June at 8.00 p.m. in the Roanmore Centre, Waterford.

A portion of the meeting will be for all operators who have volunteered their services for the cycle race on the 1st of July and those operators who will be assisting are urged to attend so that radio protocol and equipment requirements etc. can be discussed.

Foyle and District Amateur Radio Club

Foyle and District Amateur Radio Club, Bready, Strabane, Co. Tyrone will be heading to St. Angelo Airport, Enniskillen for the 2007 Jet World Masters competition. The competition itself runs from the 5th to the 14th of July. The club station will be on the air during the weekend July the 13th and 14th using the club's callsign MN0AKU/P.

This event is the ultimate radio-controlled model aircraft competition. These model planes are capable of speeds up to 250 miles per hour. One hundred pilots

from 31 countries will be taking part in this competition. More information can be found on their website www.jwm2007.com

The club wishes to express its gratitude to all the operators who contacted them during the 2 days of their Amelia Earhart special event station on May the 20th and 21st. A sepia-tone photo of the aviator has been used for a unique QSL card and these will soon be sent out via the buro. Foyle and District Amateur Radio Clubs web address is www.mn0aku.org.uk.

Comeragh Cycle Race

The national under 23 road racing championship will take place in Waterford on the 1st of July. Richie EI9HR is event Co-ordinator and he is being assisted by John EI8JA. This year's race will be on a greater scale with over 160 riders taking part. The Civil Defence have come on board this year to help with marshalling and RTE will be filming the event.

AREN will provide the communications for safe traffic management and accident reporting. There will be more radio reporting points and mobile stations than last year so more radio operators are required. Again newcomers are welcome and training will be provided on the morning of the race. This is an excellent opportunity for operators to put their radio skills to good use in a very enjoyable and rewarding way for the benefit of the Community. All operators irrespective of experience are welcome.

Please contact Richie on mobile 085-1465465 or evenings on 051-854315. You can also contact Richie by e-mail at "ei9hr at yahoo dot com". Those who have volunteered to assist with this event are asked to attend the meeting in Waterford on Monday the 25th.

Rally's

The Cork Radio Club Rally will take place on Sunday the 23rd of September in the Blarney Park Hotel, Blarney, Co. Cork, the Waterford Rally will take place on the 21st of October 2007 in the Woodlands Hotel, Waterford and the Mayo Radio Rally will be on Sunday the 18th of November in the Belmont Hotel, Knock, Co. Mayo.

A full listing of upcoming rally's is available on www.irts.ie.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to ﷺnews at irts dot ieﷺ for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday ﷺs bulletin.

1266. Re: TUNER-CALL SWITCH

Newsgroup: rec.radio.amateur.moderated

Source record: 4171

The Tuner button needs a signal on the 4 pin Molex connector before it will do anything. The connector is looking for the tuner to tell the rig it is tuned. There was a circuit on the net a while back that could fool the rig into thinking it has a tuner attached, I think it involved one transistor, but it seems like it disappeared from the net a few years back. Perhaps there is another.

In CW they are going to listen 5-10 kHz up.

CE - CHILE
Claudio,CE1VIL, is very active as 3G100S until Aug 1 to celebrate the 100th anniversary of the scout movement in Chile.
QSL via bureau or direct to XQ1KY.

CN - MOROCCO
Claude,F5OGE, will be active as CN2GE/m making a roundtrip through
Morocco from Jul 13-29. His trip starts in Tangier and will lead him
to Rabat, Marrakech, Benni Mellal, Fes, Tetouane and back to Tangier.
Claude will be QRV mainly in CW/SSB on 7 and 14 MHz during the early
morning or late evening hours. QSLs direct or via bureau to F5OGE.

DU - PHILIPPINES
Chris,VK3FY/DU1, will be QRV from Luzon (OC-042) from Jul 5-9.
He might show up also as VK3FY/DU8 from Mindanao (OC-130) and maybe
also from OC-235 if he finds some transportation possibilities.

J8 - ST VINCENT, NA-109
J8/W6JKV is active on the air until Jul 11. This operation takes place
on the "magic band" (6m) only. QSL via homecall.

OJ0 - MARKET REEF, EU-053
While OJ0/OH3RM (QSL via homecall) and OJ0VR (QSL via OH1VR) should be
active until July 3, the calls of the next DXpedition to Market Reef
taking place from Jul 5-9 (see last DXNL) have been announced lately:
Peter,SM0BSO, Stellan,SM0LQB, Jan,SM5XGJ, Eric,SM1TDE, and Lars,OH0RJ,
will run 3-4 stations in CW/SSB/digital on 2-160m signing OJ0/homecall.

PJ2 - NETHERLAND ANTILLES, CURACAO, SA-006 (WLOTA LH 0942)
Jan,PJ2/DJ8NK, Carsten,PJ2/DL6LAU, and Joachim,PJ2/DL8OBQ, will be QRV
from Curacao Island (SA-006) from Jul 9-16. They will sign PJ2HQ during
the IARU HF World Championship on Jul 14/15.
QSLs via the operator's homecalls, PJ2HQ via N9AG or LotW.

Salvatore,PJ2/DH7SA, will show up on the bands also from Jul 9-16.
QSL via homecall.

SV5 - DODEKANES, EU-001
SX5RHO is a special event station during the "12th Island Games" active
in all modes on all bands until Jul 7. QSLs will be sent automatically
via the bureau and the manager SV5FRD will upload the logs to the LotW.

V2 - ANTIGUA AND BARBUDA, NA-100
Frank,K3TRM, is working in SSB/CW/RTTY on 80-6m signing V26RM from
Jul 4-10. Furthermore he was the first one to obtain a license for 60m.

YA - AFGHANISTAN
Dejan,YA/9A4ZD, is a new operator in Afghanistan. He has been spotted
on 20m (14.300 MHz) and 17m (18.130 MHz) already. QSLs via homecall.

4O - MONTENEGRO
David,OK1FJD, is going to be QRV as 4O6DJ on 6-160m from Jul 7-14.
QSL via OK6DJ.

5X - UGANDA / UA4WHX QRT
Uganda was the last stop of the trip of Vlad,UA4WHX. After logging
more than 310.000 QSOs from 21 African DXCC entities in 26 months
Vlad released his QSL guidelines now. Vlad held the following calls:
3DA0VB, 4K0VB, 4L0B, 5H3VMB, 5H3VMB/3 (AF-075), 5H3VMB/5 (AF-074),

5R8VB, 5X1VB, 5Z4/UA4WHX, 5Z4/UA4WHX/p (AF-067), 5Z4BU, 7P8VB, 7Q7VB,
9J2VB, 9U0VB, 9X0VB, A25VB, C91VB, C91VB/4 (AF-103), C91VB/6 (AF-088),
D20VB, D60VB, J20VB, OD5/UA4WHX, ST2KSS, ST2VB, V51VV, V51VV/p (AF-070)
and Z2/UA4WHX. These are his QSL guidelines:
1) Vlad accepts QSLs via the Russian QSL bureau, but also shipments
from national QSL bureaus to his private address (Vladimir M. Bykov,
PO Box 2040, Izhevsk, 426000, Russia).
2) However he prefers and recommends direct QSLs.
3) Please send no money bills, only IRCs. Vlad can send up to 7 QSLs
with one IRC.
4) The best choice for Vlad is a deduction via Visa or Mastercard.
Vlad states that this way of billing is 100% safe and is handled by
the "Svezhy Veter Travel Agency".
5) If you had more than one QSO with him, please send only one QSL and
list the other QSOs on an enclosed sheet of paper.
6) Vlad has no computer log. There are only paper logs and a few OMs
will assist him with confirming the QSLs. Vlad will make another
announcement as soon as the shipment of the QSLs has started.

8Q - MALEDIVES, AS-013
Al,JA9APS, will spend his family holidays on the Maldives from Jul 6-9.
Listen for 8Q7NK in SSB/CW/RTTY on 40-6m running a TS-570S into a R8
vertical. QSL via homecall, Narumi Kawai, 1-10-14 Suwanokawara, Toyama,
930-0088 Japan.

HONG KONG, SPECIAL EVENT CALLSIGN
Ten years after Hong Kong has been handed back to the People's Republic
of China all radio amateurs may use the prefix VR10 (instead of VR2)
between July 1,2007, and June 30,2008.

IRELAND, SPECIAL EVENT CALLSIGN
70 years ago the very first commercial transatlantic test flight with
passengers on board flew from Botwood/Newfoundland to Foynes/Ireland.
Members of the Limerick Radio Club (http://www.qsl.net/ei4lrc) will use
the special event call EI70FOY on 10-80m from Jul 6-8. QSL via EI8EM.
More information can be found at: http://www.transatlanticflightpby.com

BELARUS, SPECIAL EVENT CALLSIGN
The oldest town in Belarus is Orha which celebrates its 940th anniver-
sary this year. This is the reason for the activation of EU940OR until
Jul 26. QSL via UA3FDX.

LINKS: The New York Times published a very interesting article about Navassa
which belongs to the US for 150 years now. Please follow this link:

Current SOTA activities (mountain summits) are announced at:
http://sotawatch.sota.org.uk/activations.php or
http://sotawatch.sota.org.uk/spots.php

UPCOMING CONTESTS

Jul 1: RAC Canada DX RTTY Contest
Jul 7/8: DL DX RTTY Contest, Original QRP Contest
Jul 8: DARC Digital Contest Corona

IOTA collected by Fredy,DE0MST (e-mail: iota@dxhf.darc.de)

Island activities:
EU-034, ES0, Saaremaa County Group: Frank,DL1FT, will show up as ES0FTZ
from Saaremaa Island from Jul 11-21. Please check also his website at:
http://www.funkexpedition.de/estland

NA-073, V3, Corozal/Belize District Group: Dennis,K7BV, will be active from
Caye Caulker from Jul 7-17. The callsign is not known. QSL via W1JJ.

SA-077, PY1, Rio de Janeiro State East Group: A team of seven PY operators
led by OM Lima,PY1NEZ, will be QRV from Santana Island signing PY1ERR/p
from Jul 12-15. QSLs via PY1NEZ, direct or via bureau.

Announced activities for the IOTA Contest 2007 (Jul 28/29):

Amateur Radio Newsline(tm) Report 1560 - July 6, 2007

Amateur Radio Newsline report number 1560 with a
release date of Friday, July 6, 2007 to follow in 5-4-3-2-1.

The following is a Q-S-T. The mystery signal that
put space shuttle video on a Chicago baby monitor
did come from ham radio. Also, North Carolina's
governor signs a ham radio antenna protection
bill, D STAR goes into space and Amateur Radio
Newsline announces its choice for 2007 Young Ham
of the Year. Find out who gets a free trip to
Spacecamp this year on Amateur Radio Newsline(tm)
report number 1560 coming your way right now.

(Billboard Cart Here)

HAM RADIO IN SPACE: ME AND MY BABY - MONITOR - MYSTERY SOLVED

Ham radio is responsible for the NASA video seen
over an Illinois mothers baby monitor during the
recently concluded STS 117 space shuttle
flight. Bill Pasternak, WA6ITF, reports:

--

A radio club in Schaumburg, Illinois says it is
likely responsible for the NASA spaceflight video
over baby monitor. But it turns out that the
signal seen only by suburban Chicago teacher
Natalie Meilinger was not on 2.4 GHz as originally thought.

It happened this way. The club was
re-transmitting STS 117 mission video on
it's 910.25 MHz amateur television
repeater. The system runs 100 watts out into a
par of horizontal yagis. These antennas are at
70 feet with one pointed north and the other to the west.

And it turns out that not all baby monitors
operate on 2.4 GHz as everyone first
thought. Some are in the 900 Mhz spectrum while
others are dual band units. If you do the math
it mean that a more than receivable signal could

easily reach the Meilinger home and be displayed on the monitor receiver.

So why was no I-D noted by the Meilinger family? During the mission the transmitter had the call sign K9MOT displayed in the lower right corner of active video every 10 minutes - per FCC identification regulations. Any properly aligned video monitor like those used in Amateur Television stations would have displayed it because the I-D fell inside what broadcast engineers call the video safe zone. That's the screen area you are supposed to see in off air television viewing.

But a baby monitor is not a broadcast quality monitor. In reality, most are low-end consumer products that tend to overscan the picture tube face. That's fine for watching the kids at play but not for trying to see the whole picture. And that was likely the case with Natalie Meilinger's baby monitor as well.

The K9MOT identifier was there, but the baby monitor had to much picture width. That put it out of the picture area her unit could display so she and anyone else looking at the monitor screen couldn't see it.

Mystery solved thanks to some good sleuthing on the part of some Illinois hams.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, at the studio in Los Angeles.

--

By the way, this is the 5th year the club has been re-broadcasting NASA video over its K9MOT repeater but only the first time to their knowledge that its been received by a non ham. (ARNewsline(tm) with information provided by K1ATV and others)

**

RADIO LAW: N.C. ENACTS HAM RADIO ANTENNA PROTECTION LAW

North Carolina is the latest state to adopt legislation that guarantees most hams can erect and use antennas. Amateur Radio Newsline's

On Friday, June 29th, North Carolina Governor Mike Easley signed HB1340, also known the "Amateur Radio Antenna bill" into law. The measure which is crafted to follow the guidelines set forth in the FCC's Federal Preemption Order PRB-1. It permits antennas up to 90 feet in height in areas regulated solely by municipal ordinances.

However like in other states, the North Carolina measure does not override those Conditions, Covenants and Restrictions which might preclude antennas or even the ownership or use of radio transmitting gear by those who have signed deeds with those restrictions built in. Such CCR's are still deemed to be personal contracts between a buyer and a seller. As such, they remain outside the realm of federal or state regulation. They were also specifically excluded when PRB-1 was enacted.

The North Carolina bill was introduced in February. It passed unanimously in both the House and the Senate and takes effect October 1st. With this action, North Carolina becomes the 25th state to enact laws that guarantee the rights of its ham radio operators to have the antennas they need to go on the air. (N2COP)

**

RESCUE RADIO: BARSTOW CA SHERIFF WANTS HAMS FOR EMCOMMS

A California Sheriff is recruiting ham radio operators in Barstow. This, to be a part of a local emergency communication system. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

Sgt. Tim Lotspeich, KI6GH, of the Barstow sheriff station says that he watched as hurricane Katrina devastated New Orleans. He also saw that it was Amateur Radio operators who rushed in to take over for the crippled the high tech communication system left in ruins the storm's wake.

That's when Lotspeich decided to adopt the old technology of ham radios into a new emergency-communication program in the California's High Desert. He also notes that during the fires in the San Bernardino mountains, it is always Amateur Radio operators who have traditionally helped fire officials with communications. KI6GH wants to expand that role.

KI6GH notes that there are a couple hundred people in the Barstow area are licensed radio amateurs. He is hoping to get about 10 of them to volunteer.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting from Los Angeles..

--

Anyone interested in volunteering can contact
Sargent Lotspeich by e-mail to deputysheriff@verizon.net (Desert Dispatch)

**

RESCUE RADIO: RAYNET ACTIVATES AS STORMS HIT GREAT BRITAIN

In emergency communications news from around the
world, word that RAYNET groups in many parts
of Great Britain were placed on standby last
weekend. This, as torrential rains caused rivers to overflow.

The Radio Society of Great Britain's Sheffield
and Rotherham RAYNET groups were called out on
Sunday, June 24th to provide point to point
communications. They operated for two days
before finally standing down on Tuesday evening, June 26th.

Net control station operator Mark Harrison,
G6NVT, commented that it had been an exhausting
30 hours for the ham radio volunteers. RAYNET is
the U-K equivalent of our A-R-E-S and RACES, combined. (GB2RS)

**

RESCUE RADIO: GERMANY TRAINS INDIA'S EMERGENCY COMMUNICATIONS HAMS

An Emergency Communications training session has
been held in Vorarlberg, Austria. This, to
assist hams from India in learning the required techniques.

Eight hams from India selected by that nations
selected by National Institute of Amateur Radio
took part in the training sessions. Participants
from India included VU2MY, VU2JMA, VU2YOR, VU2SAX, VU2JOS and VU2MYH.

The Vorarlberg regional section of the Austrian
Amateur Radio Federation organized a four day
training exercise that was carried out by
Austrian and one German radio amateurs. The event
was featured in news reports by Austrian television.

The decision to send the hams to this special
emergency communications training event was
supported by many leading politicians of India. (DL3SBB)

**

HAM RADIO IN SPACE: D-STAR RELAYED THROUGH AO-27

D-STAR has gone into space. Well at least a
D-STAR signal has and it has been successfully
relayed back to mother Earth by a ham radio satellite.

On July 1st, during the 20:00 UTC pass over North
America, the AO-27 Easy Sat ham radio satellite

was used by Michael Wyrick, N3UC, in Haymarket
Virginia and Robin Cutshaw, AA4RC, in Atlanta
Georgia, for what's believed to be the first
ever space relay communications using D-STAR radios at both ends of the
path.

All radios used in this contact were made by
Icom. IC-2200's were utilized on the uplink by
both N3UC and AA4RC. On the downlink side N3UC
used an IC-2820 while at AA4RC it was an IC-91AD.

Doppler shift did prove to be a minor
problem. Even so, the digital QSO was completed with comparative ease.

Thirteen years ago, AO-27 became the first Easy
Sat by putting an FM repeater in space. One that
has provided many hams the ability to
use satellite relay without the expense of multi
mode radios. Now that same bird has proven that
D-STAR can also be relayed through its on-orbit
system and opening up a whole new world of
digital ham radio in space for anyone with D-STAR
gear to enjoy. And according to N3UC, the AO-27
control operators fully support and encourage the
use of D-STAR via satellite on that ham radio bird. (WB9QZB, KA9SCF)

TECHNOLOGY FRONT: D-STAR FIRST EVER NATIONAL MEETING

Still on the subject of D-STAR, an event for
enthusiasts of this emerging technology has been
announced to be held in conjunction with the
upcoming Huntsville Hamfest and ARRL National
Convention. This, with word that the first-ever
national meeting of D-STAR users will be held in
Huntsville, Alabama. Amateur Radio Newsline's
David Black, KB4KCH, is at our South-East Bureau
in nearby Birmingham with more:

--

The first-ever national gathering of D-STAR users is set for the Embassy Suites Hotel adjacent the Von Braun Center, the traditional home of the Huntsville Hamfest and this year's ARRL National Convention.

The meeting takes place Saturday August 18th, from 6 until 8 P.M. It will allow hams involved and interested in D-STAR to gather with counterparts from across the U-S. Some of the topics to be covered will include emerging D-STAR networks, innovations, new ideas, hardware and the fun side of D-STAR operation. Refreshments, door prizes and handouts are planned. Huntsville will also be the site of GAREC, the Global Amateur Radio Emergency Conference, set for August 16th and 17th at the Embassy Suites. Greg Sarratt, W4OZK, is the ARRL's Section Manager for Alabama and a D-STAR promoter:

--

W4OZK: "It is bringing a lot of world wide players in one room, so we can get to know one another, build relationships and swap ideas. We are also going to do a D-STAR presentation for 'em."
--

And what better place for that to occur than in Alabama, which Sarratt sez is setting the pace for other states to follow in implementing D-STAR:

W4OZK: "I am really proud of the fact that Alabama leads the nation in the number of D-STAR systems, the number of repeaters. users and activity."

--

More and more Alabama ham repeaters are taking their first steps to digital by augmenting traditional F-M operation with D-STAR. The state also hosts the fastest growing D-STAR user community anywhere in the nation. D-STAR, Digital Smart Technologies for Amateur Radio, is a new frontier for hams. It was born from research by the Japan Amateur Radio League investigating digital technologies for ham radio. D-STAR is a digital voice and data protocol specification developed for use on VHF and UHF Amateur Radio frequencies.

In addition to the over-the-air protocol using D-STAR compliant radios, D-STAR also provides specifications for network connectivity -- that enables these next generation radios to be connected to the Internet or other networks. And

because of the growing interest among VHF and UHF relay enthusiasts, three D-STAR forums are planned during the Huntsville Hamfest in addition to the national users meeting. A D-STAR Hamfest booth and demonstrations of the technology are also planned.

With D-STAR likely to become the successor to today's analog F-M repeaters, whether you just want to learn the basics, or whether you're wanting to take the technology further, the Huntsville Hamfest promises D-STAR opportunities galore.

For the Amateur Radio Newsline, I'm David Black, KB4KCH, at the Southeast Bureau in Birmingham, Alabama.

--

Again, that's Saturday, August 18th, from 6 to 8 P.M. local time for the first-ever National D-STAR Users Meeting at the Embassy Suites Hotel in Huntsville, Alabama. We hope to see you there.

Information on additional events, hotels and hamfest can be found at: www.arrl.org/announce/nc/2007/huntsville.html, http://www.hamfest.org/ and www.arrl-al.org/Alabama_link.htm (ARNewsline(tm), WB9QZB, W4OZK)

ENFORCEMENT: 10 METER UNLICENSED TRUCKER DINGED BY THE FCC

A follow-up to our story two weeks ago about the invasion of 10 meters by Freeband operators and truckers using illegal C-B radio gear. The FCC has now acted in one case where truckers have been found to have illegally taken up operation on 28.085 MHz and is warning the company it will face stiff fines if the pirate operation does not cease.

The target of the FCC enforcement action is Tennessee Steel Haulers of Nashville, Tennessee. In a letter to the company the FCC says that it has evidence that at least one of Tennessee Steel Haulers drivers had been operating radio equipment on 28.085 MHz without a license and causing interference to licensed stations in the Ten Meter Amateur Band. Specifically that this past May 3rd the driver was observed on Interstate 85 in Gastonia, North Carolina, at 6:40 P.M. while operating the radio gear.

Tennessee Steel Haulers were warned that this type of unlicensed operation is a direct violation of Section 301 of the Communications Act of 1934. The penalty for such operations includes the possibility of seizure of any non-certified radio transmitting equipment along with a hefty fine or even time in jail. The company was also instructed to contact FCC Special Counsel Riley Hollingsworth to discuss the issue with him. (FCC)

**

ENFORCEMENT: HAMTRONICS RECEIVER INTERFERES WITH SARSAT

The FCC has issued a Citation to a California resident whose U-H-F radio receiver caused accidental interference a radio frequency used by the National Oceanic and Atmospheric Administration. Henry Feinberg, K2SSQ, reports:

--

In its June 18th notification to Fred Caughell of Bakersfied, the regulatory agency noted that in response to a complaint from NOAA, an investigation by the Enforcement Bureau's Los Angeles Office took place. It revealed that last May 10th Caughell operated a Hamtronics R901 receiver that produced an emission on 406.086 MHz with a field strength greater than the limit allowed under the FCC rules. It also noted that the radiated emission on 406.086 MHz is within the 406.0-406.1 MHz band, which is reserved for use by low power satellite emergency position-indicating radio beacons.

The National Oceanic and Atmospheric Administration operates the Search & Rescue Satellite Aided Tracking System better known by the acronym SarSat. That agency had complained to the FCC that a 406.086 MHz signal in Bakersfield had the potential to cause interference to their life-saving system.

In the Citation, Caughell was told that violations of the Communications Act or the Commission's Rules may subject the violator to substantial monetary forfeitures, seizure of equipment and criminal sanctions, including imprisonment. He was also told to call the Los Angeles area FCC office to schedule an interview with a field engineer or to submit a detailed written response within 14 days of the issuance of the Citation order.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.
--

The FCC says that Caughell's response will be
used by the agency to determine if further
enforcement action is required. (FCC)

**

ENFORCEMENT: WAYWARD SAFETY LIGHT BRINGS FCC CITATION

A malfunctioning security light has brought a New
Mexico resident a citation from the FCC. In its
June 18th action, the regularity agency wrote to
Fred Grant of Albuquerque citing him for
operating a security light located atop the
garage of his residence that was interfering with
wireless car remote keys being used near his residence.

Agents from the Denver Office investigated the
complaint and found that wireless remotes
operating on 315 MHz did not function in the area
immediately near Grant's residence. The agents
located the interfering signal as coming from
Grant's single family residence. Further
investigation this past May 7th revealed that
the source of the interfering signal was the security light.

Grant was given 14 days from the date of the FCC
action to y request an interview at the closest
FCC Office or to submit a written statement to
specify what actions have been taken to correct
the violation . He was also told that any
statement or information provided may be used by
the Commission to determine if further
enforcement action is required. Such action
could include government seizure of the
interfering lighting system and a fine of up to $10,000 for using it.
(FCC)

**

ENFORCEMENT: YOU CANT USE THOSE REPEATERS

A pair of hams who refused repeater owner
requests to not operate on their systems have
been ordered to comply by the FCC. In two
separate cases the FCC notified Donald Ellis,
KB0TVP, of Sioux Falls, South Dakota and William
Westley, Jr, AF4GC, of New Port Richey, Florida,
that they must not operate on certain repeaters in their geographic areas.

Prior to the FCC acting, Ellis was requested by
the licensees of W0MXW and K0RGR repeaters to

stop from using them. Westley had been asked by the licensee of the W4FLG repeater to stop using that machine. The FCC said it took the enforcement action because neither ham would follow the user operational guidelines as set forth by the licensees and the control operators of the two systems. (FCC)

NEW PRODUCTS: RDL INTRODUCED 18 WATT STICK-ON AUDIO AMP

Need some extra audio in a small space? Radio Design Labs is offering the ST-PA18 18-watt utility power amplifier as part of the company's line of Stick-On products. The ST-PA18 features a balanced line-level input that may be connected unbalanced. The gain control range accommodates standard unbalanced levels as well as professional balanced levels. The module bridges the input signal.. Now heres the best part. The bottom adhesive permits permanent or removable mounting. The amplifier can also be used with RDL's racking accessories. More is on line at www.rdlnet.com/ (RW)

**

NAMES IN THE NEWS: RSGB PRESIDENT AND THE LONDON 10K RUN

Some names in the news. First are RSGB President Angus Annan, MM1CCR, and Financial Controller Marilyn Slade, 2E1GKR, who have taken part in the British London 10K run. The event was held on Sunday the 1st July with the RSGB in support of the British Wireless for the Blind organization. More is on-line at www.blind.org.uk. (GB2RS)

**

NAMES IN THE NEWS: VK5ZAI NAMED AUSTRALIAN ARISS COORDINATOR

And congratulations Tony Hutchison, VK5ZAI, who has been named to the newly created WIA board position of Australian National Coordinator for Amateur Radio on the International Space Station. The official recognition of Hutchison's work took place at the recent Wireless Institute of Australia annual meeting. That's where he had gone to addresses board members with an outline of the Amateur Radio on the International Space Station educational program and its aims. (K1STO)

WORLDBEAT - HUNGARY: TEMPORARY 70 MHZ ALLOCATION APPROVED

Hams in Hungary have a new albeit temporary band to experiment on. This, with word that the nations telecommunications regulator has issued an experimental radio license to the Haros Radioklub which permits radio use of the Region 1 exclusive 70 MHz band for a period of 30 days that began on July 1st.

The license permits 30 Hungarian hams from the club to use the frequency range of 70.000 to 70.500 MHz, using all operating modes. This means CW, SSB, narrow band FM as well as digital modes like JT6M. The maximum effective radiated power is limited to 1 kilowatt.

The aim of the experiment is to study propagation in the 70 MHz band where all commercial FM broadcasting was ended this past February. The long term goal is to contribute to the joint effort to help create a 70 MHz amateur radio service allocation for Hungary and eventually expand it worldwide. (Skywaves, Southgate)

**

CONTEST CORNER: CQ WW VHF CONTEST JULY 21-22

Turning to radio sports news, the 2007 CQ World Wide VHF Contest will take place this year on July 21st to the 22nd. The objectives of this competition is for amateurs around the world to contact as many other hams as possible in the contest period. Its also a vehicle to promote VHF operations, to allow VHF operators the opportunity to experience the enhanced propagation available at this time of year, and for interested amateurs to collect VHF Maidenhead grid locators for awards credits.

All authorized Amateur Radio frequencies on 50 MHz and 144.00 MHz ham radio bands may be used as authorized by local law and license class. The

complete rules appeared in the June issue of CQ
magazine. They are also posted online
http://www.cq-amateur-radio.com/VHFContest_Rules200741107.pdf (CQ)

**

DX

In D-X, word that HB9QQ, will operate portable
HB0 from Liechtenstein until 2nd July and again
on July 6th to the 9th. Please use the normal QSL routes for this one.

And PA4JJ, will be active slash 9A from Porec,
Croatia until the 7th of July. He will be
operating mainly on the WARC bands using RTTY and PSK. QSL direct
or via bureau.

Lastly, a Swedish expedition to Market Reef, is
planned to take place from the 5th to 9th
July. Three or four operators will be active
using their home calls portable OJ0. Listen out
for them on 160 to 2 meters using CW, SSB and
digital modes and QSL as directed on the air.

(Above from various DX news sources)

RADIO HONORS: ARNEWSLINE NAMES GRANT MORINE,
W4GHM, AS 2007 YOUNG HAM OF THE YEAR

Finally this week, A 17 year old from North
Carolina, who carried out a major project to help
hospitals in his hurricane-prone area has been
chosen as the 2007 Amateur Radio Newsline Young
Ham of the Year. Mark Abramovich, NT3V, who
happens to head up the awards judging committee is here with the details:

--

W4GHM: "This is so cool. I'm smiling from ear-to-ear right now."

--

That's Grant Morine of Wilmington, N.C., who was
ecstatic to learn first that he had been
nominated and then recognized as the top
selection of the Young Ham of the Year judges.

Morine is W4GHM, a Technican, and the son of Bill
and Pam Morine. He's going into his senior year
at New Hanover High School's Lyceum Academy where
he's enrolled in several advanced placement courses.

Bill Morine is N2COP and an American Radio Relay
League Public Information Coordinator in Wilmington.

Grant and his dad are active members of the
Carolinas Amateur Radio Emergency Services which
provided the impetus for his Eagle Scout service
project helping the Coastal Carolinas Health Alliance.

That organization covers seventeen hospital
campuses throughout North and South Carolina.

--

W4GHM: "I was looking at the Katrina disaster
down in New Orleans and how there was a lack of
communications and how amateur radio operators
stepped up to the plate down there and helped
relay the emergency traffic," Morine recalls.
"And, I was talking to my dad, who is in on the
CARES and CCHA, and he was saying there's a need
for emergency communications systems in the CCHA.

"So, I said, 'Why can't I build some antennas and
give them out to the 22 hospitals and five Red
Cross chapters?' So I did that, and I made some
spares and I found a design on the Internet - 220Mhz J-pole."

--

Grant, his father, and mentor Paul Magnabosco,
AD4HZ, tweaked the design. Grant says he then
went to the local Lowe's and got them to donate
enough PVC pipe to build 30 antennas.

He says he bought the rest of the materials with
his own money and was reimbursed by the Coastal Carolinas Health Alliance.

Grant says he enlisted a number of fellow Scouts
in Troop 215 in Wilmington to help him build the
antennas and then they were distributed to the
hospitals and Red Cross chapters.

Grant, a National Honor Society member who also
runs track and cross country and plays lacrosse,
says his interest in amateur antennas and how
they work started some six years ago - after he got his ham ticket.

--

W4GHM: "Kids were doing all sorts of weird
projects and such and I had just gotten my
license back in 2001 when I was going into sixth
grade," Morine says. "I remember I was looking
for an idea to do my first science fair project
because I never had to do it before and I was

like, 'Man, this sounds hard.' And, my dad was
like, 'Hey, you just got your ham radio license
and you can operate, you'll be the only kid who
can do that. Why don't you do a topic in ham radio?

"I said, 'All right.' So, the first project, we
made a copper Cactus J-pole and that was the
first science fair project and I got to like it
and I was like, 'Hmm, I can build all sorts of
things that can talk to people all over the world
out of copper piping that a plumber would use. This is pretty cool.'

"So then we started building more and more
antennas and then next year I built it was like
four Quads like made of wood with four copper
wires bent into diagonal cubes, he continues.
"And, then eighth-grade year we got a chili can
and stuck a clothes hanger out of the top and I
can't remember how far we got off that but I
actually won the state science fair with that and I got first place."

--

Grant says he's active when he can be in
emergency communications and likes to rag-chew.

Besides school and ham radio, Grant says Scouting
is a big part of his life. He has served as a
senior patrol leader in his troop, is a
brotherhood member of the Order of the Arrow, and
has earned 41 merit badges - 21 of those required for Eagle.

He says he's planning to earn the Bronze, Silver and Gold palms.

Grant says Scouting also has provided him with many great outdoor
experiences.

--

W4GHM: "In 2004, I went to the Philmont National
Scout Ranch out in Cimarron, New Mexico, and I
hiked 74 miles out there in July 2004," Grant
says. "In 2005, I attended the National Scout
Jamboree (outside Winchester, VA) which went on
for 11 days and it let me try so many different
things like scuba-diving, and snorkeling and
kayaking, and it was just a really cool experience."

--

When he grows up and eventually gets married,
Grant says Scouting will continue to be a part of his life.

--

W4GHM "I'm definitely going to put my children,
whether they be boy or girl, into the Scouting
program and I'll probably become a leader in that
because Scouting has given me so much in my life."

--

With high school graduation closing in, Grant says he already has a game
plan.

--

W4GHM: "Right now, I'm looking at attending the
Naval Academy and from there going to Duke Law
School," Grant says. "And, then being a JAG in
the Navy or the Marines, I haven't determined which one, yet.
"And, then I don't know if I'd be a civilian
lawyer or continue to serve in the military. But,
right now, I want to pursue law."

--

Grant says a recent experience solidified his career goal.

--

W4GHM "I went to Boys State recently and I
participated in the Moot Court. And, I passed the
bar there and got sixth highest out of 44 kids.
And, then I won the position of attorney general
and we got to prosecute and defend a make-believe
case about a rape and a murder. I really enjoyed that."

And, finally, what does receiving the Young Ham
of the Year Award mean to Grant?

--

W4GHM "It would mean that in the eyes of the ham
radio community I've done a lot of things as a
youth ham like all the science projects and such
and the Eagle project and that I'm being honored
for it and it's kind of luck a thank you for
promoting the hobby and what we do, especially
when it comes to the emergency services," he
says. "And, I just think it would be a good honor to have."

--

We, the judges, think so, too, Grant. Congratulations!

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

As 2007 Young Ham of the Year, Grant Morine, W4GHM, will receive an expense paid trip to the 2007 Huntsvile Hamfest and ARRL National Convention. This, courtesy of corporate underwriter Vertex-Standard corporation which will also present Grant with a gift of the company's Yaesu brand Amateur Radio gear. Grant will also get to spend a week at Spacecamp compliments of corporate underwriter C-Q Magazine. The Huntsville Hamfest and ARRL National Convention is slated for August 18th and 19th at the Von Braun Center in Huntsville, Alabama. (ARNewsline(tm))

GRANT H. MORINE, W4GHM, NAMED RECIPIENT OF THE
2007 AMATEUR RADIO NEWSLINE(tm) "YOUNG HAM OF THE YEAR" AWARD

(Los Angeles, CA) -- Grant H. Morine (W4GHM), a 17-year-old from Wilmington, N.C., has been named the 2007 "Young Ham of the Year," according to ham radio operators and Award Administrator Bill Pasternak (WA6ITF) and Award Committee Chairman Mark Abramowicz (NT3V).

Grant Morine was selected based on his commitment to Amateur Radio along with his work in public service and in promoting the hobby/service to others through the Boy Scouts of America program.

The son of Bill (N2COP) and Pamela Morine, and the brother of Reid, W4RSM, Grant was first licensed in June of 2001 at age 10 and holds a Technician class license. He was nominated largely based on a far-reaching public service project he spearheaded to earn the rank of Eagle Scout, which was to construct and donate thirty (30) 220 MHz. J-Pole antennas to the CARES (Carolinas Amateur Radio Emergency Services). The antennas are indoor back-ups for the CARES network of hospitals in some of the storm-prone coastal Carolinas.

To make this project a reality, Grant successfully solicited the donation of the needed raw materials from the Orchard Supply Hardware Company. He then organized a group of three adults and ten scouts to assemble the antenna systems at his home. After completion, each was tested for proper performance before being handed over to CARES managers in October 2006 for distribution to the needed locations.

Grant's antennas were recently proofed by CARES when they were utilized in test run in South Carolina.

Antenna design and construction is not new to Grant Morine. In 2006, he took First Place in the North Carolina Science Fair with an environmentally inspired project that he called "Can Homemade Antennas Made From Recyclable Materials Work As Well As Commercially Made Antennas?" He proved that they could by designing and constructing a dual-band 2 meter and 70 cm antenna from a steel can, a soda can and a wire coat hanger. Grant had previously won county and regional science fairs in 7th and 8th grades, also using ham radio antenna projects.

Aside from ham radio, Grant has served as a Page in the North Carolina legislature in the summer of 2006; he was also appointed by County Commissioners in 2006 to serve on the Junior Crime Prevention Council of New Hanover County. During his tenure he was the sole representative under age 18 on this government panel.

Grant is currently in his senior year at the Lyceum Academy which is best described as a school within a school. It was created in 1998 by educator Gordon Massengill at New Hanover High School in Wilmington, North Carolina and trains Junior and Senior high school students in an accelerated college preparatory program. (See https://www.edline.net/pages/Lyceum)

For his long-term future, Grant hopes to enroll in the United States Naval Academy, after which he plans to attend Duke University's School of Law with an eye toward a long-term career as a military Judge Advocate General (JAG).

The 2007 Amateur Radio Newsline(tm) "Young Ham of the Year Award" will be presented on Saturday, August 18th, 2007 at the Huntsville Hamfest in Huntsville, Alabama. As the 2007 "Young Ham of the Year," Grant will receive -- courtesy of Vertex-Standard -- an expense-paid trip to the Huntsville Hamfest, along with a gift of Yaesu brand ham radio equipment. CQ magazine will treat him to an expense-paid week at Spacecamp Huntsville, and will present him with a variety of CQ products. Amateur Radio Newsline(tm) will provide Grant with a commemorative plaque at the award ceremony. Once again, the cost of year's plaque has been underwritten by Dave Bell (W6AQ), President of DBA Entertainment Inc., Hollywood California.

The presentation of the award as a regular feature of the Huntsville Hamfest has been made possible through the generosity and kindness of the event's Planning Committee. This year's Huntsville Hamfest also hosts the 2007 ARRL National Convention. In addition, the International Amateur Radio Union's Global Amateur Radio Emergency Communications Conference (GAREC-07) will take place in conjunction with the Huntsville Hamfest. (See http://www.hamfest.org)

This year's award ceremony will be co-hosted by Bill Pasternak (WA6ITF) and Don Wilbanks (AE5DW) of Amateur Radio Newsline(tm) along with representatives of corporate underwriters Vertex-Standard and CQ Communications, Inc.

Award Program Background

The Amateur Radio Newsline(tm) "Young Ham of the Year" award program, (formerly the Westlink Report Young Ham of the Year Award) is now entering its 21st consecutive year. It is presented annually to a licensed radio amateur (Ham) who is 18 years of age or younger and who has provided outstanding service to the nation, his/her community or the betterment of the state of the art in communications through the Amateur Radio hobby/service. It maintains a website will full information on the award program and background material located at http://www.yhoty.org.

Award Sponsors

The award program is jointly sponsored by the Los Angeles, California-based Amateur Radio Newsline(tm) with corporate support from Vertex-Standard Corporation of Cerritos, California and CQ Magazine of Hicksville, NY.

Since 1976, Amateur Radio Newsline(tm) and its predecessor, the Westlink Radio Network, have been providing radio amateurs around the world with up-to-the-minute news at no cost to them. Amateur Radio Newsline(tm) also sponsors the "Roy Neal, K6DUE, Amateur Radio Mentoring Project" that serves as a clearinghouse to match radio amateurs in need of educational assistance on the hobby with those able to aid them. (See http://www.arnewsline.org)

The awards two corporate underwriters are world leaders in their respective areas of Amateur Radio product support.

Vertex-Standard Corporation is considered the trailblazer in the design, manufacture and distribution of high quality Vertex-Standard commercial two-way radio, monitoring and air-band communications equipment along with its Standard Horizon marine electronics line and Yaesu brand Amateur Radio equipment. The Yaesu name is known world-wide among ham radio aficionados and is synonymous with premium quality ham radio gear. (See http://www.vertexstandard.com)

CQ Magazine and its sister publications, CQ VHF and Popular Communications, are published by CQ Communications, Inc., and are considered the trend-setting publications serving today's modern radio amateur. (See http://www.cq-amateur-radio.com)

Past Recipients

Past recipients of the "ARNewsline Young Ham of the Year Award" include Shawn Alan Wakefield, WK5P, of Bartlesville, OK (1986); David Rosenman, KA9PMK, of Muncie, IN (1987); Jonathan Binstock, NK3D, of Potomac, MD (1988); Erin McGinnis, KAOWTE, of Topeka, KS (1989); Mary

Alestra, KB2IGG, of Staten Island, NY (1990); Richard S. "Sammy" Garrett, AAOCR, of St. Louis, MO (1991); Angela (Angie) Fischer, KBOHXY, also of St. Louis (1992); Kevin Boudreaux, N5XMH, of New Orleans, LA (1993); Allison Daneen Zettwoch, KD4CKP, of Louisville KY (1994); Adam Weyhaupt, N9MEZ, of Alton IL (1995); Toby Metz, KB7UIM, of Boise ID (1996); Brian Mileshosky, N5ZGT, of Albuquerque NM (1997); Richard Paczkowski, Jr., KF4BIA, of Edgewater, FL (1998); Michelle Swann, KE4EZI, of Warner-Robins, GA (1999); Christopher Arthur, KT4XA, of Russelville, AL (2000); Patrick Clark, KC8BFD, of Elkwood, WV (2001); Josh Abramowicz, KB3GWY, of Reading, PA (2002); Jay Thompson, W6JAY, of Santa Ana, CA (2003); Andrea Hartlage, KB4IUM, of Grayson, GA (2004), and Rebekah Dorff, WG4Y, of Hoover, AL (2005), Catherine Ferry, NC8F, of Streetville, OH. (2006).

SB DX @ ARL $ARLD028
ARLD028 Correction to ARLD027

ZCZC AE28
QST de W1AW
DX Bulletin 28 ARLD028
>From ARRL Headquarters
Newington CT July 6, 2007
To all radio amateurs

SB DX ARL ARLD028
ARLD028 Correction to ARLD027

DX Bulletin ARLD027 incorrectly listed the IARU HF World Championship for this coming weekend. The correct dates are July 14-15. Good luck to all participants.

==> FCC Responds to ARRL's BPL Brief

On Monday, July 2, the FCC filed its reply brief with the US Court of Appeals for the District of Columbia Circuit. The FCC attempted to rebut the ARRL's challenge to the FCC's Broadband over Power Line (BPL) rules enacted in late 2004 and affirmed by the agency in 2006. According to ARRL General Counsel Chris Imlay, W3KD, "The FCC's brief does not accurately describe ARRL's arguments concerning harmful interference."

Given what is in essence a 100 percent probability of interference from BPL systems to fixed and mobile HF facilities at significant distances from power lines, Imlay said Section 301 of the Communications Act does not allow unlicensed BPL systems to operate in the HF bands. "Basically, Section 301 says you can not operate a radio frequency emitting device without a license. The legislative purpose of Section 301 is clearly to avoid interference. FCC's Part 15 rules have assumed that certain very low power devices and systems can operate without predictable interference, thus allowing them to operate without a license, notwithstanding Section 301. But with BPL, the FCC has ignored conclusive record evidence which shows that there will be, and in fact our experience conclusively demonstrates, that BPL causes severe interference to licensed services," Imlay said.

The FCC claims that it has the authority to permit unlicensed BPL under Section 302 of the Act; this section allows the FCC to regulate the interference potential of RF devices. What Section 302 does not do, Imlay said, is to create a loophole in, or modify, or invalidate Section 301.

"It is the ARRL's position," Imlay said, "that the FCC can regulate and authorize BPL with certain safeguards, consistent with the terms of Section 301; however, the FCC simply cannot honestly maintain the position that BPL has an inherently low interference potential. It has a high interference potential, and the rules they have enacted to date are woefully inadequate and insufficient to address it." The ARRL has long maintained that BPL, when not adequately "notched," causes harmful interference to Amateur Radio operations. In its brief, the FCC claims BPL does not cause significant interference and the Courts must defer to the FCC's expertise to decide this issue.

ARRL Chief Executive Officer David Sumner, K1ZZ, said, "The FCC misrepresents the ARRL's position as being that the FCC has no authority to allow unlicensed devices that pose any risk whatsoever of causing interference to licensed services. That's not our position at all. Our position is that the FCC possessed clear evidence, at the time it made its BPL decisions, that the limits it was adopting would allow the deployment of BPL systems with a near-100 percent probability of causing harmful interference to radio receivers hundreds of feet from the power lines. Yet, despite this evidence it characterized the likelihood of harmful interference as 'low.'"

The brief goes on to say that, in the FCC's view, mobile stations and fixed stations are protected against harmful interference from BPL. But with respect to mobile stations complaining of interference, the FCC requires only that BPL operators reduce the radiated emission levels to 20 dB below the Part 15 maximum levels for radiated emissions. This, in the HF bands, still permits BPL noise at levels that preclude communications entirely. It offers mobile stations no protection whatsoever, Imlay stated.

Sumner explained, "The FCC claims that it continues to protect mobile stations from harmful interference, but it does so simply by defining

whatever interference a mobile station might encounter from a notched BPL system as not harmful! None of the steps to limit the interference potential of BPL systems that the FCC took in this rulemaking proceeding reduce the likelihood of interference to the amateur service, and to this day the FCC has declined to enforce its rules even when protracted violations and interference have been documented."

The FCC's brief also attempted to justify its presumption that a BPL radiated interfering signal decays at a rate of 40 dB per decade of distance. "A 'decade of distance' is a factor of 10," Imlay explained. "For example, if a victim receiver moves from 3-30 feet from the power lines (10 times farther away), that is one decade of distance. For each decade of distance, the FCC believes that there is a 40 dB signal decay. In the HF bands, however, the evidence in the record shows that the signal decay is closer to 20 dB than 40 dB per decade of distance from the power lines. The FCC's brief claimed that there was conflicting evidence on the subject, but ARRL's view is that the FCC merely avoided consideration of the overwhelming evidence favoring the more conservative decay factor."

Imlay said the ARRL has asked the Court to order the FCC to "rethink the rules governing BPL and for the first time to take into account the evidence on the record concerning harmful interference to Amateur Radio." ARRL's reply brief is due for filing with the Court July 28, 2007. There is no date set yet for oral argument before the three-judge panel in Washington, DC.

==> Huntsville to Host Global EmComm Conference in August

The 2007 Global Amateur Radio Emergency Communications Conference (GAREC-07) is scheduled for Thursday and Friday, August 16-17 in Huntsville, Alabama. GAREC-07 registrants will participate in emergency communications-themed presentations, discussions and demonstrations. The conference will be held just before the 2007 ARRL National Convention and annual Huntsville Hamfest, which take place on Saturday and Sunday, August 18-19.

In 2005, current IARU Region 1 Emergency Communications Coordinator Seppo Sisatto, OH1VR, organized the first GAREC meeting in Tampere, Finland. Tampere was the site of a 1998 intergovernmental meeting where the Tampere Convention was adopted -- an international treaty that facilitates the use of telecommunications in humanitarian assistance. In 2006, GAREC met in Tampere for the second time, in connection with the International Conference on Emergency Communications (ICEC-2006) and the United Nations Working Group on Emergency Telecommunications.

According to IARU International Coordinator for Emergency Communications Hans Zimmermann, F5VKP/HB9AQS, "...GAREC wants to be a forum for the exchange of information. Many IARU Member Societies and specialized emergency communications groups have developed and implemented emergency concepts. Many others want to benefit from their technical, operational and, not the least, their administrative or even 'political' experiences

when establishing the necessary cooperation with partners in emergency and disaster response. GAREC also developed new concepts, such as the 'Center of Activity Frequencies,' meanwhile adopted by the IARU Region 1 and 3 conferences."

The packed GAREC-07 agenda includes reviews of advanced digital technologies and their applications to emergency telecommunications. The ARRL Alabama Section, Zimmermann said, "leads the way" with respect to D-STAR repeater systems, activities and users. There will also be a demonstration of the Automatic Packet Reporting System (APRS), another capability of the Amateur Radio Services. Zimmermann noted, "A demonstration of [APRS'] capabilities found much interest among the delegates of the ITU Plenipotentiary Conference in Turkey last November."

Zimmermann added that EchoLink and eQSO are "yet more such tools, and specialized groups have developed emergency applications for these modes. More technologies are being developed or have become available already. The two days in August will be packed with practical information, and experts will arrange demonstrations of the capabilities of 21st century Amateur Radio!" Emergency communication vehicles and equipment will be on hand throughout the conference.

Details for GAREC-2007 are now being finalized. Information about GAREC-07 and the related events is available at these Web sites: <http://www.arrl-al.org/GAREC07.htm> and <http://www.iaru.org/emergency/. The sites will be updated as more information becomes available. To register for GAREC-07, please see the registration page <https://www.arrl.org/forms/misc/garec07.html>. GAREC-07's tentative agenda <http://www.arrl-al.org/garec_schedule.htm>is also available.

==> ARRL In Action: What Have We Been Up to Lately?

In June, ARRL HQ staffers, officers and directors were busy. ARRL President Joel Harrison, W5ZN, expressed his appreciation to Arkansas Senator Mark Pryor after the senator introduced a BPL-related bill in the US Senate. ARRL Chief Development Officer Mary Hobart, K1MMH, oversaw the installation of the Diamond Terrace at ARRL Headquarters. Several members of the ARRL HQ staff, area hams and out of state visitors activated W1AW during Field Day weekend.

The ARRL sent out more than 100 letters to repeater owners/trustees who have repeaters affected by the Pave Paws radars. The letters provided an update on the ongoing negotiations with the US Air Force. In response, most have reported that they have voluntarily reduced power.

The ARRL Worked All States (WAS) award has been redesigned. The August issue of QST and the July/August issues of QEX and NCJ have been printed and mailed. The 2006 Annual Report is available electronically or, upon request, in printed form.

ARRL Field and Regulation Correspondent Chuck Skolaut, K0BOG, compiled and forwarded the ARRL Monitoring System/Intruder Watch report to the IARU Region 2 Coordinator. US Virgin Islands Section Manager John Ellis, NP2B, is serving as the main liaison between the Hurricane Watch Net and ARRL HQ staff during the 2007 hurricane season.

ARRL Education Project Coordinator Mark Spencer, WA8SME, led two Teachers Institutes, one in Rocklin, California and one in Spokane, Washington. Mark and his wife Doris spent a good part of a week in EmComm support for a local wildfire emergency in Coleville, California, including offering their home as shelter. The Executive Committee has approved seven new grants to Education & Technology Program schools.

The new editions of The ARRL General Class License Manual and General Q&A are available for sale. Jon Bloom, KE3Z, managed the process of switching the massive Logbook of The World QSO repository over to a more robust server. Several staff members helped reorganize the ARRL HQ lobby publications and apparel display.

ARRL HQ staff traveled internationally and domestically promoting and advocating on behalf of Amateur Radio. On behalf of the IARU, ARRL Chief Executive Officer David Sumner, K1ZZ, took part in a meeting of International Telecommunication Union-Radio Communication Sector (ITU-R) Working Party 1A in Geneva, Switzerland. IARU President Larry Price, W4RA, ARRL Chief Technology Officer Paul Rinaldo, W4RI, and Sumner also took part in a meeting of ITU Working Party 8A in Geneva. Dan Henderson, N1ND, took part in the ARRL Forum at the Georgia State Convention/Atlanta Hamfest, as well as the Iowa State Convention in South Sioux City, Nebraska. Mary Hobart took part in the Northwestern Division Convention at Seaside, Oregon. Katie Breen, W1KRB, attended the New York State Convention in Rochester. David Sumner, Dave Patton, NN1N, and Maria Somma, AB1FM, Joel Harrison, W5ZN, and Rod Stafford, W6ROD,represented the ARRL at HAM RADIO 2007 at Friedrichshafen, Germany. Steve Ewald, WV1X, attended the National Citizen Corps Conference in Alexandria, Virginia. ARRL News Editor S. Khrystyne Keane, K1SFA, gave a presentation at the West Gulf Division Convention/HamCom 2007 in Plano, Texas.

==> Amateurs Play Key Role in Tennessee Earthquake Exercise

Almost 100 radio amateurs participated in TNCAT '07, the largest and most comprehensive exercise ever conducted by the Tennessee Emergency Management Agency (TEMA). The exercise, conducted over a 3 day period from June 19-21, was based on a presumed 7.7 magnitude earthquake along the New Madrid Seismic Zone.

TEMA's Operations Chief Hank Koebler, Jr, N3ORX, said he was very impressed with the response from the amateur community. "I anticipated a top-notch performance from them, but they exceeded those expectations by far."

Throughout the exercise, ARES and MARS continued to provide the bulk of the emergency communications. At the State Emergency Operations Center

in Nashville, ARES and MARS operators were set up side-by-side to handle the communications load -- ARES handled voice on VHF/UHF and HF links into the disaster area, while MARS handled all Winlink traffic via HF. In the affected counties in West Tennessee, ARES operators performed damage assessments, provided the sole means of communications for the county Emergency Operations Centers and were the communications workhorses for TEMA's Regional Center in Jackson, Tennessee.

==> North Carolina Eagle Scout Named 2007's Young Ham of the Year

Grant H. Morine, W4GHM, a 17 year old from Wilmington, North Carolina, has been named the 2007 Young Ham of the Year (YHOTY), announced YHOTY Award Administrator Bill Pasternak, WA6ITF, and Award Committee Chairman Mark Abramowicz, NT3V. Grant was selected based on his commitment to Amateur Radio, along with his work in public service and his promotion of the Amateur Radio Service to others through the Boy Scouts of America. Grant will receive his award as part of the Huntsville Hamfest, held in conjunction with the 2007 ARRL National Convention.

The son of Bill, N2COP, and Pamela Morine, and the brother of Reid, W4RSM, Grant was first licensed in June of 2001 when he was 10; he holds a Technician class license. His nomination told of the public service project that he spearheaded to earn the rank of Eagle Scout -- the construction and donation of 30 220-MHz J-pole antennas to the Carolinas Amateur Radio Emergency Services (CARES). The antennas are indoor back-ups for the CARES network of hospitals, located in some of the storm-prone coastal areas of the Carolinas.

To complete his project, Grant successfully solicited the donation of the needed raw materials from a local hardware store. He then organized a group of three adults and 10 Scouts to assemble the antenna systems at his home. After each antenna was completed, it was tested for proper performance before being handed over to CARES managers in October 2006. Grant's antennas were recently tested by CARES when they were utilized in a test run in South Carolina.

Antenna design and construction are not new to Grant. In 2006, he won first place in the North Carolina Science Fair with an environmentally inspired project that he called "Can Homemade Antennas Made from Recyclable Materials Work As Well As Commercially Made Antennas?" He proved that they could by designing and constructing a dual-band 2 meter and 70 cm antenna from a steel can, a soda can and a wire coat hanger. Grant won county and regional science fairs when he was in 7th and 8th grades using ham radio antenna projects.

Aside from ham radio, Grant served as a Page in the North Carolina legislature in the summer of 2006. He was also appointed to serve on the Junior Crime Prevention Council of New Hanover County in 2006 by the County Commissioners. During his tenure, he was the sole representative under age 18 on this government panel.

Grant is currently in his senior year at the Lyceum Academy. Grant hopes to enroll in the United States Naval Academy, after which he plans to attend Duke University's School of Law with an eye toward a long-term career as a military Judge Advocate General (JAG).

The 2007 Amateur Radio Newsline Young Ham of the Year Award will be presented on Saturday, August 18, 2007 at the Huntsville Hamfest in Huntsville, Alabama. As the 2007 Young Ham of the Year, Grant will receive a trip to the Huntsville Hamfest, ham radio equipment, various books and magazines and an all-expense-paid week at Spacecamp in Huntsville. Amateur Radio Newsline will award Grant with a commemorative plaque at the ceremony.

The presentation of the YHOTY award is a regular feature of the Huntsville Hamfest and has been made possible through the generosity and kindness of the event's Planning Committee. In addition to the 2007 ARRL National Convention, the International Amateur Radio Union's Global Amateur Radio Emergency Communications Conference (GAREC-07) will take place at the Huntsville Hamfest. This year's YHOTY award ceremony will be co-hosted by Pasternak and Don Wilbanks, AE5DW, of Amateur Radio Newsline, along with representatives of corporate underwriters Vertex-Standard and CQ Communications, Inc.

The Amateur Radio Newsline "Young Ham of the Year" award program (formerly the Westlink Report Young Ham of the Year Award), is now entering its 21st consecutive year. It is presented annually to a licensed radio Amateur Radio operator who is 18 years of age or younger and who has provided outstanding service to the nation, his/her community or the betterment of the state of the art in communications through the Amateur Radio hobby/service.

==> New Section Manager Appointed in Sacramento Valley

Ron Murdock, W6KJ, of Yuba City, California, has been appointed Section Manager of the Sacramento Valley Section. Dave Patton, NN1N, Manager of ARRL's Membership and Volunteer Programs Department, made the appointment effective July 2 since outgoing Section Manager Casey McPartland, W7IB, will be moving out the section soon. Murdock was scheduled to become Section Manager on October 1. "I have been looking forward to this for some time," Murdock said after getting the word that his term is starting three months early. He comes to the position with strong recommendations from McPartland, as well as former Sacramento Valley Section Manager Jettie Hill, W6RFF. Murdock is active with the Yuba-Sutter Amateur Radio Club, and has also served as ARRL Bulletin Manager and ARRL Emergency Coordinator. Licensed since 1967, he has been involved in public service events and emergency communications since 1969, helping out with earthquakes, wildfires and floods. Murdock and his wife Jo Anne, N6YLO, have two grown sons.

==>SOLAR UPDATE

Tad "You Are the Sun(spot) of My Life" Cook, K7RA, this week reports: The average daily sunspot number for this week rose nearly 18 points

from the previous seven days. On July 4, the A index was moderately elevated due to a solar wind stream. Expect to see a similar increase around July 11, and a much greater increase in geomagnetic activity from July 16-19. Geophysical Institute Prague predicts quiet conditions for July 6-9, quiet to unsettled July 10, and unsettled conditions for July 11. Monthly averages of daily sunspot numbers for April 2006 through June 2007 were 55.2, 39.6, 24.4, 22.6, 22.8, 25.2, 14.7, 31.5, 22.2, 28.2, 17.3, 9.8, 6.9, 19.8 and 20.7. Monthly averages of daily solar flux for the same period were 88.9, 80.9, 76.5, 75.8, 79, 77.8, 74.3, 86.3, 84.4, 83.5, 77.7, 72.2, 72.4, 74.4 and 73.7. Sunspot numbers for June 28 through July 4 were 27, 29, 36, 30, 13, 12 and 13 with a mean of 22.9. 10.7 cm flux was 74.9, 75.3, 74, 74.3, 72.6, 71.7, and 72.4, with a mean of 73.6. Estimated planetary A indices were 6, 13, 6, 5, 3, 9 and 16 with a mean of 8.3. Estimated mid-latitude A indices were 5, 5, 4, 4, 2, 6 and 13, with a mean of 5.6. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: This weekend, look for the VK/Trans-Tasman 160 Meter Contest (SSB) on July 7. The Venezuelan Independence Day Contest, the DL-DX RTTY Contest and the Original QRP Contest are scheduled for July 7-8. On July 8, look for the DARC 10 Meter Digital Contest and the ARCI Summer Homebrew Sprint. Later in the week on July 11, the SKCC Sprint and RSGB 80 Meter Club Championship (SSB) are on the air. Next weekend, the big event is the IARU HF World Championship, from 1200 UTC July 14-1200 UTC July 15. On July 13, the NCCC Sprint Ladder is on the air, and on July 14, look for the FISTS Summer Sprint. The Colorado QSO Party is on July 15-16, while the Run for the Bacon QRP Contest is on July 16. The NAQCC Straight Key/Bug Sprint and the RSGB 80 Meter Club Championship (Data) are on July 19. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education Course Registration: Registration remains open through Sunday, July 22 for these online courses beginning on Friday August 3: Technician License Course (EC-010); Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012) and Digital Electronics (EC-013). To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Solar Flux to Bottom Out in July as Cycle 24 Gets Closer: The National Oceanic and Atmospheric Administration's (NOAA) Space Environment Center (SEC) released their monthly forecasts of sunspot number and 10.7 cm

radio flux, including high and low bounds to their forecasts. The SEC forecasts that the smoothed sunspot number reached its low value of 11.7 in March 2007, and predicts that the solar flux will reach its low of 75.4 this month. This is the fourth month in a row that the SEC predicts the solar flux will bottom out in July. Based on the SEC predictions, this is probably at the bottom of Cycle 23 and extremely close to the beginning of Cycle 24. Two events will mark the beginning of the next sunspot cycle: The observation of the first opposite magnetic polarity sunspots compared to Cycle 23 sunspot polarity, and the observation high solar latitude sunspots -- the Cycle 23 sunspots are now very near the solar equator. The SEC predictions table <http://www.sec.noaa.gov/ftpdir/weekly/Predict.txt> and sunspot number and solar flux prediction graphs <http://www.sec.noaa.gov/SolarCycle/> are available on the SEC's Web site.

* Get Ready for the IARU HF World Championship, July 14-15: Participation in the IARU HF World Championship has grown steadily for the past four years, despite solar activity trending in the wrong direction. The creation of Low Power and QRP categories has contributed to increasing both the popularity and the competitiveness of the event. The ARRL administers the HF World Championship on behalf of the IARU. At its May 2007 meeting the IARU Administrative Council discussed various issues related to the event and asked that the ARRL devote the resources necessary to maintain a high standard of adjudication. A condition of entry in the IARU HF World Championship is that each entrant agrees to be bound by the provisions of the announced rules, by the regulations of his/her licensing authority, and by the decisions of the ARRL Awards Committee acting for the IARU International Secretariat. Leading competitors should expect their entries to be carefully scrutinized. If exceptional results are claimed, entrants must be prepared to explain how they were achieved. Reminder: In addition to the zone and "HQ station" multipliers there are four additional multipliers available per band by contacting members of the IARU Administrative Council and the regional IARU executive committees. Administrative Council members may send "AC" instead of their zone, while regional executive committee members may send "R1," "R2" or "R3" as appropriate. See <http://www.arrl.org/contests/rules/2007/iaru.html> for more information.

* Walt Legowski, WA1KKM, wins June QST Cover Plaque Award: The winner of the QST Cover Plaque Award for June is Walt Legowski, WA1KKM, for his article "AARA 1, Murphy 0: Our Linux Logging Program at Field Day." Congratulations, Walt! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/qstvote.html?pidx=1>. Cast a ballot for your favorite article in the July issue by Tuesday, July 31.

* ARRL VEC Team Keeps Busy!: July 23 marks the 5 month anniversary of the FCC's elimination of the 5 WPM Morse code exam requirement. Since February 23, the ARRL VEC reports that test session registration and

attendance has been steady and strong. The average number of test sessions per month is up from last year (602 in 2007 compared to 472 in 2006), as is the average number of examinees per session (8 candidates in 2007 compared to 5 candidates in 2006). Of the nearly 700 test sessions registered for June, more than 600 sessions have been received and processed by the VEC staff. ARRL booth traffic was brisk at the International Ham Radio Exhibition held June 22 to 24 in Friedrichshafen, Germany. More than 18,000 people from 36 countries attended. An ARRL VEC exam session was held on Saturday morning at the convention. Thirty-one exams were given, with 25 achieving an upgrade or new license. Packages were mailed last month to more than 900 ARRL VEC volunteer examiner teams. These teams have now been provided with test materials. The packages contained the new General Class Element 3 exams to be used at test sessions beginning July 1. For ARRL VE teams who are using the ExamWin Software, the updated version was released on June 18 and is available on our ExamWin Web page <http://www.arrl.org/arrlvec/examwin>. A VE Express Newsletter was emailed on June 18 to more than 5500 subscribers. To view the current VE Newsletter or to view previous editions, visit the "ARRL VEC News Briefs, Announcements, Newsletters" Web page <http://www.arrl.org/arrlvec/announcements.html>.

* Emma Berg, W0JUV/AAR7AX (SK): Emma Berg, 102, died June 7 at Lawrence Presbyterian Manor in Lawrence, Kansas. Mrs Berg remained active in the Military Affiliate Radio System (MARS) on a daily basis. A member of the Douglas County Amateur Radio Club since 1942 and a member of the American Radio Relay League as well as Army MARS, "She was very spry for her age," said Kansas State MARS Director John Halladay, AAA7KS. "Always busy -- a person we could be proud to emulate in our own aging." Over the years, Mrs Berg served as net control operator on Kansas CW nets and was a First Lieutenant in the Civil Air Patrol. Mrs Berg edited the Sunflower Seeds, the Kansas MARS quarterly newsletter, in her younger years -- when she was in her 90s - and later penned the publication's "Fun & Relaxation" articles. Outside of radio, Mrs Berg was a teacher and administrator in Douglas County before she retired in 1962. She also taught and was principal at several rural schools, and served as Douglas County superintendent of public instruction from 1949 to 1959. Survivors include two nieces, Jane Semple Cox of Phoenix, Arizona, and Nancy Semple Menchen of Las Vegas, Nevada. The family suggests memorials to Heart of America Hospice, 1420 Wakarusa, Suite 202, Lawrence, KS 66049.

* Let Us Know: What's your favorite part of The ARRL Letter? What kind of stories would you like to see in the Letter? Would you like to see pictures in the Letter? This is your Letter and your chance to let your voice be heard. Please send your suggestions to ARRL News Editor S. Khrystyne Keane, K1SFA, at k1sfa@arrl.org, with the subject line "ARRL Letter Suggestions." All messages will be read and discussed, and we look forward to implementing positive suggestions into the ARRL Letter.

* Corrections and Clarifications: In last week's ARRL Letter (Vol 26, No 26), it was reported that the Emergency Coordinator for Williamson

County, Texas was Jim Taylor, NQ5L. Williamson County's EC is Jim Russell, NQ5L.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

1275. WIANEWS for week commencing JULY 8 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-07-07 13:22:24 UTC
From: nationalnews@wia.org.au
Message-ID: <200707071000.l67A0FM20028@panix2.panix.com>

This is WIANEWS for week commencing JULY 8 2007

Good morning I'm Jim Linton VK3PC.

Amateur Radio & the Gippsland floods

Providing communications support during the flood disaster in eastern Victoria were seven radio amateurs, members of RECOM the communications arm of the Australian Red Cross.

John Patterson VK3ATQ of RECOM reports its role was centred on emergency relief centres at Paynesville, Sale, Bairnsdale and Lakes Entrance.

There the team registered 361 flood evacuees and transmitted this information back to the Red Cross Headquarters in Melbourne using data communications.

RECOM also provided other reliable communications of administrative traffic for the Red Cross.

The operators involved included VK3ATQ, VK3AUO, VK3BQS, VK3BPD, VK3EK, VK3GBJ and VK3XSW.

The floods at some locations cut power or put it at risk and RECOM was fully prepared with self-reliant auxiliary power.

John VK3ATQ found himself being interviewed numerous times by the ABC as part of its public information coverage as the flood disaster unfolded.

The RECOM guys with their communications 'go-kits' and four wheel drive vehicles were activated for five-days in the flood areas.

RECOM which began in Victoria is now nation-wide and through its excellent voluntary work has achieved credibility and increasing recognition.

Now we cross to TREVOR QUICK VK5ATQ...

WIA - ACMA

25 June 2007 WIA President Michael Owen VK3KI and WIA Director Peter Young VK3MV met with Mark Loney, Executive Manager Pricing and Policy, Alan Jordan and John Kington at the ACMA Central Office in Canberra.

The meeting was initiated at the request of the WIA for a briefing on the delays in dealing with a number of matters, particularly arising out of the Amateur Service Review Outcomes Paper. The ACMA acknowledged the delays and sought to work with the WIA in addressing its concerns.

Of particular concern to the WIA was the delay in the making of the further amending Determination to give effect to the balance of the matters identified in the Outcomes paper, now a delay of 3 years. The WIA also raised the delay in finalising the arrangements with CEPT to allow Australian amateurs travelling overseas the privilege of operating in other countries without the need to obtain an individual authorisation in those countries, and the delay in the issue of a Class Licence to enable amateurs visiting Australia to operate here without the need for an individual licence.

Another concern was the delay in the finalisation of the issue or re-issue of 2 letter callsigns.

The WIA is also concerned at the continuing uncertainty about the future of the management of the amateur examination and the related certificate issue, as well as the callsign management function.

The WIA pointed out that the delay in the LCD meant that uncertainty prevailed over the power Foundation licensees permitted, the privileges of Foundation licensees and also that the WIA's publication "The Foundation Licence Manual" was running short and it could not be reprinted until the regulations could be up dated.

While the WIA accepted that the current delay in the LCD was beyond the direct control of ACMA, Mr Loney offered to do all he could to achieve a speedy finalisation of that, and that other immediate solutions would be investigated to address a number of the other problems faced by the WIA and its members. Mr Loney indicated that more resources would commence to address these outstanding issues with the view to finalisation as soon as possible.

In particular, work on the visiting/visitor licence issues has commenced and will be completed as soon as the enabling legislation is drafted.

The ACMA advised that a statement on the allocation process for the issue of two-letter callsigns would be made shortly, and the announcement may be made within a statement addressing the broader issues surrounding callsign management.

In relation to the outsourcing arrangements, the WIA was given a briefing on the process the ACMA intends to follow.

The WIA representatives felt that the meeting was positive and conducted in a constructive manner with a commitment to explore a range of options to meet the concerns expressed by the WIA on behalf of its members.

BAND PLANS AND Spectrum Management.

Amateur Self-Regulation
Amateurs use a wide variety of different modes. Within one amateur band, activity can include CW, voice, satellite and EME activity, and ATV.
The best way of avoiding clashes is to set aside different band segments for each of these activities, so that all amateurs can pursue their interests without interference.

Amateur band plans are voluntary agreements, often known as "Gentlemen's Agreements". They are sponsored by the WIA, but they are for the benefit of all amateurs. Most amateurs, WIA members or not, abide by the band plans because it makes sense to give everyone a fair go.

Clashes still occur at times, and the usual reason is lack of awareness of the band plans. Most amateurs are willing to change frequency if the problem is explained to them politely.

Band plans should satisfy a number of conflicting criteria:

They should take local conditions into account, but they should be consistent with international usage.

They should encourage spectrum efficiency, but they should also ensure that all modes have their fair share of spectrum space.

They should take the popularity of each mode into account, while still providing enough spectrum space for less popular activities. For example, ATV requires far more bandwidth per operator than other modes; and activities such as EME are of major importance regardless of the number of stations involved.

Band plans must be flexible enough to adapt to changing needs, but they tend to lose support if they are changed too often. The aim must be to think ahead and to make sure that future options are not closed off.

On the VHF-UHF bands, three main groups are:

CW/SSB: the preferred modes for weak signal work.

FM: not suitable for weak signal work and not compatible with SSB or CW. This category also includes digital modes such as packet, which usually use FM mode on the VHF bands.

ATV: requires a very large bandwidth but has a very low power density, so it needs an exclusive interference-free band segment.

Calling Frequencies
On the VHF bands, the band plans include calling frequencies. These frequencies are "meeting places" and should be used only to make initial contact before moving to another frequency. If you "hog" the calling frequency you will prevent others from making calls or hearing more distant stations that may appear on the frequency.

For further check out bandplans at www.wia.org.au

TRIPPING.

Last weekend saw Michael Owen the National WIA President and Phil Waite the National WIA Director at Westlakes, a meeting arranged by the Immediate Past President of Westlakes Club, Frank VK2FJL

Mr. Owens held discussions with Westlakes President Russell VK2KEG, QSL Manager Alex VK2ZM, Vice President Barry VK2BZ and Treasurer Les VK2 ZPA.

He also talked with many members and visitors to the club.

There was a great turn out for this occasion, hearing first hand VK3KI discussing the role of the WIA, while Mr. Waite discussed BPL.
(Westlakes News Release)

BPL INTERFERENCE - THE BATTLE CONTINUES
THE BPL FIGHT: SARL SPEAKS OUT IN OPPOSITION TO BPL

Broadband over Powerline Internet access is not an acceptable system while interference to High Frequency communications is potentially high. So says one of the worlds most respected national ham radio societies. Bill Pasternak, WA6ITF from Amateur Radio Newsline, has more:

Broadband over Powerline is not an acceptable system to provide Internet access connections. This, while the interference potential to High Frequency communications remains high.

This was the message that the South African Radio League delivered to a Broadband Conference held last week. One where the proponents of B-P-L see it as the solution to bridging the digital divide.

These people must think again, says the S-A-R-L's Hans van de Groenendaal, ZS6AKV. van de Groenendaal told delegates that bridging the digital divide is about access to Personal Computers and computer literacy and not about cheap broadband delivery.

ZS6AKV said that the South African Radio League is not against new technologies. This, as long as these technologies are not at the cost of the High Frequency spectrum which he terms as a scarce national resource.

van de Groenendaal said that radio amateurs are always embracing new technologies. It is part of being an communications experimenter.

With so many successful and more mature technologies available, ZS6AKV concluded by saying that it is difficult to understand why PLT is still pursued so vigorously.

At the studio in Los Angeles, I'm Bill Pasternak reporting for the amateur Radio Newsline.

Currently there is no Broadband over Powerline equipment "type approved" by for use in South Africa and no licenses for it have been issued. The South African Radio League and the South Africa ham community are hopeful to keep it that way.

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or training in Amateur Radio go to wia.org.au and check out the club pages.

Help amateur radio continue to grow
Next Foundation Licence course, and Standard / Advanced assessments .....

VICTORIA

The North East Radio Group will be conducting Foundation Licence training and examinations on the weekend of 14-15 July at their Club rooms situated At 126 Mountain View Rd. Briar Hill, starting at 0800 each day.

Examinations for Standard, and regulations will also be available on Sunday 15 July.

For further information and bookings contact John VK3ZRV on 03 9431 0667 or Mobile 0427 316 431.
(zzrvelec@bigpond.net.au)

Enrolments are open for this month's Foundation Licence training and assessment session held by Amateur Radio Victoria on the weekend of the 21st and 22nd of July, at Box Hill North.
For inquiries contact Barry Robinson VK3JBR 0428 516 001 or email arv@amateurradio.com.au

WIA PRESIDENT - ASSESSOR INSTRUCTIONS

About a week ago the WIA released a revised Assessor Instructions, that is the basic document that governs the WIA amateur qualification assessment process.

We told all the WIA Assessors about it by email, through an Assessor Alert. We put it and the new or revised forms on the WIA website.

Let me say a few words about the WIA Exam Service.

We announced some weeks ago that by the end of the year we hope to replace all the Invigilators with what we have called Learning Facilitators.

Unlike the Invigilator, the Learning Facilitator is a person qualified by the WIA and registered and accredited by the WIA. Now, I think that if you look at the Learning Facilitator Instructions which are on the WIA website, you will see that it will be pretty easy for most people to qualify.

A number of very loyal supporters of the WIA Exam Service have expressed some concern at some of the new requirements.

One is the requirement for a card, such as the Working with Children check in Victoria, the blue card in Queensland, the Western Australian Card or just the requirement for a national police check in other places. The WIA doesn't trust us.

Please understand that in many parts of Australia the WIA has to comply with local laws, and insist on such checks. Everywhere in today's world the WIA has to take reasonable care in the suitability of the people it appoints to work with children. No, we don't distrust you, but yes, we do have to take these steps to protect the WIA and its members.

Yes, we do require Learning Facilitators like Assessors to be WIA members. We must be sure that these important volunteers are covered by the WIA's public liability policy.

I know it is a burden for some, but remember you can pay $17.50 every 3 months to be a member if you are a Concession Member. If that sounds attractive, please ring the WIA office.

Oh, and for the sake of clarity, it is a matter for clubs who they appoint to train potential amateurs, though I hope that the Assessors and Learning Facilitators will be able to assist.

And also, please remember this: the WIA has no certainty that it will retain the examination management function, but the more we seek to act responsibly on all things, and recognise current community concerns, the better placed we are to retain that function.

I know that many Invigilators have now qualified as Assessors or are seeking to qualify as Assessors. But please, if your club has people willing to assist the WIA Assessors in organising and conducting exam events as Learning Facilitators, please make sure that they send their application for qualification to the WIA national office, as soon as possible.

Hold the presses! Extra Extra Extra Hams Across Australia!

Rex Newsome VK4 LR has offered to match donations to Jeff's Walk.

To match donations to date, Rex has deposited $2000.

He said it is to give Jeff "a boot along".

Jeff VK4XJJ is our intrepid lone travellor, walking across Australia raising monies and awareness of the Deaf/Blind.

Rex you have given us all a boot along!

With other amounts promised Jeff's DeafBlind walk is half way on his journey and now half way to the target of $10,000 towards a small bus with wheelchair access.

Rex heard about the DeafBlind awareness walk on the WIA Sunday news, thank you WIA. He respectfully sends out a challenge to listeners to hit the tin and again he will match any donations.

Every Day, from 5:30pm Eastern on 40 meters, 7045 put out a call to VK4XJJ

Gippsland Gate Radio & Electronics Club News

Well, we have done it again. Its another total sell-out of tables for the GGREC Hamfest on July 21 at Cranbourne, South of Melbourne. This year all

41 tables were booked well in advance of our expected timetable and all reports suggest this will be our busiest Hamfest yet. With buyer numbers expected to reach the 350 plus mark, the organizers are going to be kept on their feet . Great Door Prizes will be won on the day and it will be worth the $6.00 entry fee. All of your favourite stall holders will be present and a variety of Commercial sellers will be happy to parade their latest equipment. We look forward to seeing you there AND BY THE WAY--
the Hamfest will be in the Cranbourne Public Hall in High St --
Corner of Cameron St.
Be early for pole position at the 10am stampede.
(73s Albert -- Hamfest 07 Co ordinator)

VK4

The Historical Wireless Society of South-East Queensland celebrated its tenth anniversary on the weekend of 16/17 June.

73 members and guests attended a dinner at the Mansfield Tavern on Saturday night. HWS president Peter VK4APD spoke about incidents and personalities in the club history. Guest speaker Mike VK3ZCZ, president of the Historical Radio Society of Australia spoke to a 1920s advertisement for a 3 valve regen receiver, supposedly better than a 5 valve TRF Neutrodyne, illustrating that sales pitches haven't changed much. He also outlined the future for HRSA.

The club put on a display of old domestic radios at Mt Gravatt showground Saturday afternoon and Sunday morning. Dave VK4KDP displayed his collection of WW II military and Comfort Fund (Amenities) radios with assistance from Brisbane Amateur Radio Club members Col VK4ACG and Les VK4ZLP. Not forgetting a display of gramophones by another avid collector.

Queensland Museum lent a locally-made Soladyne receiver, plus Traeger receiver and pedal-wireless generator.

This weekend was courtesy of 4MBS-fm, Breville, and the Brisbane City Council who provided a much appreciated grant.
(Peter Hadgraft)

INTERNATIONAL NEWS READ BY Rob VK5MM

When the weather gets bad, Mumbai's Ham radio operators get cracking.

But Mumbai's Ham radio operators, who quietly, resolutely and efficiently were in their element during the weekend's downpour and floods, are unperturbed.

Operating from Mumbai vu2zrs, vu2hit, vu2lnz and vu2axn from the Mumbai Ham Radio Association were out in the field, doing their bit for the safety of the public.

As we heard several weeks ago from the Hunter, and this week from Gippsland and India, the value of Ham Radio in emergencies is a real asset to the community.

Still in India, Ray VU3ORN reports that at the International Amateur Radio Union leaders meeting recently in Vienna, they came up with a definition of what constitutes a valid Amateur Radio contact.

At least on the VHF and UHF bands in ITU Region 1.

According to the newly crafted regulation, the minimum requirement for a valid QSO on VHF and higher bands is a contact is one where both operators during the contact have mutually identified each other, received a report, and received a confirmation of the successful identification and the reception of the report.

The report emphasizes that the responsibility always lies with the operator for the integrity of the contact. It also says that this ruling is 'technology neutral' and applies to all analogue and digital modes.

WEIRD N WONDERFUL

power puzzle

>From the weird and wonderful file, we report on a mysterious energy source at Bendigo and central Victoria which has been dubbed a 'power puzzle'.

Local factory owners in Prospect Road Bendigo East have claimed that thousands of dollars worth of equipment has been destroyed and the cause is unidentified.

Energy Safe Victoria reports receiving examples of incidents that include fires at power points not connected to the electric supply and equipment blowing fuses when not connected to any supply point. Very strange indeed!

Apparently this first occurred when the industrial estate was being set up a decade ago. There were incidents of unplugged power tools operating or being damaged and new fluorescent tubes lighting up while still in their boxes.

Energy Safe Victoria has set up chart recorders within the factories in the latest in an attempt to track down and solve the mystery.

Where might this all lead, perhaps the discovery of a new source of energy, perhaps not. Indeed we'll try and keep plugged into this investigation and illuminate everyone on the findings.

I'm Jim Linton VK3PC and you're listening to VK1WIA.

JULY 14-15
The annual IARU HF World Championship, Trevor Quick joins us from Adelaide:-

Get Ready for the IARU HF World Championship, July 14-15!

Participation in the IARU HF World Championship has grown steadily for the past four years, despite solar activity trending in the wrong direction. The creation of Low Power and QRP categories has contributed to increasing both the popularity and the competitiveness of the event.

The ARRL administers the HF World Championship on behalf of the IARU. At its May 2007 meeting the IARU Administrative Council discussed various issues related to the event and asked that the ARRL devote the resources necessary to maintain a high standard of adjudication.

A condition of entry in the IARU HF World Championship is that each entrant agrees to be bound by the provisions of the announced rules, by the regulations of his/her licensing authority, and by the decisions of the ARRL Awards Committee acting for the IARU International Secretariat. Leading competitors should expect their entries to be carefully scrutinized. If exceptional results are claimed, entrants must be prepared to explain how they were achieved.

Reminder: In addition to the zone and "HQ station" multipliers there are four additional multipliers available per band by contacting members of the IARU Administrative Council and the regional IARU executive committees. Administrative Council members may send "AC" instead of their zone, while regional executive committee members may send "R1," "R2" or "R3" as appropriate.

See you on the air for the 24 hours beginning at 1200 UTC Saturday, July 14
(David Sumner, K1ZZ Secretary, IARU)

AUGUST 11/12 Remembrance Day Contest (The RD) wia.org.au

With an update, here is the "birthday boy" Peter Harding.

Hello listeners, yesterday marks another aging year for me, and a lot closer to being called snowy, in my youth I was auburn then grey and well what is left has faded to a snow colour, enough about me we are still counting down to the 11th Aug and is now only 37 days to the 2007 RD contest.

This week saw some clarification required for some rules, in Paragraph 15 relates to logs, here we have confirmed that a separate log is required for the HF bands, that is, all Freq's below 50mHz are to be sequentially numbered, irrespective of what frequency on the HF band, likewise a separate sequential numbered log will be required for operation above 50mHz.

On page 5 of the rules under the declaration section some software writers are including an area that requires you to tick as your declaration certification.

Hand written logs will still be require a hand written, signed declaration.

And as before ANY LOGS THAT ARE RECEIVED AFTER THE CLOSING TIME WILL BE RETURNED.

On the WIA Website the rules are available along with associated documents.

Thanks Peter, well that's the RD now let's rewind to some highlights of the 2007 VK/ trans-Tasman 80 meter Contests

Over-all participation was up slightly on last year's record, due to an increase of mainly VK4's.

Phone - 12th May:

The 80M Phone was won by ZL1FF Trevor Buckeridge, scoring 2653.
VK3FRC (Frankston & Mornington Peninsular ARC), came in 2nd, scoring 2612.

QRP Phone Category was won by VK2ENG Mike, from Gundaroo, NSW.

CW - 26th May:

1st place went to VK3TSN, scoring 796.
2nd was VK3MV on 468,

QRP logs were received, with VK5BLS winning the Category.

That's the contesting scene, I'm Felix VK4FUQ.

NOW ROBERT BROOMHEAD - VK3KRB.

WW SPECIAL INTEREST GROUPS --- FINAL FRONTIER

Astronaut Suni Williams, KD5PLB, Back on Terra Firma

Suni Williams, KD5PLB, International Space Station (ISS) Expedition 15 Flight Engineer, came back to Earth Saturday, June 23 on the space shuttle Atlantis (STS-117), wrapping up a six month stay during which she became the new record holder for the longest single spaceflight by a woman. While on the ISS, Williams participated in 33 Amateur Radio on the International Space Station (ARISS) contacts. ISS Expedition 12 Commander Bill McArthur, KC5ACR, holds the record for the most ARISS school contacts in a single mission at 37.

Williams launched with the crew of the space shuttle Discovery (STS-116) on December 9, 2006. She docked with the ISS on December 11. Clay Anderson, KD5PLA, part of STS-117, replaced Williams as ISS Flight Engineer. STS-117 was launched from Florida June 8 and docked with the ISS June 10. Its mission lasted almost 14 days.

"The space station's just a stepping-stone to get us to understand space, and how to live and work in space, and then potentially get back to the moon is the next stepping-stone. How to work in a low-gravity environment and how to work in an environment that is not habitable for us that will take us to the next place, maybe Mars and then beyond," Williams said.

While in space, Williams, a US Navy helicopter pilot who holds the rank of Commander (O5), worked with robotics operation on the ISS and participated in four spacewalks. She was also NASA ISS Science Officer for part of her time in space. The primary focus of US science on the ISS is research on how people can live and work safely in weightlessness.

Williams participated in the 2007 Boston Marathon from the ISS. She competed as an official entrant in the annual Patriots Day event from 210 miles above Earth. Williams ran on an ISS exercise treadmill, circling Earth at least twice in the process and going as fast as 8 MPH while flying more than 5 miles per second. "I [hope to] encourage kids to start making physical fitness part of their daily lives," she said. "I think a big goal like a marathon will help get this message out there."

This is WIANEWS for week commencing JULY 1 2007

The WIA offers to it's members a range of services, including a personalised WIA email address..

Since the start of the year, the WIA has added over 120 member email address to our mailserver, taking the total number of people who have availed themselves of this member service to around 800.

So what does it all mean and how does it work?? .... well ...the WIA email server allows you to establish "yourcallsign@wia.org.au" with all emails sent to this address automatically forwarded to either your home or work email account..

So what benefits does really provide?

Well, firstly it provides YOU with ONE consistent email address. If at some time you choose to change your ISP, (for one with a better plan) then by having a WIA email address, means your friends and colleague will still be able to email you after you have changed ISP meaning you don't have to contact them all and advise them of your new address. When you change ISP all you need to do is advise the WIA via a simple form on the WIA website and we do the rest.

It couldn't not be any easier !!

A second benefit of the WIA email address, is in receiving informative Amateur Radio news as it breaks sent directly to YOUR email box..

To obtain your own WIA email address today, visit our website www.wia.org.au and simply click on member services, then select email address, and fill out the application form.

WIA Director Trevor Quick says that on 25 June 2007 WIA President Michael Owen VK3KI and WIA Director Peter Young VK3MV met with Mark Loney, Executive Manager Pricing and Policy, Alan Jordan and John Kington at the ACMA Central Office in Canberra.

The meeting was initiated at the request of the WIA for a briefing on the delays in dealing with a number of matters, particularly arising out of the Amateur Service Review Outcomes Paper. The ACMA acknowledged the delays and sought to work with the WIA in addressing its concerns.

Of particular concern to the WIA was the delay in the making of the further amending Determination to give effect to the balance of the matters

identified in the Outcomes paper, now a delay of 3 years. The WIA also raised the delay in finalising the arrangements with CEPT to allow Australian amateurs travelling overseas the privilege of operating in other countries without the need to obtain an individual authorisation in those countries, and the delay in the issue of a Class Licence to enable amateurs visiting Australia to operate here without the need for an individual licence.

Another concern was the delay in the finalisation of the issue or re-issue of 2 letter callsigns.

The WIA is also concerned at the continuing uncertainty about the future of the management of the amateur examination and the related certificate issue, as well as the callsign management function.

The WIA pointed out that the delay in the LCD meant that uncertainty prevailed over the power Foundation licensees permitted, the privileges of Foundation licensees and also that the WIA's publication "The Foundation Licence Manual" was running short and it could not be reprinted until the regulations could be up dated.

While the WIA accepted that the current delay in the LCD was beyond the direct control of ACMA, Mr Loney offered to do all he could to achieve a speedy finalisation of that, and that other immediate solutions would be investigated to address a number of the other problems faced by the WIA and its members. Mr Loney indicated that more resources would commence next week to address these outstanding issues with the view to finalisation as soon as possible.

In particular, work on the visiting/visitor licence issues has commenced and will be completed as soon as the enabling legislation is drafted.

The ACMA advised that a statement on the allocation process for the issue of two-letter callsigns would be made shortly, and the announcement may be made within a statement addressing the broader issues surrounding callsign management.

In relation to the outsourcing arrangements, the WIA was given a briefing on the process the ACMA intends to follow.

The WIA representatives felt that the meeting was positive and conducted in a constructive manner with a commitment to explore a range of options to meet the concerns expressed by the WIA on behalf of its members.

Jeff VK4XJJ is still going strong on his walk across Australia, and again this

week we'll talk to Jeff as he leaves Birdsville, the half way point in his trek.

But he still wants to hear from YOU, and it is these calls in particular that keep him going!!

Every Day, from 5:30pm Eastern on 40 meters, 7045 put out a call to VK4XJJ

>From Wednesday 20th to Tuesday 26th June Jeff walked 165 Kms to Birdsville.

Arrived at 11:45, just in time for lunch.

During one evening sked he said " I am going like a train".

Temperatures have ranged between 8 to 25 degrees C.

Not always warm enough early in the morning but comfortable in the tent.

Jeff sent over 600 pictures, we will pick out 40 for the web pages.

Single pictures are free to download.

He will stay in Birdsville for a few days to catch up on emails, phone calls to family and collect some supplies posted in.

179 Kms after Birdsville will be half way on this great walk.

On this walk to Karumba in the Gulf and on the return drive to Port Augusta Jeff's goal is to raise $10,000.

All proceeds to DeafBlind (NSW) Inc. to aid the purchase of a small bus with some places for wheelchairs.

Regards,

Bill Johnson VK2FWGJ

for Jeff Johnson VK4XJJ Walking for DeafBlind awareness

AMATEUR RADIO - HOME OF THE GOOD GUYS

AFRI75

During the IRTS Jubilee expedition to Swaziland the team met with the Scout Association and agreed to support their Thirst for Life Programme, which helps Aids orphans in Swaziland.

The team is pleased to announce that the first initial funding for the project of 350 Euro is on its way to Swaziland and this will fund the purchase of chickens for their farm.

The money was raised by donations included with direct QSL cards received from stations worked around the world, together with funds raised from the sale of Afri75 caps at the IRTS AGM in Cork.

The team are still anxious to continue support for the project, and if you think you can help please contact Paul EI2CA. You will find details of the project on the Afri75 page of the IRTS website.

BPL INTERFERENCE - THE BATTLE CONTINUES

VK7news says Owen Duffy VK1OD has prepared some notes on his interpretation of the ACMA Mt Nelson report that was recently released.

Owen suggests that the background measurement are most likely the reporting instrument's internal noise as they do not match expected ambient noise levels.

The BPL emission levels are up to 55dB above the expected ambient noise levels and even within the notch on the 20m band emissions are 37dB above the expected ambient noise level.

Notch depth is on average about 22dB less on 20m band, 21dB on average in the 17m band and on average about 18dB on the 15m band.

Owen concludes that the measurements taken using Conrad's 20m quad once you take into account the difference in test receiver and amateur receiver bandwidth results in a noise floor degradation in the order of 11.4dB within the 20m notched segment.

It is an interesting read and I encourage everyone interested in BPL to take a look. The notes can be found at the address on the email and internet editions of this broadcast.

AROUND VK in 80 Seconds.
(vk6fxyl)

VK2

Allan VK2 JED is asking those in the Westlakes club and region to fossick through their gear to see if there is anything that they would like to donate to the club Market/Field day organised for the 14th of July.

If you find anything, you may leave it at the club premises on either Tuesday nights or Saturday afternoons.

July 14 again is the date, the time 8am.

VK3

July 21 - Gippsland Gate Radio & Electronics HamFest - 10am

David Ryan VK3LOZ says the EMDRC has a propposal for a club project, construction and tuning of a wire dipole for use on the 80 metre amateur band.

For those who require it they'll will be making a "Ugly Balun" to match the antenna to the feed wire. (Those who wish to use a commercial Balun are also welcome to do so, or omit the Balun altogether.)

Following construction they will demonstrate the various methods used to tune antennas:-

1/ with a SWR meter
2/ with a Grid dip Oscillator

3/ with an MJF 259B HF/VHF SWR Analyzer

The proposed date of the make day is Saturday July 28 10.00 AM to 4.00 PM at the EMDRC Burwood club rooms. Register interest at VK3AMN@wia.org.au

VK4

The Annual general Meeting of the Dalby & District ARC will be held on Sunday August 5th at 2PM at the 4DDD FM studios 107 Drayton street Dalby.

All members are encouraged to attend, and visitors are welcome. Also please note that the postal address for the club is 15 Bunya Street Dalby, and all correspondence should be directed to this address. All Emails should be sent to HYPERLINK holmzie@bigpond.com
(Neil VK4NF).

VK5

Saturday 23 June, the VK5 VHF/UHF beacons VK5VF fell silent, after some 44 years of operation from their Mt Lofty broadcasting site.

The 52.450 MHz, 144.450 MHz, 432.450 MHz and 145.650 MHz Morse transmitters were switched off at 0215UTC and the equipment removed at the request of the national owners of the site.

1296.450 MHz has not been on air recently.

Mark VK5AVQ told us "The beacons have been a reliable signal source across much of South Australia and Western Victoria since their commissioning in June 1963. The only significant down time was following the 1983 Ash Wednesday fires.

Thanks to VK5ACE, VK5KK and VK5KDK and the many others who have supported the project, even those just offering reports.

Hopefully we will find another suitable site, but the current one will be a hard act to follow.

VK6

August 5 - HAMFEST 2007 happens in Perth at 9am.
Cyril Jackson Recreation Centre Fisher Street Ashfield

Also in the State of Excitement VK6 Next Monday... Tomorrow is the Monthly Meeting of the West Australian Repeater Group, 1930 h @ the 1st Hillview Scout Hall, crn Gibbs St and Welshpool Rd East Cannington...
Visitors welcome.

VK7

Coming up in the apple isle over the next few months:

AUSRADIO FoxHunt Tuesday the 3rd July at 7pm meet at Parks St Launceston.

REAST • Independence Day Mid-Winter Feast on July 4th at 6:30pm at the Domain.

NTARC • Meeting - Wednesday July 11th at 7:30pm at Block B Alanvale TAFE College Launceston.

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6FXYL

The Wireless Institute of Australia's Foundation Licence Manual is a full colour manual consisting of 95 pages of information for those studying, or those who would just like a reference book for Foundation Licence Operators.

The manual contains the all relevant information you will need to know to successfully complete a training course to obtain our foundation licence.

It also contains a wealth of information a Foundation Licence operator will need. Items like Band Plans, Electrical Safety information, operating procedures such as the Q code, how to contact you local radio club, the WIA and much more.

For more information on obtaining the foundation licence manual please visit wia.org.au
(Alan VK4YAR)

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or training in Amateur Radio go to wia.org.au and check out the club pages.

Participating clubs keep this site up to date and post the latest information for all to see.

Also check the text edition of each news edition, where we do keep a secondary listing.

On the audio broadcast we will continue to give new information when it is received, but just in case you miss it one week, you can always access our text

Help amateur radio continue to grow

Do you know someone who could be interested in joining our hobby? Then encourage them to enrol in a Foundation Licence training course.

Next Foundation Licence course, and Standard / Advanced assessments .....

NEW SOUTH WALES

ARNSW regularly holds Foundation Licence Assessments as well as Exams for Standard and Advanced Licences.
Held on the last weekend of each EVEN numbered month.

Waverley Amateur Radio Society (SYDNEY)
They hold Foundation Licence courses regularly, email the club at

exams@vk2bv.org
OR visit vk2bv.org or call Simon, VK2UA on 9328 7141.

VICTORIA

At Bendigo classes and licence assessments are conducted by Ross Pittard VK3FCE who can be contacted via email vk3fce@internode.on.net

The Central Goldfields Amateur Radio Club, Maryborough regularly holds classes. Contact Peter Rafferty VK3CC on 5460 4387 or email majorca49@hotmail.com

QUEENSLAND

On the Gold Coast and want to talk to the world through their IRLP and EchoLink systems? Or already licensed and wish to upgrade Foundation to Standard? Well classes are held at the Nerang Clubhouse of the GCARS, ring Roy VK4IG on 5539 3530 Exams can be taken at a time to suit you.

TARC WIA Exams Information
Exam sessions are held on demand with WIA Assessors and assessment packs available for all 3 levels of licensing.
Contact theTARCinc WIA Exams Regional Co-ordinator Roger/VK4CD 0417 638366.
www.tarc.org.au/tarcexam.htm

Tablelands Radio and Electronics Club
TREC WIA Exams Information
TREC will conduct exam sessions as required, at a time to suit the candidate. WIA Assessors and assessment packs are available for all 3 levels of licensing.
Contact the TREC WIA Exams Co-ordinator Dale VK4DMC on 4091 3700 or vk4dmc@wia.org.au for further information.

SOUTH AUSTRALIA

Adelaide Hills Amateur Radio Society will run Foundation licence's at the Aviation Museum, 56 Lipson Street Port Adelaide, 2 weekends August 4th and 5th then November 3rd and 4th.
Contact the course convenor, Sasi Nayar on 0417 858 547

Examinations are hosted by South Coast Amateur Radio Club.
Those interested in sitting for foundation or license upgrades, please contact by email
vk5kbj@internode.on.net

TASMANIA

Radio and Electronics Association of Southern Tasmania

For more information or enroll please contact Reg Emmett VK7KK by emailing regemm@ozemail.com.au or calling 0417 391 607

And remember Foundation Licence Manuals and CD's are available for purchase at McCann's Model World in Elizabeth St. Hobart at $20.

A quick reminder about "Intro to the Standard Licence" sessions
on a Saturday afternoons from 1:00 to 4:00pm in the Domain clubrooms.

These sessions are an introduction to the standard licences and
attempt to de-mystify the upgrading process.
(Ken VK7DY/Reg, VK7KK)

DISCUSSION POINT

Further on the reported intrusion of an echolink node on the vk 2 meter fm
calling frequency in VK4.

gLENN vk4bg/TZL drew our attention to some Amateurs in the Bundaberg /
Hervey Bay Region in Queensland operating on the node in this important
and nationally approved segment of our band.

Although allegedley suggesting perhaps 146.500 was not the spot for such
activities he apparently has not gotten the positive result he expected.

These days 146.500 is totally useless for the purpose it was 'gazzetted'.

Glenn was told that the node had existed for some 4 years
...and NOT ONE Amateur had seen fit to complain on the Band Plan issue.

So, as there are always 2 sometimes 3 sides (hihi) to every story,

Gordon VK4KGS is in Bundaberg and Rob vk4mod setup the node some 4 years ago
and the reason they chose 146 500 was because they monitored quite a few
different frequencies over a couple of months and found 146 500 did not get
ANY traffic on it as opposed to adjacent simplex channels.

Also another reason for ch50 being chosen is that any hams travelling in the
area in simplex range of the node will hear the echolink node id on ch50,
which quite a few hams sit on while travelling), and when they hear the
echolink ident they will know that they can use it to call back home or
anywhere else in the world.

The echolink node is also used daily by locals in Bundaberg and in fact there
is a ex navy net on it daily connecting ex navy hams all over the world.

Also it is busy at night with VK and international contacts.

VK4KGS told WIANational News this simplex node id's every 10mins and has a
3min time out and abides by all of the determinations set out in the LCD as
well as the rad ACT.

Back to the south, in the Wide Bay members of the MERG(e) group when asked
said they were a little puzzled by the item last week as in the Wide Bay
neither President, nor any of the MERG members he asked, have any
recollection of ever hearing such on 146.500.

Moreover, no-one recalls ever hearing ANYTHING on 146.500 in Maryborough
and they generally use 146.550 as a local listening and working frequency.

Ray went on to tell WIA National news there could even be argued a case for
146.500 to be designated as a nation-wide Echolink frequency so that

travellers would not need to change frequency for each town they came to in order to maintain contact with "Home Base".

This of course would not work if the node was connected to, say live streaming ot NASA's Shuttle Missions or similar, but thereby hangs a different tale.

So what do YOU think?

Is this "out of our bandplan activity, in this case a good idea? OR do you think it could be the start of caos as far as who does what where?

As in our sign off each week..... we've reported, you decide.

==========

NEWS FROM ARNEWSLINE

MICROWAVE SDR RADIO BEING DEVELOPED

Radio amateurs interested in the microwave bands may find the Microwave Software Defined Radio project interesting. Its goal is to provide a transceiver operating on the 144, 422, 1268, 2400 MHz and above bands, covering the whole of each band. Full duplex cross-band operation is also planned specifically for satellite use. More details are on line at the Microwave Software Defined Radio website. Its in cyberspace at http://uwsdr.berlios.de

JPL CONGRATULATES AMSAT-DL ON VOYAGER 1 INTERCEPT

The Flight Team that oversees NASA's Voyager One deep space probe has congratulated AMSAT Germany on its reception of a signal from the spacecraft. In March 2006, the signal from Voyager 1 was received by the AMSAT D-L team using the 20 meter dish in Bochum.

Voyager 1 is the furthest object away from earth to be built by humans. As a token of their collective appreciation, the controllers not only confirmed the reception report. They also sent Amsat Germany a photo of the Voyager Flight That picture can be found on line at
http://www.amsat-dl.org//
index.php?option=com_content&task=view&id=142&Itemid=97

COMMEMORATING 70 YEARS OF TRANS ATLANTIC FLIGHT

To commemorate the 70th anniversary of the first transatlantic passenger test flight, a special re-enactment flight is planned by Captain Patrick White and his son Ian. The two will be flying their "Vintage Lady", a PBY Catalina Flying Boat, from Botwood Newfoundland to Foynes, Ireland, on the 5th and 6th of July. To celebrate this event, Ireland's Limerick Radio Club has been invited by the Foynes Flying Boat Museum to operate a special Amateur Radio station in conjunction with the commemorative reenactment of the 1937 flight. EI70FOY will be on the air from the 6th to the 8th of July on 80 throughg10 meters as well as locally on VHF and UHF. A special QSL

card, commemorating the flight, will be sent to all stations worked over the three days . All QSL cards should be sent to the Club's QSL Manager Alan Cronin EI8EM at his callbook address.

FIGHTING THE 10 METER FREEBAND INVASION
If you are wondering what all those conversations without call signs are on 28.085 MHz, well it appears to be a small invasion of unlicensed truckers and so called Freeband operators of our 10 meter band.

We have more in this report:

Originally confined to portions of the mid-West, the pirate trucker and Freeband epidemic appears to be spreading nationwide. This, as more and more of these illegal operators are making their unauthorized home on 28.085 Megahertz and several other 10 meter frequencies.

And what is the Amateur Radio community doing about this invasion? On the surface at least, very little. With the upper High frequency bands not offering very much D-X these days, the majority of hams are sticking to 20, 40 and 80 meters with few stations heard in the 15, 12 and 10 meter spectrum. So the truckers and Freebanders see this is fair game for their unlawful operations and are busy establishing squatters rights in these bands.

What about the FCC? Well its doing what it can. There have been several well publicized violation notices sent to trucking firms. They request owners to instruct their drivers to curtail any operations for which they are not licensed and threatening punitive action such as fines. But that's about it. With the FCC enforcement folks stretched thin and Freeband operations being among the lowest of priorities on the enforcement agenda, there is no reason to believe that there is going to be any sort of massive sweep by the Federal government to clear these pirate operators out of the ham radio bands.

In the end, it will be the ham radio community that will have to defend these frequencies. And it does that by using them. If hams load up 10 meters or any band with legitimate Amateur Radio operations, there will be no place for the illegals to play and they will go elsewhere.

In the case of 28.085, there have been suggestions that this frequency become a national C-W or RTTY Calling Channel. That's a pretty good approach. Another is for every ham with the capability of operating 10 meters to start holding QSO's on that frequency. As any Morse enthusiast will tell you, C-W can get through even when faced with all sorts of QRM including pirate operators using voice.

The bottom line. if licensed radio amateurs fill up 10 meters even for local chats, the truckers and Frreebanders will soon be looking elsewhere for a new home.

For the Amateur Radio Newsline, I'm Evi Simons, in New York.

About two decades ago, then 73 Magazine editor Wayne Green, W2NSD,
coined the phrase "Use it or loose it." Back then it was applied to
the pending transfer of 220 to 222 MHz away from Amateur Radio. Today
the same words ring important in fighting those without licenses who
are trying to take 10 meters forcibly from hams.

==========

NEWS SOURCED TO THE RSGB NEWS SERVICE AND READ BY G4NJH FROM GB2RS NEWS

Foyle and District Amateur Radio Club (FADARC) will be heading to St Angelo
Airport, Enniskillen for the 2007 Jet World Masters competition.

The competition runs from 5 July to 14 July the club will be on the air
during the final two days of the event with its call sign MN0AKU/P.

This event showcases model aircrafts capable of flying at up to 250 mph.

In attendance will be 100 pilots from some 31 countries demonstrating their
skills in what has been described as the ultimate radio-controlled model
aircraft competition. More details can be viewed at www.jwm2007.com.

Help is still needed for the British leg of the Tour de France. Kent RAYNET
requires a large number of RAYNET members being able to pass third party
traffic on 8 July.

Special event station 9A07P will be active on all bands and modes until
31 December to celebrate the city of Djurdjevac. All QSOs will be confirmed
automatically via the bureau.

The annual transmission on Alexanderson Day with the Alexanderson alternator
on VLF 17.2 kHz will take place Sunday 1 July at 0900 UTC. Tuning up will be
from 0815 UTC and the transmission will be repeated at 1300 UTC, tuning up
from 1215 UTC. The station will be open to visitors. There will be activity
on amateur radio frequencies with the call SK6SAQ. For more information log
onto www.alexander.n.se/. QSL reports are very welcome.

JULY 14-15

Rules are at www.iaru.org/contest.html

Participation in the IARU HF World Championship has grown steadily for the past four years, despite solar activity trending in the wrong direction. The creation of Low Power and QRP categories has contributed to increasing both the popularity and the competitiveness of the event.

The ARRL administers the HF World Championship on behalf of the IARU. At its May 2007 meeting the IARU Administrative Council discussed various issues related to the event and asked that the ARRL devote the resources necessary to maintain a high standard of adjudication.

A condition of entry in the IARU HF World Championship is that each entrant agrees to be bound by the provisions of the announced rules, by the regulations of his/her licensing authority, and by the decisions of the ARRL Awards Committee acting for the IARU International Secretariat.Leading competitors should expect their entries to be carefully scrutinized. If exceptional results are claimed, entrants must be prepared to explain how they were achieved.

Reminder: In addition to the zone and "HQ station" multipliers there are four additional multipliers available per band by contacting members of the IARU Administrative Council and the regional IARU executive committees. Administrative Council members may send "AC" instead of their zone, while regional executive committee members may send "R1," "R2" or "R3" as appropriate.

See you on the air for the 24 hours beginning at 1200 UTC Saturday, July 14! - David Sumner, K1ZZ, IARU Secretary

Boat Anchor Sprints:
August (11), October (13).
Local ZL time: 2000 to 2100 hrs

Section 1: Old radios - all valves - i.e. ZC1, 19 set, Heathkits, any home brew set, but must have all valves.

Section 2: Any Hybrid transceiver (must have valve finals i.e. FT200, FTDX400/401, Drake, FT 101s, etc..

Amplitude Modulated signals only.

The overall winner shall be the entrant having the highest points score which will be published in the following New Zealand "Break-in".
(Jamie Pye ZL2NN, Editor NZART's InfoLine)

AUGUST 11/12 Remembrance Day Contest (The RD) wia.org.au

Well the month of June is gone and we are counting down to the 11th Aug and is now only 41 days to the 2007 RD contest.

An email query that came across the desk this week, concerns the use of Computers within the RD.

Within the rules in paragraph 10b reads :
Automated operation is not permitted. The operator must have physical control of the station for each contact. However CW and voice keyers are permitted, although the use of computers is restricted to logging purposes only.

The keywords here are ‘Automated Operation’ I believe is self explanatory, and that Computers is restricted to logging purposes.

On the WIA Website the rules are available along with associated documents.

7th World HST Championship will be held in Belgrade Serbia September 19-23rd.
www.hst2007.org

NOVEMBER 17/18
Spring VHF-UHF Field Day - November 2007
For everyone who likes to plan ahead - please note the dates for this year's Spring VHF-UHF Field Day. It will be held on November 17/18, a week later than usual. This will prevent a clash with club activities in two states.

MEDIA WATCH

North West Tasmanian Amateur Radio Interest Group

Night Broadcast Update

Now that there has been a vast improvement in the speed and capacity of the Internet services at Club Host Station VK7AX, testing is now under way with video streaming from this facility.

Shortly it is anticipated the Amateur Broadcasts emanating from Club Station VK7NW on 70CM ATV during the week will be available world-wide using video streaming. The facility is currently being tested and listeners will be advised when and where the stream is available as soon as the tests are completed and the performance is rated as acceptable.

Also being planned is a audio stream of the broadcasts via the Sydney IRLP Reflector on proposed Channel 5907.

Listeners will also be advised when the feed is being sent to the reflector.

Stay Tuned for further updates.

(73's until next time... Tony VK7AX, President, NWTARIG)

The episode of the 1960 BBC TV comedy series 'Hancock's Half Hour' starring Tony Hancock and in particular, the infamous bungling radio ham segment containing those now classic lines "It is ah not raining in Tokyo" and

"GLK London calling the world" is available on YouTube.

This classic episode shows Hancock as a ham radio enthusiast who receives a mayday call from a ship in distress but keeps getting distracted just before he can take down its position.

The episode is split into three parts.

To view log onto YouTube and type in Tony Hancock.
(rsgb)

WIRELESS WEATHER

Last week we brought you the new courtesy of Graham Rogers in VK6 that the solar flux figure of 66 was reached June 20 and maybe we were at the bottom of the cycle, Graham said maybe we drag along the bottom for awhile OR enter a 'Maunder minimum'.

So what is a Maunder minimum I hear you ask.

Justin VK7TW in the VK7 news explains it thus:-

"The Maunder Minimum is the name given to the period roughly from 1645 to 1715, when sunspots became exceedingly rare, as noted by solar observers of the time. It is named after the solar astronomer Edward W. Maunder (1851 1928) who discovered the dearth of sunspots during that period by studying records from those years. During one 30-year period within the Maunder Minimum, for example, astronomers observed only about 50 sunspots, as opposed to a more typical 40,000 50,000 spots."

EMERGENCY FREQUENCIES REGION ONE
21.360 - 18.160 - 14.300 - 7.060 - 3.760 MHz.

Bharat Balsavar VU2BDX has put the call out in India, a suggestion/reminder
all local ham groups get themselves equipped for emergencies particularly
weather related events.

"With the monsoon setting in, we are again in that part of the year when
floods and cyclones will quite likely hit some places.

We should ideally have two types of volunteers - one that is prepared to
move to and rough it out in the vicinity of such emergencies and the other
those that are prepared to provide com support from their homes for
relaying messages and coordinating with local authorities.

Also a list of items to be kept ready as 'emergency kits' - equipment,
batteries, mobile/portable antennas, solar cells, personal protection
equipment (PPEs), medicines - preventive and curative, etc. irrespective of
whether one is working out of home or mobile at the emergency site.

73, Bharat, VU2BDX"

1 GB2RS NEWS Sunday 8 July

The news headlines

* New Islands on the Air website

* Dick Biddulph, M0CGN / G8DPS becomes Silent Key

* Sheffield and Rotherham RAYNET Group to the rescue

* Hungarian amateurs get experimental licence for 70 MHz

The RSGB Islands on the Air scheme, sponsored by ICOM, launched its new website on 21 June. The new site includes many innovative improvements, and contains also many new features including the ability to view one's own record of confirmed island groups. Soon it will be possible for participants to claim additional credits on line and even to claim credit for IOTA Contest QSOs without the need for QSL card verification.

The site at www.rsgbiota.org has already proved to be a great success. Within the first week, 34,308 pages had been viewed an average of about 4,900 per day by users in 64 different countries. The homepage, search page and island group information pages being the most popular. About 383 users have registered to use the QSO credits part of the site, of which 163 are new to the IOTA programme, proving the value of moving to an on line management system.

The site was developed primarily by Dominic Smith, M0BLF, with Martin Atherton, G3ZAY, acting as the liaison between the project team and the IOTA Committee. Enquires about the website can be emailed to IOTA.online@rsgb.org.uk.

The RSGB is saddened to announce the death of Dick Biddulp, M0CGN/G8DPS. Dick served two terms on the RSGB Council in the mid 1990's, was the long standing chairman of the former RSGB Publications committee and editor of the RSGB Handbook. Dick passed away on Monday 25 June and his funeral took place on Friday 6 July.

Sheffield and Rotherham RAYNET Group were activated during the week in response to the flooding in South Yorkshire. The main concern was the Ulley dam, amid fears it could collapse and swamp nearby villages. The group were stood down at 9pm on Tuesday evening, but contingency plans were put in place to reactivate the group should the need arise.

An experimental radio licence has been issued to Haros Radioklub in Hungary that permits its 30 members to use the 70MHz band. This is the

first time that the band has been made available to amateurs in that country.

The licence started on 1 July and is valid for 30 days. The aim of the experiment is to study propagation of radio waves in the 70 MHz band. Until February this year the band was used for FM broadcasting. The frequency range permitted for the experiment is 70.000 - 70.500 MHz and the licence is valid for all operating modes including CW, SSB, narrow band FM and digital modes like JT6M. Maximum effective radiated power (ERP) is limited to 1kW.

The original request was submitted in April and the National Communications Authority responded quickly and cooperatively. In the experiment the amateurs have to identify themselves by a "call name" as

2 well as their normal callsign. The call name is composed by a prefix "70m" and a suffix of the amateur radio callsign, for example 70M1BVC HG1BVC 70012.5kHz JN87FI beacon.

The long term goal for the club is to contribute towards the joint efforts of gaining a 70MHz allocation for amateur radio service in Hungary and worldwide.

AMSAT-UK will be holding their 22nd International Space Colloquium at the University of Surrey, Guildford, from 20 to 22 July.

The Colloquium keynote lecture will be given by Pat Norris, Chairman of the Royal Aeronautical Society Space Group, entitled "Spies in the Sky: Surveillance Satellites in War and Peace". Starting with Sputnik 1 and the impact of its launch 50 years ago both on the Soviets and on the West, Pat will also discuss the social, economic and scientific benefits of satellites today in our daily lives. His presentation will take place on 20 July and will be followed by the SSC Research Poster Exhibition and tours of the satellite ground station.

The event is open to all. The RSGB GB4FUN van will be present throughout the event to allow visitors to work the satellites. A Beginners Workshop will be held on 20 July and an RSGB bookstall will be available on 21 July. For further details see www.uk.amsat.org/Colloquium/.

Participation in the IARU HF World Championship due to take place on 14 to 15 July has grown steadily for the past four years, despite solar activity trending in the wrong direction. The creation of Low Power and QRP categories has contributed to increasing both the popularity and the competitiveness of the event.

The ARRL administers the HF World Championship on behalf of the IARU. At its May meeting this year the IARU Administrative Council discussed various issues related to the event and asked that the ARRL devote the resources necessary to maintain a high standard of adjudication.

A condition of entry in the IARU HF World Championship is that each entrant agrees to be bound by the provisions of the announced rules, by the regulations of his or her licensing authority. Also by the decisions of the ARRL Awards Committee acting for the IARU International Secretariat. Leading competitors should expect their entries to be carefully scrutinised. If exceptional results are claimed, entrants must be prepared to explain how they were achieved.

The RSGB will be fielding a new call sign this year for the IARU HF Championship: GB7HQ. The contest takes place from 1200Z on 14 July to 1200Z on 15 July, GB7HQ intends to be active on all the HF contest bands on both CW and SSB. A list of the operators and host stations can be found at the station website, www.gb7hq.com.

The team are particularly keen to contact as many RSGB members on as many bands as possible and on both CW and SSB. They are also aiming to recognise contacts with GB7HQ. G3LZQ has agreed again to manage an awards program, with a series of attractive certificates on offer. These are

* Bronze award - for contacting GB7HQ on three band or modes

* Silver award - for contacting GB7HQ on six band or modes

* Gold award - for contacting GB7HQ on nine band or modes

* Platinum award - for contacting GB7HQ on twelve band or modes

Any operator on any station will be able to tell you the run frequency of all the other stations, irrespective of band or mode. The QSL manager for GB7HQ will be Nigel, G3TXF, either direct, via the bureau or Log of the World.

The EU Commission has adopted a Communication establishing the EU's positions on what needs to be achieved at this year's International Telecommunication Union, World Radiocommunication Conference, WRC-07.

3 At the conference, 191 countries will decide how they will share the radio spectrum, particularly for important application sectors including mobile communications, broadcasting and air transport.

The Commission highlighted a number of EU objectives that Member States negotiating at WRC-07 should achieve, including:

* Accommodating the spectrum demands of future terrestrial mobile systems

* Ensuring the effective protection of Earth Exploration and other scientific services from harmful

interference

* Satisfying the necessary spectrum requirements for digital radio broadcasting and for maritime

services in the 4 to 10 MHz bands

* Providing enough spectrum for aviation applications

* Preparing actions to support Community policies for the next WRC Conference due in 2011,

concerning spectrum flexibility, climate change and the Single European Sky.

And now for the details of rallies and events for the coming week

[Note to newsreaders: please exercise your judgement on whether to read the 8 July event, based on your service area and time of transmission]. On Sunday 8 July the York Radio Rally takes place from 10.30 at York racecourse. Details from Arthur, G8IMZ, on 07841 120 738. On Sunday 15 July the McMichael Rally and Boot Sale takes place from 9.30 at Reading Rugby club, just off the A4, east of Reading. Details from G0JMS, on 01189 723504 or on the web at www.McMichaelRally.org.uk. More details of these and future events can be found on pages 88 and 89 of the July edition of RadCom. Now for the news of special events

On 8 July, the Sudbury and District Radio Amateurs will be putting on special event station GB4LMR. It will take place at the Long Melford Rally, at the Farm Machinery Preservation Society's steam rally at Melford Hall, Long Melford in Suffolk. Operation will be from 80m to 10m and possibly 160m on SSB and digimodes. QSL via M0MJH direct or via the bureau. The Yeovil Amateur Radio Club will be operating GB2MBS Marconi Beam Station on HF throughout the day at New Barn Centre, Bradford Peverell, near Dorchester, on 15 July. It will be commencing at 1000 BST to mark the occasion of the 70th anniversary of the passing away of Guglielmo Marconi. On the day contact Derek, M0WOB, on 07974759669. Finchampstead Scout Group will be putting on a special event station GB1FSG on 22 to 30 July on SSB on the scouting HF bands on either 3.690, 3.940, 7.090, 7.190 or 14.290MHz + or - QRN. The station will be operated from the Lake District. Special event station 9A07P will be active on all bands and modes until 31 December to celebrate the city of Djurdjevac. All QSOs will be confirmed automatically via the bureau. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

David, OK1FJD, will operate on the HF bands and 6 metres as 4O6DJ from Montenegro until 14 July. QSL via OK6DJ.

4 UA9, Asiatic Russia, DL6XK, Gerhard, will operate the special station UE9CXK from Sverdlovsk, until 15 July. QSL via DL6XK via bureau. A Swedish expedition to Market Reef, is taking place until 9 July. Three or four operators will be active as OJ0/homecall on 160 to 2 metres CW, SSB and digital modes. More information will follow. Claude, F5OGE, will be active as CN2GE and CN2GE/m from Morocco between 13 and 29 July. He will be travelling from Tangiers to Rabat, Marrakech, Benni Mellal, Fes, and Tetouane and again Tangiers. Claude will operate CW and SSB, mainly on 40 and 20 metres, early in the morning and late in the evening (local time). QSL via home call, direct or bureau. Art, KG6ZWD, will be active as SV1/KG6ZWD/p from mainland Greece on 11 to 15

and 24 to 25 July. He will also operate as SV8/KG6ZWD/p from Andros Island, EU-067, on 17 to 23 July. Expect holiday style activity on 10 to 40 meters SSB and PSK31. QSL via home call, director bureau. Announced SSB frequencies where the 5 to 20 July operation from Botswana might be on are: 1840, 3790, 7075, 14220, 14265, 18145, 21270, 24935, 28450 and 50110. The team will be signing A25HQ during the IARU HF World Championship. Hank, W0CZE, will be active as YJ0CZE from Vanuatu on 14 to 21 July. He will operate on 10 to 80 meters SSB, 28495, 24950, 21295, 18150, 14190 & 14250, 7082 and 3795 kHz and CW 28020, 24895, 21025, 18075, 14020, 10105, 7010 and 3505 kHz. Rod, YJ8RN, of the Vanuatu Amateur Radio Society, is helping with preparations on site. QSL via W0FF. Marq, CT1BWW, Juan Carlos, EA3GHZ and Tomas, EA5YH, will operate as FS/home call and PJ7/home call from Saint Martin and Sint Maarten on 15 to 25 July. They plan to be active on 80 to 6 meters CW, SSB and digital modes with two stations. Further information can be found on their web site www.dxciting.com. Jose, CT1EHX, Toze, CT1GFK, Goncalo, CT1GPQ, Miguel, CT1IUA, Rui, CT2IHP, Jose, CT1DVG, Jose, CT1EPS, Arnaldo, CT2IOV and Antonio, CT2IOU, will operate SSB, CW and RTTY on 160 to 6 meters as CS26X until 22 July for the 26th International Motorcycle Rally in Faro. QSL via CT1EHX, direct or bureau. Look for RV3ATS, RV3ATT and RU3AVF to operate on 10, 15, 20, 40, 80 and 2 metres as RV3ATS/p from 16 mountains located in various different Russian Districts until 21 July. They also plan to participate in a number of contests on the VHF and HF bands. QSL via RV3ATS, direct or bureau. Pete, W2GJ, C6APR, Ed, K3IXD, C6AXD and Randy, K4QO, C6AQO, will be active from Crooked Island, NA-113, ARLHS BAH-005 on 26 to 30 July. They will operate CW, SSB, and RTTY on 80 to 6 meters and will participate in the IOTA Contest as C6APR. All QSLs via K3IXD. Now the contest news

The RSGB 80m Club Championship takes place between 1900 and 2030 on 11 July on the 3.5 MHz band, SSB mode. The exchange takes the form of RST and serial number. The IARU HF Championship takes place between 1200 on 14 to 1200 on 15 July on 1.8MHz to 28MHz bands, CW and SSB modes. The exchange takes the form of RST, ITU Zone.

5 The RSGB 144MHz Backpackers Contest takes place between 1100 to 1500 on 8 July on the 144MHz band, all modes. The exchange takes the form of RST, serial number and locator. The RSGB 432MHz activity Contest takes place between 2000 to 2230 local on 432MHz band on all modes. The exchange takes the form of RST, serial number and locator. The RSGB 50MHz Backpackers takes place between 1100 to 1500 on the 50MHz band, all modes. The exchange takes the form of RST, serial number, locator and postcode. Now the solar factual data for the period from 25 June to 1 July, compiled by Neil Clarke, G0CAS.

During the second half of the period the solar disc had two sunspot groups visible. However, solar activity was very low except for the 29th when a single low strength C class solar flare took place. Solar flux levels increased from 68 units on the 25th to 75 by the 28th and the 29th. The average was 73 units. The 90 day solar flux average on

the 1st was the same level as last week at 74 units. X-ray flux levels remained below the A1 for the majority of the time. Geomagnetic activity was quiet except for the 29th when activity increased due to a small recurring coronal hole. The Ap was 13 units. The average was Ap 6 units. Solar wind speeds increased from 330 kilometres per second on the 26th to 570 by the 30th. Particle densities started around 3 particles per cubic centimetre but on the 28th densities increased to 32 particles per cubic centimetre. A further increase to 57 particles per cubic centimetre took place the next day. Bz varied between minus and plus 4 nanoTeslas on the quiet days and between minus 12 and plus 9 nanoTeslas during the coronal hole disturbance. The past week saw the best VHF sporadic-E of the current season. There was a morning opening to Japan at 50MHz, which favoured stations in the north of England and Scotland. This was probably attributable to Short-path Summer Solstice Propagation, featured in G3FPK's VHF column in the current issue of Radcom. There were also good 50MHz openings to North America on several days, at times reaching the mid-west and the southern states. Multi-hop sporadic-E from North America was also reported on Ten metres. And G7CNF reported an interesting contact with VE9AA, cross-band between four and six metres on the 25th. And finally the solar forecast. This week the quiet side of the Sun is expected to be looking our way. Solar activity should be very low. The solar disc could be spotless on some days. Solar flux levels are expected to decline and be in the 60's for most of the week. Geomagnetic activity should be quiet except for around midweek when a small recurring coronal hole disturbance could take place. MUFs during daylight hours at equal latitudes should be around 19MHz for the south and 16MHz for the north. The darkness hour lows should be around 10MHz. Paths this week to the East Coast of North America should have a maximum usable frequency with a 50 per cent success rate of about 19MHz. The optimum working frequency with a 90 per cent success rate will be around 15MHz. The best time to try this path will between 1300 and 2200 hours UTC. Sporadic-E should take place most days this week. Also during any good openings on 50MHz, look for multi-hop openings to North America, several have took place over recent weeks. Also openings to southern Europe on 144MHz are still a possibility.

And that's all for this week from the propagation team.

transmission.]

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Sunday 8 July Felixstowe and District Amateur Radio Society is running special event station GB2FX for Felixstowe Museum at Landguard Fort. Contact Paul, G4YQC, by email to paul.whiting@bt.com.

On Sunday 8 July Southdown Amateur Radio Society is operating at the Beachy Head Site. Contact John, G3DQY, on 0124424319, or by email to vaughdqy@aol.com.

On Monday 9 July Basingstoke Amateur Radio Club is having a club meeting. Contact Frank, M0AEU, by email to barc@2lo.info.

On Monday 9 July Coulsdon Amateur Transmitting Society is having a DF hunt discussion and contest planning, plus Concorde video. Contact Andy, G8JAC, on g8jac@btinternet.com.

On Monday 9 July Surbiton Heritage Amateur Radio and Electronics Society will be welcoming new members and having an on the air evening. Contact Tony, G7DGW, on g7dgw@shares.uk.net, or on the web at www.shares.uk.net.

On Wednesday 11 July Aylesbury Vale Radio Society is having a BBQ hosted by Gerry and Mandy. Contact Roger, G3MEH, on 01442 826 651, or by email to roger@g3meh.com.

On Wednesday 11 July Chesham and District Amateur Radio Society is planning for the McMichael Rally. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 11 July Dover Radio Club is having a talk on fox hunting by Brian, G4SAU. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 11 July Fareham and District Amateur Radio Club is having a debate: "this house believes that the internet will kill off amateur radio". Contact Jim, M1JJN.

On Wednesday 11 July Farnborough and District Radio Society is having a talk on PSK31 by Derek, G3OFA. Contact Colin, M3IHS.

On Wednesday 11 July Harwich Amateur Radio Interest Group is having a BBQ and magnetic loop on-air night. Contact James, M0ZZO, on 01255 242 746.

On Wednesday 11 July Havering and District Amateur Radio Club is having an informal evening. Contact Dave, 2E0EBV, on 07956 594 514.

On Wednesday 11 July Norfolk Amateur Radio Club is having a briefing for members on the DF Trophy. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Wednesday 11 July South Essex Amateur Radio Society is having a talk on the history of codes by Ken, G0BBN. Contact Dave, G4UVJ, on 01268 697 978, or by email to southessex.ARS@btinternet.com.

7 On Wednesday 11 July Worthing and District Amateur Radio Club is having a video evening. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 12 July Horsham Amateur Radio Club is having a fox hunt. Contact or on the web at www.harc.org.uk.

On Thursday 12 July Radio Society of Harrow is putting G3EFX on the air. Contact Linda, G7RJL, on 020 8386 8586, or on the web at www.g3efx.org.uk or Chris 01895 621 310.

On Thursday 12 July Reading and District Amateur Radio Club is having a talk previewing the St Brandon DXpedition by Don Field, G3XTT. Contact Pete, G8FRC, on 01189 695 697, or on the web at www.radarc.org.

On Thursday 12 July Shefford and District Amateur Radio Society is having the club BBQ at Summerfields. Contact David, G8UOD, on 01234 742 757.

On Friday 13 July Hilderstone Radio and Electronics Club is having a talk by Don, G4TKR, on D-Star and PCB design with Eagle software. Contact Mike, G4MIX, on 01304 813 175, g4mix@waitrose.com.

On Friday 13 July Itchen Valley Amateur Radio Club is having a talk on ships communications by Vic, G3NVB. Contact Liz, M0ACL.

On Friday 13 July Mid-Sussex Amateur Radio Society is having a radio night. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 13 July Wimbledon and District Amateur Radio Society is having a talk and demonstration of the magnetic dip circle. Contact Jim, M0CON, on 020 8874 7456.

On Saturday 14 July Felixstowe and District Amateur Radio Society is having a field activity day at Hallowtree Scout Camp, Nacton. Contact Paul, G4YQC, by email to paul.whiting@bt.com.

On Sunday 15 July Radio Society of Harrow is operating GB2DHH. Contact Linda, G7RJL, on 020 8386 8586, or on the web at www.g3efx.org.uk or Chris 01895 621 310.

On Sunday 15 July Reading and District Amateur Radio Club is running the McMichael Radio Rally at Reading Rugby Football Club. Contact Pete, G8FRC, on 01189 695 697, or on the web at www.radarc.org.

NEWS FOR THE SOUTH-WEST

On Sunday 8 July the Cornish Radio Amateur Club is running its rally at Penair School, Truro. Contact Ian, 01872 561 058.

On Monday 9 July Cornish Radio Amateur Club is having a computer section meeting. Contact Ian, on 01872 561 058.

On Tuesday 10 July Flight Refuelling Amateur Radio Society is running Intermediate training. Contact Tony, G3PFM, on 01202 622 262.

On Wednesday 11 July South Bristol Amateur Radio Club Debriefing of the CHF NFD Team. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 11 July Taunton and District Amateur Radio Club is operating the club station. Contact William, G3WNI, on 01823 666 234, or by email to g3wni@btinternet.com.

On Wednesday 11 July Thornbury and South Gloucestershire Amateur Radio Club is on the air. Contact Tony, G0WMB, by email to tonytsgarc@beeb.net.

8 On Thursday 12 July Yeovil Amateur Radio Club is having an introduction to Morse by G3MYM. Contact Derek, 01935 414 452, or by email to m0wob@tiscali.co.uk.

On Sunday 15 July Yeovil Amateur Radio Club Sunday afternoon is having a club BBQ at Ham Hill. Contact Derek, 01935 414 452, or by email to m0wob@tiscali.co.uk.

NEWS FOR THE MIDLANDS

On Sunday 8 July Hucknall Rolls-Royce Amateur Radio Club is taking part in the RSGB VHF National Field Day at Crich, Derbyshire. Contact Carl, M0XBE, on 07979 092 447, or on the web at www.hrrarc.com.

On Monday 9 July Stourbridge and District Amateur Radio Society is having an open shack night. Contact John, M1EJG, on 01562 700 513.

On Monday 9 July Stratford Upon Avon District Radio Society is having a surplus sale. Contact Jack, G3VYE, on 01926 641 988.

On Tuesday 10 July Loughborough and District Amateur Radio Club is sorting out the club equipment ready for the move. Contact Chris, G1ETZ, on 01509 504 319.

On Wednesday 11 July Lincoln Short-Wave Club is having its summer quiz and BBQ. Contact John, G1TSL, on 01526 323 153.

On Wednesday 11 July Telford and District Amateur Radio Society is having a purchases night to decide what the society needs. Contact Mike, G3JKX, on 01952 299 677, or by email to mjstreetg3jkx@blueyonder.co.uk.

On Thursday 12 July Salop Amateur Radio Society is working on the SARS Power Meter. Contact Glenda, G1YJB, on 01939 235 412.

On Thursday 12 July Stafford and District Amateur Radio Society is working on the "El Beano project" at Cannock Chase. Contact Graeme, G4NVH, on 01785 604 534, or by email to graeme.boull@ntlworld.com.

On Friday 13 July Coventry Amateur Radio Society is on the air and having a BBQ. Contact John, G8SEQ, on 02476 273 190, or by email to johng8seq@ntlworld.com.

On Friday 13 July Hucknall Rolls-Royce Amateur Radio Club is having a members forum evening. Contact Carl, M0XBE, on 07979 092 447, or on the web at www.hrrarc.com.

On Saturday 14 July Lincoln Short-Wave Club is visiting Boultham Park Gala. Contact John, G1TSL, on 01526 323 153.

On Sunday 15 July Coventry Amateur Radio Society is having a visit to Bletchley Park. Contact John, G8SEQ, on 02476 273 190, or by email to johng8seq@ntlworld.com.

NEWS FOR THE NORTH OF ENGLAND

On Monday 9 July Thornton Cleveleys Amateur Radio Society is having an inquest on VHF Field Day. Contact Jack, G4BFH, by email to jack.duddington@btinternet.com.

On Tuesday 10 July Halifax and District Amateur Radio Society is having a members technical evening at Rishworth School. Contact Brenda, 2E0YKS, by email to wrenuk10@yahoo.com.

9 On Wednesday 11 July Great Lumley Amateur Radio and Electronics Society is having a talk and video by Gary Wilkinson on Atlantic 252. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Thursday 12 July Morecambe Bay Amateur Radio Society is having a film night. Contact Chris, M5XYZ. On Friday 13 July South Manchester Radio and Computer Club is on the air. Contact Ron, on 0161 969 3999.

On Friday 13 July Tynemouth Radio Club is having a crystal set competition. Contact Tony, G8YFA, by email to tonyregnart@blueyonder.co.uk.

NEWS FOR SCOTLAND

On Sunday 8 July Dundee Amateur Radio Club is taking part in VHF National Field Day. Contact Martin, MM0DUN, on mm0dun@dundee-amayeur-radio.co.uk, or on the web at www.dundee-amateur-radio.co.uk.

NEWS FOR WALES

No news items have been received for Wales this week. NEWS FOR NORTHERN IRELAND

No news items have been received for Northern Ireland this week.

And that's the end of this week's GB2RS news broadcast, prepared by the Radio Society of Great Britain.

Irish Radio Transmitters Society
Radio News Bulletin

Sunday July 8th 2007

Silent Key Se&#65533;n Cooney EI5GH

The many friends of Se&#65533;n Cooney EI5GH will be saddened to hear of his death on Friday after a period of illness. Se&#65533;n was very well known in amateur radio circles and up to this year had the distinction of never having missed an AGM for more years than any of us would care to remember. All of those who went to Baggot Street in the early mid 1960's will have had along association with Se&#65533;n. After Baggot Street Se&#65533;n was a founder member of the City of Dublin Radio Club with Dermot EI9BT and John EI8DE both now also sadly deceased. He served as Treasurer of the Society for quite a number of years and up to the time of his illness he had been one of the readers of the two metre FM news bulletins in the Dublin area. His distinct voice and humour will be sadly missed on the two-metre news and on the NDR net on Monday nights.

We extend our deepest sympathy to his family. May he rest in peace.

Theory Examination

Last Thursday week forty-five candidates sat the theory examination for the experimenters licence at centres in Dublin and Carrigtwohill. The examination papers have been checked and the results were delivered to ComReg on Tuesday last. ComReg have been very efficient in sending out the results but it takes time as each candidate gets a breakdown of their results in each of the three sections of the paper. We appeal to candidates not to contact ComReg about the results, as results will not be given over the phone or by e-mail. The official letters will issue in due course. There is also no point in contacting the IRTS about results. The papers are checked by IRTS but the issue of results and the HAREC certificate to successful candidates is a

matter exclusively for ComReg.

CQIR

Great interest is being expressed worldwide in the Society's 75th Anniversary Contest CQIR, which will take place on the last weekend in September. The contest is a celebration of Ireland and the Irish, throughout the world and with 40 million people in the United States alone claiming Irish forefathers; we expect that CQIR will be one of the largest 'one off' contests ever aired on the Amateur Bands. It is a 24-hour single operator contest with the emphasis on participation rather than winning and to this end every participant gains an entry ticket for a spectacular draw for every 75 QSO's made during the Contest.

The ticket drawn out of the EI/GI drum will win an all expenses paid long weekend in New York City for two people. ARRL have confirmed that this will include a visit to their national headquarters hosted by ARRL. Kinnitty Castle in Offaly will host the international winners for a week with flights for two from anywhere in the world. The prizes have been fully sponsored at no cost to the Society and this is really an excellent opportunity to celebrate the Society and its 75 years of service to Irish experimenters. We would encourage all Irish operators to be active during the Contest. So ring fence the last weekend of September in your diary, make an effort to have that new antenna up for the event and lets ensure a good show from the local Irish operators to support the international Irish who will no doubt come on the bands in their thousands for the contest. Full rules are on the IRTS website.

Limerick Radio Club

Limerick Radio Club has been invited by the Foynes Flying-Boat Museum to operate a special Amateur Radio Station in conjunction with the commemorative Transatlantic Re-Enactment Flight 1937 from Newfoundland Canada to Foynes Ireland. A special call sign has been allocated to the station EI-70-FOY. The station will be on the air from the 6th to the 8th of July 2007. On HF the station will operate from 80 to 10 metres. It will also operate on VHF / UHF using the EI70FOY call sign.

A special QSL card, commemorating the Re-Enactment Flight, will be sent to all stations worked over the

three-day event. All QSL cards should be sent to the Club's QSL Manager Alan Cronin EI8EM at QTHR. Limerick Radio Club can be contacted at ei4lrc at eircom dot net or at www.qsl.net/ei4lrc.

South Eastern Amateur Radio Group

The next general meeting will take place on Monday the 30th of July at 8.00 p.m. in the Roanmore Centre, Waterford. All are welcome.

Road Racing Championships

On the 1st of July last, the National road racing championships took place in Waterford city and the event was hosted by Comeragh Cycling Club. The 13.3-mile course took in some of the busiest junctions and roundabouts in the city, a huge entry saw over 120 riders entered for the senior race and 30 for the junior. The senior race took in eight laps and the juniors five, Local operators (all AREN members) who had been involved in a similar type race last year were again asked to get involved in the traffic management side of things and readily agreed. AREN were then consulted and a course of action agreed.

First and foremost a site needed to be found for the AREN repeater that would provide radio coverage over the entire course and a site was subsequently found and tests proved satisfactory. Following this a decision was taken to use signs at all junctions and roundabouts which meant that mobile operators not familiar with the course could identify their precise location and also ensured that net control could pinpoint any segment of the race at any time as this was vital for traffic management. Also a very simple radio protocol was adopted for the day, which ensured that all communications were kept short, and to the point with 14 operators involved on the day this was vital.

Race day saw all operators meet at race HQ at the W.I.T campus, firstly five mobiles were fitted with radios and antennas, mobile operators were Richie - EI9HR, John - EI7IG, EI7JS, Robbie - EI8FZB and Nicky - EI3JB. John, EI8JA then departed for the repeater site to set up the repeater aided by SWL David Gainda. John - EI2GN departed for the start/finish line to act as net controller while Conor - EI4JN was deployed as motorcycle mobile which enabled him to be deployed quickly anywhere on the course that he was needed. Mick

- EI3IQ, Gareth - EI7FZB, John - EI8FRB, Aidan - EI2CTB and SWL David went to their positions at various round-abouts and junctions. The senior race started promptly at noon followed ten minutes later by the juniors. Both races were accompanied by service cars also present on the course were officials of the cycling federations, Gardai, Ambulance service and Civil Defence.

Radio communications for the duration of the race was intense as the senior race was over in just more than four hours. Richie - EI9HR would like to thank all who helped out on the day also a big thank you to Neil - EI3JE for the loan of the equipment.

Foyle and District Amateur Radio Club

Foyle and District Amateur Radio Club, Bready, Strabane, Co. Tyrone will be heading to St. Angelo Airport, Enniskillen for the 2007 Jet World Masters competition. The competition itself runs from the 5th to the 14th of July. The club station will be on the air during the weekend July the 13th and 14th using the club's callsign MN0AKU/P.

This event is the ultimate radio-controlled model aircraft competition. These model planes are capable of speeds up to 250 miles per hour. One hundred pilots from 31 countries will be taking part in this competition. More information can be found on their website www.jwm2007.com

The club wishes to express its gratitude to all the operators who contacted them during the 2 days of their Amelia Earhart special event station on May the 20th and 21st. A sepia-tone photo of the aviator has been used for a unique QSL card and these will soon be sent out via the buro. Foyle and District Amateur Radio Clubs web address is www.mn0aku.org.uk.

Rally&#65533;s

The Cork Radio Club Rally will take place on Sunday the 23rd of September in the Blarney Park Hotel, Blarney, Co. Cork, the Waterford Rally will take place on the 21st of October 2007 in the Woodlands Hotel, Waterford and the Mayo Radio Rally will be on Sunday the 18th of November in the Belmont Hotel, Knock, Co. Mayo.

A full listing of upcoming rally&#65533;s is available on www.irts.ie.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to ﷺnews at irts dot ieﷺ for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday ﷺs bulletin.

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 08 JULY 2007

You are listening to ZS6SRL the official Radio Station of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is transmitted every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. To listen to a web stream or Echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links for details. This, and previous bulletins, can be downloaded from the www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

This transmission is by Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, 14,235 and 51,400 MHz as well as 438,825 MHz in the Pretoria area. (Other newsreaders please change to suit).

SILENT KEYS

It is with regret that we have to announce that the keys of two radio amateurs became silent recently. They are:

Llew Strydom, ZSL-0062, who passed away 15th June 2007. Our sincerest condolences to his spouse Pat, other relatives and friends.

Ossie Osborne, ZS1KP, passed away on Friday 6th July. Our sincerest condolences to his relatives and friends.

(PAUSE)

SPECIAL ANNOUNCEMENT

It seems that the SARL web is having a problem with the acceptance and forwarding of news items for the bulletin and that may be why there is no news from clubs in this bulletin. We apologise for this inconvenience. We trust that the webmaster will soon get rid of this problem and that news will soon start to flow smoothly again.

In the news today:

SARL ANNOUNCES A REDUCTION IN RAE EXAM FEES

MORE FOR MEMBERS

ITCHEN VALLEY RADIO CLUB BURSARIES AWARDED

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

SARL ANNOUNCES A REDUCTION IN RAE EXAM FEES

During the President's Net last Sunday SARL President Graham Hartlett announced a substantial reduction in the RAE fees. The reduction has been made possible as ICASA has agreed that in future the SARL, as the national body for Amateur Radio, will be authorised to issue the RAE certificate. Effective immediately, the registration fee for both the class A and Class B examination will be an inclusive R300. There is an additional reduction for students under the age of 25 who can prove that they are full time students or learners. The fee will be R200. The fee will include one re-write should the candidate fail the first attempt at the examination, however no refunds will be considered.

The process for registering for the examination has also been streamlined. Candidates can download the necessary forms from the SARL website or request copies from the SARL administrator and after completion fax or mail the completed forms and required documentation to the SARL. It is important that candidates carefully follow the checklist on the RAE registration form to ensure that all the required documentation is submitted. Failing to do so may result in unnecessary delays.

The SARL is currently working with ICASA on combining the RAE certificate with the HAREC certificate as specified in the radio regulations. Once this has been finalised, candidates who pass the class A examination will receive a HAREC certificate which will be valid for application of an amateur radio license in CEPT countries and other countries which has contracted into the HAREC system. HAREC is the acronym for Harmonised Amateur Radio Examination certificate. This process may take a few weeks.

MORE FOR MEMBERS

Graham Hartlett also discussed the issue of more benefits for members. He said that the Council had accepted the principle that members should derive maximum benefit from their membership. As the National Body for Amateur Radio, a number of services must be available to all radio amateurs for which the SARL will in future charge an admin fee. He cited the example of the upgrade process from ZR to ZS. The process will be free for SARL members, but non-members will be charged an admin fee of R100. The SARL will also relook at the various services on the web and, where necessary, upgrade the website and increase the members only content.

He said that not all changes will be made immediately but will be an ongoing process over a period of time.

ITCHEN VALLEY RADIOCLUB BURSARIES AWARDED

The South African Amateur Radio Development Trust has awarded the three YARP - Young People in Amateur Radio Programme - bursaries sponsored by

the UK Itchen Valley Radio Club. The successful candidates are: Bongani Mondlana, Nfumo Khoza and Suzette van Wyk. They will study for the class A examination and write in October. Congratulations to the three students, we wish them success in their studies.

BAND PLANS AND SPECTRUM MANAGEMENT

Due to the shortage of local news we include and item taken from WIA News which is applicable to all radio amateurs world wide and which we may well take note of. (Read SARL where WIA appears in the text).

Amateur Self-Regulation.

Amateurs use a wide variety of different modes. Within one amateur band, activity can include CW, voice, satellite and EME activity, and ATV. The best way of avoiding clashes is to set aside different band segments for each of these activities, so that all amateurs can pursue their interests without interference.

Amateur band plans are voluntary agreements, often known as "Gentlemen's Agreements". They are sponsored by the WIA, but they are for the benefit of all amateurs. Most amateurs, WIA members or not, abide by the band plans because it makes sense to give everyone a fair go.

Clashes still occur at times, and the usual reason is lack of awareness of the band plans. Most amateurs are willing to change frequency if the problem is explained to them politely.

Band plans should satisfy a number of conflicting criteria:

They should take local conditions into account, but they should be consistent with international usage.

They should encourage spectrum efficiency, but they should also ensure that all modes have their fair share of spectrum space.

They should take the popularity of each mode into account, while still providing enough spectrum space for less popular activities. For example, ATV requires far more bandwidth per operator than other modes; and activities such as EME are of major importance regardless of the number of stations involved.

Band plans must be flexible enough to adapt to changing needs, but they tend to lose support if they are changed too often. The aim must be to think ahead and to make sure that future options are not closed off.

On the VHF-UHF bands, three main groups are:

CW/SSB: the preferred modes for weak signal work.

FM: Not suitable for weak signal work and not compatible with SSB or CW. This category also includes digital modes such as packet, which usually use FM mode on the VHF bands.

ATV: Requires a very large bandwidth but has a very low power density, so it needs an exclusive interference-free band segment.

Calling Frequencies

On the VHF bands, the band plans include calling frequencies. These frequencies are "meeting places" and should be used only to make initial contact before moving to another frequency. If you "hog" the calling frequency you will prevent others from making calls or hearing more distant stations that may appear on the frequency.

PROPAGATION CONDITIONS

Probably due to the web site problem and the fact that we could not contact our regular contributer, ZS6BZP, by telephone, Marten, ZS6ZY, acquired the information which follows for us.

At present the sun spot number is 12 with an associated sun flux figure of 71, which is evidence of very low sun activity. The geomagnetic conditions will be quiet to unsettled with sporadic active periods during the coming week.

Propagation graphs show that communication with Europe on 14 MHz may be successful between 09:00 and 17:00 UTC and sporadically on 21 MHz between 09:00 and 16:00 UTC.

To the Far East 7 MHz contacts may be successful between 02:00 and 18:00 UTC and on 21 MHz between 17:00 and 23:00 UTC. It is interesting that no data is shown for 14 MHz.

DIARY OF EVENTS

14 - 15 July - IARU HF World Championship; 22 July - Boland ARC 40 m Contest; 5 August - SARL HF Phone contest; 15 August - Last day to submit synopsis of proposed papers for SA AMSAT Space Conference; 23 August - Class B RAE; 6 October - SA AMSAT Space Conference; 18 October - Class A RAE.

SARL News invites clubs and individuals to submit news stories of interest to radio amateurs and shortwave listeners. Submit news stories if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to the programme Amateur Radio Mirror International, on the air every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 695 kHz. For the web stream and echolink by ZS6FCS, visit www.sarl.org.za, click on ARMI and follow the links. A repeat transmission can be heard Mondays at 21:00 CAT on 3 215 kHz. Sentech sponsor the ARMI transmissions on the non-amateur frequencies.

Today's South African Radio League news bulletin was compiled by Roger, ZR3RC, and transmitted by (your name and call sign)

Thank you for listening. 73

/EX

When moving the mouse curser over a spotted callsign, it shows
the name of the DXCC entity, continent, CQ- and ITU-Zones.

The site is loaded with Google ads and loads pretty slow here;
nothing like a real telnet cluster ;-)

73,

DXNL 1527 - Jul 11 2007
DX Newsletter

a free and weekly service of
DARC Committee "DX and HF contesting"
(http://www.darcdxhf.de)

editor: Helmut Schlaffer, DL7MAE
(e-mail: dxnl@dxhf.darc.de)

translation by: Bob, DL7VOA
(e-mail: dl7voa@darc.de)

FM - MARTINIQUE, NA-107
Alain,F5LMJ, will be active from Martinique (NA-107) signing TO5J from Jul 14-28. No further information has been released but Alain prefers working mainly in CW and digital modes. Alain usually sends the QSLs automatically via bureau and his log will be uploaded to the LotW, too.

FS/PJ7 - ST MARTIN, NA-105
Marq,CT1BWW, John,EA3GHZ, and Tomas,EA5YH, and their XYLs will spend their holidays on St. Martin (NA-105) from Jul 15-25. They will be QRV as FS/homecall working with two stations simultaneously in CW/SSB and digital modes on 80-6m. They will also make a trip to the Dutch side of the island from where they may show up as PJ7/homecall. All QSL cards should be sent to the OP's homecall. More information can be found on: http://www.dxciting.com

KH0 - NORTHERN MARIANA ISLANDS, OC-086
Kay,JH0MRP (AC5TB) and Nao,JK1FNL (NA8O), will activate Saipan (OC-086) mainly on the WARC bands and 6m as AC5TB/KH0 (QSL via JH0MRP) and NA8O/KH0 (QSL via JK1FNL) from Jul 13-16. They intend to participate in the IARU HF Championship Contest (Jul 14/15) as well.

SV9 - CRETE, EU-015
Paolo,SV9/IK2MLS, will be QRV from his holidays working in SSB on HF, 6m and 2m from Jul 15-27. QSL via homecall.

T8 - PALAU, OC-009
Hide,T80W (JM1LJS), Motoaki,T88EK (JE1EKS), and Koya, T88PT (JI5RPT), will be active from the "IMPAC Palau Rental Shack" in SSB/CW on 40-6m and via satellite from Jul 13-18. QSLs via homecalls. The websites are: http://radio-dream.com/t80w and http://www.ji5rpt.com/t88pt
A view of the shack is here: http://palau.rental-shack.com/english

TA - TURKEY
Another special event station to celebrate the 100th birthday of the sports club Fenerbahce Istanbul will be YM1907FB from Jul 19-26. The call will be aired by Berkin,TA3J, on 2-160m. QSLs via bureau or direct to TA3YJ. If you send direct QSLs please enclose no money bills but IRCs. There will be no eQSLs and SWL reports are welcome. Feel free to check these two links: http://www.qsl.net/ta3j/ym1907fb and http://www.geocities.com/qslservice/ta3yj
---
TA1FR, TA1HZ and TA2RX are working as TC25SG (25 years coast guard) on all bands from Jul 11-15. QSL via TA1HZ, direct or via bureau!

V3 - BELIZE
V31BV is the call of Dennis,K7BV, who is active from Caye Caulker (NA-073) until Jul 16 as printed in the last DXNL. He is also using the special callsign V36M exclusively on 6m and you can watch the QRG 50106 kHz where he runs a beacon. Both QSLs are managed by W1JJ.

Colin,KU5B, announces his operation as V31UB from Jul 12-17. He is going to spend most of the nights at the radio in CW and SSB and also considers a participation in the IARU HF Championship. QSL via KU5B.

V8 - BRUNEI, OC-088
Steve,9M6DXX, is staying in Brunei (OC-088) from Jul 11-15. He is QRV as V8FEO (QSL via M5AAV) in SSB on 10-80m and will take part in the upcoming IARU HF World Championship as well.

VP2M - MONTSERRAT, NA-103
Frank,K3TRM, applied for the callsign VP2MRM which he plans to activate on the volcano island Montserrat (NA-103) in SSB/CW/RTTY on 80-6m from Jul 11-14.

VP2V - BRITISH VIRGIN ISLANDS, NA-023
Nancy,WZ8C, Bob,WB5IUU, Cal,WF5F, Paul,W5PF, and Bill,K5WAF, are going to stay on Tortola Island (NA-023) from Jul 11-18. They will hit the airwaves as VP2V/homecall in SSB/CW/RTTY and also during the contest. QSL cards for all calls should be sent via bureau to W5PF.

YJ - VANUATU
Hank,W0CZE, and possibly a second OP will shop up as YJ0CZE from Jul 13-21. The QSL manager for YJ0CZE is W0FF.
Operation will take place on following frequencies (in MHz):
band CW SSB
10m 28.020 28.495
12m 24.895 24.950
15m 21.025 21.295
17m 18.075 18.150
20m 14.020 14.190/14.250
30m 10.105 ---
40m 7.010 7.082
80m 3.505 3.795

ZF - CAYMAN ISLANDS, NA-016
Eddie,N2EK, will spend his holidays on Grand Cayman (NA-016) and
will use the callsign ZF2EK from Jul 13-20. QSL via N2EK.

1A0 - SOVEREIGN MILITARY ORDER OF MALTA
Francesco,IK0FVC, will be the leader of a multinational team (OH2BH,
DL5MAE, DL6RAI, G3SXW, G3TXF, K5AB, KO4RR, N4WV (YL), I2UIY, I8NHJ,
IK0DWN, IK0FTA, IK0PRG, IW0GIV, IW0GPN, I0JBL) activating 1A0KM from
Jul 12-22. They will work on all bands from 23cm-160m and also via EME
for the very first time. Their QSL manager will be IK0FTA.
The log will be uploaded to the LotW and an online log can be found at:
http://1a0km.splinder.com

8Q - MALEDIVES, AS-013
8Q7JP is the callsign of James,M1DST, from Jul 9-16. He is working in
SSB on 80/40/20/15/10m without any stress since this is his honeymoon
and his wife comes first! QSL via his homecall.

PORTUGAL, SPECIAL EVENT STATION
Josu,CT1EHX, Toze,CT1GFK, Goncalo,CT1GPQ, Miguel,CT1IUA, Rui,CT2IHP,
Josu,CT1DVG, Jose,CT1EPS, Arnaldo,CT2IOV, and Antonio,CT2IOU, will
activate the special event station CS26X in SSB/CW/RTTY on 6-80m from
the 26th International Motard Meeting of Faro on Jul 16-22.
QSL via CT1EHX, direct or via bureau.

UPCOMING CONTESTS

Jul 7/8: DL DX RTTY Contest, Original QRP Contest
Jul 8: DARC Digital Contest Corona
Jul 14/15: IARU HF World Championship Contest

IOTA collected by Fredy,DE0MST (e-mail: iota@dxhf.darc.de)

Island activities:
AF-004, EA8, Canary Islands: OM Wolfgang,DF8AA, will spend his holidays on
the island El Hierro and will also activate several lighthouses as
DF8AA/EA8/p from Jul 14-28. QSLs via homecall.

AS-060, HL4, Cholla-Namdo Province Group: Members of the Gwangju DX Club
plan to be QRV from Ch'ung Island from Jul 14-17. QSL via HL4XM.

EU-112, GM, Shiant Islands: A few members of the Grantham ARS are activating
House Island (Eilean an Tighe) as GC0GRC/p and GS0GRC/p from Jul 10-13.
QSL via bureau.

NA-092, W5, Texas State West Group: Rick,N5EYT, will be on holiday as well
on Mustang Island (USI TX-001S) from Jul 14 until Aug 5. He also plans
activities from the IOTA islands Padre and Harbor during this time.
QSL via homecall.

NA-206, KL7, Barren Islands: Marvin,KL1YY, Bob,NF7E, and Art,NN7A, will be
QRV from Ushagat Island working with two stations (100W and verticals)
on 160-10m from Jul 12-17. NN7A/NL7 is going be QRV in CW, Marvin and
Bob in SSB. QSL via the appropriate homecalls, bureau is ok.

Announced activities for the IOTA Contest 2007 (Jul 28/29):

Amateur Radio Newsline(tm) Report 1561 - July 13, 2007

Amateur Radio Newsline report number 1561 with a
release date of Friday, July 13, 2007 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams down-under
respond as flood waters rise, wildfires won't
stop the fall Amateur Radio Direction Finding
Championship and the FCC says no to special
military call sign designators requeasted by the
QCWA. Find out the details on Amateur Radio
Newsline(tm) report number 1561 coming your way right now.

RESCUE RADIO: VK HAMS VS. THE GIPPSLAND FLOODS

Ham radio proved to be an important channel of
communications as flood waters ravaged the
Gippsland area of Australia's Victoria
state. Jim Linton, VK3PC, of the WIA News has the details:

--

Providing communications support during the flood
disaster in eastern Victoria were seven radio
amateurs, members of RECOM the communications arm of the Australian Red
Cross.

John Patterson VK3ATQ of RECOM reports its role
was centered on emergency relief centers at
Paynesville, Sale, Bairnsdale and Lakes Entrance.

There the team registered 361 flood evacuees and
transmitted this information back to the Red
Cross Headquarters in Melbourne using data communications.

RECOM also provided other reliable communications
of administrative traffic for the Red Cross. The
operators involved included VK3ATQ, VK3AUO,
VK3BQS, VK3BPD, VK3EK, VK3GBJ and VK3XSW.

The floods at some locations cut power or put it
at risk and RECOM was fully prepared with self-reliant auxiliary power.

John VK3ATQ found himself being interviewed numerous times by the ABC as part of its public information coverage as the flood disaster unfolded.

The RECOM guys with their communications 'go-kits' and four wheel drive vehicles were activated for five-days in the flood areas.

For the Amateur Radio Newsline, I'm Jim Linton, VK3PC.

--

According to VK3PC, RECOM began in Australia's Victoria state. Its is now grown to become a nation-wide service group with ever increasing recognition. (WIA News)

RESCUE RADIO: EAS MISTAKE IN ILLINOIS

Several hundred radio and television stations in Illinois were affected by an E-A-S mistake the morning of June 26th. This, when the Illinois Emergency Management Agency was testing new equipment in what was supposed to be a closed-circuit test of the 10-minute presidential alert message from FEMA.

Between 7:30 and 8 a.m., depending on when each station in the chain got the message, their programming was taken over for 10 minutes. A monthly test would have lasted for two minutes, as opposed to the 10-minute presidential alert.

The Illinois Emergency Management Agency said it had no advance warning of the test and that the federal government used a hot or active code rather than a test code for the test message. Chicago, Rockford, Quincy, and Springfield were among the affected areas.

FEMA says it's trying to upgrade EAS with satellite delivery, and the snafu occurred in Illinois because a contractor improperly installed equipment and basically created an open loop. The system was not supposed to be on line at the time. (RW, listerner reports)

**

RADIOSPORTS: WILDFIRES WONT HAMPER ARDF CHAMPIONSHIPS

The recent wildfire near Lake Tahoe on the Nevada and California border has not put an end to the planning for this year's hidden transmitter hunting championship games. They will take place

as planned. Amateur Radio Newsline's Joe Moell K0OV, has the story.

--

It's full speed ahead with preparations for the Seventh Annual Championships of Amateur Radio Direction Finding, or ARDF. This year's championships will take place on the weekend of September 14 through 16 in the El Dorado Forest near Lake Tahoe. That's in the Sierra Mountains near the California/Nevada border. Primary sponsor is the Santa Barbara Amateur Radio Club. Marvin Johnston KE6HTS is General Chair of the organizers.

Most of the competitors will be staying at Camp Concord, a rustic but comfortable facility that's two miles west of the city of South Lake Tahoe, near the shore of Fallen Leaf Lake. Camp staff will provide meals during the events, and everyone can walk to the competition courses from there.

Registration opened in early June and plans for the championships were proceeding. Then on the afternoon of June 24, a forest fire broke out south of Fallen Leaf Lake. Fanned by high winds, it moved rapidly northeast into a nearby residential area. Over 550 firefighters worked diligently around the clock to slow the expansion of the burn area and prevent further structure damage.

Full containment of the Angora fire, as it was called, was achieved just before Independence Day. It destroyed 3100 acres, 242 homes and 67 commercial buildings. Total loss has been estimated at 11.7 million dollars.

Camp Concord is 1.6 miles from the edge of the burn area and has reopened for the summer camping season. The entire burn area is closed until at least November 30 to protect the fragile environment. But the forest land near the shores of Fallen Leaf Lake has mostly been spared.

With a few minor map revisions, everything looks good to go. Early Bird registration was scheduled to end on July 14, but because of the delay, that deadline has been extended to July 31

You and your family are invited to the championships this year. Anyone with reasonable physical abilities can participate. A ham license is not required and there are no age limits, but you must be able to run or walk

through the forest and carry your DF gear for
five to ten kilometers. You might even win a
spot on USA's team to the next ARDF World
Championships. Read more about the
championships, and international-style
transmitter hunting, at the usual
place: homingin.com. Homing In is entered as one word, homingin.com.

From southern California, this Joe Moell,
K-zero-O-V for Amateur Radio Newsline.

--

Again, this year's ARDF Championship games will
take place on the weekend of September 14 through
16 in the El Dorado Forest near Lake Tahoe. And
as Joe said, more is on-line at www.homingin.com. (K0OV, ARNewsline(tm))

**

RADIO SPORTS: IARU WORLD CHAMPIONSHIP

The International Amateur Radio Union's High
Frequency World Championship operating event is
taking place as this newscast goes to air. RSGB
News Reader Jeramy Boot, G4NJH, has some
background on the event and how its scoring security is enforced:

--

Participation in the IARU HF World Championship
due to take place on 14 to 15 July has grown
steadily for the past four years, despite solar
activity trending in the wrong direction. The
creation of Low Power and QRP categories has
contributed to increasing both the popularity and
the competitiveness of the event.

A condition of entry in the IARU HF World
Championship is that each entrant agrees to be
bound by the provisions of the announced rules,
by the regulations of his or her licensing
authority. Also by the decisions of the ARRL
Awards Committee acting for the IARU International Secretariat.

Leading competitors should expect their entries
to be carefully scrutinised. If exceptional
results are claimed, entrants must be prepared to
explain how they were achieved.

Im Jeramy Boot, G4NJH

--

According to the ARRL Letter, the League
administers the High Frequency World Championship
on behalf of the IARU. (GB2RS)

**

REGULATORY NEWS: FCC TO RESCIND E-MAIL FILING SYSTEM

Starting this September, there will be no filing
at the FCC by fax or e-mail. Radio World reports
that the regulatory agency is doing away with
interim procedures it adopted in 2001 to allow
electronic filing of certain pleadings.

The procedure in question came into being
following an anthrax scare on Capitol Hill and
some U.S. Postal Service processing
facilities. This disrupted mail delivery and
required certain documents to be filed via fax or
e-mail, by an overnight delivery service other
than the U.S. Postal Service, or by hand-delivery
to the commission's Capitol Heights,
Maryland location. Since that time, mail
delivery in the Washington areas has improved and
the FCC has implemented its own processes to
combat the threat of contamination of incoming
mail. The commission also has expanded its online filing capabilities.

Based on this, the agency decided to rescind the
interim procedures effective September
25th. After that date, filings will no longer be
accepted by facsimile or e-mail unless otherwise
authorized by the FCC's rules. Its not clear if
this decision to revert back to the old system
will affect ham radio operators filing of rules
change requests or those making comments on them. (Published reports)

RERGULATORY NEWS: VEC MISTAKE LEADS TO PROPOSED
LICENSE DOWNGRADE

The FCC says that a clerical error made by the
W5YI VEC has resulted in Joseph K. Lewis, N1LNV,

being granted an un-earned upgrade. Now the agency wants to take it back. And it will do so unless Joseph K. Lewis files an objection to the regulatory agency within the next several days. Amateur Radio Newsline's Henry Feinberg, K2SSQ, has more:

--

According to an FCC release, back on April 10th of this year the W5YI Volunteer Examiner Coordinator sent an electronic data file to the Commission, One requesting that Joseph K. Lewis's operator license for station N1LNV be upgrade to General Class operator privileges. Based on this application, the Commission granted the request the same day.

Then on dated May 16th, the W5YI V-E-C notified the Commission that it had made a typographical error in the April 10th data filing and that Lewis had not qualified for a General Class operator license. It urged the FCC to modify Lewis's license to correct the Technician Class operator privileges for which he was actually authorized.

The FCC says that right now the W5YI V-E-C's request is most properly characterized as an informal request for Commission action under Section 1.41 of the Commission's Rules. However, based on the information now before it now, the FCC says that it appears to it that the grant of General Class operator privileges to Lewis was erroneous. This is because he did not pass the examination necessary to qualify for a General Class operator license. Rather, he appears to be currently authorized to operate with General Class operator privileges only due to a typographical error made during the application process.

So here's what happens now. The FCC says that it believes that a modification of the license for amateur station N1LNV to Technician is appropriate. That said, it is giving Lewis 30 days to file a statement opposing this action. If no objection is forthcoming from Lewis, he will be considered having waived his right to protest and will be deemed to have given the FCC his consent for the FCC action to change his license to Technician class to proceed.

For the Amateur radio Newsline, I'm Henry Feinberg, K2SSQ, reporting from New York.

--

The FCC order proposing the license modification was issued on July 9th. We will let you know the outcome of this one in about a month. (FCC)

**

RADIO LAW: QCWA MILITARY CALL SIGN PETITION DISMISED

The FCC has dismissed a rules change request asked by the Quarter Century Wireless Association. One that would have permitted hams who were currently a member of, or those who have been honorably discharged member of the United States military to include a unique indicator with the station's call sign identification announcement.

In saying no to this one, the FCC noted that its rules already permit the inclusion of indicators with the call sign during station identification. This, provided that no self-assigned indicator conflicts with any indicator specified by the Commission's rules or with any prefix assigned to another country. As such, the FCC says that Amateur Radio operators who are in current service or who have been honorably discharged already are permitted to identify their stations in the way that the QCWA suggests. As such, it deems this rule change as unnecessary. (FCC)

**

REGULATIORY NEWS: FCC WILL NOT CHANGE ID TIME PERIOD RULES

The FCC has said no to a pair of hams who sought to change the time period in which it requires an Amateur station to identify. Bill Pasternak, WA6ITF, has more:

--

There were two I-D time limit filings. In the first, Glen Zook, K9STH, of Richardson, Texas, had asked the regulatory agency require that hams transmit their callsign at the beginning and end of each single transmission and at other times involving short interval communications.

On the other side of the call sign issues was Murray Green, K3BEQ, of Cheverly, Maryland. Green had petitioned the FCC to reduce the required frequency of station identification

period to every 30 minutes, rather than once every 10 minutes as it is now.

In denying both petitions the FCC said that the present rule has not been shown to be burdensome or unreasonable. The agency said that it agreed with the comments that say that the problem of operators who do not comply with the current identification rule is better addressed by enforcement rather than another rules change.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, at the studio in Los Angeles.

--

The bottom line: The FCC sees nothing wrong with the current 10 minute I-D requirement and plans to keep it that way. (FCC)

**

RADIO LAW: A NEW PUSH FOR LPFM

Low Power FM station backers in Congress are pushing again to make the FCC ease restrictions on low-power stations. Proponents want the commission to eliminate third-adjacent minimum distance separation requirements between L-P-F-Ms and other full power F-M stations.

Backers say that when Congress authorized the FCC to issue L-P-F-M licenses in 2000, it attached an unnecessary rule that limited these stations to rural areas. Since then, thousands who submitted applications with the FCC to operate their own stations have been blocked.

But proponents point out that the FCC's own MITRE Study. In 2003 the Commission found that increasing the number of Low Power FM stations would not cause significant interference and that the FCC then urged Congress to repeal the restrictions. (RW)

**

RADIO HELP: NEW SHORTWAVE TRANSMITTER USERS REMAILER

Stephen Lockwood of Hatfield and Dawson Consulting Engineers has set up e-mail list servers on the Society of Broadcast Engineers Chapter 16 server to help shortwave transmitter users. According to the National Association of Shortwave Broadcasters, the servers are a forum for suggestions for maintenance and operation of Continental 418 and Harris SW 100 transmitters. For questions e-mail

lockwood@hatdaw.com. (Radio Remailer)

**

SPECIAL EVENTS: AIR VENTURE 2007 FROM WISCONSIN

Ham radio and flight will be coming together
later this month in Wisconsin. This, at one of
the worlds largest and best known fly-in
events. Amateur Radio Newsline's Jeff Clark, K8JAC, has more:

--

The Fox Cities Amateur Radio Club station ,W9ZL.
will once again run a special event
station. This. from Thursday July 26th through
Sunday July 29th from the grounds of the
AirVenture 2007 fly-in in Oskosh, Wisconsin.

The station will run from 1300 to 2100 U-T-C
each day on 14.270 and 7.250, as well as locally
on 146.520 and over the 146.760 repeater. The
latter requires a 100 hertz access tone. All
hams attending AirVenture are encouraged to stop
by to visit and be a guest operator at our station

A certificate will be sent to all High
Frequency contacts who QSL first with a 9" x 12"
Self Addressed Stamped Envelope. Send your QSL
info to Fox Cities Amateur Radio Club, Attn:
N9YMC at PO Box 5233, Appleton, Wisconsin, 54912.

--

Details about AirVenture 2007 are on-line at
www.airventure.org Information about the Fox
Cities Amateur Radio Club is in cyberspace at www.fcarc.us (N9MYC)

**

COMMUNICATIONS BUSINESS: BLOCKBUSTER SAYS YES TO BLU RAY DVD

Blockbuster Video rentals has chosen the Sony
backed Blu Ray high definition DVD as its next
generation video rental product. The move gives
significant weight to predictions that stores and
other retail outlets would begin to have a say in
the Blu Ray versus HD DVD format war.

Blockbuster came to its decision after test
marketing both emerging DVD formats in 250 of its
stores. After analyzing consumer response, it
decided to stock only Blu Ray disks in its next
1,450 stores to get high-def movies. HD DVD will

still be available online and at the locations
that Blockbuster used in testing rentals of both formats.

So far, the new high definition video disks
account for less than 1 percent of today's DVD sales. (Future Trends)

HAM HAPPENINGS: AMSAT-UK SPACE COLLOQUIUM - JULY 20 - 22

AMSAT-UK will be holding its 22nd annual
International Space Colloquium at the University
of Surrey, Guildford, from July 20th to the
22nd. This years keynote speaker is Pat
Norris. Norris is the Chairman of the Royal
Aeronautical Society Space Group. His talk is
titled "Spies in the Sky: Surveillance Satellites in War and Peace."

Also, a Satellite Beginners Workshop will be held
on July 20th For further details take your web
browser to www.uk.amsat.org/Colloquium/. (GB2RS)

**

HAM HAPPENINGS: DCC PAPERS DEADLINE JULY 31ST

Technical papers are solicited for presentation
at the 26th Annual ARRL and TAPR Digital
Communications Conference. That event is slated
to be held September 28th to the 30th in
Hartford, Connecticut. These papers will also be
published in the Conference Proceedings. Papers
will be published exactly as submitted and authors will retain all rights.

The submission deadline is July 31st. Please
send papers to Maty Weinberg, ARRL, 225 Main
Street, Newington, Connecticut, 06111. Or you
can make your submission via e-mail to: maty@arrl.org (ARRL, TAPR)

**

BREAK 2

This is ham radio news for today's radio
amateur. From the United States of America, We

EMERGING TECHNOLOGY: NEW HIGH SENSITIVITY CAMERA CHIPS

A new image sensor could revolutionize the way
you take pictures. Even those you send via A-T-V. Jim Davis, W2JKD, has
more:

--

Eastman Kodak says it's developed a color filter
technology that will at least double the
sensitivity to sensors used in digital
cameras. Kodak expects to provide samples of the
new chips to a variety of camera manufacturers in the first quarter of 2008.

The new technology is likely to be quickly
incorporated into mass-market point-and-shoot
cameras and camera-equipped cellular telephones
phones beginning sometime next year.

I'm Jim Davis, W2JKD.

--

The new sensors are not quite see in the dark
devices, but are the next step in getting there. (Science On-Line)

**

HAM RADIO IN SPACE: AMSAT TO ELECT NEW LEADERS

Nominations for the 2007 AMSAT Board of Directors
have closed. The list of qualified candidates
includes Barry Baines, WD4ASW, Drew Glasbrenner,
KO4MA, Rick Hambly, W2GPS, Lee McLamb, KU4OS and Gunther Meisse, W8GSM.

The terms of four directors are up this
year. Ballots and biographical information
submitted by each candidate will be in the mail
to current AMSAT members by July 15th. Return
ballots are due back at the AMSAT office in
Silver Spring, Maryland no later than the close
of business on the 15th of September.

The winners names will be announced shortly
thereafter. Terms of the new directors start
upon certification of the election. AMSAT
Directors serve a two year term. (ANS)

**

WORLDBEAT - SWITZERLAND: HD RADIO DAYS IN OCTOBER

The second HD Radio Days event is taking place in
Lucerne, Switzerland in October. The gathering,
at Hotel Radisson SAS Lakefront, will include a
presentation of the final report on the Swiss HD
Radio field trial reported above. A variety of
test vehicles equipped with HD Radios will be on

hand for participants to drive. Separate workshops will demonstrate a frequency assignment simulation, plus receivers. A detailed program and registration information will be posted in August. (Media Net)

**

WORLDBEAT - SOUTH AFRICA: NEW LOWER HAM TEST FEES

The cost of taking a ham radio test in South Africa is going down, This, according to South African Radio League President Graham Hartlett, ZS6GJH who has announced a substantial reduction in the cost of taking that nations Radio Amateur Exam.

According to Hartlett, the reduction has been made possible because the nations telecommunications regulator has agreed that the South African Radio League, as the national body for Amateur Radio, will be authorized to issue the Radio Amateur Exam certificates. This takes a major expense off the governments shoulders. The new lower fee will include one re-test should the candidate fail the first attempt at the examination. (Southgate)

**

WORLDBEAT - UK: NEW IOTA WEBSITE OPENS

The RSGB's premier DX award program has launched its new website. Devoted entirely to the Islands on the Air or IOTA program, the spot in cyberspace came on-line on Thursday, June 21st.

The new web pages feature many innovative improvements including the ability to view one's own record of island groups confirmed. In the near future it will be possible for participants to claim additional credits on-line and even to claim credit for IOTA Contest QSOs without the need for QSL card verification.

The site is located at www.rsgbiota.org. It was developed by Dominic Smith, M0BLF, with Martin Atherton, G3ZAY, acting as the liaison between the project team and the IOTA Committee. (GB2RS)

**

WORLDBEAT - UK: ANALONG MAY END IN 2015

According to an article in the Sunday Telegraph newspaper, commercial radio companies in the

United Kingdom are looking to set a firm end date for analog radio.

The industry body RadioCentre was expected to approach the British broadcast regulator, Ofcom, about setting a shutoff date for analog radio that could be as early as 2015.

An analog shutdown would mirror the transition path being followed by the U-K television industry, which will see an end to terrestrial analog broadcasting in 2012.

There is a concern, according to the Telegraph report, that only a firm analog shutoff date will ensure continued investment and development of digital radio, although there are political concerns about making millions of analog receivers obsolete. (RW)

**

WORLDBEAT - UK: NEW IOTA WEBSITE OPENS

In other news from around the world, word that the RSGB's premier D-X award program has launched a new website. Devoted entirely to the Islands on the Air or IOTA program, the spot in cyberspace came on-line on Thursday, June 21st.

The new web pages feature many innovative improvements including the ability to view one's own record of island groups confirmed. In the near future it will be possible for participants to claim additional credits on-line and even to claim credit for IOTA Contest QSOs without the need for QSL card verification.

The site is located at www.rsgbiota.org. It was developed by Dominic Smith, M0BLF, with Martin Atherton, G3ZAY, acting as the liaison between the project team and the IOTA Committee. (Southgate)

**

DX

In DX, word that A multinational team lead by Francesco, IK0FVC, will activate 1A0KM from the Sovereign Military Order of Malta between July 12th to the 22nd. Activity is planned for 160 meters through 23 centimeters on all modes. There will be a possibility of some EME activity during the first weekend of operations. QSL via IK0FTA.

Also, A25CF, and his team of operators are active from Botswana until July the 20th. Activity is on

160 through 6 meters on CW and SSB, with operations also on 6 and 2 meters along with 70 centimeter EME. QSL as directed by each operator.

Worldradio magazine editor Nancy Kott, WZ8C, and several others are operating from the island of Tortola through July 18th. The group is participating in the FISTS CW Club summer sprint on Friday July 13 and the IARU contest the weekend of the 14th. Operation during the rest of the time will be on SSB, RTTY and CW with an emphasis on straight key operation. QSL via the FISTS bureau or W5PF

Lastly, listen out for EA1FCH, will be active portable CU2 from Sao Miguel in the Eastern Island Group from July 27th through August 5th. Activity will be on the lower bands and WARC bands, mainly CW and the Digital modes. QSL EA1FCH direct or via the bureau.

THE NEWSLINE ON-LINE SURVEY: JUNE RESULTS AND A NEW ONE FOR JULY

And finally this week, we have the results of the past months on-line Newsline website survey that asked you what your favorite ham radio magazine is. Coming in as the most read was the ARRL's Q-S-T Magazine with 63.3% of the vote. In second place among our listeners is Worldradio. It garnered 18% of the vote. Third place in went to CQ with 13.5%. The rest of you voted "other" and accounted for 5.2% of those who responded.

As we have said in the past, these surveys are not meant to be a scientific sampling. Rather, it's a fun way for those of you interested to tell the rest of the world your choice.

And in keeping with the fun theme of our surveys, the new one now on-line asks a follow up question. This one asks where in your home do you read your favorite ham magazine.

Again, you have four choices. Please go to www.arnewsline.org and cast your vote right now. (ARNewsline(tm))

==> FCC Releases Post-Katrina Order, "Final Rule"

On July 11, the FCC released their Order regarding the recommendations
of the independent panel reviewing the impact of Hurricane Katrina on
communications networks (the Katrina Panel). It contained their
conclusions following a review of the comments filed in response to the
FCC's Notice of Proposed Rulemaking (NPRM). The Commission asked for
comments a week after the release of the report and recommendations of
the Katrina Panel and directed the Public Safety & Homeland Security
```

Bureau (PSHSB) to implement several of the recommendations. The FCC also adopted rules requiring some communications providers to have emergency/back-up power and to conduct analyses and submit reports on the redundancy and resiliency of their 911 and E911 networks. The FCC's actions are to go into effect August 10.

The Commission noted that "the amateur radio community played an important role in the aftermath of Hurricane Katrina and other disasters," and instructed the PSHSB to "include the amateur radio community in its outreach efforts."

The FCC invited comments on the Katrina Panel's recommendation that the FCC "act to enhance the public safety community's awareness of non-traditional emergency alternative technologies that might be of value as back-up communications systems in a crisis." Several commenters suggested that the public safety community be educated about the applicability of Amateur Radio in a crisis. The FCC agreed with these comments, saying that improving the public safety community's knowledge of, and training in, alternative technologies would improve preparedness for future crises. They directed the PSHSB to "develop and implement an awareness program to educate public safety agencies about alternative technologies and to encourage agencies to provide regular training on any alternative technologies to be used," including educating public safety agencies about alternative technologies.

The recommendations said that several Amateur Radio operators recommended changes to Part 97 of the FCC's rules; Part 97 is the section that covers Amateur Radio. Many of the suggestions, the report said, have already been implemented, and as such, require no further action. For example, "the Commission recently eliminated Morse Code proficiency as a license qualification requirement, an action supported by several commenters in this proceeding."

The FCC once again made clear that Part 97 "does not prohibit Amateur Radio operators who are emergency personnel engaged in disaster relief from using their amateur radio bands while in a paid duty status." This changed this past December in WT Docket 04-140, the "Omnibus" Amateur Radio Report and Order (R&O).

The Commission also previously decided to phase out RACES station licenses, "making proposed changes to rules relevant to these licenses moot." ARRL Regulatory Information Specialist Dan Henderson, N1ND, notes that the FCC "is not phasing out the RACES program, just the RACES station licenses."

In his comments to the Katrina Panel, W. Lee McVey requested that the FCC initiate a rulemaking to create a new radio service in the 148-150 MHz band "to facilitate interoperability between different first responders during and following a national emergency." The FCC noted that the 148-149.9 MHz band is allocated on a primary basis for the federal mixed, mobile and mobile satellite (Earth-to-space) service, and the 149-150.05 MHz segment is allocated on a co-primary basis for

federal and non-federal mobile satellite (Earth-to-space) and radio navigation.

The FCC's report said "[This] petition does not address this use nor does it explain what rules would be necessary to govern access to this spectrum. Given the potential impact of McVey's proposal to spectrum allocated for federal use, we direct PSHSB, together with the Office of Engineering and Technology (OET), to seek feedback from the National Telecommunications and Information Administration (NTIA) on this petition."

The FCC said that when it receives the feedback, they will direct PSHSB and OET to make a determination on the appropriate action to be taken on McVey's petition.

==> ARRL EXPO at 2007 National Convention in Huntsville

Join the ARRL in Huntsville, Alabama the weekend of August 18-19, 2007 for the ARRL National Convention, held at the Huntsville Hamfest, in the all air-conditioned Von Braun Center. The Global Amateur Radio Emergency Communication Conference (GAREC) will meet in Huntsville prior to the hamfest on Thursday and Friday, August 16-17.

This year, the ARRL is pulling out all the stops in planning the National Convention. According to ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R, "ARRL will have a big exhibit on the convention floor for ARRL EXPO 2007. The ARRL EXPO was first introduced as a major component of the 2005 National Convention in Dayton, Ohio. We're excited to bring this exposition to Huntsville." This special exhibit area will feature ARRL program representatives, activities, presentations and the huge ARRL bookstore.

Get a free gift when you join or renew your ARRL membership at the ARRL EXPO. Plan on picking up a free 2007 National Convention button and frequency chart, as well as free copies of QST, NCJ and QEX (while supplies last). See live presentations every half hour at the ARRL Stage, and hear from ARRL volunteers and staff on a variety of topics. ARRL EXPO is equipped with wireless Internet. Any laptop or device equipped for wireless will enjoy Internet access within the ARRL EXPO vicinity. ARRL EXPO will also include a small Internet cafe with computers set up to browse. Access your e-mail and the Internet. Surf away -- compliments of ARRL.

Last year, more than 4000 people attended the Huntsville Hamfest; organizers expect 2007's attendance to top 5000, with more than 40 vendors displaying their Amateur Radio wares. Almost 400 tables will be available for rental. Unlike many other hamfests, the flea market is in an air-conditioned building, something much appreciated in Alabama in August.

An exciting forums schedule is in store. Dr David Hathaway, a nationally known and well-respected expert on Sunspot activity and solar cycles, will be speaking. Also, Dr Monte Bateman will return to the hamfest this

year. He's NASA's "Go-to Guy" when it comes to weather, specializing in lightning strike predictions and prevention. In the past, his forums have been standing-room only as he discusses lightning prevention as a it applies to Amateur Radio.

Along with, and in conjunction with the National Young Ham of the Year awards, Rebekah Dorff, WG4Y (2006's National YHOTY), will host Alabama's YHOTY activities, including a youth lounge for young hams, and prospective or new hams. The YHOTY for 2007, Grant Morine, W4GHM, is expected to be on hand to receive his award.

On Saturday, August 18, The ARRL Alabama Section will host a reception for Southeastern Division Director Frank M. Butler Jr, W4RH, honoring Frank's dedication and longtime service to ARRL and Amateur Radio. There will also be a D-STAR users' meeting and reception on Saturday evening from 6-8, hosted by the Alabama D-STAR Group. New and experienced D-STAR users are invited to attend to learn about D-STAR networks and to meet other users and digital technology experimenters. A DX Banquet is also planned for Saturday at 6:30 PM. Bob Allphin, K4UEE, will speak on the VU7 Lakshadweep DXpedition. Tickets are $29 per person.

For more information on the ARRL National Convention, please see <http://www.arrl.org/announce/nc/2007/huntsville.html>. To find out more about the Huntsville Hamfest, please see <http://www.hamfest.org/>.

==> Amateur Radio Now Legal in all Texas Public Schools

In what can only be termed a huge victory for the future of Amateur Radio in Texas, Governor Rick Perry signed Senate Bill 11 (SB11) into law in June. Among many disaster response specifications, the new law contains two important Amateur Radio-related provisions: State employees who are ham radio operators may to take up to 10 days of paid leave while participating in a disaster response or training exercise, and Amateur Radio is now allowed in all Texas public schools.

A single sentence in Article 2 of SB11 modifies the legal definition of a banned paging device by adding the following ham radio exception: "The term does not include an Amateur Radio under the control of an operator who holds an Amateur Radio Station License issued by the Federal Communications Commission."

Texas is the first state to enact such a sweeping change allowing school-based ham radio programs statewide. It is hoped that similar measures will be enacted in other states. Local clubs in Texas are urged to contact their school boards and encourage them to bring school policies regarding student possession of RF devices into compliance with the new law.

A decades-old provision in the Texas Education Code (Section 37.082) long ago granted Texas schools blanket authority to ban student possession of all RF devices, including ham radios. The old law was originally enacted with the best of intentions, but had unintended negative consequences both for student safety and for the cause of

Amateur Radio. More than 20 years ago Texas -- like many states at the time -- passed a law granting schools sweeping authority to ban student possession of "paging devices." The original intent of the law was to prevent on-campus drug dealers from communicating with one another using now-obsolete numeric pagers. Cut off their communication, the logic went, and drugs on campus would be seriously curtailed.

The old law broadly defined a prohibited "paging device" as any RF device which had the ability to vibrate, emit a sound, display a message, or in any way convey a communication to the possessor. There was no exception for school-based Amateur Radio programs or clubs. Practically all Texas schools immediately exercised their newly granted right by banning all RF devices to the maximum extent allowed by law -- and sometimes to a greater extent than the law allowed.

The result of the old law was that in most Texas schools, starting a ham radio club was simply out of the question. Existing ham radio programs were even removed from some San Antonio area schools as a direct result of the old law.

Although schools can still have basic rules of classroom decorum to insure that ham radio activities do not disturb academic instruction, SB 11 effectively puts ham radio programs on the same legal footing with all other student-initiated clubs and activities. Texas school teachers are now free to start ham radio programs. Students are now free to form school-based ham radio clubs. Individual students who have a ham license are even legally allowed to possess ham radios at school regardless of whether a club exists yet. SB11 takes effect on September 1. -- James Alderman, KF5WT

==> FCC Dismisses Three Amateur Station Identification Change Requests

On July 10, the FCC dismissed three separate petitions to Section 97.119 of the Commission's Rules. These petitions requested changes to the way amateur stations are identified. Two of the petitions requested that the time interval between required identification announcements be changed, while the third petition requested that certain combinations of letters be reserved for use by current or former members of the armed forces when identifying their amateur service stations.

The FCC said that "[b]ecause the petitioners seek to amend the rules to permit activity that the current rules already permit, or do not present sufficient evidence to justify altering the current rules, we are dismissing all three petitions." Section 97.119(a) of the Commission's Rules provides that an amateur station "must transmit its assigned call sign on its transmitting channel at the end of each communication, and at least every 10 minutes during a communication, for the purpose of clearly making the source of the transmissions from the station known to those receiving the transmissions."

Murray Green, K3BEQ, of Cheverly, Maryland, filed a Petition for Rulemaking (PRM) asking the FCC to amend Section 97.119(a), requesting

the FCC to reduce the required frequency of station identification to every 30 minutes, rather than once every 10 minutes.

Green's petition received approximately 100 comments, with the majority of those commenting in opposition to the petition.

The FCC, on finding that the present rule has not been shown to be burdensome or unreasonable, said they were not persuaded by comments that support expanding the interval between required identification to 15 or 20 minutes.

The FCC's response went on to say "that requiring a station receiving another station's transmission to listen for up to 30 minutes to determine the call sign of the transmitting station would compromise the ability of the amateur service to self-police, especially in light of the fact that other methods of identifying the station, such as looking up the station call sign based on the operating frequency, are not available because amateur stations do not operate on specifically assigned frequencies. It therefore is reasonable to require amateur station identification more frequently than is required of stations in other services."

The Commission noted that "a hallmark of enforcement in the amateur service is 'self-policing,' which depends on an amateur station hearing a message being able to determine the call sign of the transmitting station." The FCC concluded that "proposing to increase the time between required station identification transmissions would not improve or enhance the operation of amateur service stations or otherwise be in the public interest," and dismissed Green's petition.

Glen Zook, K9STH, of Richardson, Texas, filed a separate PRM, requesting that the Commission amend Section 97.119(a) to require that the call sign be transmitted at the beginning and end of each single transmission, as well as at the beginning and end of a series of transmissions between stations having established communications when each transmission is less than three minutes in duration. He also requested that the FCC amend the rule to require that the call sign be preceded by the words "this is" or "from" when voice communication is being transmitted, and require that the call sign be preceded by the prosign "de" when telegraphy is being transmitted.

The FCC agreed with the majority of commenters in the Zook petition, calling the proposed rules change "unnecessary and...burdensome." Saying that identifying before every transmission could "lead to congestion, such as during a contest when many amateur operators are trying to contact a distant station," the petition "does not demonstrate that so revising the station identification requirement would address the primary concern expressed by the petitioner -- that many Amateur Radio operators do not identify their station timely or at all."

The FCC said they agreed with the comments that say, in various ways, "that the problem of station operators not complying with the present

rule is better addressed by enforcement of the present rule, rather than a rule change. Finally, we note that while the current rule does not require identification at the beginning of a communication, many amateur stations already routinely begin a transmission with their call sign." As such, the Zook petition was dismissed.

The Quarter Century Wireless Association (QCWA) filed a PRM requesting that Section 97.119(c) be amended to permit an Amateur Radio operator who is a "current or honorably discharged member of the United States military to include a unique indicator with the station's call sign identification announcement." Section 97.119(c) of the Commission's Rules permits the inclusion of indicators with the call sign during station identification, provided that no self-assigned indicator conflicts with any indicator specified by the Commission's rules or with any prefix assigned to another country.

The QCWA, in support of their proposal, noted that "many Amateur Radio operators are serving or have served in the United States military, or became Amateur Radio operators during or following their military training in communications and electronics, and it states that this proposal would afford those individuals the option to advise others of their military service when they identify their amateur stations on the air."

Specifically, QCWA requested that the indicators AF, AA, NA, NM and ACG be reserved for use by current or honorably discharged members of the United States Air Force, Army, Navy, Marine Corps and Coast Guard, respectively.

The FCC dismissed this petition, saying that "Amateur Radio operators who are current or honorably discharged members of the United States military already are permitted to identify their stations in the way QCWA suggests." The Commission went on to say that the QCWA "seeks to regularize the use of its proposed indicators to increase their recognition, the amateur community may do so without any change to the amateur service rules." As such, the FCC deemed such a rule change unnecessary and dismissed the QCWA's petition.

==> ARES Members Serve Firefighting Efforts in California

Amateur Radio Emergency Service (ARES) members are assisting firefighters on the Zaca Fire, in Los Padres National Forest. More than 6500 acres of the forest are affected. The forest stretches across almost 220 miles from the Big Sur Coast in Monterey County to the western edge of Los Angeles County. ARES members from Santa Maria, in Santa Barbara County, are staffing roadblocks at the intersection of Figueroa Mountain Road and SR 154 and at the intersection of Happy Cyn and Baseline Roads. The roadblocks were established at the request of Santa Barbara County Fire Department.

The fire, which began July 4, is believed to be human caused, according to the US Forest Service. As of now, it is 37 percent contained. The

fire has now burned into the San Rafael wilderness, with the north flank of the fire currently burning in heavy, 40 year old fuels with a high dead to live ratio. Fuel moisture levels are extremely low and at a point that is usually not seen until late summer. Humidity is high, hovering at around 78 percent.

According to Donna Tooth of the US Forest Service, the fire is continuing to back down to the Sisquoc River. Plans are in the works to contain this portion of the fire, preventing it from spreading into areas that have not been burned since 1966. On its eastern side, the fire is burning along the Manzana Creek and has hit a portion of the Marre Fire of 1993. Firefighters are taking advantage of the younger vegetation and are attempting to "turn the corner" by applying direct line construction techniques. Firefighters are holding the fire on the north side of the San Rafael Ridge, south of the Sisquoc River and east of School House Canyon. The fire is threatening the Cody Cabin and the historic Manzana School House.

Fire commanders say the fire could grow significantly larger in the next 12-24 hours, and project containment will require 14 days or more.

==> Oklahoma ARES Members Assist with Floods

Due to record rainfall in June and July in Oklahoma, Texas and Kansas, many rivers and streams were already swollen or flooding. On July 2, nearly 15 inches of rain fell in southern Kansas, causing widespread flooding and damage and sending torrents of floodwater downstream into northeastern Oklahoma. On July 5, the American Red Cross requested the Amateur Radio Emergency Service (ARES) to provide communications support for their damage assessment teams in those flooded areas of Northeast Oklahoma.

The Caney River, which flows through the city of Bartlesville, Oklahoma, 60 miles north of Tulsa, overflowed its banks, causing flood damage to homes and businesses within the city, as well as widespread flooding in the farm lands in other parts of Washington County. In Miami, Oklahoma, 70 miles east of Bartlesville, the Neosho River crested as it snaked in and around the community. Water up to 10 feet deep filled homes and businesses and blocked roads and highways.

ARES set up a Net Control Station, and Amateur Radio operators equipped with handheld transceivers and magnet mount antennas rode along with each Red Cross Damage assessment team as they surveyed the flood damage in Northeastern Oklahoma. An ARES Rapid Response Team (RRT) from Tulsa, led by Larry Holden, KC5KLM, began the operation and the primary group assisting with the response. Operations to survey to damage began on July 6 in Bartlesville and continued July 7 in Miami.

The ARES team used the Bartlesville Amateur Radio Club's repeater and set up a temporary repeater in Miami to aid with communications between the teams in the field and the Net Control Station. Jeff Lawson, American Red Cross team leader for the damage assessment teams, praised

the ARES team's professional communication work.

==>SOLAR UPDATE

Tad "Sun(spot) on My Shoulders" Cook, K7RA, this week reports: The average of daily sunspot numbers for this reporting week, July 5-11, were about the same as the previous seven days, declining slightly by less than two points. We've seen no zero sunspot days since an 11-day spotless period ended on June 25. If sunspot numbers continue at this level and higher, it will become easier to convince ourselves that the sunspot minimum is already behind us. Predicted planetary A index for July 13-19 is 8, 10, 8, 8, 8, 15 and 20. For the same period, Geophysical Institute Prague predicts quiet to unsettled conditions for July 13, unsettled July 14, quiet July 15-17 and unsettled July 18-19. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* ARRL Board of Directors to Meet July 20-21: The ARRL Board of Directors will be in Windsor, Connecticut for the second 2007 meeting. ARRL Chief Executive Officer David Sumner, K1ZZ, said that the Board will be looking at the progress toward achieving the League's legislative objectives, among other things. On Thursday, July 19 at 1900 UTC, there will be a brief and informal dedication of the ARRL Diamond Terrace at ARRL HQ. ARRL President Joel Harrison, W5ZN, and Sumner will be on hand to assist with a ribbon cutting ceremony.

* This weekend on the radio: This weekend, the big event is the IARU HF World Championship, from 1200 UTC July 14-1200 UTC July 15. On July 13, the NCCC Sprint Ladder is on the air, and on July 14, look for the FISTS Summer Sprint. The Colorado QSO Party is on July 15-16, while the Run for the Bacon QRP Contest is on July 16. The NAQCC Straight Key/Bug Sprint and the RSGB 80 Meter Club Championship (Data) are on July 19. Next week, look for the NCCC Sprint Ladder on July 20 and the VK/Trans-Tasman 160 Meter Contest (CW) on July 21. The North American QSO Party (RTTY) and the CQ World Wide VHF Contest are July 21-22. On July 22, the SKCC Weekend Sprint and RSGB Low Power Field Day are on the air. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education Course Registration: Registration remains open through Sunday, July 22 for these online courses beginning on Friday August 3: Technician License Course (EC-010); Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction

(EC-009); Analog Electronics (EC-012) and Digital Electronics (EC-013). To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* VE2XPO on the Air Again 40 Years Later: Forty years ago, in April 1967, more than 50 million people from five continents visited the Universal and International Exhibition (Expo 67), the World's Fair, in Montreal, Quebec Canada. Roland Masse, VE2PX, and the Radio Amateurs of Quebec (RAQI) set up and operated Amateur Radio station VE2XPO from Ste-Helene Island at the exhibition. Their first contact was with W1AW. More than 6000 contacts were made during the exhibition. Now, 40 years later, VE2XPO will be on the air again on all bands from July 13-29 using CW and SSB. It is planned for the first contact to be W1AW, just as it was 40 years ago. Masse, now 85 years old, and VE2XPO are looking to contact many US Amateur Radio stations. There will be a special QSL card -- QSL via Jacques Dube, VE2QK, 875 St-Severe, Trois Rivieres, Quebec G9A 4G4, Canada.

* DXCC Honor Roll, DX Phone Contest Coverage in QST: The DXCC Honor Roll listing, which normally appears in the August issue, will be in the September 2007 issue of QST. In addition, the ARRL International DX Phone Contest Results that normally appear in the September issue will instead appear in October.

* ARRL Membership Newsletters, Bulletins and Notifications: Did you know the ARRL offers more newsletters than just The ARRL Letter? One of the many ARRL membership benefits includes other newsletters, such as the ARRL Contest Rate Sheet (a bi-weekly contest newsletter), the ARES E-Letter (sent monthly, containing public service and emergency communications news), the ARRL Club News (monthly club news), the ARRL Instructor/Teacher E-Letter and the IARU E-Letter. You can also elect to receive news and information from your Division Director and Section Manager (keep in mind that not all Divisions/Sections send notices), as well as W1AW bulletins that relate to DX, propagation, satellites and Keplerian reports. The ARRL also offers a free notification service to members, letting them know when their membership and license are due to expire. Sign up for these newsletters, bulletins and notifications on the Member Data page of the ARRL Web site <http://www.arrl.org/members-only/memdata.html>.

* Field Day a PR Success: If you happen to be familiar with ARRL HQ, you may remember a very large bulletin board in the downstairs hallway. It is currently wallpapered with listings of Field Day media hits -- not even the items themselves, just lists of them: newspapers, radio, TV, blogs, Web sites, videos and special Public Service Announcements. ARRL Media and PR Manager Allen Pitts, W1AGP, said "The problem is that there is not enough space to put everything up because there are even more pages of listings to post and they are still coming in! In addition, not only were there more hits than ever, the quality of the hits was significantly improved. Articles and stories were longer, and had

pictures and better information. The credit for this avalanche goes directly to the hundreds of Public Information Officers and club members who took the time to advocate Amateur Radio for us all. It seems that clubs and groups were out for more than just the FD publicity points -- they wanted real PR this year, and they got it!"

* Howard Lester, W2ODC (SK): Howard Lester, W2ODC, died on April 16, 2007, in Alplaus, New York. He was 83. A Fellow of the Radio Club of America, he was one of the inventors of color television at RCA, and one of the inventors of tracking radar that locks onto moving targets. He worked with General Electric and Ericsson of Sweden to develop the basis of much of today's cellular telephone networking technology. A US Navy veteran, Lester taught radio and radar classes at the Navy Pier in Chicago during World War II. Lester was a member of the Schenectady Amateur Radio Association and the ARRL; he had an Amateur Extra class license and a First Class Radiotelephone license from the FCC. Lester was a 51-year member of the Alplaus Volunteer Fire Company, and served for many years as a firefighter, as well as on the Fire District Board of Commissioners and in the Fire Police. He frequently consulted on radio communications for the fire service in and around Schenectady County. Lester is survived by his wife Ruth; his brother Donald and sister Margaret Dalheim; sons, Carl, David, Donald and Eric; eight grandchildren and five great-grandchildren.

* Let Us Know: What's your favorite part of The ARRL Letter? What kind of stories would you like to see in the Letter? Would you prefer the Letter in an HTML format? This is your Letter and your chance to let your voice be heard. Please send your suggestions to ARRL News Editor S. Khrystyne Keane, K1SFA, at k1sfa@arrl.org, with the subject line "ARRL Letter Suggestions." All messages will be read and discussed, and we look forward to implementing positive suggestions into the ARRL Letter.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 15 JULY 2007

You are listening to ZS6SRL the official Radio Station of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is transmitted every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. To listen to a web stream or Echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links for details.

This, and previous bulletins, can be downloaded from the www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

This transmission is by Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, 14,235 and 51,400 MHz as well as 438,825 and 1 297 MHz in the Pretoria area. (Other newsreaders please change to suit).

SILENT KEY

It is with regret that we must announce the passing of J.J. Joubert (Jody), ZS6BLW, on Thursday 5 July 2007. Following his retirement from the Navy, he was involved with the Air Force Museum at AFB Swartkops and the National Military Museum in Johannesburg.

We extend our condolences to his wife Faith, family and friends.

PAUSE

In the news today:

SEE YOU IN BLOEMFONTEIN THIS COMING SATURDAY

WHEN NORTH IS NOT NORTH!

MEMBERSHIP CARDS ON THEIR WAY

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

SEE YOU IN BLOEMFONTEIN THIS COMING SATURDAY

The SARL Technology in Action programme hits Bloemfontein this coming Saturday, 21 July at the Advanced Training Wing at the School of Armour. Registration is at 08:30 with the official opening at 09:00. The programme is packet with interesting presentations. Tony Voorvelt

will open the presentations with "The mystery of the frog's thigh" - the story of the invention of the battery". Other presentations include "Cognitive Radio, an emerging technology that may make more intelligent use of the available radio spectrum", "Research in ionospheric radio propagation", "World Radio Sport Team Championships and DXpeditions", "WJST Software and Antennas for Long Distance VHF Work" and BACAR 2007 style, a fun project to take into school or for a club outing. Entrance fee is R 20 per person, learners and students enter free. The entrance ticket includes entry into the attendance prize draw.

Full details can be found by clicking on RTA on the SARL Web pages at www.sarl.org.za.

WHEN NORTH IS NOT NORTH!

Have you ever considered that if you align your beam heading on north using a compass that in fact you are way off target and that the further south you live the worse the error will be? Join Pieter Kotze of the Geomagnetism Group of the Hermanus Magnetic Observatory at the next Intecnet on Sunday 29 July for an interesting discussion. Before that you may want to read the science fiction novel Polar Shift by the author Clive Cussler. When will the poles flip and north become south? Clive Cussler has created a second to none fiction drama, Pieter Kotze will take us to the reality and discuss when it is likely to happen. Should we worry about it or should we rather get our antenna rotators properly aligned? The Intecnet discussion is on the air at 20:00, after the President's Net, on Sunday 29 July.

Clubs wishing to join their local repeaters for both the President's Net and the Intecnet should send an email to armi@sarl.org.za with details of the telephone number to be linked to the conference bridge.

MEMBERSHIP CARDS ON THEIR WAY

Members who have paid their 2007/2008 subscription will soon be receiving their membership card. Some final logistics are being sorted out. This year members will have to cut out the membership card which will be printed at the bottom of an acknowledgement letter. A credit card size plastic holder will be provided so that the card will fit snugly into your wallet or credit card holder. The SARL Administrator expects that she will be starting to mail the cards towards the end of this week.

The SARL thanks all members who have so promptly paid their 2007/2008 membership fees. An additional reminder invoice will be mailed to members who may have mislaid their invoice and who have not yet remitted.

If you are not a member yet, it is now a good time to join. The membership fee is less than R6 per week or R305 per year for full members. Seniors over 65 years of age pay R184 per year with an additional discount of 20% for this financial year putting it at R147.

CONTEST NEWS

THE BOLAND ARC 40-METRE CONTEST

This is a fun activity to promote contacts on 40 metres between radio amateurs in Southern African countries and will be on the air on Sunday 22 July from 15:00 to 18:00 CAT. The exchange is a RS report and postal code. Only wire antennas and a maximum output of 100 watt may be used.

Contacts with Southern African stations are worth 1 point. The Boland ARC club station, ZS1BAK, will be activated and a contact with this station counts 5 points, only one contact is allowed. Log sheets shall be submitted within 15 days after the contest and can be sent by e-mail to zs1bak@mailbox.co.za or by snail mail to BARK, PO Box 2105, Dennesig, 7601.

The contest committee for the SARL Digital Contest has only received five logs and it has been decided to extend the closing date to Monday 23 July 2007. Log submissions can be sent by e-mail to zs6bne@nwinternet.za.org or by normal mail to The Lichtenburg ARC, Box 410, Lichetenburg, 2740. Remember the winner of this competition will receive a Yaesu VX-2R Handheld.

CLUB NEWS

PEARS to provide radio communications.

The annual Volkswagen Rally (one in the series of national events) will take place on 20 and 21 July, in the general area of Port Elizabeth, Uitenhage and Jeffreys Bay. Some of the special stages will be run in the Longmore Plantation near Loerie in the Gamtoos Valley, and these have tremendous spectator appeal, with stones and dirt flying in all directions.

As usual, the Port Elizabeth Amateur Radio Society will provide radio communications for rally control and the passing of stage times - PEARS has been associated with this event for close on twenty years. Besides serving to sharpen the operating skills of members, it is also tremendous fun, and is one of the highlights of PEARS' annual calendar of events.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at low to very low levels. The geomagnetic field is expected to be quiet in general while reaching active levels on 19 July. The expected Effective Sun Spot number for the coming week will be less than 15. 20 m and 40 m will provide best opportunities for DX. There is a possibility of 20 m openings towards India from about 15:30 CAT. 20 m may open briefly at 08:00 to Australia and 40 m from 18:00. From 17:00 there may be a 20 m opening towards Europe. At about 16:00 short 20 m openings towards the West Coast of the USA are possible. Otherwise contacts to the USA are going to be very challenging. For the CW and digital enthusiasts it will also be worth monitoring 10 MHz.

Locally 40 m is going to be the band to be on during day time and 80 m after sunset. It is once again time to work towards your 80 m WAZS award in the evenings. Remember that HF always has the capability to surprise you. You will never know what you are missing unless you switch your rig on, listen and also call CQ.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

22 July - Boland ARC 40 m Contest; 5 August - SARL HF Phone contest; 15 August - Last day to submit synopsis of proposed papers for SA AMSAT Space Conference; 23 August - Class B RAE; 6 October - SA AMSAT Space Conference; 18 October - Class A RAE.

SARL News invites clubs and individuals to submit news stories of interest to radio amateurs and shortwave listeners. Submit news stories if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to the programme Amateur Radio Mirror International, on the air every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 695 kHz. For the web stream and echolink by ZS6FCS visit www.sarl.org.za click on ARMI and follow the links. A repeat transmission can be heard Mondays at 21:00 CAT on 3 215 kHz. Sentech sponsor the ARMI transmissions on the non-amateur frequencies.

Today's South African Radio League news bulletin was compiled by Roger, ZR3RC, and transmitted by (your name and call sign)

Thank you for listening. 73

1286. WIANEWS for week commencing JULY 15 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-07-14 16:33:20 UTC
From: nationalnews@wia.org.au
Message-ID: <200707141633.l6EGX0N24807@panix2.panix.com>
Source record: 4191
Cross-posted to: rec.radio.amateur.moderated,aus.radio.amateur.misc,rec.radio.info

This is WIANEWS for week commencing JULY 15 2007

Amateur Licence Fee Increased.

The ACMA has increased the cost of the amateur licence from $58 to $61 with effect from 1 July 2007.

The WIA was unaware of this increase until the 9th July.

It was not advised of any increase by the ACMA.

The cost of amending an existing licence has not changed.

It is understood that where the old fee has already been sent to ACMA it will be accepted, and the next renewal date will be brought forward to a slightly earlier date to reflect the slight underpayment.

Also forms in the new Assessor Instructions on the WIA website have been updated - the file can be identified as "Rev 5-01.pdf", and the forms on the website have also been updated. Assessors are asked to download and use the new forms.

'It's that Wintry time of year again and the snow gods have been kind down vk2/3 way. The alpine regions of south-eastern Australia are recording some of the best dumps of the white stuff for quite a while.

In accordance with established tradition, several VK3 amateurs are heading 'back-country' to the Bogong High Plains for a cross-country ski expedition.

Amongst those heading to the mountains this year will be VK3JPA, VK3HFI and VK3SN, who are all strapping on skis to spend four days away from civilisation in the Victorian alps from the second to the fifth of August.

Their ultra-light solar powered multimode-multiband station will be in action each afternoon and into the late evening, so listen out on all bands from HF through to the local 70cm repeaters for the fellas camping in the snow.'
(Stephen VK3SN)

BARC, The Brisbane Amateur Radio Club's news letter is reporting how GPS has come to the rescue of the elderly and overcome the problems of radio in a hilly terrain to provide a unique bus service in Toowoomba, South East Queensland.

Buses now run door to door and on demand, following no set route, and the scheme is the result of collaboration between Queensland Transport and Transit Australia using know-how from Belengo which produced the flexible

transport system called Kan-go.

Kan-go responds to the requirements of the individual passenger and provides the same convenience as a taxi but is as affordable as a bus.

Passengers book a bus trip by using the web-based job booking system. The system handles bookings and amendments, tracks the buses and optimises the route that the buses will take.

The route organization engine calculates the most efficient route to each of the pick-up or drop locations and the driver is guided to each point via the onboard GPS navigation system.

The bus only responds to people who have booked a service, and therefore only operates when there are passengers to be picked up.

www. Belengo. Com

WIA PRESIDENT MICHAEL OWEN VK3KI

The WIA exam service forms on the website, both as incorporated in the Assessor Instructions Revision 5 and the downloadable forms have been updated.

ACMA increased the amateur licence fee from $58 per year to $61 per year, an increase of $3 per year, with effect from 1 July.

On 21 January last we reported on the submission that had been lodged by the WIA with ACMA contesting some of the published assumptions following Peter Young and my meeting with ACMA in January this year. ACMA had announced its review of its costs recovery arrangements just before Christmas.

The cost of amending an existing licence has not changed.

I understand that where the old fee has already been sent to ACMA it will be accepted, and the next renewal date will be brought forward to a slightly earlier date to reflect the slight underpayment.

Next, a reminder about the closing date for the Club Grant Scheme.

The WIA has allocated $5,000 this year for grants to affiliated clubs, to support projects that promote and advance amateur radio, the WIA and it's Affiliated Clubs by supporting useful and/or innovative projects undertaken or to be undertaken by Affiliated Clubs.

That is very broad, but the Board believes it should give as much latitude to the Grant Committee as possible to balance the various factors.
The 2007 Grant Committee is Don Wilchefski VK4BY, Deane Blackman VK3TX and Wally Howse VK6KZ.

The closing date for applications by clubs is tomorrow, Monday 16 July.
The application must be in the office by close of business tomorrow.

Let me answer a couple of frequently asked questions.

What sort of things are grants made for?

The best thing to do is to look at last years Grant Committee Report, a link to which is on the WIA website, under clubs, on the right hand side.

A link to the template, which is suggested as being the first page of a submission, is also on the same page.

What about the number of WIA Members in a club?

The rules say ordinarily participation limited to Affiliated Clubs having a Membership Percentage of not less than 50%. The rules make it clear that the Grant Committee must have regard to the number of WIA members in a club in making its recommendation. However, a grant may be made to a club with less than 50% membership if the Grant Committee so recommends in the case of a project having particular merit.

Thank you.

AMATEUR RADIO - HOME OF THE GOOD GUYS

CQIR

Great interest is being expressed worldwide in the Irish Society's 75th Anniversary Contest CQIR, which will take place on the last weekend in September.

The contest is a celebration of Ireland and the Irish, and they figure CQIR will be one of the largest 'one off' contests ever aired on the Amateur Bands.

It is a 24-hour single operator contest with the emphasis on participation rather than winning and to this end every participant gains an entry ticket for a spectacular draw for every 75 QSO's made during the Contest.

The ticket drawn out of the EI/GI drum will win an all expenses paid long weekend in New York City for two Irish people. ARRL have confirmed that this will include a visit to their national headquarters hosted by ARRL.

Kinnitty Castle in Offaly will host the international winners for a week with flights for two from anywhere in the world.

The prizes have been fully sponsored at no cost to the Society and this is really an excellent opportunity to celebrate the Society and its 75 years of service to Irish experimenters.

The IRTS have encouraged all Irish operators to be active during the Contest.

Full rules are on the IRTS website.

HAMS ACROSS AUSTRALIA.

The 28th July the EMDRC will be running their HF antenna build day.

Over the course of the day members and friends will be building dipole antennas for 80 meters. This will be a full day activity with a break for a BBQ lunch.

The activity will be held at the EMDRC clubrooms 12 a McCubbin street in Burwood and kicking off around 10:00am. The EMDRC extends an open and warm invitation to visitors To register for attendance.

contact VK3AMN@wia.org.au

VK4

At long last the Worked All Queensland award is up and running.

Check the article published in this months AR magazine.

Dale VK4DMC has designed a log sheet for the award. It shows all the current shires that count towards the award.

He will email a copy to anyone who would like one.

Just send an email
vk4dmc@wia.org.au
with WAQ log sheet in the subject header.

If someone would like a copy posted simply send a stamped self addressed envelope to:

WAQ Log sheet
7 Danzer Drive
Atherton Q 4883

And don't forget there may be some changes to the Queensland shire names around February 2008. The log sheet will be amended to reflect these changes when the Government legislates the changes, if any.

VK8

Its been a little chilly in the top end over the last couple of weeks, you may laugh but to us it has been colllld. Especially out here in the rural area.

Hello to our visitors in town. The Darwin amateur radio club clubrooms are open Tuesday nights 7pm at sports house Waratah Cres Fannie Bay. Follow the feeders from the antenna farm.

The general meeting of the club is held on the first Monday of the month at 7pm

Keep an ear out for the Darwin crew on 40 meters in the IARU contest today and tonight. Give us a call.

There will be a home brew competition shortly. Get your thinking and building caps on team. No it's not a beer-making contest although that would be fun.

Three categories, 1) own design and circuit.
2) Constructed from a Kit
3) Foundation licensees in either of the above classes.

Finally this week the club will be assisting the Topend Lions clubs with the Darwin Beer can regatta on the 29th of July at Mindil beach. It starts at around 10 am with junior events and building to the finale the Battle of Mindil. Contact Trevor VK8CO if you are able to assist on the day.
The more the merrier. Come along and join in the fun

Now its back to the national news desk
This has been Spud VK8ZWM for the National WIA

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6FXYL

The RSGB might have their educational van GB4FUN, but in the tropical north of VK4 Townsville hams, better known as "TARCadians" have their own very well equipped version, predating the British by several years.

the Townsville Amateur Radio Club, or "TARC" Communications Van has seen use in such varied locations as tropical wonderlands, glorious cattle stations, crowded university conventions, boisterous JOTA camps and serendipitous radio field days - in short its been well used and a great way of promoting and showing off to the general public this great hobby of ours.

RADIO SLEEP-OVER
In ALARA's latest news letter we read how Michelle VK2 FM YL, and her Guide unit, Baulkham Hills Explorer and Possum Guides, had a sleep-over with a difference.

Michelle set up an amateur radio station and the group spoke to other Scouts and Guides around the world to gain the Scouting 100 Radio Award, which has been established to celebrate the 100 years of Scouting.

Some of the countries contacted were England, The Netherlands, Germany, Japan Brazil, Canada and USA.

The girls also learnt radio communication techniques and practised their skills for JOTA.

Now we all know "sleep over" is hardly the end result of such an activity! BUT some of the girls WERE between 5 and 9 years old, many of them were falling asleep by 9 pm and this was too early for many DX stations, although one American station got up at 3am to talk to them.

Similarly when they came on in the morning the European and English stations wanted to go to bed as they had to work the next day. However, many stations called and talked to the girls, so they could get the award.

VK2FMYL were the first Guide unit to receive it in the world.

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or training in Amateur Radio go to wia.org.au and check out the club pages.

Participating clubs keep this site up to date and post the latest information for all to see.

Also check the text edition of each news edition, where we do keep a secondary listing.

On the audio broadcast we will continue to give new information when it is received, but just in case you miss it one week, you can always access our text

Next Foundation Licence course, and Standard / Advanced assessments .....

VICTORIA

Enrolments are open for this month's Foundation Licence training and assessment session held by Amateur Radio Victoria on the weekend of the 21st and 22nd of July, at Box Hill North.
For inquiries contact Barry Robinson VK3JBR 0428 516 001 or email arv@amateurradio.com.au

WESTERN AUSTRALIA

Enrolments are open for the Advanced Licence Course to be held Tuesday nights commencing 24th July.

Get your name in now by contacting Kylea on 0412 704 226.

CONGRATULATIONS - RESULTS

Tony VK7FACC and Roger VK7FRMH. Welcome to the hobby and we hope to hear you on the air soon.

Entry level licences - update

The successful introduction of Foundation Licences, particularly in Britain and Australia, continues to be food for thought in a number of other countries. With the story, VK3PC Jim Linton.

The latest to declare such an interest is the New Zealand Association of Radio Transmitters (NZART) which is looking at the possible introduction of a Foundation type licence.

New Zealand currently has a single licence restructure having abandoned its Novice licence which was not a success and in its final year had only about a dozen on issue.

NZART says a Foundation Licence will be considered over coming months with both the British and Australian models being examined for their suitability.

Canada is still in favour of a new entry licence. However the thought there are the moment is that it should be of a limited tenure in order to encourage licensees to upgrade. The regulator Industry Canada is talking about the new licence being introduced in years, rather than months.

Our near neighbour Papua New Guinea is also looking at the possible introduction of a Foundation Licence.

And decisions are yet to be made on a commonly agreed Foundation licence that can be adopted by member nations of the European Community.

INTERNATIONAL NEWS READ BY Rob VK5MM

Hungary allocated Experimental licence for 70 MHz

An experimental radio licence was recently signed and issued to Haros Radioklub which permits radio usage of the 70 MHz band for the first time in Hungary for 30 radio amateurs.

The licence is valid for a period of 30 days starting 1 July 2007. The aim of the experiment is to study propagation of radio waves in the 70 MHz band where all FM broadcasting was stopped in February.

The frequency range permitted for the experiment is 70.000 - 70.500 MHz, and the licence is valid for all operating modes, CW, SSB, narrow band FM and digital modes like JT6M. Maximum effective radiated power (ERP) is limited to 1kW.

The original request was submitted in April. In spite of lack of Radio amateur service allocation of the band, the National Communications Authority responded quickly and cooperatively.

In the experiment they identify by "call name" beside ham radio callsign.

The call name is composed by a prefix "70m" and a suffix of amateur radio callsign, for example 70M1BVC HG1BVC 70012.5kHz JN87FI beacon

long-term goal is to contribute to the joint efforts of 70MHz allocation for amateur radio service in Hungary and worldwide.
(from a posting picked up by southgate)

NEWS FROM ARNEWSLINE
HAM RADIO IN SPACE: ME AND MY BABY - MONITOR - MYSTERY SOLVED

Ham radio is responsible for the NASA video seen over an Illinois mothers baby monitor during the recently concluded STS 117 space shuttle flight. Bill Pasternak, WA6ITF, reports:

A radio club in Schaumburg, Illinois says it is likely responsible for the NASA spaceflight video over baby monitor. But it turns out that the signal seen only by suburban Chicago teacher Natalie Meilinger was not on 2.4 GHz as originally thought.

It happened this way. The club was re-transmitting STS 117 mission video on it's 910.25 MHz amateur television repeater. The system runs 100 watts out into a par of horizontal yagis. These antennas are at 70 feet with one pointed north and the other to the west.

And it turns out that not all baby monitors operate on 2.4 GHz as everyone first

thought. Some are in the 900 Mhz spectrum while
others are dual band units. If you do the math
it mean that a more than receivable signal could
easily reach the Meilinger home and be displayed on the monitor receiver.

So why was no I-D noted by the Meilinger family?
During the mission the transmitter had the call
sign K9MOT displayed in the lower right corner of
active video every 10 minutes - per FCC
identification regulations. Any properly aligned
video monitor like those used in Amateur
Television stations would have displayed it
because the I-D fell inside what broadcast
engineers call the video safe zone. That's the
screen area you are supposed to see in off air television viewing.

But a baby monitor is not a broadcast quality
monitor. In reality, most are low-end consumer
products that tend to overscan the picture tube
face. That's fine for watching the kids at play
but not for trying to see the whole picture. And
that was likely the case with Natalie Meilinger's baby monitor as well.

The K9MOT identifier was there, but the baby
monitor had to much picture width. That put it
out of the picture area her unit could display so
she and anyone else looking at the monitor screen couldn't see it.

Mystery solved thanks to some good sleuthing on
the part of some Illinois hams.

For the Amateur Radio Newsline, I'm Bill
Pasternak, WA6ITF, at the studio in Los Angeles.

By the way, this is the 5th year the club has
been re-broadcasting NASA video over its K9MOT
repeater but only the first time to their
knowledge that its been received by a non ham.

WEIRD N WONDERFUL

Blue Moon

When you hear someone say "Once in a Blue Moon..." you know what they mean:

Rare.

Seldom.

Maybe even absurd.

After all, when was the last time you saw the moon turn blue?

According to modern folklore, a Blue Moon is the second full moon in a
calendar month.

Usually months have only one full moon, but occasionally a second one sneaks in.

Full moons are separated by 29 days, while most months are 30 or 31 days long it is possible to fit two full moons in a single month. This happens every two and a half years, on average.

July has the first full moon on July 2nd and a second on July 31st, which is, by definition, a Blue Moon.

(jamie pye zl2nn nzart)

Ducie Island, VP6, DXpedition Gears Up:

The Daily DX reports that the Ducie Island DXpedition Team, VP6DX, has been busy behind the scenes preparing for the much anticipated February 2008 DXpedition.

It was also announced that the VP6DX team decided to extend the duration of the DXpedition.

Plans are to depart Mangareva Island, part of the Gambier Islands in French Polynesia, via ship on February 5 and head for Pitcairn Island; this trip normally takes about 36 hours.

The ops will spend a few hours on Pitcairn before taking another 36 hour trip boat ride to Ducie Island; they plan to arrive at sunrise on February 9, and hope to be up and running within 24 hours.

If all goes well, including the weather, they will have VP6 on the air for as long as 19 days.
(ARRL LETTER)

WIRELESS WEATHER

Solar Flux to Bottom Out in July as Cycle 24 Gets Closer:

The National Oceanic and Atmospheric Administration's Space Environment Centre released their monthly forecasts of sunspot number and 10.7 cm radio flux, including high and low bounds to their forecasts. The S.E.C. forecasts that the smoothed sunspot number reached its low value of 11.7 in March 2007, and predicts that the solar flux will reach its low of 75.4 this month.

This is the fourth month in a row that the SEC predicts the solar flux will bottom out in July.

Based on the SEC predictions, this is probably at the bottom of Cycle 23 and extremely close to the beginning of Cycle 24.

Two events will mark the beginning of the next sunspot cycle:
The observation of the first opposite magnetic polarity sunspots compared to Cycle 23 sunspot polarity, and the observation high solar latitude sunspots.

The Cycle 23 sunspots are now very near the solar equator.

NOW ROBERT BROOMHEAD - VK3KRB.

WW SPECIAL INTEREST GROUPS --- IOTA
http://rsgbiota.org

The RSGB Islands on the Air scheme, sponsored by ICOM, launched its new website on 21 June.

The new site includes many innovative improvements, and contains also many new features including the ability to view one's own record of confirmed island groups.

Soon it will be possible for participants to claim additional credits on line and even to claim credit for IOTA Contest QSOs without the need for QSL card verification.

The site at www.rsgbiota.org has already proved to be a great success.

Within the first week, 34,308 pages had been viewed an average of about 4,900 per day by users in 64 different countries. The homepage, search page and island group information pages being the most popular.

About 383 users have registered to use the QSO credits part of the site, of which 163 are new to the IOTA programme, proving the value of moving to an on line management system.

The site was developed primarily by Dominic Smith, M0BLF, with Martin Atherton, G3ZAY, acting as the liaison between the project team and the IOTA Committee.

WW SPECIAL INTEREST GROUPS --- RADIO SCOUTING
http://www.scouts.com.au
http://www.scout.org/jota
http://www.wiaq.com/nationalnews/jotahead.htm

SCOUT JOTA HF Voice Calling Frequencies
3590, 7090, 14190, 21190, 28590 kHz
14290, 18140, 21360, 24960, 28390 kHz (DX)

This years 50th JOTA will run from October 19th at 22:00 hours to October 21st at 24:00 hours YOUR local time.

An official start will be given by the World Scout Bureau radio station in Geneva, Switzerland on October 19th at 21:00 h UTC with a transmission in the 20 and 80 meter bands and on EchoLink.

VE7JAM at Pacific Scout Jamboree on until sundown today July 14

Scouts of VE7JAM are looking for all Scouting stations and will give them 5 points for the Centennial Scouting award.

VE7JAM is operating near the official scout frequencies so check out 7090, 14.190 14.290

The full listing of Scout channels is available on this weeks text edition, www.wia.org.au click broadcast.

Also check via IRLP node 1409

There are about 2000 Scouts at the event, so says Alan VE6DE at this Canadian Pacific Scout Jamboree

North Queensland Amateur Radio Convention
Happening in twin cities of Thuringowa and Townsville.

JANUARY 20 2008

The Mid North Coast Amateur Radio Group invite all amateurs to attend the 2008 Mid North Coast Radio Expo to be held in Coffs Harbour on Sunday 20th January.

The Expo is held at the St Johns Church Hall, Mc Lean Street, Coffs Harbour. Gary VK2ZKT is the Radio Expo Coordinator on 02 66 55 2 990 or visit the Groups comprehensive web site at www.mncarg.org

REWIND - A LOOK BACK IN HISTORY
(Will McGhie VK6UU is WIA National Historian)

The Pedal Radio

Australia's population density is just 6.4 people per square mile. Eighty years ago, with almost no telecommunication infrastructure beyond the seaboard, the tyranny of distance loomed much larger in the Outback as the nearest doctor could be several thousand miles away, with no method of contacting them in an emergency. Hearing that German WW1 soldiers had used hand-cranked radios for battlefield communications, Alf Traeger set about creating a radio powered by bicycle pedals.

The invention of the pedal radio in the late 1920s enabled the famous Royal Flying Doctor service (RFDS) introduced by the Rev John Flynn, and offered remote settlements access to telecommunications for the first time.

Flynn lived in the Outback for most of his life, setting up hostels and bush hospitals for pastoralists, miners, road workers, railwaymen and other settlers and families. Known as 'Flynn of the Inland', his dream of a 'flying doctor service' came to life when H V McKay, inventor of the McKay Sunshine Harvester left a large sum of money in his will, and when Traegar developed the pedal radio. This gave Outback people the voice they needed to summon a doctor if necessary and at least to be able to get a radio consultation with one.

Pedal radios also meant neighbours, families and friends, scattered over thousands of square kilometres, could exchange news and gossip after normal transmission hours. This time became known as the 'galah' session, after the noisy, chattering native bird.

The School of the Air was also established, using the Flying Doctor Service network, and supplemented correspondence lessons sent to Outback children.

In 2005 alone the RFDS attended more than 234,000 patients, with more than 33,000 aerial evacuations, bringing this huge continent just a little bit closer for people in the most remote areas of Australia and this was all built on the groundwork of Alf Traeger and the pedal HF radio.

(vk7news)

THE FINAL FINAL

WALKS

Jeff VK4XJJ is still going strong on his walk across Australia.

But he still wants to hear from YOU, and it is these calls in particular that keep him going!!

Thursday 5th July. Walked 27 Km today. Temperature 8 to 25 degrees. Camped 2 Km south of Ayre Creek. Beautiful clear waterhole I km long. Tons of bird life.

Friday 6th. Averaging 4.5 Km per hour. Walked 30 Km today in shirt and shorts. 13 vehicles passed and four stopped to chat.

Saturday 7th. 10 km walk into Bedourie at 11 a.m. Walk from Birdsville to Bedourie took eight days. Plenty of amateur and web site contacts.

Sunday 8th. Looking forward to natural spa bath, then visits round town.

Monday 9th and Tuesday 10th. Local visits, emailing and waiting for food and spares parcel. Bedourie well worth a visit, nice and green and a very pleasant town.

Wednesday 11th. Left Bedoulia at 9:15 a.m. 20 vehicles, 2 stopped. Walked 24 Km today. Temperature range 6 to 21 degrees. Now 220 Km north of Birdsville.

Thanks to Roger VK4BNQ, main relay, and to those who called Jeff. Jeff is enjoying the AR magazine when sent.

Every Day, from 5:30pm Eastern on 40 meters, 7045 put out a call to VK4XJJ

Now we usually don't give url's as they can be a pain to take down but in this case very simple go to www.jeffswalk.com

1 GB2RS NEWS Sunday 15 July

The news headlines

* RSGB Microwave Manager to speak at International Space Colloquium

* New beacons on 40 and 60MHz

* CQIR contest should prove to be popular

A reminder that AMSAT-UK will be holding its 22nd International Space Colloquium at the University of Surrey, Guildford, from Friday 20 to Sunday 22 July.

Frequency allocations are a matter of great concern to the amateur satellite community and so the presentation by the RSGB Microwave Manager Murray Niman, G6JYB, on The Future of Amateur Satellite Spectrum will be received with great interest. The presentation will summarise both the challenges and opportunities for amateur satellite spectrum and future satellite designers from 50MHz to beyond 50GHz.

GB4FUN will be present throughout the event to allow visitors to work the satellites. On Friday there will be a special Beginners Workshop to show newcomers how to use the many amateur satellites that are available. The event is open to all amateurs and SWL's. For further details log onto www.uk.amsat.org.uk.

Rutherford Appleton Laboratories, located near Oxford, has just received licences for some very special beacons. The National Frequency Assignment Panel has allocated 40.050MHz and 60.050MHz for use by GB3RAL. Ofcom has issued NoVs for these frequencies, which will be used alongside other beacons on the site. GB3RAL will operate on 5, 28, 40, 50, 60 and 70MHz. This will provide a valuable propagation resource for amateurs worldwide. Please remember though that 40MHz and 60MHz are not amateur bands and these spot frequencies are for GB3RAL only.

Great interest is being expressed worldwide in the Irish Radio Transmitters Society's 75th Anniversary Contest, CQIR. This one-off, 24 hour, single-op contest takes place on the last weekend in September. It is intended to be a celebration of Ireland and the Irish worldwide.

The emphasis is on participation rather than winning, but every participant will gain a free raffle ticket for every 75 QSO's made during the contest. The first EI/GI ticket drawn will win an all expenses paid long weekend in New York. This will also include a visit to ARRL HQ.

Entrants from the rest of the world will enter a draw for a week in Kinnitty Castle, Offaly. The prize includes flights from anywhere in the world. This contest is an excellent opportunity to celebrate the IRTS and its 75 years of service to Irish radio experimenters. The society would like to encourage all Irish operators to be active during the Contest. Full rules are on the IRTS website.

The new UK transport minister Rosie Winterton says that the commercial sector should still have a role in developing the troubled Galileo satnav system. The plans have been plagued by delays and increased costs, and in May the European Commission abandoned negotiations with a private consortium to help it build the system. The 2.7 billion pound system is supposed to be functional by the end of 2012. Many amateurs remain concerned about possible mutual interference between Galileo and microwave operations, particularly on 23cm.

Dorset RAYNET is seeking volunteers for the IRONMAN Triathlon at Sherborne, Dorset on Sunday 19 August. They are offering a free campsite for any operator who wishes to make a weekend of the event.

2 XYLs are welcome too. Anyone who would like to help should contact John Goodall, G0SKR, by email to jg@shortwaveshop.com. And now for the details of rallies and events for the coming week [Note to newsreaders: please exercise your judgement on whether to read the 15 July event, based on your service area and time of transmission. We have not been notified of any events on 22 July.] On Sunday 15 July the McMichael Rally and Boot Sale takes place from 09.30 at Reading Rugby club, just off the A4, east of Reading. Details from G0JMS, on 01189 723504 or on the web at www.McMichaelRally.org.uk. More details of these and future events can be found on pages 88 and 89 of the July edition of RadCom. Now for the news of special events

On 15 July the Yeovil Amateur Radio Club will be operating GB2MBS, Marconi Beam Station, on HF throughout the day. Operations will be from 10am at New Barn Centre, Bradford Peverell, near Dorchester. The special event station is to mark the occasion of the 70th anniversary of the death of Guglielmo Marconi. For queries on the day contact Derek, M0WOB, on 07974759669. Finchampstead Scout Group will be putting on a special event station GB1FSG on 22 to 30 July. They will operate SSB on the scouting HF bands, either 3.690, 7.090, 7.190 or 14.290MHz, + or - QRN. The station will be operated from the Lake District.

On 28 to 29 July a group of radio amateurs will be active from Isle of Islay. Apart from the IOTA Contest with participation under two contest call signs GM2Z and GM4A, there will be a separate PSK station MS0EPC (EPC#1700). The radio amateurs will try to be active on all HF bands, including 160m. More than one radio may be in use. Special event station 9A07P will be active on all bands and modes until 31 December to celebrate the city of

Djurdjevac. All QSOs will be confirmed automatically via the bureau. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

Paolo, IK2MLS, reports he will be active holiday style as SV9/IK2MLS from Crete (EU-015) on 15 to 27 July. He plans to operate SSB on the HF bands, 6 and 2 metres. QSL via home call. Marq, CT1BWW, Juan Carlos, EA3GHZ and Tomas, EA5YH, will operate as FS/home call and PJ7/home call from Saint Martin and Sint Maarten on 15 to 25 July. They plan to be active on 80 to 6 meters CW, SSB and digital modes with two stations. Further information can be found on their web site www.dxciting.com. Hide, JM1LJS, Motoaki, JE1EK and Koya, JI5RPT, will be active from Koror (OC-009), Palau until 18 July. They plan to operate on 40 to 6 metres SSB and CW, plus satellite. QSL via home calls. Jack, HB9TL, reports he will be active as TK/HB9TL from Corsica on 18 to 30 July. He plans to operate SSB on 10 to 80 metres. QSL direct to HB9QR. Eddie, N2EK, will be operating holiday style as ZF2EK from Grand Cayman (NA-016) until 20 July. QSL via homecall.

3 Hank, W0CZE, will be active as YJ0CZE from Vanuatu until 21 July. He will operate on 10 to 80 meters SSB and CW. QSL is via W0FF. Frank, DL1FT, will be active as ES0FTZ from Saaremaa Island (EU-034) until 21 July. He plans to operate on 15, 17, 20, 30, 40 and 80m. A group of nine Portuguese amateurs will be operating as CS26X until 22 July for the 26th International Motorcycle Rally in Faro. They will be active on 160 to 6 meters, SSB, CW and RTTY. QSL via CT1EHX, direct or bureau. Look for RV3ATS, RV3ATT and RU3AVF to operate on 10, 15, 20, 40, 80 and 2 metres as RV3ATS/p. They will be operating until 21 July from 16 mountains located in various different Russian Districts. They also plan to participate in a number of contests on the VHF and HF bands. QSL via RV3ATS, direct or bureau. The Sovereign Military Order of Malta will be active as 1A0KM, with a large team of operators led by IK0FVC. Plans are to operate from 160 metres to 23cm on all modes, until 22 July. QSL via IK0FTA. Claude, F5OGE, will be active as CN2GE and CN2GE/m from Morocco until 29 July. He will be travelling from Tangiers to Rabat, Marrakech, Benni Mellal, Fes, and Tetouane and back to Tangiers. Claude will operate CW and SSB, mainly on 40 and 20 metres, early in the morning and late in the evening (local time). QSL via home call, direct or bureau. Art, KG6ZWD, will be active as SV1/KG6ZWD/p from mainland Greece on 24 to 25 July. He will also operate as SV8/KG6ZWD/p from Andros Island, EU-067, on 17 to 23 July. Expect holiday style activity on 10 to 40 meters SSB and PSK31. QSL via home call, director bureau. Pete, W2GJ, C6APR, Ed, K3IXD, C6AXD and Randy, K4QO, C6AQO, will be active from Crooked Island, NA-113, ARLHS BAH-005 on 26 to 30 July. They will operate CW, SSB, and RTTY on 80 to 6 meters and will participate in the IOTA Contest as C6APR. All QSLs via K3IXD. Now the contest news

The RSGB 1.3GHz to 2.3GHz activity takes place on 17 July between 2000 to 2230 local on all modes. The exchange takes the form of RST, serial number and locator. The RSGB 80m Club Championship takes place between 1900 and 2030 on 19 July on the 3.5MHz band, data modes. The exchange takes the form of RST and serial number. The RSGB Low Power Field Day, session 1, takes place between 0900 and 1200 on 22 July on the 3.5MHz and 7MHz bands, CW. The exchange takes the form of RST, serial number and power. The CQ WW VHF Contest takes place between 1800 on 21 July to

2100 on 22 July. Activity is the on 50MHz to 144MHz bands, all modes. The exchange takes the form of call sign and grid. The RSGB 144MHz Backpackers Contest takes place on 22 July between 1100 to 1500 on all modes. The exchange takes the form of RST, serial number, locator and postcode. Now the solar factual data for the period from 2 July to 8 July, compiled by Neil Clarke, G0CAS

4 Solar activity was very low until the 7th when a small sunspot group rotated into view and produced several C class solar flares, which increased activity to low. Solar flux levels initially declined from 73 to 71 units. Levels then increased to 75 by the 8th. The average was 73 units. The 90 day solar flux average on the 8th was 74 units, that's the same level as last week. X-ray flux levels remained below the minimum level but on the arrival of the new sunspot group increased to A6.9 units by the 8th. The average was A1.2 units. Geomagnetic activity started at quiet levels with an Ap index of 3 units on the 2nd. The 4th was the most disturbed day, this was due to a recurring coronal hole. The Ap index was 16 units. The remainder of the period was quiet and the average was Ap 7 units. The ACE spacecraft saw solar wind speeds increase from 320 kilometres per second on the 3rd to 650 by the 4th. Particle densities were low except for the 3rd, which increased to 12 particles per cubic centimetre. Bz varied between minus 3 and plus 2 nanoTeslas on the quiet days and between minus 7 and plus 8 during the disturbance. HF propagation was disappointing for a couple of days midweek, when MUFs were below predicted levels. Otherwise, it followed the pattern of the last few weeks. Sporadic-E was reported up to 50MHz every day and there were several strong openings at 70MHz, including Hungarian stations mentioned earlier in this bulletin. There was more 50MHz propagation into North America and the Caribbean, including a good opening for many Field Day stations yesterday. And finally the solar forecast This week the quiet side of the Sun is expected to be looking our way. Solar activity is expected to be very low. Solar flux levels should decline and maybe in the 60's for most of the week. Geomagnetic activity should be quiet today and tomorrow, but, due to a recurring coronal hole, activity is expected to increase from Tuesday and last till the weekend. MUFs during daylight hours at equal latitudes should be around 18MHz for the south and 15MHz for the north. The darkness hour lows should be about 10MHz. Paths this week to the Middle East should have a maximum usable frequency with a 50 per cent success rate of 19MHz. The optimum working frequency with a 90 per cent success rate will be around 15MHz. The best time to try this path will be between 0800 and 1600 hours UTC. Double hop sporadic E openings to the same destination could also take place on 50MHz. Meanwhile, single hop openings around Europe should take place almost daily on 28 and 50MHz. Openings on 144MHz could still be a slight possibility. And that's all for this week from the propagation team.

5 Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies can be found on the RSGB website, including e-mail addresses

and website links where known.

[Note to newsreaders: Please read the local news items appropriate to the service area of your

transmission.] NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Sunday 15 July Radio Society of Harrow is operating GB2DHH De Havilland Heritage at the De Haviland museum, London Colney. Contact Linda, G7RJL, on 020 8386 8586, or on the web at www.g3efx.org.uk.

On Sunday 15 July Reading and District Amateur Radio Club is running the McMichael Radio Rally at Reading Rugby Football Club. Contact Pete, G8FRC, on 01189 695 697, or on the web at www.radarc.org.

On Monday 16 July Burnham Beeches Radio Club is having a talk on WSJT low signal working. Contact G4XDU, on 01628625720.

On Monday 16 July Braintree and District Amateur Radio Society is having talks on X-Rays by G0BYH and on transformers by G3PEN. Contact John, M5AJB, on 01787 460 947.

On Monday 16 July Surrey Radio Contact Club is having a fix-it, advice, chin wag and move-it-on evening at their trial venue, Trinity Hall. Contact Ray, G4FFY, on 020 8644 7589.

On Tuesday 17 July Gorleston Amateur Radio Society is having a discussion about Field Day Activities. Contact David, G3OEP, on QTHR, 01493 662 323.

On Wednesday 18 July Chesham and District Amateur Radio Society is having a pedestrian treasure hunt on 2m. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 18 July Dover Radio Club is having a planning evening for GB2SFL. Contact Brian, G4SAU, on g4sau@District Amateur Radio Club.org.uk.

On Wednesday 18 July Fareham and District Amateur Radio Club is having a talk on submarine communication by Paul Hawkins. Contact Jim, M1JJN.

On Wednesday 18 July Havering and District Amateur Radio Club is having a contest DVD evening. Contact Dave, 2E0EBV, on 07956 594 514 .

Archive-name: radio/ham-radio/moderated/guidelines
Revision: 1.2 2007/02/22 18:15:39
Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
promoting or defending unlawful activities, etc. Crossposts of regular
discussion articles between rec.radio.amateur.moderated and other
```

discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness,
suitability and/or readiness of any individual (or members of any group)
to be an amateur radio operator are unacceptable in this newsgroup. If
an individual chooses to post asking for advice on when or whether to
obtain an amateur radio license, or to participate in any type of lawful
activity in the Amateur Radio Service, respondents should be careful to
address their comments only to the original poster and not explicitly
generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur
radio licenses, or certain members of national amateur radio societies
(e.g., American Radio Relay League, Radio Amateurs of Canada, Radio
Society of Great Britain, Wireless Institute of Australia, etc.), to be
more or less worthy than others, are not permitted. Posts that politely
encourage individuals to join their local amateur radio society, or to
upgrade to higher classes of amateur radio license in order to enjoy
greater operating privileges, are permitted, however. Posts that
contain reasoned, civil, and fact-based discussion of the activities and
internal politics of national amateur radio societies are also
permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on
rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created
for this purpose, and should be used instead. All such articles will be
rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or
other public relations campaigns will not be permitted. Relatively
unbiased announcements or reviews of new amateur radio-related products
or services may be permitted at the discretion of the moderators. Such
posters are asked to disclose their financial or professional interest,
if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true."

"That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/about/whatis/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

Irish Radio Transmitters Society
Radio News Bulletin

Sunday July 15th 2007

Church Broadcasts

You will recall that in June of last year we informed you that ComReg had introduced a Wireless Public Address licensing Scheme. This scheme allows religious and community organisations to be licensed to transmit services or events from their public address systems for the benefit of people in local communities. Two bands of 40 channels each 10 kHz wide between 27.6 and 27.995 MHz were allocated for this purpose. Base station ERP is 0dBW (1 watt AM) or 6dBW (4 watts FM) with a vertically polarised antenna. Many churches throughout the country are using this scheme and if licensed and operating within the terms of the licence these transmissions are legal.

However, we have been notified by the national coordinator of Intruder Watch for the German National Society DARC that transmissions of church services, which seem to be originating from Ireland, have been taking place in the 28 MHz amateur band. WAV files have been provided of such transmissions on 28.105 MHz. We would ask members to listen out on this frequency and on the lower portion of the 28 MHz band generally at appropriate times for their local areas, particularly on Sundays to see if unauthorised stations in the 10-metre band can be identified. Ground wave propagation would be fairly short at these frequencies so specific identification of stations may be possible from some reference in notices to local events. If you cannot identify the station and you have a beam antenna you could take a bearing on the station, which in conjunction with bearings taken by other stations could help identify the general area from which the transmission originates.

If you hear anything worth reporting you should send a report to Thos Caffrey EI2JD the IRTS Intruder Watch coordinator at QTHR or to ﷺthoscaffrey at hotmail dot

com with a copy to Sean Nolan EI7CD at QTHR or to ei7cd at gofree dot indigo dot ie. The report should include date, time, frequency, possible location of the station if identified, beam heading and other relevant information. If the station is identified from an announcement of local events, details should be given. It is in our own interests to identify these stations to preserve the exclusive nature of the 28 MHz allocation. The matter has already been reported to ComReg who will act on the matter if we can provide locational information.

ComReg Meeting

On Tuesday last, representatives of the Society had a lengthy meeting with representatives of ComReg on a range of issues. The meeting was very useful and productive. Certain matters decided at the meeting need a little more work and we will give a full report of the meeting as soon as we can.

WRC-07

Prior to the CEPT Preparatory Group Meeting for WRC-07 held in Gothenburg in the early days of last week, the IRTS had submitted to ComReg documentation about the requirements of the amateur service from WRC-07 as well as items for inclusion on the agenda of WRC-11. Among the documents was a detailed paper prepared by Dave EI3IO setting out options for regularising the position of the 70 MHz band in the ITU Radio Regulations and/or the European Common Allocation Table. Such regularisation would for the band internationally and/or in Europe and would allow and encourage other administrations to make amateur allocations at 70 MHz. Permission has been sought by Ole LA2RR, Chairman Region 1 IARU to use this document in their further work on this matter.

Theory Examination

Recently forty-five candidates sat the theory examination for the experimenters licence at centres in Dublin and Carrigtwohill. The examination papers have been checked and the results were delivered to ComReg on Tuesday last. ComReg have been very efficient in sending out the results but it takes time as each candidate gets a breakdown of their results in each of the three sections of the paper. We appeal to

candidates not to contact ComReg about the results, as results will not be given over the phone or by e-mail. The official letters will issue in due course. There is also no point in contacting the IRTS about results. The papers are checked by IRTS but the issue of results and the HAREC certificate to successful candidates is a matter exclusively for ComReg.

Limerick Radio Club

Limerick Radio Club participated in the Foynes Flying Boat Festival last weekend. As part of the festival, a re-enactment of the original 1937 flying boat flight from Botwood Newfoundland to Foynes was planned, using a Canso A C-FPQM flying boat. However because of mechanical problems with one of the engines the flight had to be postponed at the last minute. The pilots did travel to Foynes for the festival and assured everyone that the re-enactment flight will be completed at a later date, once the aircraft is repaired.

Limerick Radio Club operated two HF stations and one VHF Station over the three-day festival, using the special call sign EI7�FOY. Despite band conditions a large number of stations were worked, mainly on 20 metres. The transceivers in use were an Icom 756 Pro 2 and a TenTec Jupiter and the antennae a Cushcraft A4S beam at 60 ft and a G5RV.

The following participated in the event: EI2GT,EI8EM,EI2AW,EI0DJ,EI2IX,EI6IW,EI7ALB,EI9IY,EI3AL, EI0CZ,EI8GY,EI9AL,EI9CI and SWL�S Breada Cronin EI896 and Damien Brown. The QSL Manager for the special event is Alan Cronin EI8EM at QTHR.

The Club would like to thank Ms Margaret O�Shaughnessy, Museum Curator, for the invitation to participate in the festival and for providing the necessary facilities to the Club members.

Rally�s

The Cork Radio Club Rally will take place on Sunday the 23rd of September in the Blarney Park Hotel, Blarney, Co. Cork, the Waterford Rally will take place on the 21st of October 2007 in the Woodlands Hotel, Waterford and the Mayo Radio Rally will be on Sunday the 18th of November in the Belmont Hotel, Knock, Co. Mayo.

A full listing of upcoming rally�s is available on www.irts.ie.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to �news at irts dot ie� for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday�s bulletin.

1291. [RAC-Bulletin] New Proposeed HF Band Plans

Newsgroup: rec.radio.amateur.moderated

This is a relatively late reply to this post, but it bears a reply
nonetheless.

I would have to agree with the league's assessment of why they are
getting an increase in membership.

This will probably be an overall good thing for the league, and
probably Amateur Radio in general. I have always been a little concerned
that more Hams were not members. I think this bears some discussion.

1293. APRS a different way

Newsgroup: rec.radio.amateur.moderated
Date: 2007-07-18 21:02:40 UTC
From: Michael Coslo <mjc5@psu.edu>
Message-ID: <f7lqvh$1lh0$1@f04n12.cac.psu.edu>
Source record: 4198

I recently installed APRS on my mobile rig.

I suppose I should note that I have no financial interest in any of the producers of software or equipment I've noted here.

While most people go for a receiver - either using a hockey puck or a hendheld - connected to a tnc then to the radio, I already had a copy of Streets and Trips on my laptop, and the USB GPS receiver supplied by MicroSoft.

I wanted to see if I could do something with that.

A found a software called APRSPoint on the web, and purchased a copy. They said that it would work with Streets and Trips and my Kenwood D-700. They weren't completely clear on exactly how though. Links were provided to a site where someone had done this.

This ham had used an external receiver connected directly to the D-700. I was hoping to run directly from the laptop. Emails to the writer of the software indicated that he wasn't sure himself if what I was trying to do would work.

After messing with it a few days, I wasn't having a whole lot of joy. Then I decided to try something different.

The D-700 uses a db9 serial cable to communicate with the laptop. General Packet work uses the Serial cable. So in anticipation that the unit was expecting the antenna to be hooked into a separate connecter when in APRS mode, I simply switched the D-700 over to Packet mode instead of APPRS.

Success. I was squacking my position and reading everyone else's. Works like a charm, and the dynamic maps change with where I am. I then built a nice little laptop desk, and there ya go.

I'm using the APRS/Laptop combination this weekend in a local MS-150 bike ride. We'll be having several GPS units barking position with the various mobile units (bike repair, sag wagon, ambulance, race director, and myself. I'll be behind the last rider, watching who is where, and there will be another APRS at HQ allowing them to see who is where also.

Anyone else using APRS in a practical situation?

- 73 de Mike KB3EIA -

1294. [RAC-Bulletin] RAC Study Guide for the Basic Qualification - second printing

Newsgroup: rec.radio.amateur.moderated
Date: 2007-07-18 23:17:40 UTC
From: John Iliffe <john.iliffe@sympatico.ca>
Message-ID: <1184801706.4254.7.camel@linuxprod2>
Source record: 4099
Cross-posted to: rec.radio.amateur.moderated,rec.radio.info

Radio Amateurs of Canada is pleased to announce the Second Printing of
our popular "RAC Study Guide for the Basic Exam".

This new printing corrects a number of typographic errors found in the
First Printing, deletes one section, and adds a new section providing
additional information about 5/8 wavelength antennas. It was apparent
from correspondence received that some students did not fully understand
the previous material and so it has been extended and several new
antenna patterns have been included.

The RAC Study Guide for the Basic Exam continues to be priced at $50.00
plus applicable taxes and shipping and includes a browsable CD/ROM of
the IC question bank with keyed correct/incorrect responses.

A cautionary note here though. This is still less than 25% of all licensed
amateurs. We will have wait and see.

Certainly it is a "quick look" assessment.

But I think it is a step in the right direction.

My rationale is this:

Around half of all Amateurs were/are Technicians. When I was a
Technician, I saw the League as an interesting thing, but I did not join
until I got my General license. The reason why was that I saw it as more
relevent to my evolving interests. So while there are always going to be
people who are only interested in the VHF/UHF portions of the spectrum,
IMO the "prize" of the ARS is HF access. And once you get serious about
that, the ARRL, and QST is of much more interest. Once you get HF access,
and you get interested in the league, you get more info on what is going
on, and a positive feedback loop is generated.

We might debate over the qualifications of the qualified, but my
experience so far is that the new crop are fine gentlemen and ladies. I'm
pleasantly satisfied so far.

I've often wondered how many of the members joined for the primarily to be
able to use the outgoing QSL service and be eligible for the various
operating awards (WAS, DXCC, etc.)? It's unlikely that there is a way to
get an accurate count on that though.

> Anyone else using APRS in a practical situation?

Our ARES/RACES team has been using APRS-equipped mobile units in practically every public service event which we have been supporting for the past few years - the MS-150 is a good example. We have also demonstrated its utility to the county-wide Fire and Rescue District command staff who were very impressed. The system is available as an accessory to commercial communication transceivers now.

I'm not sure that's too bad. I've been licensed from 1974. I was
active 1974-1979, and again from 2004. I.e. less than 30% of the time.

The number of licensed amateur seriously overestimates the number of
active amateurs - even the number of amateurs who would like to be
active. That's the case here, where until a couple of years ago, there
was a yearly fee to pay. Probably even more so in the U.S.

This is a retransmission of a bulletin sent on 18 July, 2007 because
videotron.ca refused it. If you use a different ISP, please ignore
this duplication.
==========

Radio Amateurs of Canada is pleased to announce the Second Printing of
our popular "RAC Study Guide for the Basic Exam".

This new printing corrects a number of typographic errors found in the
First Printing, deletes one section, and adds a new section providing
additional information about 5/8 wavelength antennas. It was apparent
from correspondence received that some students did not fully understand
the previous material and so it has been extended and several new
antenna patterns have been included.

The RAC Study Guide for the Basic Exam continues to be priced at $50.00
plus applicable taxes and shipping and includes a browsable CD/ROM of
the IC question bank with keyed correct/incorrect responses.

1301. [RAC-Bulletin] Industry Canada Releases New Antenna Siting and Approval Procedures

Newsgroup: rec.radio.amateur.moderated
Date: 2007-07-19 22:25:34 UTC
From: John Iliffe <john.iliffe@sympatico.ca>
Message-ID: <1184884890.4256.39.camel@linuxprod2>
Source record: 4106
Cross-posted to: rec.radio.amateur.moderated,rec.radio.info

On June 28, 2007 Industry Canada released its long-awaited new policy and procedures on towers and antenna siting, entitled CPC-2-0-03, Radiocommunication and Broadcasting Antenna Systems, Issue 4, June 2007. The new procedures will come into effect on 1 January 2008. Radio amateurs should note that until then, the current CPC-2-0-03, Issue 3, June 24, 1995,remains in effect.

Radio Amateurs of Canada (RAC) has been an active participant in the national review of antenna tower policies initiated by Industry Canada in March 2003, and in the subsequent many and varied spectrum-user stakeholders' meetings that reviewed and commented on the initial draft policy. The new CPC-2-0-03 was released by the Department without a final review by tower proponents despite their requests. Therefore RAC is now analyzing the new tower policy and procedures and will describe their impact for the Amateur Service in an upcoming issue of The Canadian Amateur.

Radio amateurs are invited to read the new policy at: http://strategis.ic.gc.ca/epic/site/smt-gst.nsf/en/h_sf01702e.html and to comment to Jim Dean, VE3IQ and Richard Ferch, VE3KI/VE3IAY at ve3iq@rac.ca and ve3iay@rac.ca, respectively.

Amateur Radio Newsline(tm) Report 1562 - July 20, 2007

Amateur Radio Newsline report number 1562 with a
release date of Friday, July 20, 2007 to follow in 5-4-3-2-1.

The following is a Q-S-T. Foundation Class mania
is starting to sweep the globe, a new emergency
communications system is unveiled in New York,
and he's retired again. Find out who's left what
radio on Amateur Radio Newsline(tm) report number 1562 coming your way right
now.

(Billboard Cart Here)

**

RESTRUCTURING: FOUNDATION CLASS MANIA IS SWEEPING THE GLOBE

Call it Foundation Class mania. The successful
introduction of Foundation Licenses, particularly
in Britain and Australia, continues to be food
for thought in a number of other countries around
the world. Jim Linton, VK3PC, of the W-I-A News is here with the story:

--

The latest to declare such an interest is the New
Zealand Association of Radio Transmitters (NZART)
which is looking at the possible introduction of a Foundation type license.

New Zealand currently has a single license
restructure having abandoned its Novice license
which was not a success and in its final year had only about a dozen on
issue.

NZART says a Foundation License will be
considered over coming months with both the
British and Australian models being examined for their suitability.

Canada is still in favor of a new entry license.
However the thought there are the moment is that
it should be of a limited tenure in order to
encourage licensees to upgrade. The regulator
Industry Canada is talking about the new license
being introduced in years, rather than months.

Papua New Guinea is also looking at the possible introduction of a Foundation License. And decisions have yet to be made on a commonly agreed Foundation license that can be adopted by member nations of the European Community.

For the Amateur Radio Newsline, I'm Jim Linton, VK3PC

--

The bottom line. Its starting to look as if the Foundation Class license could become the ham radio entry point for people, world wide. (WIA)

**

RESCUE RADIO: ITS "NEWS" TO THE BIG APPLE

The Big Apple and its Eastern suburbs will soon have a new emergency communications program. One which encourages the participation of all amateur radio operators to pass messages of any nature during a large-scale emergency. Amateur Radio Newsline's Evi Simons is in the Big Apple with more:

--

Called the Neighborhood Emergency Watch or NEWS System, the program will allow any radio amateur in New York City and on Long Island to help friends and neighbors in time of disaster. This, by providing emergency communications when all other forms of messaging are unavailable.

According to the program administrators, during disasters, phone lines become overloaded, cell phones are rendered useless and most other public communication becomes nearly impossible to use. But with NEWS, Amateur Radio operators will be able to offer assistance by simply passing along messages to other hams who are able to get through to emergency services. This, using the hobby's long established network of Amateur Radio Emergency Service volunteers.

NEWS will also sponsor nets that will liaison with other emergency communications systems that might be concurrently with the NEWS operations. This means that NEWS will have the capability to participate in networks that A-R-E-S and other groups have established with first-responder groups.

Each borough, county and town will have a Local Operations Center, to be developed as the NEWS

network evolves. Combined with the ham resident
in the Metro New York and Long Island areas,
these Local Operations Center will eventually tie
into citywide and other logistical emergency nets
to provide a venue and lines of communications to serve local needs.

For the Amateur Radio Newsline, I'm Evi Simons, in New York.

--

If you live in that area and if all this sounds
exciting to you there is a lot more information
about the NEWS program on-line
at www.neighborhoodemergencywatchsystem.org (N2YBB)

**

RESCUE RADIO: HAMS WORK THE NEW MEXICO - TEXAS BORDER STORM

Amateur Radio emergency communications took
center stage in parts of New Mexico and Texas the
evening of June 26th. This when the leading edge
of a severe weather front traveled along the
border of the two states. Bill Pasternak, WA6ITF, reports:

--

With poor weather spotting coverage in that part
of the county, Rob Tice, W5TIC left the town of
Lovington heading north. He operated on the
Caprock repeater with Alf Lindsey, W5ALL, in
Roswell providing reports using Gibson Ridge radar software.

W5TIC met up with the storm in Tatum, New
Mexico. He used a handheld anemometer to get a
78 MPH reading as the storm gust front
hit. While Lindsay kept him updated with radar
reports, Jim Morrison, KM5BS relayed Tice's storm
reports back to the weather watch center. As the
storm front moved south, Tice tracked along with
it and continued to provide reports.

At this point Gaines County activated its EOC
providing radio contact with Jack Moore, KC5LNY,
in Seminole, Texas. Shortly after the front hit
Seminole, Moore requested wthat Hobbs Fire be
contacted for mutual aid. He said most of their
communications had been knocked out or were on battery backup.

Gaines EOC was in danger of being overwhelmed
with reports of damage, injuries and
fires. W5TIC went to the EOC and volunteered to take over.

The storm front was approaching the Midland Texas area by then and the net control at SkyWarn requested New Mexico to take traffic as they worked the rest of the event. Clint Lannom, N5MXE, in Midland, came up to serve as net control.

About 0100 CDT, the severe wether event was pretty much over for SkyWarn volunters. The hams serving at the various locations were able to stand down and return home.

A job well done.

For the amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, at the studio in Los Angeles.

--

Severe weather in this part of the country is not uncommon and the hams who live there and are involved in Skywarn are always on the alert. (K5CEC)

**

RADIO LAW: FCC REFUSES TO REVIEW GMRS LICENSE GRANTS

The FCC has told the Personal Radio Association, Inc. that it does not have the legal ground to challenge license grants made in the General Mobile Radio Service. In a letter to the groups president Douglas M. Smith, the FCC says that the fact that an individual's G-M-R-S license lists a business address as the contact information, does not present sufficient evidence, standing alone, to suggest that the license was improperly granted or that the station is operating in violation of the Commission's Rules.

The denial comes in response to a complaint to the FCC by the Personal Radio Association filing back on February 12th. It had requested the regulatory agency review the grants of 277 G-M-R-S licenses because the records contains the name of an organization or company in the "attention" field. The Personal Radio Association said this indicated the licenses may have been issued to entities not eligible for licensing in the GMRS.

But the FCC says that's not the case. It says that the information in the "attention" field is just what is says. It is a note for Commission use and as such it has no impact on the validity of the license. For that reason it is denying the Personal Radio Groups license review request.

**

HAM RADIO IN SPACE: SUPER EFFICIENT AMPLIFIER DESIGNED BY AMSAT HAMS

The Amsat News service reports that Allen Katz, K2UYH and Marc Franco, N2UO have developed a VHF, high-efficiency, class-E, R-F power amplifier. One with a DC to RF efficiency of 86.8%.

A-N-S says that their design is based on silicon carbide metal-semiconductor field effect transistors. The amplifier efficiency was measured at around 86 to 88% with this number holding quite well at almost any drain voltage or output power.

The AMSAT News Service ays that this type of amplifier is under consideration for the envelope elimination and restoration linear amplifier planned for the upcoming AMSAT Eagle ham radio satellite.

The design was presented in a paper at the IEEE International Microwave Symposium in Hawaii. It is now available on-line at http://www.cree.com/products/wireless_docs.htm titled "Class-E Silicon Carbide VHF Power Amplifier" (ANS)

NEW PRODUCTS: NEW KENWOOD DUAL BANDER A HIT WITH THE VISUALLY IMPAIRED

A newly released 2 meter and 70 centimeter dual band radio from Kenwood is getting rave reviews from the visually handicapped ham radio community. The transceiver in question is the Kenwood model TM-V71A. Blind and visually impaired amateurs love it because when equipped with the optional VGS-1 voice chip unit, the radio announces even menu-level settings for true accessibility by audio alone. One of those most enthusiastic about this feature is Linda Reeder, N7HVF, of Salt Lake City, Utah:

--

N7HVF: "The 71A is the most blind user friendly radio I have ever see in the 22 years I have been in Amateue Radio."

--

N7HVF is so enthussed about the new TM-V71A, that
she not only bought one. She has also produced
and recorded a 12 minute audio netcast that
loojks at the new radio and explains what its
capable of doing. Heres a samole:

--

N7HVF: (Descriptive audio of how rgw TM-V71A
operates demonstrating voice readout.)

--

The TM-V71A is not just for the blind or visually
impaired. The radios voice readout also
functions as a safety enhancement that lets an
operator tune the radio will operating mobile
without ever having to take his or her eyes off the road.

But it is the visually handicapped that are the
most vocal in singing its praises. You can hear
Linda Reeders entire report on the blind friendly
new Kenwood radio at the HandiHam website. A
link directly to it is in this weeks printed,
Amateur Radio Newsline report. Its in cyberspace
at http://www.handiham.org/manuals/Kenwood/TMV71A/tmv71a.mp3

More about the TMV-71A is at the Kenewood website
in PDF form at
http://www.kenwoodusa.com/Dealers/Us1/flyers/TM-V71A.pdf (N7HVF)

**

ENFORCEMENT: FCC TELLS NJ HAM TO CLEAR UP RPT TO RPT INTERFERENCE

Anthony W. Cranston, WA2HYO, of East Brunswick,
New Jersey has been told by the by FCC that his
uncoordinated repeater is allegedly interfering
with a coordinated system. The regulatory agency
says it wants to know what Cranston plans to do to remedy the situation.

In its June 29th letter to WA2HYO, the FCC says
that representatives of the WA3BXW repeater had
contacted Cranston a number of times since 2003,
but to this date it remains unresolved. So, as
per the Part 97 Amateur Service Rules it is
placing the burden to solve the problem on
Cranston's uncoordinated repeater since the WA3BXW system is coordinated.

For those not aware Section 97.205 of the
Commission's rule states that where there is
interference between a coordinated and an
uncoordinated repeater, the licensee of the

uncoordinated repeater has primary responsibility
to resolve the interference. And the FCC appears
to be placing that responsibility squarely on Cranston.

WA2HYO was given 20 days from the date of the
FCC's letter to respond to the inquiry. It
instructed him to furnish the Commission with all
of the information that it has requested.

Cranston was also warned that failure to resolve
this interference problem will result in
enforcement action against his
license. Enforcement that may include removal
of automatic control privileges from his repeater. (FCC)

**

ENFORCEMENT: TEXAS CB'ER FINED $7000

The FCC has affirmed a $7,000 against 11 meter
C-B operator Donald Winton of Corpus Cristi,
Texas. This for allegedly rebroadcasting a local
AM station on CB Channel 19. And for refusing to
allow the FCC to inspect his station. Amateur
Radio Newlines Bruce Tennant, K6PZW, reports:

--

The FCC says that last February 21st it received
a complaint that a CB radio station in Corpus
Christi was jamming communications on CB channel
19 by continually re-broadcasting the programming
of a local AM broadcast station. An agent from
the Commission's Houston Office used radio
direction finding and determined that the signal
originated from an antenna mounted on a house in that city

While the agent was making measurements on the
radio signal, Donald Winton exited the house and
walked down the driveway. The agent introduced
himself and requested to inspect the CB radio
station inside the house. Mr. Winton confirmed
this location was his residence and that the CB
station belonged to him, but refused to make it available for inspection.

The agent advised Winton that the Commission's
Rules require the operator of a CB radio station
to make the station available for inspection.
Winton still refused. The agent then requested
that Winton go inside and take the station off
the air because it was blocking communications on
CB radio channel 19. The FCC says that Winton
walked into the house and the station's

transmissions ceased. Winton returned and
continued to refuse to make the station available
for inspection, so the agent left.

On April 23, 2007, the Houston Office issued a
Notice of Apparent Liability for Forfeiture to
Winton in the amount of $7,000. Winton responded
by requesting either a reduction or cancellation
of the fine. He also claimed that his CB
transmitter was not on when the agent arrived,
and that, if it was on, it must have been
operated by homeless people whom he allows access
to his home. He also claimed that he did not
allow the agent access to his home, because the
agent did not have a warrant and because he was
concerned that his dogs might injure the
agent. Finally, he states that he was not aware
of any of the Commission's Rules governing CB radios.

But the FCC says that Winton has no explanation
for how the agents used direction finding to
locate the source of the signal to his
residence. Nor could he explain how the agent
was able to observe the signal right before he
came out of his house. And the FCC noted that
Winton admits that he refused to provide the
agent access to his CB station located in his
residence. This, even though FCC rules authorize
inspection of all CB stations by the
Commission. Accordingly, agents are not required
to obtain a warrant to inspect a CB station.
The bottom line. The FCC says that it finds no
basis for cancellation or reduction of the $7,000
forfeiture and has ordered Donald Winton to pay it within the next 30 days.
For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--
At this point Winton has only two choices. He
can pay the $7000 fine or he can appeal the
matter higher up the FCC's administrative chain. (FCC)

NAMES IN THE NEWS: N6USO RELEASE FROM HOSPITAL - RECOVERING AT HOME

Some good news to report. Word that Los Angeles Sheriff's Deputy Burton Brink, N6USO is out of the hospital and recovering at home from injuries suffered in an on-duty accident.

As previously reported, the incident took place on June 13th. This, when a driver tried to exit the carpool lane on the Interstate 10 freeway. The motorist, who was in violation of state law requiring there be more than one person in the car did not check for a clear lane. He collided with Brink who was on motorcycle patrol.

N6USO suffered 9 broken ribs, a broken shoulder blade, a punctured lung and a punctured spleen. He required almost a month of hospital care and it will likely be another half year before he can return to duty.

Brink asks that nobody call him right now as he is still in a lot of pain. Get well wishes are best sent by e-mail to n6uso@officer.com. (WA6ILQ)

**

NAMES IN THE NEWS: WR1B NAMED NEW EDITOR OF QEX

And a word of congratulations to Larry Wolfgang, WR1B, on being named as the new editor of the ARRL publication QEX. He assumes the position from Doug Smith, KF6DX, who has edited QEX since September of `1998. Wolfgang had been serving as

QEX Managing Editor for the past year and a half
and as a member of Newsline's Young Ham of the
Year judging committee for the past two seasons. (ARRL)

ON THE NET: WEATHERBRAINS - A FREE NETCAST ABOUT THE WEATHER

If you are a radio amateur involved in severe
weather spotting or just ham an interest in the
environment, a couple of hams in Alabama have a
website you will want to visit and an Internet
radio show you will want to hear. The website
and the show are both called WeatherBrains. In
one recent program they interviewed Gary Woodall
of the National Weather Service office in Ft.
Worth, Texas to find out about the art of post storm surveys:

--

Audio only. Hear it by downloading the MP3
version of this newscast at www.arnewsline.org

--

Weatherbrains is the brain child of Birmingam
weathercaster James Spann, WO4W, television
producer David Black, KB4KCH and a couple of
their weather centric friends. All experts in
the area of weather forecasting. Each week the
WeatherBrains crew takes an in depth look at all
sides of the weather scene and brings it to their
listeners in a way that's entertaining and easy to understand.

The WeatherBrains program originates from the
studios of The Weather Company in Birmingham,
Alabama. New shows are posted each Tuesday. To
subscribe or learn more about WeatherBrains take
your web browser to www.weatherbrains.com And
less we forget -- listening to WeatherBrains is free. (ARNewsline(tm))

HAM RADIO IN SPACE: AO-51 PLAYING SOME FM GAMES

During the period of July 10 to July 12 the AMSAT OSAR 51 satellite was in its FM repeater mode with the uplink on 1268.700 MHz and the downlink on 2401.200 MHz. On July 10th, OE1VKW reported hearing the bird flying over Vienna with very strong signals.

As of July 13th, AO-51 was in the FM repeater mode, with an uplink on 145.920 MHz and downlink on 435.300 MHz. Telemetry is on the 435.150 MHz downlink. Starting on Tuesday, July 24th look for AO-51 to operate with an SSB uplink on 145.880 MHz and FM downlink via 435.300 MHz. An interesting combination of modes to say the least. (ANS)

WORLDBEAT - INSONESIA: ORARI PROVIES A NEEDED EMCOMM SERVICE

Indonesian Amateur Radio Organization Vice President M Jusuf Kalla says that his organization is still needed. Especially during emergencies and also to reach areas not accessible by telephones.

In a recent interview with the Antara News Service, Kalla is quoted as saying that experience has shown that telephone transmission towers and cellular phone networks are usually among the first structures to collapse in disasters like earthquakes. Kalls says that in those such situations, Indonesian Amateur Radio Organization members often provide out to be a

welcome alternative means of communication.

According to the Kalla, every telecommunication technology device has its advantages and disadvantages. He noted that not all areas of Indonesia`s vast territory are accessible by telephones. As such, two-way radio is still needed as a means of communication with people in these remote areas.

Now in its 39th year, the Indonesian Amateur Radio Organization has been in providing communication support during disaster-caused emergencies in the country (ANTARA News)

WORLDBEAT - NOVA SCOTIA: 4th ANNUAL MARIIME DX FORUM AUGUST 4

The 4th Annual Maritime DX Forum is slated for Saturday, August 4th, in Upper Tantallon, just outside Halifax, Nova Scotia. The Halifax Amateur Radio Club is sponsoring this years event which includes presentations by Tom Harrell, N4XP, talking about the highly challenging 2007 Scarborough Reef Dxpedition.

Also on hand will be Scott Wood, VE1QD. He will take attendees vicariously on a trip to the British Antarctic Territories, which is some of the rarest DX real estate on the planet.

All DX'ers and contesters are welcome. Complete details and a registration form can be downloaded from www.halifax-arc.org (Halifax ARC)

**

ON THE AIR: WAR ACTIVATED IN CROSSBAND COMMUNICATIONS TEST

A three letter special event callsign with no numeric indicator. That's the story of the callsign W-A-R as it was used in last May 12th in

the 58th running of the Crossband Communications
Test sponsored by the Army Military Affiliate Radio System.

The historic W-A-R callsign was originally the
property of the old United States War Department
as it was known in those days. This year the
W-A-R call was rolled out to be used in the cross
band ham radio test station operating at the
Pentagon. This was very significant to the
members of the Pentagon Amateur Radio Club as the
W-A-R call has been in exile at Fort Detrick, Maryland.for many years.

The complete story about the W-A-R commemorative
call and this years Crossband Communications Test
is in the article titled Amateur Radio at the
Pentagon by Bill Sexton, N1IN. It begins on Page
29 of the August Worldradio Magazine. (Worldradio)

DX

In D-X, plan ahead to work San Andres as K3WT, N0STL,W0OR and
N0AT will be active from there between November
19th and the 27th. Operations will include the
CQ World Wide DX CW Contest on November 24th and
the 25th. This will be a Multi- Single
entry. The contest callsign has not yet been announced.

Also coming on this November is Greneda. This
with seven operators active as J3A also during
the CQ World Wide DX CW Contest. Outside the
contest they will be using their own personal callsigns. QSL J3A via WA1S.

(Above from various DX news sources)

THAT FINAL ITEM: ART BELL, W6OBB, RETIRES - AGAIN

And finally this week, he' done it
again. Retired that is. The "he" in this case
is internationally known talk show host Art Bell,
W6OBB. Amateur Radio Newsline's Fred Vobbe, W8HDU, has the details:

--

IF THREE TIMES IS A CHARM, THEN WHAT IS FOUR?
VETERAN TALK SHOW HOST ART BELL, W6OBB STUNNED
HIS AUDIENCE ON JULY 1ST WITH THIS ANNOUNCEMENT:

W6OBB: "I WOULD LIKE TO ANNOUNCE TONIGHT, THAT
FOR THE .... ACTUALLY .... I'M NOT SURE HOW MANY
TIMES IT IS NOW ....SOMEBODY'S COUNTING ....

(LAUGH) FOLLOWING TONIGHTS BROADCAST ... I AM
RETIRING FROM REGULAR WEEKEND PROGRAMMING":

--

THE MOVE STUNNED MANY LISTENERS OF THE "COAST TO
COAST AM" SHOW THAT ART HOSTED ON THE WEEKEND.
SOME LISTENERS SPECULATED THAT THIS WAS A
PUBLICITY STUNT, OTHERS WERE JUST DISAPPOINTED AS
BELL HAS BEEN DESCRIBED AS BEING THE FOUNDER OF
WHAT HAS BECOME A RATINGS WINNER IN OVERNIGHT
PROGRAMMING, AND THE ONLY SOURCE FOR PARANORMAL TALK.

ALTHOUGH PREVIOUS DEPARTURES FROM THE AIR WERE
DUE TO PROBLEMS AND TRAGEDY IN HIS LIFE, SUCH AS
THE DEATH OF HIS THIRD WIFE, RAMONNA, IN JANUARY
OF 2006, BELL SAID THAT THIS IS A HAPPY RETIREMENT.:

--

W6OBB: "THE REASONS, ACTUALLY, ARE STATED BY
NEARLY EVERYBODY WHO EVER MAKES SUCH AN
ANNOUNCEMENT. ONLY NOW I VERY CLEARLY UNDERSTAND
THEM IN A VERY PERSONAL WAY. GOD HAS BLESSED ME
WITH LOVE, MY LIFE, AT A TIME FRANKLY WHEN I
THOUGHT I HAVE LOST ANY REASON TO LIVE, FOLLOWING
MONA'S DEATH. MY WONDERFUL WIFE AIRYN, AND NOW OUR DAUGHTER ASIA."

--

BELL WENT ON TO SAY THAT HIS TIME WOULD BE SPENT
WITH HIS NEW FAMILY. ART ALSO SAID THAT SINCE HE
IS OF "RETIREMENT AGE" HE WOULD LIKE TO MORE OR
LESS STOP AND SMELL THE ROSES, AND TAKE SOME TIME
OFF. MANY HAMS HAVE NOTICED THAT HE HAS BEEN
RATHER SILENT FROM THE 160 AND 80 METER BANDS, SO
ONE HAS TO HOPE THAT ART HAS ALSO NOT RETIRED FROM HAM RADIO. :

FOR THE AMATEUR RADIO NEWSLINE, IN LIMA OHIO, I'M FRED VOBBE, W8HDU

--

According to Fred, Ian Punnet will fill in for
Art Bell on weekends until a permanent
replacement is found. (W8HDU, ARNewsline(tm) - audio use courtesy of
W6OBB)

This is very true, Jon.

When a number of us get together and chat about the number of hams that
there are, I'm often compelled to mention the chaos that would result if
all were to be active and on the air.

Another thread got me thinking about the number of active Hams.

Just what percentage of Amateurs are active ones, defining active as either being on the air regularly, or participating in Amateur related activities on a regular basis? (like say on a weekly basis?)

Thoughts?

A lot of stuff for sure. I assumed that you were talking about the first link on the page.

I think your Zepp is safe, unless you sre supporting it with two towers.

While there is a lot of verbiage, the requirements read pretty much like what a lot of us have to do in the States with tower installations. Maybe a bit more on environmental impact, and certainly indigenous impact. but not a whole lot different.

Thanks the cell phone folks for prompting such rules. 8^)

==> ARRL Board of Directors Meets July 20-21

The ARRL Board of Directors holds their second meeting of 2007 July 20-21 in Windsor, Connecticut. All Directors, Vice Directors and ARRL Board officers are in attendance. The meeting, which begins Friday and continues through Saturday, was preceded on Thursday with meetings of the Administration and Finance Committee and the Programs and Services Committee.

The Administration and Finance Committee, chaired by New England Division Director Tom Frenaye, K1KI, is responsible for all administration and financial matters of the League, including recommending the annual budget to the Board, making recommendations in regard to staff management and interfacing with the ARRL Foundation on fundraising issues. Frenaye said, "The first six months of 2007 have been extremely busy with the changes brought on by the FCC's dropping of Morse code as a licensing requirement. Staff and management have had a good plan and have managed well to handle the increased workload, such as in the VEC department, acquiring new memberships and advancing publication sales."

The Programs and Services Committee, headed by Dakota Division Director Jay Bellows, K0QB, is responsible for all programs and services provided by the League, including Logbook of the World, W1AW and the incoming and outgoing QSL services. "We deal with the whole range of membership and volunteer services of the ARRL. We continue to keep the focus on the members and volunteers who are the heart and soul of this organization," Bellows said.

==> The 2007 ARRL National Convention Proudly Presents...

The ARRL 2007 National Convention, to be held in conjunction with the Huntsville Hamfest August 18-19 in Huntsville, Alabama, is getting closer by the second. Along with the many convention activities, an exciting forums schedule is being planned. This is your chance to learn about contesting, emergency communications such as D-STAR, public service, education and many technical issues.

Along with the presentations on the ARRL Stage in the ARRL EXPO area, the ARRL will also be presenting forums at the Hamfest. ARRL President Joel Harrison, W5ZN, will be moderating the ARRL Membership Forum. Come and learn more about the issues shaping Amateur Radio today. Meet ARRL President Joel Harrison, W5ZN, and other ARRL officials and staff. All are welcome!

ARRL Education Services Manager Debra Johnson, K1DMJ will lead the two-part ARRL Education Forum. Part 1 is an overview of the ARRL's new Education Services Department. Topics will include the new ARRL mission statement on education, new licensing materials, enrichment courses and an update on ARRL outreach activities through the Education and Technology Program and Amateur Radio on the International Space Station (ARISS). Part 2 consists of a discussion about ARRL educational and instructional resources and ideas. What do you need? More educational kits? A better Web site resource center? An on-line collaboration site for instructors? More on-line courses? Instructors, teachers, on-line course mentors and others are all encouraged to participate.

ARRL Membership Manager Katie Breen, W1KRB will lead a virtual ARRL Headquarters tour. Amateur Radio entered a new era this year, and licensing changes have rekindled enthusiasm among many newcomers and inactive hams. Breen will lead you through a tour of ARRL's national headquarters. Along the way, she will share stories of ARRL special

event activities aimed at encouraging on-air activity among new and newly active hams, including real-time Web blogs and videos, Hello-Live! and the W1AW HF Open House.

ARRL Media and Public Relations Manager Allen Pitts, W1AGP, will talk about ARES and the Media - How to get attention for our best stories. Emergencies often gain the attention of newspapers and television media, and yet the good works of volunteers in the Amateur Radio Emergency Service are often overlooked. Our best stories are never heard by the public. This ARRL forum will discuss ways to help your public service activities capture the attention of the media.

ARRL DXCC Manager Bill Moore, NC1L, and ARRL Web/Software Development Manager Jon Bloom, KE3Z, will discuss DXCC and ARRL's Logbook of the World. Do you enjoy the lure of DX (long-distance radio operating)? The pinnacle of DXing success is the ARRL DX Century Club, or DXCC award. Find out everything you've ever wanted to know about the DXCC program and ARRL's Web-based Logbook of the World (LoTW).

The Huntsville Hamfest's preliminary forums schedule is posted on the hamfest's Web site <http://www.hamfest.org/forums02b.htm>.

==> Diamond Terrace Officially Opens Prior to Board Meeting

The ARRL Diamond Terrace, gracing the entrance to the ARRL HQ building, was formally opened July 19 with a ribbon cutting ceremony; ARRL President Joel Harrison, W5ZN, and ARRL CEO David Sumner, K1ZZ, did the honors, while Directors, Officers, ARRL staff and visitors looked on under skies that threatened to open with a deluge of rain at any second.

ARRL Chief Development Officer Mary Hobart, K1MMH, opened the ceremony by introducing Sumner. He gave kudos to Hobart, saying that the idea of the Terrace originated in the ARRL Development Office and they saw it through to fruition. "All of us who work here in Newington get to enjoy this every day when we come to work, we get to walk through a greatly enhanced entrance which sends the right message to staff and to our members, as well as visitors, about the character and tradition of our organization," Sumner said.

Sumner then introduced Harrison, who began his remarks reiterating what he said at the donor's reception at this year's Dayton Hamvention: "When you talk to the average ham out on the street, and you ask him what's important to him in Amateur Radio, he will tell you, 'I want to go into my shack, I want to turn on my radio and I want to get on the air. I want to enjoy Amateur Radio. You take care of that for me. You are my organization, the ARRL; you handle that for me.'"

Harrison continued that in order for that to happen, a lot of work takes place behind the scenes. "With all that we have going on in Washington, nationally, with all the attacks on Amateur Radio's resources, it takes people like you in Newington, it takes people like we have on the Board of Directors and most importantly, it takes people who donate to our development program to make that all happen. The Diamond Terrace is just

one part of that, and it's a successful part. It adds a lot of meaning to Amateur Radio and to the ARRL. From the bottom of my heart, I want to say 'thank you' to everyone here and to every one of our donors."

Hobart then handed Harrison the scissors, and he and Sumner together cut the ribbon amid much cheering. ARRL Publications Manager and QST Editor Steve Ford, WB8IMY, filmed the event <http://www.youtube.com/watch?v=2hdPAhJGhYs>.

Hobart later took the time to honor those who had helped with the conception and realization of the Diamond Terrace, including Robert Antonello Jr, who did all the concrete and brickwork on the Terrace, and Bob Boucher, who engraved the bricks and is doing all the personalization on the benches. She thanked Debra Johnson, K1DMJ, former Development Office Operations Manager who is now ARRL Education Services Manager, and current Development Associates Margie Bourgoin, KB1DCO, and Maryann MacDonald. Hobart thanked the ARRL graphics department, including Graphic Design Supervisor Sue Fagan, KB1OKW, and Senior Technical Illustrator David Pingree, N1NAS, for taking the concept of the Diamond Terrace and developing the plans and designs to make it a reality.

She also extended her gratitude to ARRL News Editor S. Khrystyne Keane, K1SFA, and QST Managing Editor Joel Kleinman, N1BKE. "These guys really came through in helping me promote this great tribute to our members." She continued, "I could not have done this project without the help of Greg Kwasowski, W1GJK, ARRL HQ Building Manager."

"Everybody should have a brick!" she said in closing.

The Terrace will host up to 5000 personalized, 4x8-inch laser-engraved bricks. Flanking the new entrance to ARRL Headquarters, the Diamond Terrace recognizes donors wishing to venerate their own call signs or to honor or memorialize the call sign of a family member, club or "Elmer" (mentor). "I have heard wonderful stories from donors who are honoring their Elmer or a family member, and clubs who are honoring a founder or influential leader. There is no limit to the reasons why bricks are placed to honor a call sign," Hobart said. There are also six benches of Vermont granite placed around the Terrace.

"We already had plans to refurbish the Headquarters entrance area," Hobart continued, "so this was an ideal opportunity to invite our members to participate in the project and support League programs at the same time. We want to grow the Diamond Club, which enables the ARRL to continue programs that require revenue above and beyond what annual dues provide, ensuring their long-term health and enabling the League to do more on behalf of Amateur Radio."

The Diamond Terrace is a project of the Diamond Club, which now has more than 2100 members. The unrestricted funds it takes in support such ARRL activities as spectrum defense, educational initiatives, field services, DXCC, publications, contesting and the ARRL Volunteer Examiner

Coordinator program, among others. Hobart points out, "You pick an area that's near and dear to your heart, and Diamond Club revenue is very likely supporting it."

Information on the Diamond Terrace and how to request a brick or bench is available at the Diamond Terrace Web page <https://www.arrl.org/forms/development/donations/diamondclub/>.

==> The 2007 ARRL Public Relations Campaign - Where Are We Now?

The ARRL has two Public Relations (PR) thrusts for 2007. The first one concerns ARES and Public Relations. ARRL Media and Public Relations Manager Allen Pitts, W1AGP, said, "We lose many good media opportunities because ARES operations are not being covered by Public Information Officers (PIO). Far too often, anything provided to media about ARES activities in a crisis is not shared until long after the event, if at all. To correct this, encouragement is being given for PIOs not only to be media active during any ARES deployment, but also for Section Managers to appoint specific PIOs whose singular job is to work with the ARES Section Emergency Coordinator to talk with media during a crisis."

The second thrust of the PR campaign is the 2007 EmComm Campaign. There was a short delay on this campaign, due to the FCC eliminating the Morse code license requirement. Pitts and the ARRL Public Relations Committee immediately launched the "30 Day Code Blitz" with custom made audio Public Service Announcements and news releases (including a wire release); many interviews were given for radio and newspapers, and special materials were sent to PIOs and clubs for publication. Most of these materials pointed the public to the new PR Web page <http://www.emergency-radio.org>, which saw a spike of more than 857,000 hits in February alone.

Pitts said after the "code blitz," the planned implementation of the 2007 EmComm campaign got underway. A collection of integrated PR materials was created and provided for PIOs and others to promote Amateur Radio's EmComm capabilities. "The value of the materials is presenting the non-ham with the benefits of Amateur Radio in providing communications for themselves and their families in a crisis," Pitts said.

The EmComm campaign materials include: The 2007 EmComm brochure ("Getting the Message Through"); the 2007 edition of the Swiss Army Knife for PIOs reference CD; a Web site <http://www.emergency-radio.org> based on emergency communications; Katrina - The Untold Story, a 5 minute DVD about hams providing assistance during and after Hurricane Katrina; a 30 second audio PSA; a 30 second video PSA, and the Talk on a Disk CD.

The 2007 EmComm brochure was partially made possible by a $15,000 donation from Dayton Amateur Radio Association. Pitts said that the brochure has proved so successful that the initial printing of 100,000 copies was quickly used, and a second (unexpected) printing of an

additional 60,000 copies was needed prior to Field Day last month. A third printing may even be needed before the end of the year. ARRL PR Committee Chairman Sherri Brower, W4STB, said, "These professional-looking brochures are even more popular with representatives of our served agencies than last year's "Hello" brochure. It gives a favorable and professional image to our Emergency Communications via Amateur Radio and says the only thing amateur is our name."

The Swiss Army Knife CD for PIOs remains a highly desired reference. It provides basic computerized files and information, how-to hints and quick references for PIOs.

Richard Lubash, N1VXW, produced the 5 minute video "Katrina - The Untold Story." "With his permission, we edited down the dramatic opening sequence, added in enhanced sound and created an excellent 30 second PSA. This video has shown great acceptance by television stations and has been aired thousands of times already in 2007," said Pitts. In addition, Kevin O'Dell, N0IRW, completed "Hello - The Movie," a 5 minute general video introduction to Amateur Radio. Unlike "Amateur Radio Today," both of these videos can be broadcast.

The newest item in the ARRL PR arsenal is "Talk on a Disk," created as a suite of presentation materials keyed to go with the EmComm brochure. Designed to be used in live speaking presentations to groups, Pitts said it gives the potential speaker all they need to do a first class presentation on Amateur Radio and EmComm work. "The 'Talk on a Disk' was definitely the hot item in the PR booth at Dayton Hamvention," according to Jim McDonald, KB9LEI, one of the booth volunteers. "We spent maybe three or four minutes explaining the concept to folks and their eyes lit up. Many told us it was something they had wished for to help them do presentations."

North Carolina Section Public Information Coordinator Bill Morine, N2COP, commented: "We used both the EmComm brochure and the new EmComm Web site as tools to show North Carolina legislators the benefits of Amateur Radio in emergency situations. This approach helped with the unanimous passage of a PRB-1 type antenna bill in the North Carolina General Assembly which became law June 29 this year."

Information on how to order PR materials can be found at the ARRL's PIO Web site <www.arrl.org/pio>.

==> Larry Wolfgang, WR1B, Named QEX Editor

ARRL Publications Manager Steve Ford, WB8IMY, announced July 17 that he has named long-time ARRL Headquarters staffer Larry Wolfgang, WR1B, as QEX Editor. QEX is ARRL's forum for communications experimenters. Wolfgang takes over Editorial duties from Doug Smith, KF6DX. Smith had filled the position since the September/October 1998 issue, when he took over for Rudy Severns, N6LF.

Ford said, "Larry has been QEX Managing Editor for the past year and a half, but as Editor, he will be responsible for the full scope of QEX editorial operations."

Larry holds a BS in physics from Susquehanna University; he taught high school science prior to coming to ARRL in June 1981. First licensed at 15 as WN3JQM in 1968, Wolfgang also held WA3VIL for many years.

Wolfgang said, "Being named QEX Editor is quite an honor, and also a huge challenge. When I reviewed the list of previous Editors, starting with Paul Rinaldo, W4RI, in 1981, I realized what an awesome responsibility it will be to guide QEX. The magazine is an experimenters' exchange, so I want to encourage more authors to write about projects on which they are working. While we like construction-type articles, this is also a place to share 'projects in the works' and exchange stories about successes and failures. I also want to find some ways to increase our readership." A video detailing Wolfgang's vision for QEX is available on YouTube <http://www.youtube.com/watch?v=YnWasaN2UBw>.

Readers can find more information about QEX, published six times a year, at the QEX Web site <http://www.arrl.org/qex/>. The site features cover images for the past two years, as well as the Table of Contents and Letters columns from those issues. A sample article from each of those issues is available for free download.

==> FCC Enforcement Actions

On July 14, the FCC released information regarding enforcement actions against three radio amateurs: John C. Kimbrough, WR3S, of Murfreesboro, Tennessee; Anthony W. Cranston, WA2HYO, of East Brunswick, New Jersey, and Steve L. Wingate, K6TXH, of Eureka, California.

Kimbrough was issued a Warning Notice and Notification of Removal of Automatic Control Privileges for his repeaters. The FCC said that it sent Kimbrough a letter on April 10 of this year, notifying him that monitoring information showed that on various dates in March 2007 his repeater stations operated without proper control and re-broadcast portions of commercial television programming and music. He was also accused having operators on his system fail to identify properly and using false call signs. The FCC's letter warned Kimbrough that repeaters must be under the supervision of a control operator "and not only expects, but requires, control operators to be responsible for the proper operation of the repeater system."

When Kimbrough replied to the FCC's April letter, he informed the Commission that he is operating 12 repeaters under his call sign on the following frequencies: 145.170, 145.370; 146.955, 147.360, 223.960, 224.160, 224.360, 224.560, 224.620, 224.660, 224.760 and 224.980 MHz, using at least 10 control operators. The FCC replied in this Notification that "The rebroadcast of commercial programming, improper identification and lack of identification by end users, and your own transmissions over your repeater that can be reasonably be interpreted

as threats to complainants, indicate your inability or unwillingness to control your own repeater stations."

The FCC warned Kimbrough that he would soon be receiving a letter from the FCC's Atlanta office removing the automatic control privileges of his repeater systems. "This means that you may not operate ANY repeater stations under your call sign unless you are the control operator and at the control point at all times to make certain that Commission rules are being followed and that no interference is occurring. When you are unable to function as the control operator of the stations identifying with your call sign, they may not transmit."

Finally, the FCC said, "failure to control stations bearing your call sign, or any communications over your repeaters not complying with Commission rules, will result in enforcement action against your license. That enforcement action may include a forfeiture (fine) or revocation and suspension of your Amateur license, or modification of your Amateur license to remove voice privileges. Any threats, direct or indirect, made to complainants or perceived complainants over your repeaters by your users, will result in revocation proceedings against your Amateur license."

The FCC accused Cranston of operating his repeater without coordination and, as such, causing interference to WA3BXW on 147.345 MHz. Cranston was allegedly notified of this back in 2003 and contacted repeatedly since, but the matter remains "unresolved." The FCC notes that where there is interference between a coordinated and uncoordinated repeater, "the licensee of the uncoordinated repeater has primary responsibility to resolve the interference."

The FCC asked Cranston if his repeater was coordinated for operation at 147.345 MHz, and if it is, asked him to furnish a copy of the coordination document and to "state the circumstances, if any, under which you are operating the repeater in a manner not consistent with the coordination, including changed location or power." If the repeater is not coordinated, the FCC asked Cranston for proof of any action he has undertaken to obtain coordination or to bring the station back into compliance with coordination. The FCC also wanted to know if he had received any complaints, either oral or written, and what steps he has taken to resolve them. The Commission also asked for Cranston to "describe in detail the configuration of the WA2HYO repeater system, including all sites, links and addresses, using diagrams where necessary. Detail any changes in location since the coordination, if any, was issued."

The FCC sent Wingate a letter, letting him know about complaints alleging his "lack of station control and deliberate interference." The Commission said he had 20 days from receipt of his letter to respond to the complaints in detail: "You are directed to support your response with a signed and dated affidavit or declaration under penalty of perjury, verifying the truth and accuracy of the information submitted in your response."

==>SOLAR UPDATE

Tad "House of the Rising Sun(spot)" Cook, K7RA, this week reports: This week saw an increase in average daily sunspot numbers, rising over 8 points to 29.3. Expect to see a lower average for next week, with perhaps some zero-sunspot days. Perhaps early August will have sunspot numbers back in the twenties at least. Currently, sunspot 963 is disappearing from view. Right now there is a solar wind stream headed toward Earth. This should only be a minor upset, with planetary A index around 15 for today and tomorrow, July 20-21. The IMF (interplanetary magnetic field) is currently pointing south, which makes us vulnerable. Geophysical Institute Prague predicts unsettled to active conditions for July 20, unsettled July 21, quiet to unsettled July 22, quiet for July 23-25 and unsettled July 26. Sunspot numbers for July 12-18 were 25, 38, 41, 41, 30, 17 and 13, with a mean of 29.3. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: This weekend, look for the NCCC Sprint Ladder on July 20 and the VK/Trans-Tasman 160 Meter Contest (CW) on July 21. The North American QSO Party (RTTY) and the CQ World Wide VHF Contest are July 21-22. On July 22, the SKCC Weekend Sprint and RSGB Low Power Field Day are on the air. Next weekend, NCCC Sprint Ladder is on July 27 and the ARD Flight of the Bumblebees is July 28. The RSGB IOTA Contest is July 28-29. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more information.

* ARRL Certification and Continuing Education Course Registration: Registration remains open through Sunday August 5 for these on-line courses that begin on Friday August 17: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF - Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* World Scout Jamboree On the Air from England: Worldwide Scouting celebrates 100 years of Scouting with the 21st World Jamboree in England July 27-August 7. Amateur Radio will be a significant part of the festivities, with participation in several events during the Jamboree. GB100J will operate around the clock for the duration of the Jamboree. There are plans for a contact with the International Space Station, including an EchoLink relay of the contact. The Scouting Sunrise Net marks the 100th anniversary with ceremonies around the world at 8 AM

local time. This net will start at 1900 UTC July 31 and continue to 1900 UTC August 1, and will include GB100S and GB100BI. The BI station will be located on Brownsea Island, where Lord Baden Powell opened the very first Scout encampment at 8 AM August 1, 1907. The idea for Jamboree on the Air (JOTA) was formed at a World Jamboree in 1957. GB100J will celebrate JOTA's 50th birthday on August 4 with special on-the-air activities. This year's JOTA, always the third full weekend in October, will be a 50 hour around-the-world Scout happening. QST Assistant Technical Editor and active Scoutmaster Larry Wolfgang, WR1B, said, "Make plans now to spend some time with a local Scout Troop, Cub Pack or Venture Crew during the time of the Jamboree. Contact a local Scout camp and set up a station to have local Scouts participate in some of the World Jamboree festivities via Amateur Radio. Talk with Scouts at the Jamboree and other locations around the world. You and the Scouts will have so much fun you will want to do this again and again. For more information and updates during the Jamboree, see the GB100J Web page <http://gb100j.radio-scouting.org.uk/>.

* New Section Manager Appointed in San Diego: Loren "Mitch" Mitchell, K6BK, of San Diego, California, has been appointed ARRL San Diego Section Manager to complete the term of office vacated by Pat Bunsold, WA6MHZ. Bunsold, who served as SM on two different occasions (April 2004-March 2006 and July 2006-July 2007), stepped down due to health concerns. Dave Patton, NN1N, Manager of ARRL's Membership and Volunteer Programs Department, made the new appointment effective July 12; Mitchell's term of office continues through March 2008. Mitchell has been the San Diego Section Emergency Coordinator since April 2006. He is active with the Community Emergency Response Team (CERT) in Scripps Ranch, is a weather spotter with WX6BX for SKYWARN and operates as an ARRL Official Emergency Station on D-STAR. He is also trustee of station KA6BSA for the Boy Scouts of America. First licensed in 1961 at age 14, Mitchell developed a lifelong interest in both electronics and engineering. His wife Nancy, N6NCY, and sons Brendan, K6BMK, and Wes, K6WES, also enjoy the world of Amateur Radio.

* US ARDF Championships Scheduled for August: Registrations for the Seventh USA Championships of Amateur Radio Direction Finding (ARDF) are still being accepted. The event is scheduled for September 14-16 at South Lake Tahoe in the Sierra Mountains, near the border between California and Nevada. Beginners and experts at on-foot radio-orienteering will test their skills and learn from one each other. As in recent odd-numbered years, our national championships are being combined with the ARDF championships for International Amateur Radio Union (IARU) Region 2, which encompasses North and South America. Course operations are in accordance with IARU rules; these are uniform throughout the world. Early Bird registration (at a $25 savings) was scheduled to end on July 14, but that deadline has been extended to July 31.

* SimSat Balloon to Launch: A high-altitude balloon carrying Amateur Radio is being prepared for launch July 24 and 25 that will offer hams

and students in Maryland, Washington DC and a 20 state region a special opportunity to participate in the operations. "Balloon launches are being offered as part of a two-week science camp called 'Reach For The Stars!' at the University of Maryland Eastern Shore," said Pat Kilroy, N8PK, a long time space and near-space experimenter and engineer at the NASA Goddard Space Flight Center in Greenbelt, Maryland. "Within minutes of release from UMES, the balloon's radio footprint will grow to cover all of Maryland, Virginia, Delaware and many adjoining states. At its peak of about 100,000 feet, the signals from the balloon will be heard by all within a 400 mile radius, reaching northward to Maine, westward out to Detroit and Cincinnati, and south to Savannah," he added. Amateur Radio operators are invited to participate. There is a list of tasks that hams can do either on their own or in groups on Kilroy's Web page <http://www.patkilroy.com/simsat>.

* ARISS Report: There were two Amateur Radio on the International Space Station (ARISS) meetings July 12 and 13 at the Johnson Space Center in Houston, Texas. One meeting was with Johnson Space Center (JSC) Education Office; the agenda covered many topics such as NASA funding, a new NASA-sponsored Web site, ARISS lesson plans, NASA educational goals and other high-level topics. ARRL ARISS Program Manager Rosalie White, K1STO, prepared a paper that was presented at the second meeting with JSC Education Office and the ARISS SuitSat-2 Team. The paper discussed educational duties and public relations plans that have been completed for the future SuitSat-2, as well as future SuitSat-2 plans. The SuitSat-2 Technical Team, including Sergej Samburov, RV3DR, met on July 9-12 to make further progress on the development of the spacesuit satellite, and hammered out an agreement about what items the US will provide and work on, and what the Russians will provide and work on. The ARISS Team supported an Alaska QSO on July 7 with The Challenger Learning Center of Alaska in Kenai, Alaska, and the Manitoba Space Adventure Camp held at the Canadian Air Force 17 Wing in Winnipeg on July 12. An ARISS contact was also scheduled with the Arnold Palmer Hospital for Children in Orlando, Florida on July 17. The next scheduled contact is with Challenger Learning Center of Lucas County, in Oregon, Ohio on July 25. White said that ARISS is fortunate to have gotten these schedules approved by NASA, as the crew is heavily overloaded with ISS-assembly work duties. "ARISS may not get any more crew time than we currently have (one QSO per week) until the ISS is completely put together with its new modules," she said.

* TAPR to Meet in September: The ARRL and TAPR Digital Communications Conference is an international forum for radio amateurs to meet, publish their work and present new ideas and techniques. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results and practical applications at the three day conference to be held in Windsor Locks, Connecticut. The ARRL and TAPR Digital Communications Conference is for all levels of technical experience, not just for the expert. Not only is the conference technically stimulating, it is a weekend of fun for all who have more than a casual interest in any

aspect of amateur digital electronics and communications. The banquet speaker this year is Bruce Perens, K6BP, well-known open-source software advocate. Find out more at the TAPR Web page <https://www.tapr.org/dcc.html>.

* Let Us Know: What's your favorite part of The ARRL Letter? What kind of stories would you like to see in the Letter? Would you prefer the Letter in an HTML format? This is your Letter and your chance to let your voice be heard. Please send your suggestions to ARRL News Editor S. Khrystyne Keane, K1SFA, at k1sfa@arrl.org, with the subject line "ARRL Letter Suggestions." All messages will be read and discussed, and we look forward to implementing positive suggestions into the ARRL Letter.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change

your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Temporary phone towers may be needed after tank rampage in Sydney.

Telstra says it may have to install temporary cell phone towers in Sydney's west to replace ones which were damaged last Friday night when a man went on a rampage in a restored army personnel carrier.

The man led police on a 90-minute chase through a number of suburbs.

Police are alleging that the 45-year-old destroyed six phone towers and damaged an electricity sub-station.

He's been charged with a range of offences including malicious damage and predatory driving. The Magistrate recommended that the APC driver receive medical and psychiatric treatment before his case goes to Local Court.

Telstra spokesman Jeremy Mitchell says repair crews were not able to gain immediate access to the towers as they were a "scene of crime".

With all those towers out, one wonders if the accused ever managed his obligatory "one phone call" when finally arrested.

VK4 WICEN

Sunday, June 17, a very productive meeting was held at the Sunshine Coast Amateur Radio Club clubhouse. Representatives from many clubs in Queensland meet together with the intent to form a WICEN Secretariat.

The concept is to redistribute the considerable workload previously placed on the State Coordinator, whereas the 6 or so members of the Secretariat work together as a team to further develop WICEN involvement with Government agencies in times of need.

The VK4 WICEN Secretariat consists of representatives from Far North Region, North Region, Central Queensland, South East Region, South West Region, Moreton Region and Sunshine Coast Region.

Chairmanship of the Secretariat was accepted by Richard, VK4YRP for a 12 month tenure.

Much of this revitalisation is due to the Sunshine Coast Amateur Radio Club along with support of Government, SES and local business. SCARC certainly have inspired other club's to get back into doing WICEN things in VK4.

The new Secretariat encourages clubs to appoint a WICEN coordinator to their executive ASAP, not withstanding that many clubs in VK4 have a strong WICEN, SES tie up already, these clubs are to be commended and please keep

up the good work.

For more details, please contact the VK4 WICEN Secretariat via email, wicenqld@wia.org.au.
(From - Peter Schrader - vk4tgv@rumpleteazer.net)

WIA PRESIDENT MICHAEL OWEN VK3KI:-

The closing date for applications for grants to affiliated clubs closed last Monday, and we had received by then 8 separate submissions from 7 different clubs.

The WIA has allocated $5,000 this year for grants to affiliated clubs, to support projects that promote and advance amateur radio, the WIA and it's Affiliated Clubs by supporting useful and/or innovative projects undertaken or to be undertaken by Affiliated Clubs.

Now it is over to the 2007 Grants Committee, Don Wilchefski VK4BY, Deane Blackman VK3TX and Wally Howse VK6KZ.

The WIA office has received a number of phone calls from WIA Exam Service assessment candidates concerned about the delay in the processing of their applications for certificates of proficiency and apparatus licences by ACMA after the WIA has forwarded them.

The WIA has been advised by Alan Jordan of ACMA that the turnaround for processing amateur licenses has been extended as a result of the need to train new staff, and some new responsibilities given to those staff.

It has recently taken as much as 4 weeks for an amateur licence application to be processed.

Alan tells us that it is ACMA's aim to achieve a two-week turnaround time for issuing amateur licences, not quite as good as the turnaround time we have enjoyed recently, certainly a lot better than at present.

So please, don't chase the WIA office or ACMA if you haven't had your new callsign issued in a couple of weeks. Allow more time for ACMA processing.

The WIA will continue to aim to forward the applications and certificates within 5 working days after their receipt from the Assessors.

A final request.

Ted Thrift has been seeking details from all of the clubs of the right person for potential amateurs to contact for training and assessment.

The information is needed for the Callbook, and so it is quite important that he has the right information in time to get it into the Callbook.

Please help Ted by responding now if you haven't already done so.

HAMS ACROSS AUSTRALIA.
(vk1 wx)

VK1

The BRM Silverstone Safari runs Saturday 11 August. Some VK1's had volunteered some or most of their Saturday for an earlier date and the organisers would like to encourage you to think about generously offering your time and effort again for this new date, August 11.

Please let Mike Thurgar VK1TMT (mdthurgar@fwi.net.au) know if you are able to assist WICEN give the Light Car Club of Canberra a hand with the running of this event.

VK4

Queensland Digital Group visit

University of Queensland Tools of Science

The fifth Tools of Science meeting for 2007 will be held at 6pm on Tuesday (July 24), speaker will be Neil Boucher and the topic:

Prehistory of Radio

The official story is that Heinrich Hertz, born in 1847 was the first to send and receive radio signals between 1885 and 1889. Actually it had been done twice before in 1866 by Mahlon Loomis and in 1879 by David E Hughes. Neil will look at the intriguing system developed by Loomis.

Neil Boucher is an Electrical Engineer and author of several books on telecommunications including The Cellular Radio Handbook, now in its 4th edition. He has undertaken to resolve the controversial claims and counter claims by many of radio before Hertz, and has concluded that two of the pre-radio-age systems were viable and almost certainly did work as described by their inventors.

The QDG web site has more information at www.qdg.org.au
(Alan VK4YAR)

VK5

The Barossa Amateur Radio Club held its AGM on Friday the 13th July and Ian VK5AIC was re-elected as President, Norm VK5NR as Treasurer/Secretary and Peter VK5ZLX as Vice President & Publicity Officer.

The club re-broadcasts this, the VK1WIA national news on the local VK5RBV repeaters each Sunday evening at 8.00pm.

Listen on 146.825 MHz and 438.425 MHz.

A call-back and net will follow the broadcast, please call in and let em know you've been listening.

VK6

August 5 - HAMFEST 2007 happens in Perth at 9am.
This at the Cyril Jackson Recreation Centre Ashfield.

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6FXYL

Amateur Radio Now Legal in all Texas Public Schools

In what can only be termed a huge victory for the future of Amateur Radio in Texas, Governor Rick Perry signed Senate Bill 11 (SB11) into law in June. Among many disaster response specifications, the new law contains two important Amateur Radio-related provisions: State employees who are ham radio operators may to take up to 10 days of paid leave while participating in a disaster response or training exercise, and Amateur Radio is now allowed in all Texas public schools.

Local clubs in Texas have been urged to contact their school boards and encourage them to bring school policies regarding student possession of RF devices into compliance with the new law.

A decades-old provision in the Texas Education Code long ago granted Texas schools blanket authority to ban student possession of all RF devices, including ham radios. .

The old law broadly defined a prohibited "paging device" as any RF device which had the ability to vibrate, emit a sound, display a message, or in any way convey a communication to the possessor.

The result of the old law was that in most Texas schools, starting a ham radio club was simply out of the question. Existing ham radio programs were even removed from some San Antonio area schools as a direct result of the old law.

The WIA Amateur Radio Assessment system relies completely on Amateur Radio Assessors and Learning Facilitators.

In VK4 the next round of Amateur Radio Assessor Training is being conducted over the RD weekend of 11th and 12th of August on the Gold Coast.

This is training provided by the WIA's Nominated RTO and is free of charge.

The Venue is the Gold Coast Amateur Radio Society, 85 Harper St, Nerang.

Assistance with travel and accommodation for those travelling long distances is possible if you let them know early enough.

Download and complete an application for Assessor training form from the WIA website.

If you plan to attend, or if you are just your unsure and have any questions regarding the training please contact Ron Bertrand VK2DQ on 07 5573 2795.

The WIA, which is Amateur Radio need and rely on WIA Accredited Assessors particularly in areas where there are currently no Assessors, so "please" give Ron a call.

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or training in Amateur Radio go to wia.org.au and check out the club pages.

Participating clubs keep this site up to date and post the latest information for all to see.

Next Foundation Licence course, and Standard / Advanced assessments .....

SOUTH AUSTRALIA

Adelaide Hills Amateur Radio Society will run Foundation licence's at the Aviation Museum, 56 Lipson Street Port Adelaide, August 4th and 5th Contact the course convenor, Sasi Nayar on 0417 858 547

TASMANIA

REAST next examination Sessions is Tuesday 24 July for Standard and Advanced Exams.

Saturday 28 July will be a Foundation Training and Exam day.

Closing date to book for these sessions is Today Sunday 22 July.

For more information or enrol please contact Reg Emmett VK7KK by calling 0417 391 607

CONGRATULATIONS - RESULTS

Congratulations Cheryl Goldfinch who successfully obtained competency in WIA Exam Service assessments held at Cardwell during FNNQARG and who has just been issued Foundation callsign VK4FRYL.

Also we welcome Joachim who was successful in REAST, VK7's last foundation assessment. Joachim now has his Callsign and it is VK7FAAI, welcome to the airwaves.

SILENT KEY - VK2UC

It is with deep regret we advise that Alf Webb VK2UC is now Silent Key.

Alf Webb, Silent Key at just on 102 years of age.

Alf Webb was born on 10th September 1905 in the London suburb of Islington. He migrated to Australia in May 1911 and moved to the Lismore

He served in the 15th Light-horse Regiment from 1924 to 1931.

In 1940 he joined the Army Volunteer Defence Corps until entering Army Signals in 1943 where he served until his discharge in June 1946.

In the VDC his Section passed Heliograph traffic from Mt Warning to Coffs Harbour, 133 miles serving as a Signaller and later got his Amateur License in 1947.

In 1990 he was awarded the Order of Australia Medal for services to Returned Servicemen and the RSL and the community.

Alf was a foundation member of Summerland Amateur Radio Club and also President of SARC in 1984 and later made a Life Member of SARC.

He was Australia's oldest active amateur, being active on air every day on Morse and voice until a few months before his death.

He would have been 102 years old next September.

Vale Alf Webb OAM, VK2UC, SK.
(John Alcorn. VK2JWA for SARC)

INTERNATIONAL NEWS READ BY Rob VK5MM

14th IARU R3 Conference Christchurch 12 - 16 October, 2009.

Though it is some time away, Terry Carrell ZL3QL Chairman of the organizing committee reports that plans are well under way for the conference.

VE2XPO on the Air Again 40 Years Later:

Forty years ago, more than 50 million people from five continents visited the Universal and International Exhibition (Expo 67), the World's Fair, in Montreal, Quebec Canada.

Roland Masse, VE2PX, and the Radio Amateurs of Quebec (RAQI) set up and operated Amateur Radio station VE2XPO from Ste-Helene Island at the exhibition.

Their first contact was with W1AW.

More than 6000 contacts were made during the exhibition. Now, 40 years later, VE2XPO is on the air again on all bands from until July 29 using CW and SSB.

There will be a special QSL card

(QSL via Jacques Dube, VE2QK, 875 St-Severe, Trois Rivieres, Quebec G9A 4G4, Canada)

Kylea made mention earlier of that Texan Bill SB11 just passed, well it not only favours School Children but is termed a huge victory for the future of Amateur Radio disaster response.

The new bill grants State employees who are ham radio operators to take up to 10 days of paid leave while participating in a disaster response or training exercise's!!

==========

NEWS FROM ARNEWSLINE

WILDFIRES WONT HAMPER ARDF CHAMPIONSHIPS

The recent wildfire near Lake Tahoe on the Nevada and California border has not put an end to the planning for this year's hidden transmitter hunting championship games. They will take place as planned. Amateur Radio Newsline's Joe Moell K0OV, has the story.

It's full speed ahead with preparations for the Seventh Annual Championships of Amateur Radio Direction Finding, or ARDF. This

year's championships will take place on the weekend of September 14 through 16 in the El Dorado Forest near Lake Tahoe. That's in the Sierra Mountains near the California/Nevada border. Primary sponsor is the Santa Barbara Amateur Radio Club. Marvin Johnston KE6HTS is General Chair of the organizers.

Most of the competitors will be staying at Camp Concord, a rustic but comfortable facility that's two miles west of the city of South Lake Tahoe, near the shore of Fallen Leaf Lake. Camp staff will provide meals during the events, and everyone can walk to the competition courses from there.

Registration opened in early June and plans for the championships were proceeding. Then on the afternoon of June 24, a forest fire broke out south of Fallen Leaf Lake. Fanned by high winds, it moved rapidly northeast into a nearby residential area. Over 550 fire-fighters worked diligently around the clock to slow the expansion of the burn area and prevent further structure damage.

Full containment of the Angora fire, as it was called, was achieved just before Independence Day. It destroyed 3100 acres, 242 homes and 67 commercial buildings. Total loss has been estimated at 11.7 million dollars.

Camp Concord is 1.6 miles from the edge of the burn area and has reopened for the summer camping season. The entire burn area is closed until at least November 30 to protect the fragile environment. But the forest land near the shores of Fallen Leaf Lake has mostly been spared.

With a few minor map revisions, everything looks good to go. Early Bird registration was scheduled to end on July 14, but because of the delay, that deadline has been extended to July 31

You and your family are invited to the championships this year. Anyone with reasonable physical abilities can participate. A ham license is not required and there are no age limits, but you must be able to run or walk through the forest and carry your DF gear for five to ten kilometres. You might even win a spot on USA's team to the next ARDF World Championships. Read more about the championships, and international-style transmitter hunting, at the usual place: homingin.com. Homing In is entered as one word, homingin.com.

>From southern California, this Joe Moell, K-zero-O-V for Amateur Radio Newsline.

Again, this year's ARDF Championship games will take place on the weekend of September 14 through 16 in the El Dorado Forest near Lake Tahoe. And as Joe said, more is on-line at www.homingin.com.

10 METER UNLICENSED TRUCKER DINGED BY THE FCC

A follow-up to our story two weeks ago about the
invasion of 10 meters by Freeband operators and
truckers using illegal C-B radio gear. The FCC
has now acted in one case where truckers have
been found to have illegally taken up operation
on 28.085 MHz and is warning the company it will
face stiff fines if the pirate operation does not cease.

The target of the FCC enforcement action is
Tennessee Steel Haulers of Nashville,
Tennessee. In a letter to the company the FCC
says that it has evidence that at least one of
Tennessee Steel Haulers drivers had been
operating radio equipment on 28.085 MHz without a
license and causing interference to licensed
stations in the Ten Meter Amateur
Band. Specifically that this past May 3rd the
driver was observed on Interstate 85 in Gastonia,
North Carolina, at 6:40 P.M. while operating the radio gear.

Tennessee Steel Haulers were warned that this
type of unlicensed operation is a direct
violation of Section 301 of the Communications
Act of 1934. The penalty for such operations
includes the possibility of seizure of any
non-certified radio transmitting equipment along
with a hefty fine or even time in jail. The
company was also instructed to contact FCC
Special Counsel Riley Hollingsworth to discuss the issue with him.

RSGB NEWS G4NJH

New beacons on 40 and 60MHz

Rutherford Appleton Laboratories, located near Oxford, has just
received licences for some very special beacons. The National
Frequency Assignment Panel has allocated 40.050MHz and 60.050MHz for
use by GB3RAL. Ofcom has issued NoVs for these frequencies, which will
be used alongside other beacons on the site. GB3RAL will operate on 5,
28, 40, 50, 60 and 70MHz. This will provide a valuable propagation
resource for amateurs worldwide. Please remember though that 40MHz and
60MHz are not amateur bands and these spot frequencies are for GB3RAL only.

CONTEST COLUMN - D A T E L I N E

Boat Anchor Sprints:
August (11)
Local ZL time: 2000 to 2100 hrs
Check New Zealand's "Break-in" or NZART website.

AUGUST 11/12 Remembrance Day Contest (The RD) wia.org.au

A reminder that the RD contest is fast approaching.

For those in VK1 Reflector, expressions of interest to take part in a CRARC Club Station activity for this years RD Contest has been called for.

Their Contest and Field Day coordinator is seeking expressions of interest in the running of a Club Station entry for this years RD Contest from the Farrer Shack. This would require that they have a team of operators to be able to undertake such an operation over the weekend.

Brad Alves VK1FRST is the man with the plan.
bradalv@webone.com.au
(02) 6286 7292.

Peter Harding VK4OD says there are only 20 days to the 2007 RD contest.

With the Sunspot cycle at the bottom (so they say), lets hope that the weather holds favourable in that there are no storms to interfere with the contest this year.

For those of you that will using electronic logging software " Don't forget to update NOW.....

Hand written logs will still be require a hand written, signed declaration.

As before ANY LOGS THAT ARE RECEIVED AFTER THE CLOSING TIME WILL BE RETURNED.

On wia.org.au the rules are available along with associated documents.

SPECIAL EVENTS, BEACON AND NET ADVICE
VK's longest continual net;
The Southern Cross DX Net has been running for 43 years, operates 7 days a week - propagation permitting - on a frequency of 14.238.5MHz at 1215 zulu.

Seanet 2007

Tony Waltham, HS0ZDX reports that the 35th Southeast Asia Net (SEANET) convention will take place in the Thai town of Lampang from November 8-11, 2007, hosted by the Radio Amateur Society of Thailand under the Royal Patronage of His Majesty the King .

Full details of the programme can be found at the SEANET 2007 website

28.000 to 29.700

Church Broadcasts

You may recall that in June of last year we informed you that ComReg the Irish equivalent of ACMA had introduced a Wireless Public Address licensing Scheme. This scheme allows religious and community organizations to be licensed to transmit services or events from their public address systems for the benefit of people in local communities.

Two bands of 40 channels each 10 kHz wide between 27.6 and 27.995 MHz were allocated for this purpose.

Base station ERP is 0dBW (1 watt AM) or 6dBW (4 watts FM) with a vertically polarised antenna.

Many churches throughout Ireland are using this scheme and if licensed and operating within the terms of the licence these transmissions are legal.

However, the IRTS have been notified by the national coordinator of Intruder Watch for the German National Society DARC that transmissions of church services, which seem to be originating from Ireland, have been taking place in the 28 MHz amateur band.

WAV files have been provided of such transmissions on 28.105 MHz.

We would ask all Amateurs world wide to listen out on this frequency and on the lower portion of the 28 MHz band generally at appropriate times for these unauthorised stations.
(sourced to IRTS)

NOW ROBERT BROOMHEAD - VK3KRB.

For our digitally minded friends, particularly those in the UK, comes word in their Sunday Telegraph newspaper, that commercial radio companies in

the United Kingdom are looking to set a firm end date for analogue radio.

The industry body RadioCentre was expected to approach the British broadcast regulator, Ofcom, about setting a shutoff date for analogue radio that could be as early as 2015.

An analogue shutdown would mirror the transition path being followed by the U-K television industry, which will see an end to terrestrial analogue broadcasting in 2012.

There is a concern, according to the Telegraph report, that only a firm analogue shutoff date will ensure continued investment and development of digital radio, although there are political concerns about making millions of analogue receivers obsolete.

EMERGENCY FREQUENCIES REGION ONE
21.360 - 18.160 - 14.300 - 7.060 - 3.760 MHz.

MOCK EPEDEMIC CHALLENGES CA HAMS

The scenario of a mock bird flu a pandemic was the basis of a simulated emergency exercise, called "Operation Kung Flu." This, involving about 200 Santa Barbara California County public health and disaster planning officials along with medical service representatives and of course a number of ham radio volunteer communicators.

Amateur Radio NewsLine says the drill took place on June 20th.

In past exercises members of the Santa Barbara Amateur Radio Emergency Service have played an important role in the Health Department's backup communications between it and the local hospitals.

This time officials requested the ARES group conduct a communications survey during the exercise to evaluate how effective Ham Radio could be as a backup.

ARES members identified 34 facilities in the area and sent a team out to each location to record G-P-S coordinates. They also drew a map of directions to each location, conducted a radio check using mobile and handheld gear and sent back a slow scan television picture of the

site. The exercise proved ARES could establish solid communications at all locations tested.

Following the exercise Bruce Carter, the Manager of the Office of Emergency Services for the County of Santa Barbara issued a letter praising the ARES hams. He said and we quote: "ARES is always there, willing and up to any task."

REWIND - A LOOK BACK IN HISTORY
(Will McGhie VK6UU is WIA National Historian)

The Pedal Radio

Australia's population density is just 6.4 people per square mile. Eighty years ago, with almost no telecommunication infrastructure beyond the seaboard, the tyranny of distance loomed much larger in the Outback as the nearest doctor could be several thousand miles away, with no method of contacting them in an emergency. Hearing that German WW1 soldiers had used hand-cranked radios for battlefield communications, Alf Traeger set about creating a radio powered by bicycle pedals.

The invention of the pedal radio in the late 1920s enabled the famous Royal Flying Doctor service (RFDS) introduced by the Rev John Flynn, and offered remote settlements access to telecommunications for the first time.

Flynn lived in the Outback for most of his life, setting up hostels and bush hospitals for pastoralists, miners, road workers, railwaymen and other settlers and families. Known as 'Flynn of the Inland', his dream of a 'flying doctor service' came to life when H V McKay, inventor of the McKay Sunshine Harvester left a large sum of money in his will, and when Traegar developed the pedal radio. This gave Outback people the voice they needed to summon a doctor if necessary and at least to be able to get a radio consultation with one.

Pedal radios also meant neighbours, families and friends, scattered over thousands of square kilometres, could exchange news and gossip after normal transmission hours. This time became known as the 'galah' session, after the noisy, chattering native bird.

The School of the Air was also established, using the Flying Doctor Service network, and supplemented correspondence lessons sent to Outback children.

In 2005 alone the RFDS attended more than 234,000 patients, with more than 33,000 aerial evacuations, bringing this huge continent just a little bit closer for people in the most remote areas of Australia and this was all built on the groundwork of Alf Traeger and the pedal HF radio.

THE FINAL FINAL

WALKS

Jeff VK4XJJ is still going strong on his walk across Australia.

But he still wants to hear from YOU, and it is these calls in particular that keep him going!!

Thursday 12th July Jeff walked 26 Km .

Friday walked 34 Km. New record daily walk. Antenna operating at knee height. 20 vehicles on the road.

Saturday 28Km as the crow flies. Clear blue skies. Camped on a beautiful river.

Sunday morning interview with Macka on Australia All Over. Macka may walk a few days with Jeff?
Walked 25 road Kms. Brolgas 100 metres away at sunset.

Monday overcast, no threat of rain, walked 26.6 Km. Many vehicles up to 30 last three days. Several stopping for a chat.

Tuesday 17th July. Walked 17Km into Boulia at noon. Will stay over the weekend for the camel races. May challenge the locals to walk round the track between races. He will wear his 27Kg? back pack to give them a start.

No official skeds for a few days. We sent some 10 Kg breaking strain, stainless steel , plastic coated fishing trace for a new antenna. Complete with hackles and thimbles. The other antenna kept breaking after being up and down 90 times.

Jeff is well and continually thanks fellow operators and WIA for their communications.

Regards, Bill Johnson VK2FWGJ for Jeff Johnson VK4XJJ Walking for DeafBlind awareness.

Web design & relay station Roger Stierli VK4BNQ

www.jeffswalk.com

Every Day, from 5:30pm Eastern on 40 meters, 7045 put out a call to VK4XJJ

ROWING

For 122 days, Ralph Tuijn has been rowing from South America towards Australia.

Hank VK2BHL says he is close to FK8, maybe they can hear him on marine channel 16.

Although Hank is not aware of Ralf's callsign he does know he is looking forward to catching up with VK4 hams when he comes ashore.

Ralph is now over halfway and hopes to reach Brisbane in a few months.

He updates his website virtually on a daily basis from his canoe using a laptop and Satellite phone.

The URL is
www.zeemanoceanchallenge.com/index

Any support we hams are able to give him would be greatly appreciated.
Either leave a message on his website or listen for him on Marine Channel 16.

Well, it's not an immediate problem as I don't move to Canada until I
retire (agreement with my Canadian wife), but my reading of the document
was that the process was required for any antenna type, not just
"structures" going up...maybe I didn't read closely enough.

Jerry

Certainly it is less than 50%, probably less than a third. I seem to recall hearing a number like 20%, but that is back in some pretty fuzzy gray matter.

Probably a pretty tough thing to get a handle on. If you were to sample some random group of licensees, some of the active ones wouldn't respond, and probably most of the inactive ones wouldn't. So you would know up front you had a large error, and I can't think of a way to get a handle on how large. You could probably assume most of the non-responders weren't active, but certainly not all, and no way to get a handle on that fraction.

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 22 JULY 2007

You are listening to ZS6SRL the official Radio Station of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is transmitted every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. To listen to a web stream or Echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links for details.

This, and previous bulletins, can be downloaded from the www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

This transmission is by Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, 14,235 and 51,400 MHz as well as 438,825 and 1 297 MHz in the Pretoria area. (Other newsreaders please change to suit).

SILENT KEY

It is with deep regret that we must announce the passing of Ted Broome, ZS6KA, at the age of 82. We extend our sincere condolences to his family and friends.

(PAUSE)

In the news today:

FREQUENCY CHANGE FOR AMATEUR RADIO MIRROR INTERNATIONAL

REGISTER FOR THE CLASS B EXAMINATION NOW

PRESIDENT'S NET AND INTECNET NEXT SUNDAY

PLT CONTINUES TO BE PUNTED BY VENDORS

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

FREQUENCY CHANGE FOR AMATEUR RADIO MIRROR INTERNATIONAL

>From Sunday 29 July the frequency 17 695 kHz will be replaced by 17 590 kHz. The change is made to overcome interference by an Arabic speaking station close to 17 695 kHz. Reception reports on 17 590 kHz are invited and should be sent to armi@sarl.org.za.

REGISTER FOR THE CLASS B EXAMINATION NOW

The next class B examination will be held on 23 August. The closing date for registration is 23 July, which is in just a few days time. No late entries are accepted and will be carried forward to the October examination.

Registration for the examination is R300. The cost for students and learners under the age of 25 years is only R200. To register, download all the forms from the SARL web and after completion fax the forms to 088 011 675 2793. You can also request the forms by sending an email to admin@sarl.org.za. Carefully follow the checklist printed on page 2 of the RAE registration form.

PRESIDENT'S NET AND INTECNET NEXT SUNDAY

The President's Net will be on the air next Sunday. Join Graham Hartlett, ZS6GJH, at 19:00 for an update on the SARL and the various activities planned for the next few months. Graham will also talk about the SARL plans to promote ARDF - Amateur Radio Direction Finding - an activity that is currently attracting a lot of attention from the youth in Europe and the USA.

The President's Net will be followed at 20:00 CAT by the Intecnet with
Dr Pieter Kotz as the guest speaker. His presentation is entitled:
'Implications of Living on a Giant Magnet'.

In this presentation various aspects of the Earth's magnetic field will be discussed, its generation, as well as its influence on sophisticated technology, especially during magnetic storms. HF radio communications as well as GPS-based technologies are particularly adversely affected. Reversals of the geomagnetic field and the protective role of the magnetic field as well as the atmosphere for life on Earth will be highlighted. Declination, the angle between true North and magnetic North, is an important component of geomagnetism worldwide, but in particular southern Africa. Its non-uniform variation with time is of special interest to users of navigation maps.

The presentation slides can be downloaded in PDF format. Visit the SARL web at www.sarl.org.za and click on ARMI.

Clubs wishing to book a link to the conference bridge should send the telephone number and local repeater details to armi@sarl.org.za by Friday this week.

PLT CONTINUES TO BE PUNTED BY VENDORS

This past week PLT was again the subject at a conference held in Sandton. A new company which has been very active promoting PLT is IPOWA. According to their website IPOWA is the exclusive local provider of the world's leading broadband-over-Powerline (BPL) system. A proven, cost-effective and robust route to rapid broadband deployment, iPOWA is the last-mile solution for which utilities, ISP's, hotels, schools and property developers have been waiting for. By leveraging existing

infrastructure and utilizing a unique plug 'n play system, iPOWA is the key to high-speed access that works - fast.

Three of their representatives presented their case at Internetics 07, a conference about IT and the internet, sponsored by Internet Solutions.

iPOWA's approach has been somewhat different from their previous presentation at a broadband conference a few weeks ago. This time they are promoting it as the fixed line solution that powers the internet 15 times faster than ADSL and that besides the internet provides opportunities for power management, meter reading, electricity demand control to prevent black outs, security cameras and traffic management.

Problems such as interference to HF never entered into their discussion. They however did admit that they are waiting for ICASA to license PLT, which is the official name for BPL.

The interference issue of PLT and possible interim standards is on the Agenda of Committee TC73, the SABS committee on EMC standards which meets mid August. The SARL is keeping a close watch.

SUMMITS ON THE AIR (SOTA)

A few guys intend activating Stanleybushkop on Saturday 28 July. Listen out for Detlev, ZS6BAB, Tom, ZS6TMO, and Lucas, ZS6ACT, on 7 065 kHz and please give them a contact. Alternative frequencies will be 145,500 and 14,165 MHz. They will be on the air from 11:00 CAT. Stanleybush's SOTA reference is ZS-MP/018 and the location is S24 564 E30 481. You can find more information about SOTA at www.qsl.net/sotasa or www.sota.org.uk.

CONTEST NEWS

The Boland ARC 40 metre phone contest will be on the air this afternoon from 15:00 to 18:00 CAT. The exchange is a RS report and your postal code. Only wire antennas and a maximum output of 100 watt may be used. Each contact counts 1 point and a contact with ZS1BAK counts 5 points. Log sheets must be submitted within 15 days after the contest and can be sent by e-mail to zs1bak@mailbox.co.za or by snail mail to BARK, PO Box 2105, Dennesig, 7601.

Monday 23 July is the closing date for log submissions for the SARL Digital Contest. Get your log to the contest committee by midnight on Monday evening to stand a chance of winning a Yaesu VX-2R handheld.

The SARL HF Phone Contest will be run on Sunday 5 August 2007 starting at 15:00 and ending at 18:30 CAT with activity on certain sections of the 20, 40 and 80 metre bands. Participation can be as a single operator, multi-operator or SWL, further sub-division is low power, high power, all band, single band or my best hour. The exchange is a RS report and a serial number.

Southern Africa is divided into 8 zones for this contest and participants must try and work stations in each of these zones for bonus points, further bonus points are obtained for working the same station on all 3 bands.

The rules and log sheets are available in the 2007 SARL Contest Manual at www.sarl.org.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at very low levels. The geomagnetic field is expected to be quiet in general while reaching active levels on 31 July. The expected Effective Sun Spot number for the coming week will be less than 5.

20 m and 40 m will provide best opportunities for DX. There is a possibility of 20 m openings towards India from about 15:30 CAT. 40 m may open from 20:00 to Australia. From 17:00 there may be a 20 m opening towards Europe. At about 16:00 short 20 m openings towards the West Coast of the USA are possible. Otherwise contacts to the USA are going to be very challenging. For the CW and digital enthusiasts it will also be worth monitoring 10 MHz.

Locally 40 m is going to be the band to be on for the Boland ARC fun contest with good propagation throughout South Africa till at least 16:00, depending on your location. Remember that HF always has the capability to surprise you.

You will never know what you are missing unless you switch your rig on, listen and also call CQ.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

28 July - SOTA - Stanleybushkop activated; 29 July - President's Net and Intechnet; 5 August - SARL HF Phone contest; 15 August - Last day to submit synopsis of proposed papers for SA AMSAT Space Conference; 23 August - Class B RAE; 6 October - SA AMSAT Space Conference; 18 October - Class A RAE.

SARL News invites clubs and individuals to submit news stories of interest to radio amateurs and shortwave listeners. Submit news stories if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to the programme Amateur Radio Mirror International, on the air every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 695 kHz. For the web stream and echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links. A repeat transmission can be heard Mondays at 21:00 CAT on 3 215 kHz. Sentech sponsor the ARMI transmissions on the non-amateur frequencies.

Today's South African Radio League news bulletin was compiled by Roger, ZR3RC, and transmitted by (your name and call sign)

Thank you for listening. 73

DXNL 1528 - Jul 18, 2007
DX Newsletter

a free and weekly service of
DARC Committee "DX and HF contesting"
(http://www.darcdxhf.de)

editor: Helmut Schlaffer, DL7MAE
(e-mail: dxnl@dxhf.darc.de)

translation by: Bob, DL7VOA
(e-mail: dl7voa@darc.de)

CU - AZORES ISLANDS, EU-089
CT1EPV, CT1EGW, CT1GFK, CU2HJA, DJ2VO and HB9CRV/CT3FN will activate
Flores Island (EU-089) between Jul 21 and Aug 1. All WLOTA hunters
should be aware that they plan to put up their stations in the light-
house Farol do Albarnaz (WLOTA LH 0947). They will be on the air as
CU8/homecall in CW/SSB/RTTY/PSK on 6-80m including the beacon CU8/CT3FN
on 50.113 MHz and as CU8T (multi/single) during the IOTA Contest on
Jul 28/29. The QSL manager for CU8T is CT1GFK (via bureau), all other
QSLs should be sent to the operator's homecalls. Their homepage is:
http://www.to-mk.com/azores

JA - JAPAN
The special event station 8J7VENUS is very active in SSB and digital
modes on 80-6m from the "Sendai Tanabata Festival" until Aug 31.
QSL via JH7YES.

JD1 - MINAMI TORISHIMA, OC-073
Masafumi,JA6GXK/JD1, is working from Minami Torishima (OC-073) from
Jul 18 until Aug 2 and once again from Aug 29 until Sep 30. He prefers
working in PSK on 20m.

JW - SVALBARD, EU-026
Martin,JW/G3ZAY, and Michael,JW/G7VJR, are working from the clubstation
JW5E in Longyearbyen (EU-026) on all bands but mainly on 6m and the
WARC bands from Jul 15-22. QSLs via homecalls (bureau, direct, LoTW).

KH3 - JOHNSTON ATOLL, OC-023
Like announced previously in DXNL 1525 Susan,W7KFI, will become active
from the Johnston atoll (OC-023) during the end of July. She plans to
arrive already this week. KH3/W7KFI prefers working in CW on the QRGs
7036, 10105, 14036 and 18070 kHz and in SSB on 14236 kHz. Since the
atoll is now under administration of the "US Fish and Wildlife Service"
all future operations have to be organized under much more difficult

circumstances. However the environmental agency declared this the last official operation and the island for not accessible anymore.

KL7 - ALASKA, NA-041
Rich,N7TCO, and Martin,W7ASF, will use the callsign W7ASF/KL7 from the island Prince of Wales (NA-041) from Jul 22-30. They also intend to take part in the IOTA Contest on Jul 28/29. QSL via W7ASF.

SU - EGYPT
Giselher "Gisel",SU9GD (DJ2AVB), writes: "I am active from Mehalla El-Kubra for three years now, mostly in CW and Feldhell, THROB and other digital modes on 20m. You can find me on the bands during the Islamic weekend (friday/saturday) starting around 1400 UTC. I run about 50 watts in the digital modes and 100 watts in CW using a vertical on the roof. Please QSL via my homecall DJ2AVB."

SV5 - DODEKANES, EU-001
SX5AS is the callsign of a DXpedition to Dodekanes (Astakida Islands) with the team members Cliff,SV1JG, Nikiforos,SV1EEX, Theodoros,SV1GRM, Spiros,SV1RC, George,SV1RP, Lykoyrgos,SW1GZL, Sotirios,SV1HER, and Daniel,SV1JCZ. The Astakida Islands (EU-001) are three uninhabited rocks in the Carpathian Sea which recalls the pictures of the recent BS7H DXpedition. The team is working in SSB/CW/PSK/RTTY/FSK441/FM and via satellites on all bands from 160m-23cm activating also the lighthouse (WLOTA: LH 0393) for the very first time from Jul 17-23. Their QSL manager is SV1HER.

TK - CORSICA, EU-014
Jack,TK/HB9TL, can be found in SSB on 10-80m from Jul 18-30. Unfortunately QSLs only direct via his QSL manager HB9QR.

ZF - CAYMAN ISLANDS, NA-016
David,K2DBK, will stay on Grand Cayman (NA-016) from Jul 22-29. You may hear him as ZF2DK if he is not relaxing at the beach. David prefers working in SSB on 20m but has antennas for all bands from 6-40m with him. He may also try PSK but start listening on the IOTA frequencies. QSL cards will be handled by David himself, either direct or via bureau and all log data will be uploaded to the LotW as well. More information can be found at: http://k2dbk.com

GREECE, SPECIAL EVENT STATION
SX100VAR is a scout station celebrating 100 years of the international scout movement. The QTH is Varnava where the Greek scout headquarters is situated. Working/listening to SX100VAR qualifies yourself for a special award issued by the awards and QSL manager SV1VS for EUR 5. SX100VAR is working in SSB and RTTY on all bands until Dec 31, 2007.

ITALY, SPECIAL EVENT STATION
IA3GM is activated by Luigi,IV3LNQ, until Sep 30 to mark the 70th anniversary of the death of Guglielmo Marconi. QSLs via IV3LNQ.

JAPAN, SPECIAL EVENT STATION
8J1ESP is a special callsign of the International League of Esperantist

Radio Amateurs (ILERA) which will be put on the air by Lenio,PY3DF,
Tanaka,JA1FXZ, and other members of the league with following schedule:
Jul 31-Aug 04 from Nagano/Takato
Aug 04-12 from the 92nd Esperanto World Congress in Yokohama
Aug 12-31 from Tokyo.
The station will work on these frequencies (+/- QRM): 7.066, 14.266,
21.266 and 28.766 MHz. QSLs via bureau or direct to JA1YAR or JA1FXZ.

DXCC: The German "Financial Times Deutschland" wrote on July 10, 2007, that
the independence of Kosovo will be retarded not only because of the
resistance of Russia. Experts expect a decision about the future of
the Kosovo to be made not before the NATO summit in Bukarest which will
take place in April 2008. So we still have to wait for a new European
DXCC counter...

Due to a problem with the database it is momentarily not possible to
open any online DXCC lists on the DXCC homepage. They are already
working to fix the problem.

LINKS: The young Montenegrin amateur radio operator Nikola,4O7AMD, invites
you to visit his homepage at: http://www.montenegro-radio.net
---
VHF activities can be published on the website Make More Miles on VHF:
http://www.mmmonvhf.de or http://www.mmmonvhf.de/latest.php

Current SOTA activities (mountain summits) are announced at:
http://sotawatch.sota.org.uk/activations.php or
http://sotawatch.sota.org.uk/spots.php

PIRATE: Mamuka,4L2M, president of the "National Association Radioamateurs
of Georgia (NARG)" writes that the station 4L6VV is a pirate!
The OP calls himself Yuri and proclaims Tkvarcheli to be his QTH.
Mamuka states that this is not a valid Georgian licence and asks
everybody not to QSL. He thinks the pirate works from Russia.

UPCOMING CONTESTS

Jul 28/29: RSGB IOTA Contest and SWL IOTA Contest

IOTA collected by Fredy,DE0MST (e-mail: iota@dxhf.darc.de)

Island activities:
EU-038, PA, Noord Holland: Jack,PD2J, and Jan-Jaap,PG7V, will be active as
PC6IOTA from Texel Island between Jul 24 and Aug 1. QSL via PG7V.

EU-170, 9A, Dalmatia North Group: A team of Hungarian OPs will show up as
9A6NL and/or 9A/homecalls from Pasman Island from Jul 21-31. They also
plan to participate in the upcoming IOTA Contest.
QSLs for 9A6NL via HA6NL, all others via homecalls.
You can also check their website at http://www.c3.hu/~ha0khw/ha0hw.html

EU-170, 9A, Dalmatia North Group: Claudio,IN3DEI/W1ADX, is going to activate the islands Dugi Otok, Molat, Pasman and Ugljan signing 9A/W1ADX during his holidays from Jul 19 until Aug 7. QSL via IN3DEI.

1 GB2RS NEWS Sunday 22 July

The news headlines

* RSGB IOTA contest approaches

* RAYNET helps Tour de France

* Religious broadcasts reported on 10m

The weekend of 28 and 29 July sees the RSGB IOTA contest, sponsored by Icom. Many islands will be activated specially for the event by teams of enthusiasts. Many more amateurs around the world will of course be taking part from home. More details of the IOTA programme can be found on the RSGB IOTA web site, www.rsgbiota.org.

RAYNET members provided valuable assistance during the recent Tour de France stages in southern England. RAYNET members provided communications, safety and marshalling services to supplement the professional emergency services. Kent RAYNET coordinated the effort and were also assisted by volunteers from outside the county. Although it was reported to have been a long day for all concerned, it was a great success.

Reports have been received from Germany of religious broadcasts in the 10m band. The transmissions are thought to emanate from Ireland, which recently started licensing wireless PA services on the 11m band. However, German amateurs have received signals at 28.105MHz. The Irish Radio Transmitters Society is asking for any reception reports, with beam headings and recordings if possible, to try and help locate the transmitter or transmitters. Reports should be sent to Thos Caffrey, EI2JD, either QTHR or by email to thoscaffrey@hotmail.com. The Irish regulator, ComReg, is prepared to act on the matter if given sufficient information.

AMSAT members Allen Katz, K2UYH and Marc Franco, N2UO, have designed a high-efficiency VHF class-E RF power amplifier, with a DC to RF efficiency of 86.8%. Their work is based on silicon carbide metal-semiconductor field effect transistors, or MESFETs. This type of amplifier is under consideration for use on the AMSAT Eagle satellite.

According to its annual report, Ofcom seized 661 illegal radio transmitters in the year 2006-2007. It undertook 707 separate enforcement actions, including 48 raids on studios used by illegal broadcasters. As a result of its actions, Ofcom secured 61 successful convictions. The full annual report can be downloaded form the Ofcom

web site at www.ofcom.org.uk.

And now for the details of rallies and events for the coming week

[Note to newsreaders: we have not been notified of any events on 22 July.] On Friday 27 to Sunday 29 July the Party In The Park takes place at Eirias Park, Colwyn Bay. For more details contact Ron Roberts on 01492592884.

2 On Sunday 29 July the Horncastle Summer Rally takes place from 10.30am at Horncastle Youth Centre, Horncastle, Lincolnshire. Details from Tony, G3ZPU, on 01507 527835, or by email to G3ZPU@hotmail.com. On Sunday 29 July the Colchester Radio and Computer Rally takes place from 10am at St Helena School, Sheepen Road, Colchester. Details from James, M0ZZO, 01255 242 748, or by email to James@M0ZZO.com. More details of these and future events can be found on pages 88 and 89 of the August edition of RadCom. Now for the news of special events Finchampstead Scout Group will be putting on a special event station GB1FSG on 22 to 30 July. They will operate SSB on the HF bands. The station will be operated from the Lake District.

To mark the 100th anniversary of Scouting, special event station GB100J will be active from 27 July until 7 August. Operating from Hylands Park, Chelmsford, the station is expected to be on air 24 hours per day on 80m through to 6m. Depending on the availability of an Internet connection, the station also hopes to be active on Echolink. More details at www.radioscouting.org.uk.

On 28 and 29 July a group of radio amateurs will be active from Isle of Islay. Apart from the IOTA Contest with participation under two contest call signs GM2Z and GM4A, there will be a separate PSK station MS0EPC (EPC#1700). The radio amateurs will try to be active on all HF bands, including 160m. More than one radio may be in use at any one time. GB200A will be operational from Saturday 28 July to celebrate the bicentenary of Aberaeron in Wales. Two stations will be operated as time permits, one QRP and one 100W. Operation is planned mainly on 40, 20 and 15m. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources. Terry, W6WTG will be active as W6I from Anacapa Island (NA-144) on 27 to 29 July. He will take part in the IOTA contest and plans to operate on 20 metres SSB running battery power. QSL via N2OWL. Sam, UT9FJ, Alex, UR5FEL and Petro, UR5FCZ will be active as homecall/p from Berezan Island (EU-179) on 25 to 30 July for the IOTA contest. QSL via home calls. Jack, HB9TL, reports he will be active as TK/HB9TL from Corsica on 18 to 30 July. He plans to operate SSB on 10-80 metres. QSL direct to HB9QR. Paolo, IK2MLS reports he will be active holiday style as SV9/IK2MLS from Crete (EU-015) on 15-27 July. He plans to operate SSB on the HF bands, 6 and 2 metres. QSL via home call. Mike, W7ASF and Richard, N7TCO will be active as W7ASF/KL7 from Prince of Wales Island (NA-041), Alaska on 22-30 July for the IOTA contest. QSL direct or via bureau. Jack, HB9TL, reports he will be active as TK/HB9TL from Corsica on 18 to 30 July. He plans to operate SSB on 10 to 80 metres. QSL direct to HB9QR.

3 Claude, F5OGE, will be active as CN2GE and CN2GE/m from Morocco until 29 July. He will be travelling from Tangiers to Rabat, Marrakech, Benni Mellal, Fes, and Tetouane and back to Tangiers. Claude will operate CW and SSB, mainly on 40 and 20 metres, early in the morning and late in the evening (local time). QSL via home call, direct or bureau. Art, KG6ZWD, will be active as SV1/KG6ZWD/p from mainland Greece on 24 and 25 July. He will also operate as SV8/KG6ZWD/p from Andros Island, EU-067, on 17 to 23 July. Expect holiday style activity on 10 to 40 meters SSB and PSK31. QSL via home call, director bureau. Pete, W2GJ, C6APR, Ed, K3IXD, C6AXD and Randy, K4QO, C6AQO, will be active from Crooked Island, NA-113, ARLHS BAH-005 on 26 to 30 July. They will operate CW, SSB, and RTTY on 80 to 6 meters and will participate in the IOTA Contest as C6APR. All QSLs via K3IXD. Now the contest news

The CQ WW VHF Contest takes place from 1800 on 21 July to 2100 on 22 July. Activity is the on 50MHz to 144MHz bands, all modes. The exchange takes the form of call sign and grid. The RSGB CW Low Power Field Day takes place on Sunday 22 July from 0900-1200 and 1300-1600 on the 80m and 40m bands. The exchange is RST, serial number and power. The RSGB 144MHz Backpackers Contest takes place on 22 July between 1100 and 1500 on all modes. The exchange takes the form of RST, serial number, locator and postcode. On Tuesday 24 July the RSGB 50MHz Activity Night takes place from 2000-2230 local. RST, serial number and locator form the exchange. The RSGB IOTA contest takes place from 1200 UTC on Saturday 28 July until 1200 UTC on Sunday 29 July. Activity is on 80, 40, 20, 15 and 10m, CW and SSB. The exchange is RST, serial number and IOTA reference. Now the solar factual data for the period from 9 July to 15 July, compiled by Neil Clarke, G0CAS

On 9 July a small but magnetically complex sunspot group rotated into view. On the 9th and the 10th the group produced over twenty C class solar flares, the largest was a C8 on the 10th. However, they had little effect on propagation. From the 11th the group simplified and solar activity declined to very low with no further C class solar flares taking place. Solar flux levels varied little day to day and averaged 77 units. The 90 day solar flux average on the 15th was 74 units. This has remained at the same level for the last six weeks. X-ray flux levels started at a respectable level of B1 units on the 9th but then declined to below the minimum A1 level by the 14th. The average was A3.3 units. Geomagnetic activity started at quiet levels with an Ap index of only 3 units on the 9th but due to a recurring coronal hole, activity increased on the 11th and the 14th to 23 units. The average was Ap 11 units. The ACE spacecraft saw solar wind speeds increased from 290 kilometres per second to 600 by the 11th and the 12th. Particle densities increased to 72 particles per cubic centimetre by the 10th, but then declined to low levels for the remainder of the period. The interplanetary magnetic field, the Bz varied between minus and plus 2 nanoTeslas on the quiet days and between minus 14 and plus 18 nanoTeslas during the disturbance.

The HF bands were in relatively good shape until midweek, with good 20-metre propagation to northern Canada, the West Coast and Hawaii

around 0630 to 0730UTC and late openings to Asia in the

4 evening. However, increased geomagnetic activity depressed MUFs by 2 to 3MHz for the second half of the week. A handful of VHF auroral contacts were reported at high latitudes on the 11th and again on the 14th. Sporadic-E occurred on 28 and 50MHz on all days. Also a transatlantic opening occurred during the afternoon of the 14th on 50MHz.

And finally the solar forecast

This week the quiet side of the Sun is expected to be rotating out of view. Solar activity should be very low, at least at first. There is a small chance that activity could increase after midweek. Solar flux levels could increase and by next weekend be in the mid 70's. Geomagnetic activity is expected to be mostly quiet. However, due to a small recurring coronal hole activity could increase around Thursday. MUFs during daylight hours at equal latitudes should be about 19MHz for the south and 16MHz for the north. The darkness hour lows should be around 10MHz. Paths this week to Australia should have a maximum usable frequency with a 50 per cent success rate will be about 19MHz. The optimum working frequency with a 90 per cent success rate will be around 15MHz. The best time to try this path will be between 0800 and 1100 hours UTC. Expect sporadic E to take place most days, particularly on 28 and 50MHz.

And that's all for this week from the propagation team.

5 Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies can be found on the RSGB website, including e-mail addresses

and website links where known.

[Note to newsreaders: Please read the local news items appropriate to the service area of your

transmission.]

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Sunday 22 July Radio Society of Harrow is operating GB2DHH De Havilland Heritage. Contact Linda, G7RJL, on 020 8386 8586, or on the web at www.g3efx.org.uk or Chris 01895 621 310.

On Sunday 22 July Southdown Amateur Radio Society is operating at the Beachy Head Site. Contact John, G3DQY, on 0124424319, or by email to vaughdqy@aol.com.

On Monday 23 July Basingstoke Amateur Radio Club is having a club night. Contact Frank, M0AEU, by email to barc@2lo.info.

On Tuesday 24 July Cray Valley Radio Society is mounting a DXpedition to the Isles of Scilly. Contact Bob, BRS32525, on 020 8265 7735 after

8pm.

On Tuesday 24 July Horndean and District Amateur Radio Club is having a talk and demo of amateur television by members of the SCART group. Contact Stuart, G0FYX, on 023 9247 2846, or on the web at www.hdarc.co.uk.

On Wednesday 25 July Chesham and District Amateur Radio Society is on the air. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 25 July Dover Radio Club is having a school holiday 2m fox hunt with Brian, G4SAU as the fox. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 25 July Fareham and District Amateur Radio Club is having a talk by Jim, M1JJN, entitled 'DTMF - the next generation'. Contact Jim, M1JJN.

On Wednesday 25 July Havering and District Amateur Radio Club is having an informal evening. Contact Dave, 2E0EBV, on 07956 594 514.

On Wednesday 25 July Norfolk Amateur Radio Club is having a bright sparks SSTV and hat cam demonstration plus informal evening. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Wednesday 25 July Worthing and District Amateur Radio Club is making plans for its special event station at the forthcoming fire brigade open day. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 26 July Bittern DX Group is running the group's "Summertime CQ's". Contact Keith, G0GFQ, on 01263 588 506, keith@g0gfq.com, or on the web at www.bittern-dxers.org.uk.

On Thursday 26 July Horsham Amateur Radio Club is having a social at The Fountain Inn, Ashust. Contact or on the web at www.harc.org.uk.

On Friday 27 July Hilderstone Radio and Electronics Club is having a natter night. Contact Mike, G4MIX, on 01304 813 175, g4mix@waitrose.com.

On Friday 27 July Mid-Sussex Amateur Radio Society is having a field exercise to test reception within Sussex. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

6 On Friday 27 July Itchen Valley Amateur Radio Club is meeting at a temporary venue: the Guide Hall, Ramally Lane, Chandlers Ford, where they will be trying out portable antennas. Contact Liz, M0ACL, on 02380 254599.

On Friday 27 July Torbay Amateur Radio Society is having an education and training night. Contact Dave, G6FSP, by email to g6fsp@tars.org.uk.

On Friday 27 July Wimbledon and District Amateur Radio Society is setting up its summer camp. Contact Jim, M0CON, on 020 8874 7456.

On Saturday 28 July Gorleston Amateur Radio Society is having a meeting. Contact David, G3OEP, on QTHR, 01493 662 323.

On Saturday 28 July Harwich Amateur Radio Interest Group is taking part in the IOTA contest from the site of the Colchester Radio Rally. Contact James, M0ZZO, on 01255 242 746.

On Saturday 28 July Worthing and District Amateur Radio Club is attending the Fire Brigade open day at Worthing Fire Station. Contact Roy, G4GPX, on 01903 753 893.

On Sunday 29 July Basingstoke Amateur Radio Club is having a fox hunt. Contact Frank, M0AEU, by email to barc@2lo.info.

On Sunday 29 July Hilderstone Radio and Electronics Club is having its WOK event field day. Contact Mike, G4MIX, on 01304 813 175, g4mix@waitrose.com.

NEWS FOR THE SOUTH-WEST

On Wednesday 25 July South Bristol Amateur Radio Club is having session 5 of its Project OSS. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 25 July Taunton and District Amateur Radio Club is operating the club station. Contact William, G3WNI, on 01823 666 234, or by email to g3wni@btinternet.com.

On Wednesday 25 July Thornbury and South Gloucestershire Amateur Radio Club is on the air. Contact Tony, G0WMB, by email to tonytsgarc@beeb.net.

On Thursday 26 July Yeovil Amateur Radio Club is on the air. Contact Derek, 01935 414 452, or by email to m0wob@tiscali.co.uk.

On Friday 27 July Guernsey Amateur Radio Society is having a talk by GU4WTN on how to use the MFJ antenna analyser. Contact Phil, GU0SUP.

NEWS FOR THE MIDLANDS

On Sunday 22 July Wythall Radio Club is running a special event station for the Land Rover Show at Billing Aquadrome. Contact Chris, G0EYO, on 07710 412 819, by email to g0eyo@blueyonder.co.uk, or on the web at www.wythallradioclub.co.uk.

On Monday 23 July Stourbridge and District Amateur Radio Society is having an open shack night. Contact John, M1EJG, on 01562 700 513.

On Monday 23 July Stratford Upon Avon District Radio Society is having a construction competition. Contact Jack, G3VYE, on 01926 641 988.

7 On Tuesday 24 July Derby and District Amateur Radio Society is having a quiz night. Contact Martin, G3SZJ, on 01332 556 875.

On Tuesday 24 July Loughborough and District Amateur Radio Club is having a radio ramble. Contact Chris, G1ETZ, on 01509 504 319.

On Tuesday 24 July Wythall Radio Club is having a talk by Tim, M3SDE on the 3YOX DXpedition to Peter 1 Island. Contact Chris, G0EYO, on 07710 412 819, by email to g0eyo@blueyonder.co.uk, or on the web at www.wythallradioclub.co.uk.

On Wednesday 25 July Lincoln Short-Wave Club is having a video night. Contact John, G1TSL, on 01526 323 153.

On Wednesday 25 July Telford and District Amateur Radio Society is having a talk on direction finding, fox hunting - and how to do it, by G4EIX. Contact Mike, G3JKX, on 01952 299 677, or by email to mjstreetg3jkx@blueyonder.co.uk.

On Thursday 26 July Salop Amateur Radio Society is having its 4th fox hunt. Contact Glenda, G1YJB, on 01939 235 412.

On Thursday 26 July Stafford and District Amateur Radio Society is operating portable from Cannock Chase. Contact Graeme, G4NVH, on 01785 604 534, or by email to graeme.boull@ntlworld.com.

On Friday 27 July Coventry Amateur Radio Society is on the air. Contact John, G8SEQ, on 02476 273 190, or by email to johng8seq@ntlworld.com.

On Friday 27 July Hucknall Rolls-Royce Amateur Radio Club is celebrating 20 years of HRRARC with a social evening and buffet. Contact Carl, M0XBE, on 07979 092 447, or on the web at www.hrrarc.com.

NEWS FOR THE NORTH OF ENGLAND

On Sunday 22 July Great Lumley Amateur Radio and Electronics Society is having a fox hunt. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Monday 23 July Sheffield Amateur Radio Club is having its second fox hunt and BBQ. Contact Trevor, M0TWS.

On Monday 23 July Thornton Cleveleys Amateur Radio Society is having a talk by G3ZRZ on simple antennas. Contact Jack, G4BFH, by email to jack.duddington@btinternet.com.

On Tuesday 24 July Chester and District Radio Society is having a talk on Stroboscopes by Bill Silversides, M3SCK. Details on the web at www.chesterdars.org.uk, or by email to info@chesterdars.org.uk.

On Tuesday 24 July Halifax and District Amateur Radio Society is having a members technical evening at Rishworth School. Contact Brenda, 2E0YKS, by email to wrenuk10@yahoo.com.

On Wednesday 25 July Chester and District Radio Society is having a presentation on the International short wave league by Geoff Hoyle. Details on the web at www.chesterdars.org.uk, info@chesterdars.org.uk.

On Wednesday 25 July Great Lumley Amateur Radio and Electronics Society is on the air. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Wednesday 25 July Hornsea Amateur Radio Club is preparing its antenna farm and having an activity night. Contact Steve, G4GPY, on 01482 860 440, or by email to g4gpy@eddiesplace.karoo.co.uk.

8 On Friday 27 July South Manchester Radio and Computer Club is having a talk on marine radio by G3UAU. Contact Ron, on 0161 969 3999.

On Friday 27 July Tynemouth Radio Club is having a talk by Ken, M3ILL, entitled A Slinky Antenna. Contact Tony, G8YFA, by email to tonyregnart@blueyonder.co.uk.

On Saturday 28 July Sheffield Amateur Radio Club is taking part in the IOTA contest as MM3M from the Island of Arran. Contact Trevor, M0TWS.

NEWS FOR SCOTLAND

On Sunday 22 July Aberdeen Amateur Radio Society is taking part in the RSGB low power CW contest as GM3BSQ/P from Walker Park. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

On Thursday 26 July Aberdeen Amateur Radio Society is on the air. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

On Friday 27 July Banff and Buchan Amateur Radio Club is having a talk on PC to radio interfacing. Contact geraldbrt@aol.com.

On Saturday 28 July Aberdeen Amateur Radio Society is on the air. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

On Saturday 28 July Cockenzie and Port Seton Amateur Radio Club is taking part in the RSGB IOTA contest from the Island of Tiree. Contact Bob, GM4UYZ, on 01875 811 723.

NEWS FOR WALES

On Friday 27 to Sunday 29 July the North Wales Radio Society is running the Party In The Park at Eirias Park, Colwyn Bay. The event, which is open to all, has ample space for camping. There will be a car boot sale and flea market, although the organizers with to limit the sale of transmitting equipment to licensed amateurs. For more details contact Ron Roberts on 01492592884.

A meeting has been arranged for club secretaries or other representatives of North Wales amateur radio clubs. This will take place on Saturday 28 July at 11am in the organisers tent at the Party In The Park, Colwyn Bay. The subject of the meeting is to get something going to provide a meeting point for radio amateurs in North Wales. This has come about because there is a feeling that the former Llandudno Rally provided more than just a place to meet the traders. It is not essential that the club secretary per se be there, but it would be preferable if each club or organisation in North Wales (Region 6) is represented by one of their officers or members.

NEWS FOR NORTHERN IRELAND

No news items have been received for Northern Ireland this week. And that's the end of this week's GB2RS news broadcast,

prepared by the Radio Society of Great Britain.

1315. Welcome to rec.radio.info!

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate
articles, it was decided to create the group as a moderated newsgroup.
```

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to

rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill

to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group and to rec.answers/news.answers every month. You are now reading the second article, which explains how to submit something to rec.radio.info, and which answers some Frequently Asked Questions about the submission process. The first article is titled "Welcome to rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post the article to rec.radio.info, as you would do with any other newsgroup. The difference is that the software recognizes the special status of rec.radio.info as a moderated group, and will e-mail your article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the transparency offered by the newsreading software is probably more convenient.

If you have any questions, or wish to deal with some administrivia with the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have to read it first, give it the stamp of approval, and finally send it on to the group. We will attempt to read and decide on all submissions within 72 hours at the very least, though we will probably be able to process submissions much faster in actual practice.

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and

articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions
rec.radio.shortwave International broadcasting on the 'HF' bands

rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org>

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

1317. Any new guesses on change in ARS numbers

Newsgroup: rec.radio.amateur.moderated
Date: 2007-07-22 12:56:56 UTC
From: Dee Flint <deeflint01@comcast.net>
Message-ID: <4OGdneOpUt6SyT7bnZ2dnUVZ_gydnZ2d@comcast.com>
Source record: 4122

1) Predict amount of change in ARS numbers between the IMPLEMENTATION
date of the R&O for elimination of code testing and one year from that
> date.
2) Calculation of the number of licenses will be done by N2EY under the
same principals that he uses now to calculate the number of licenses.
3) You must select whole numbers for your percentage.
4) You may select positive or negative percentages.
5) You may select a range but that range may not exceed a total of 4%.
Note that your average will be used to determine who is closest. If the
actual change is outside the range of everyone's guesses then the person
whose limit is closest will be the winner.
6) You must submit your guess no later than six months after the
IMPLEMENTATION date of the R&O.

Anyone else? Note if your guess doesn't show up on the list within a
week, it may mean that my ISP is blocking it or that you are on my
blocked senders list. You may still participate but you will have to have
your guess submitted by someone who is not blocked.

Guesses submitted:

N8UZE: 1% less to 1% more
N2EY: 1% more to 2% more
KH6HZ: 1% less to 0% change
N3KIP: 2% more to 6% more
KH6O: 6% more to 10% more
KK6J: 12% more to 14% more
KC2HMZ: 5% more
K8BSG: 2% to 3% more <--- Added 02/18/06

>

First, I'd argue that your definition of "active" is much too restrictive. I consider myself "active" in the hobby but my activity isn't on a "regular basis" and certainly not "weekly". I live in rural southern Arizona and have offices and keep apartments in two other cities, one 100 miles away and another 700 miles away. About 1/3 of my time is spent in each of these locations, and I keep a station only at home. I may go for many months without turning the transmitter on, then have 1,500 contacts in a weekend contest, or just a couple of ragchews or DX contacts.

In my life I have sometimes not had a station for a year or two, but didn't consider myself an inactive ham. I also know a ham who has been transmitter-less for at least 15 years, but plans to return to the air. Still subscribes to all the magazines and belongs to CADXA up in Phoenix (he's on the Honor Roll). His work has just not allowed him to operate, but has not abandoned the hobby and considers himself "active".

So I'll use a different definition of active --- keeps his/her license current, gets on the air at least a couple of times a year, or if currently off the air he/she expects to be back on the air in the future. By that definition I'd estimate that 75% of the current US license holders can be consider active.

I belong to that particular radio club because I'm interested in being in the
DXCC listings. Beyond that, I consider the club to have politically
marginalized itself to irrelevance.

Once-upon-a-time-in-a-galazy-far-far-away I'd have agreed with you, but I believe that the days of "what's good for ARRL is good for ham radio" are past, and "being a member is the mark of an active ham" is mostly an empty slogan. By being "everything to everyone" they have steadily eroded support from their core member base and now are exposed to the realities of the publishing business which is "subscription churn".

It's a very bare-bones entry class license, with an easy entrance examination
and a low level of privileges, sort of "here's a taste of amateur radio ---
there's more where this came from".

It appears to me like the "Foundation License" is actually more difficult to get than our current Technician license. The mandatory 10 hour class, while philosophically a good idea, could be a real hardship for people in our rural areas and people whose work schedules do not accommodate available class schedules.

On the other hand, in the US, one can get the short question/answer/brief explanation books and fit their study into available moments as they come along in the course of the day.

Irish Radio Transmitters Society
Radio News Bulletin

Sunday July 22nd 2007

Field Days

The winners of the CW Field Day in a very closly fought contest were South Dublin Radio, EI2SDR. Commisserations to EI3Z, and thanks to Paul for the GI6YM checklog.

The UHF/VHF field day took place 2 weekends ago. The stations heard were EI2II, EI3Z, EI7T, and EI9E. Thanks go to all the stations for taking part as conditions were not altogether favourable. As yet no logs have been recieved so please send them to &#65533;contests at irts dot ie&#65533; or to Ei8IU at QTHR.

September will be a busy month with the SSB field day over the first weekend. Again the grounds of Garbally College, Ballinasloe, Co. Galway will be available, thanks to Niall EI4CF and once again the Shannon Basin Club will be hosting their now famous Barbeque. Of course, the big event will be CQIR over the last weekend, so plenty to look forward to.

WRC-07 CEPT Preparatory Group Meeting

As you will all be aware by now a World Radio Conference, WRC-07 will be held in November of this year. These conferences are extremely important for the amateur service as it is at them that decisions are taken which affect the frequencies available to the amateur service on into the future. A preparatory meeting for the Conference of the CEPT countries was held the week before last in Gothenburg. As we told you in last week&#65533;s news the IRTS, prior to that meeting, had submitted to ComReg documentation on the issues of importance to the amateur service in the context of WRC-07.

Through ComReg we have received some good news on the outcome of the Gothenburg meeting. CEPT has agreed on a European Common Proposal to support a secondary allocation to the amateur service at 5 MHz by way of a footnote to the ITU Radio Regulations. The footnote proposed will be to the effect that Administrations may allow stations in the amateur service to operate in the band 5260 to 5410 kHz on a secondary basis. This proposal if adopted at WRC-07 would give provision for a new allocation of 150 kHz with a radiated power not exceeding 24gBW or 250 watts. There was general agreement that this band comes within the scope of Agenda item 1.13 of the WRC-07 Agenda. The Irish delegation at the meeting is party to the European Common Proposal and will of course be supporting it at WRC-07. With a bit of luck WRC-07 will see us with a new secondary allocation in the 5 MHz region.

For LF enthusiasts CEPT is proposing amendments to Article 5 of the Radio Regulations that will in effect, if adopted at WRC-07, provide a worldwide secondary allocation for the amateur service of 135.7 to 137.8 kHz. Ireland will be supporting this proposal at WRC-07.

Ireland also supported a proposal, which had sufficient support to be carried at the meeting to include on the Agenda for WRC-11 consideration of a secondary allocation to the amateur service in parts of the frequency band 415 to 526.5 kHz. A proposal which Ireland supported at the meeting for inclusion on the WRC-11 Agenda consideration of an allocation to the amateur service in the range 50 to 54 MHz throughout Region 1 received insufficient support to be carried. The IARU Region 1 will have to consider other strategies to seek to achieve this objective.

We would like to express our appreciation to the officials of ComReg and the Department of Communications, Energy and Natural Resources who attended the meeting and for yet again giving their support to the internationally agreed IARU position on issues of concern to the amateur service in the context of WRC-07.

Church Broadcasts

Last week we carried an item telling you that we had been notified by the national coordinator for the IARU Intruder Watch for the German National Society DARC that transmission of church services which seem to be coming from Ireland have been taking place in the 28

MHz amateur band. WAV files have been provided of such transmissions on 28.105 MHz FM. It has now been established that a Church broadcast is being transmitted on 28.105 MHz FM in the Dublin area. Some further work is required to identify the Church concerned. Mass is transmitted at 0900, 1000 and 1100 local on Sundays and at 1000 on weekdays. We would ask stations in the greater Dublin area to listen on this frequency at these times to see if the location can be positively identified. The local Church notices can be of assistance here. If you cannot identify the station and you have a beam antenna you could take a bearing on the peak signal, which in conjunction with similar bearings taken by other stations could help identify the general area from which the transmission originates.

Stations located outside Dublin should listen on the lower end of the 28 MHz band generally to see if any unauthorised activity is taking place in the band in their areas. If you hear anything worth reporting you should send a report to Thos Caffrey EI2JD the IRTS Intruder Watch coordinator at QTHR or to &#65533;thoscaffrey at hotmail dot com&#65533; with a copy to Sean Nolan EI7CD at QTHR or to ei7cd at &#65533;gofree dot indigo dot ie&#65533;. The report should include date, time, frequency, possible location of station if identified, beam heading in degrees from true north and other relevant information. If the station is identified from an announcement of local events, details should be given. Should you hear anything, no action should be taken other than forwarding a report as requested.

It is in our own interests to identify any unauthorised activity so as to preserve the exclusive nature of the 28 MHz allocation. The matter has already been reported to ComReg who will act on the matter if we can provide appropriate information.

CQIR

Great interest is being expressed worldwide in the Society's 75th Anniversary Contest CQIR, which will take place on the last weekend in September. The contest is a celebration of Ireland and the Irish, throughout the world and with 40 million people in the United States alone claiming Irish forefathers; we expect that CQIR will be one of the largest 'one off' contests ever aired on the Amateur Bands. It is a 24-hour single operator contest with the emphasis on

participation rather than winning and to this end every participant gains an entry ticket for a spectacular draw for every 75 QSO's made during the Contest.

The ticket drawn out of the EI/GI drum will win an all expenses paid long weekend in New York City for two people. ARRL have confirmed that this will include a visit to their national headquarters hosted by ARRL. Kinnitty Castle in Offaly will host the international winners for a week with flights for two from anywhere in the world. The prizes have been fully sponsored at no cost to the Society and this is really an excellent opportunity to celebrate the Society and its 75 years of service to Irish experimenters. We would encourage all Irish operators to be active during the Contest. So ring fence the last weekend of September in your diary, make an effort to have that new antenna up for the event and lets ensure a good show from the local Irish operators to support the international Irish who will no doubt come on the bands in their thousands for the contest. Full rules are on the IRTS website.

South Eastern Amateur Radio Group

The next general meeting will take place on Monday the 30th of July at 8.00 p.m. in the Roanmore Centre, Waterford. All are welcome.

Cork Radio Club

On Manday night last Aedan EI3EG gave a demonstration of his loop antenna at the club. Although the bands were not very active, beacons were located on both 15 and 10 meters. It showed how efficient these small antennae are in confined spaces. The Cork Radio club are gearing up for their annual rally, which will take place in the Blarney Park hotel on Sunday the 24th of September plenty of parking, food all day.

Theory Examination

The examination papers from the recent Theory Exam have been checked and the results delivered to ComReg. ComReg have been very efficient in sending out the results but it takes time as each candidate gets a breakdown of their results in each of the three sections of the paper. We appeal to candidates not to contact ComReg about the results, as results will not be given over the phone or by e-mail. The official

letters will issue in due course.

Huntsville Hamfest

Live video and audio of the 2007 Huntsville hamfest will be broadcast again this year via the internet. The live broadcast begins on Friday morning August the 17th at 0800 CST. Watch as the helmet cam takes you on a virtual tour of all the tables and booths there. Also watch many activities such as the ARRL activities and the Young Ham of The Year. For more information visit wa5kub.com.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to ﷺ for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday ﷺ bulletin.

I think keeping your license current is the only requirement for the definition of an 'active' ham. Keeping your license current implies either on-air activity or the intention of returning to on-air activity at some point in the future.

While there are some scary parts about "notifying the neighbors", they have things pretty well spelled out about what constitutes a good reason to dissalow an antenna. Like "how will it affect my property value" as an unacceptable argument on the neighbors part. Some other parts seem to allow a lot of leeway for the local gvmt to just say "go ahead"if you are in a sparse area.

> point in the future.

Anyone who has invested the effort to obtain a license is likely to invest the small effort required to renew the ticket. I am sure that there are many licensed hams out there who haven't been active in the hobby in years, and never will be active again, but since renewing their license costs no money and very little time, they invest the tiny effort to renew it. This tiny effort does not make them "active" unless the definition of "active" is extraordinarily liberal.

Then there are the hams who die during the term of their license. As far as I know there's no linkage from any other branch of government (Social Security or IRS, say) to the FCC to remove these individuals from the active rolls.

The idea of the exercise was to determine what percentage of the folks listed by the FCC as licensed amateur radio operators that has actually contributed to the hobby in the recent past, or might do so in the near future. I suspect that percentage is rather low and would be interested in knowing, just from an academic perspective, but I suspect there's no real way of finding out with any meaningful level of accuracy.

73, Steve KB9X

I'll concede that it is pretty hard to define what "active" is. If this
were a proper poll, we'd want to get feedback on the different levels of
activity.

I'd have to say that I'd consider your description above as being active.

> So I'll use a different definition of active --- keeps his/her license current,
> gets on the air at least a couple of times a year, or if currently off the air
> he/she expects to be back on the air in the future. By that definition I'd

The number seems a little high to me, but that's good feedback anyhoo.

As others have said, this is tough to get a handle on since one of the things it depends on is the definition of "active".

There are not many numeric measures of activity, but one that comes to mind is the number of people who vote in the election for ARRL Section Manager. In the following, the number of votes is taken from the ARRL web site and the number of hams from http://www.speroni.com/FCC/ARRL/State1A.html

Kentucky, Feb. 2007, 527 votes, 8534 hams, 6% voted.
Texas, Feb. 2007, 1577 votes, 42,949 hams, 4% voted.
New Hampshire, May 2007, 513 votes, 4825 hams, 11% voted.

You can speculate about how much correlation there is between "active ham" and "voted in ARRL election for SM". I am certainly NOT suggesting that this is an accurate measure of the activity level of the ham radio community, but it's an interesting number.

(e-mail: dl7voa@darc.de)

BY - CHINA, AS-136
Dale,BA4TB/4, Jiang,BG4TBC/4, Dai,BG4TBJ/4, Yun,BG1LKK/4, and
Mi,BG4TQX/4, will activate Chongming Island (AS-136) in CW/SSB/RTTY
on 80-6m from Jul 27-30 including the IOTA Contest on Jul 28/29.
QSLs via homecalls.

C6 - BAHAMAS, NA-113
Pete,W2GJ, Ed,K3IXD (C6AXD), and Randy,K4QO (C6AQO), will show up from
Crooked Island (NA-113) from Jul 27-30 including a participation in
the IOTA Contest as C6APR (QSL via K3IXD). C6AXD and C6AQO will be QRV
in CW/SSB/RTTY on 6m and the WARC bands before and after the contest.

CU - AZORES ISLANDS, EU-003
Pedro,CU2/EA1FCH, who prefers working in CW and digital modes on the
WARC and lowbands will stay on Sao Miguel Island (EU-003) from July 27
until Aug 5. QSL via EA1FCH, via bureau or direct.

Ann,CU2/WA1S, will visit Sao Miguel (LH 2016) as well between Jul 28
and Aug 9. QSL via bureau to WA1S.

EA6 - BALEARIC ISLANDS, EU-004
Jorge,EA8TL/EA6, is going to visit Ibiza and Formentera (EU-004) from
Jul 31 until Aug 24. He plans to operate in SSB on 80-2m (no 30m/6m)
using an IC-706 with 100 watts.

GJ - JERSEY, EU-013
Iain,M0PCB, and Chloe,2E1IDT, are working with QRP power signing
MJ0PCB and 2J1IDT from Jersey Island (EU-013) from Jul 24-31.
QSLs via homecalls.

HC8 - GALAPAGOS ISLANDS, SA-004
Manu,HC8/LX2LX, and Norby,HC8/LX1NO, are spending their holidays on
Isabela Island (IOTA SA-004, WLOTA LH 2957) from Jul 20-31. You can

expect them to show up in CW mostly. QSL via LX1NO.
See also http://www.luxlog.info/hc.htm

HS - THAILAND, AS-053
Between August 2007 and June 2008 Eric,SM1TDE, will work at a place where other people use to spend their holidays: on Phuket (AS-053). As soon as he gets his HS0Z license you will find him mainly in CW on 40m/20m/15m/10m. Bureau QSLs should be sent via SM1TDE, for direct requests Eric still needs to rent a postbox in Thailand.

IS0 - SARDINIA ISLAND, EU-024
Tano,IS0/IZ8GCB, will be active in CW/SSB on 40m/20m/15m/10m from Sardinia (EU-024) from Aug 1-19. QSLs direct or via bureau to IZ8GCB. His homepage can be found at: http://www.iz8gcb.com

KH3 - JOHNSTON ATOLL, OC-023
Once again Susan's,W7KFI, departure from Hawaii to Johnston has been delayed by a hurricane. This week she will decide if a safe trip to Johnston is possible at the moment. Else the departure would be delayed till November when the hurricane season is over and the condx to Europe are hopefully better. Susan will keep us informed.

LY - LITHUANIA
Rolf,DL6ZFG, is staing in Lithuania until Jul 31 and also intends to attend the LY-Hamfest near Kaunas from Jul 27-29. Rig: IC-706MK2G, verticals, all bands, preferably 20m up.

OX - GREENLAND, NA-018
Roland,OX/HB9FMD, will be QRV from the hotel Hvide Falk in Ilulissat from Aug 1-27.Operation will take place mainly in CW on the WARC bands. Roland will confirm the QSLs himself after his return.

TK - CORSICA, EU-014
TK/DL2RMC and TK/DL1RTL will spend their holidays on the island of Corsica (EU-014) between Jul 30 and Aug 8. They will use verticals in CW and digital modes on 6-160m and will tro to activate EU-164 as well. QSLs via homecalls. See also: http://www.qsl.net/dl2rmc
---
TK/IK5WOB is working in CW only from Algaiola from Jul 28 until Aug 11. QSL via homecall.

V6 - FEDERATED STATES OF MICRONESIA, OC-010
Six members of the JARL Kyoto Club (JA3YAQ) are going to celebrate the 60th anniversary of their club on the island of Pohnpei (OC-010). They promised activities in CW/SSB/FM/RTTY/PSK31 on 160-6m from the South Park Hotel between Jul 30 and Aug 6. The licensing authority was kind enough to issue special V60 callsigns. Following is a list of the calls and their corresponding homecalls (which are also their QSL routes). All OPs accept QSL cards via bureau as well.
V60YAQ clubstation, QSL via JI6DUE
V60KL Kenji, JN3JBC
V60DU Hidenori, JI6DUE

V60TI Tetsuya, JA3UWB
V60IL Masato, JF3PLF
V60TX Shozo, JH3TXR
V63JJ Kazuo, JA3ART
See also: http://www.ja3yaq.ampr.org/~v6

ENGLAND, SPECIAL EVENT STATION
GB100J will be QRV in all modes (including PSK31) on all bands from
the "21st World Scout Jamboree" from Jul 27 until Aug 7.
For more information please check: http://gb100j.radio-scouting.org.uk

MARTINIQUE, SPECIAL EVENT STATION
FM0IR, FM0JR, FM0JZ, FM1HM, FM1II, FM1KM and FM1HN will activate the
special event station TO1YR in SSB, RTTY and PSK on 2-80m between
Jul 29 and Aug 5.

UPCOMING CONTESTS

Jul 28/29: RSGB IOTA Contest and SWL IOTA Contest

IOTA collected by Fredy,DE0MST (e-mail: iota@dxhf.darc.de)

Island activities:
AS-012, JA6, Nagasaki Pref.: JA6RGJ/6, JK6IIS/6 and JO6RGZ/6 will be QRV
from Kuro Island on Jul 28/29. QSLs via homecalls (bureau/direct).

AS-100, 4X, Israel Group: The Holyland DX Group (4Z4KX, 4Z5LA, 4X6HP, 4Z5FI,
4X1VF) will be QRV from Akhziv Island signing 4X7AZ on Jul 28/29 with
a participation in the IOTA Contest included. QSL via 4Z5LA.
Their website can be found at: http://www.4z5la.net/4x7az

EU-042, DL, Langeness: Manfred,DF7FC, will be QRV in SSB/RTTY/PSK on 20m/40m
from Langeness (FED 134) between Jul 28 and Aug 3. Please QSL via buro.

EU-049, SV, Samos: SV1QN/SV8 and SV1GYG/SV8 will show up in CW/SSB/RTTY/PSK
from Jul 26 until Aug 4. QSLs via homecalls.

EU-055, LA, Sogn og Fjordane: Juergen,LA/DB5YB, plans to hit the airwaves
during his holidays on Stord Island from Jul 28 till Aug 9, including
the IOTA Contest. QSL via homecall.

EU-123, GM/MM, Scottish Coastal Islands: A group of the Sheffield A.R.Club
will activate the Isle of Arran as GS3RCM between Jul 26 and Aug 2.
They also plan to be active in the IOTA Contest. QSL via G3VCQ.

EU-179, UR, Black Sea Coast Group: Alex,UR5FEL/p, Petro,UR5FCZ/p, and
Sam,UT9FJ/p, will be QRV from Berezan Island (UIA BS-02) from Jul 25-30
including the IOTA Contest. QSLs via homecalls.

NA-091, VE7, BC Province South Group: Heinz,VA7AQ, plans to become active
from Quadra Island (BC-006) from Jul 26 until Aug 1. QSL via bureau ok.

NA-128, VE2, QC Province Group: Claude,VE2FK, and Jean-Pierre,VA2SG, will
be QRV as VE2FK from the island Aux Coudres from Jul 27-29 (including

IOTA Contest). QSL via VA2SG.

I think the only way to settle this question is to conduct a
well-designed survey with a ramdom sample of hams.

If there are any statisticians among the readers, please tell us how
many hams we'd have to sample to get a valid measurement.

73, Bill W1AC

Conspiracy Theory
---- ---------- ------

This is an expanded version of a posting I made promoting unregulated
(free from government-has-the-key) cryptography.

Attorney John Loftus is the author of four histories of intelligence
operations. As a former prosecutor with the U.S. Justice Department's
Nazi-hunting unit, he had unprecedented access to top-secret CIA and
NATO archives. Mark Aarons is an investigative reporter and author of
several books on intelligence related issues.

One day I was flipping channels, and came across "The Leon Charney Show".

Attorney Charney was interviewing Attorney Loftus, who has many many
connections in the intelligence world.

Mr. Loftus described a room in NSA's Fort Meade that was actually British
soil (diplomatic territory), with a British guard posted outside...

This one is tricky. With most surveys, there's no correlation between the response rate and what you're trying to measure. If you're asking for someone's opinion on an issue, you do a survey and get 10% response, you can assume that the results are valid even though 90% of the people who received the survey didn't bother to respond.

In a survey that asks licensed hams if they're active, if you get 10% response, do you assume that the other 90% are inactive hams? No, you can't do that. But you have to assume that an active ham is more likely to respond to a survey about ham radio than an inactive one. Thus the response is likely to be significantly skewed towards activity.

> If there are any statisticians among the readers, please tell us how
> many hams we'd have to sample to get a valid measurement.

For opinion surveys, the more you survey, the higher the accuracy. In this case, I'm not sure that adding more people to the survey improves the accuracy since active hams are more likely to respond. The key is how to interpret the non-responders, something that seems unknowable.

I don't claim to be a statistician, so I would appreciate comments from someone who is.

Well, I'm a ARRL member (the majority of US hams are not, and thus
cannot vote for SM), and I get on the air a couple of times a week.
If there were a contested election for SM of my section, I would
probably have no real information on the relative merits of the
candidates, and thus would leave voting to those who do know something
about it.

I consider it my obligation to the polity to inform myself and vote in
all elections for public office in my jurisdiction, but I don't regard
voting in ARRL elections in the same light. "An active ham who is a
member of the League" and "a ham who is an active member of the
League" are far different things.

into the computers. Even though NSA's specialized supercomputers
have enormous storage capacities, the tremendous number of targets forces
the Agency to squeeze the watch lists together as tightly as possible.

P462-465: Its power to eavesdrop, the NSA had always insisted, came under no
earthly laws but rather emanated from some celestial "inherent presidential
authority" reposed in the chief executive by the Constitution.

Senator Edward M. Kennedy tried year after year to pass legislation to
require the NSA to submit to judicial review.

Finally, the Foreign Intelligence Surveillance Act [FISA] was signed into
law by president Carter on October 25, 1978.

The key to the legislation could only have been dreamed up by Franz Kafka:
the establishment of a supersecret federal court.

The legislation established a complex authorization procedure and added a
strict "minimization" requirement to prohibit the use and distribution of
communications involving Americans inadvertently picked up during the
intercept operations.

These requirements constitute the most important parts of the FISA law, a

This is a report on the Internet traffic of Bob Brain.

The Internet is a public wire, which Salomon is obligated
to monitor for security/compliance reasons.

Mr. Brain showed up on radar when he transferred out
over 12,000 lines of source code which was extensively
maintained by more than one Salomon person, to Merrill Lynch.

His individual traffic (public Internet) was then pulled
from backups.

This is the summary report of what has been found.

Prepared by Guy, 5/6/96.

Steve,

Those are good points.

I'd guess that a "valid" survey would have provisions to account for all
those surveyed, including a method to weed out silent keys, and
provision for guarding against "false positives", i.e., knee-jerk "Yes,
I'm active" responses.

What little I remember from college statistics tells me that the design
of the questions is all-important. The survey mustn't cue the respondent
as to "right" or "wrong" answers, and must provide "discriminator"
questions to confirm and/or deny the accuracy of previous answers.

It's a job for an expert: if we called someone up and asked "Are you active?", the results would be skewed, as you point out. However, if the question is, e.g. "Will you help with disaster preparedness as a ham?", you risk getting a "novelty" response, i.e., a respondent who says "Yes" just because he/she hasn't done it before.

Questions about purchasing are less likely to show bias, but there's always the problem of "what do the answers mean?": if a ham says he's going to buy a new rig this year, is he just trying to please the questioner, is he window shopping, or is he just wishing out loud?

This is all theoretical, of course. The first issue is to define what "active" means, and then we'd need a survey that accurately measures the ham population for that metric. Short of putting remote RF sensors at a statistically-valid percentage of ham operator's homes, I'm out of ideas.

HTH.

Bill

It seems to me that this discussion is getting bogged down a bit. The
burning question is what constitutes activity..? As I see it, activity is
transmitting on the air, pure and simple.

So how often in a given time period must someone transmit to be considered
active..? This is the real question and is basically unanswerable -
everyone will have different opinions.

Personally, I'd say if someone owns a radio that is in working condition,
that's good enough. I know people that only operate on special occasions,
or when they go to rallies, but I consider them active.

1346. July 23, 2007 ARS License Numbers

Newsgroup: rec.radio.amateur.moderated
Date: 2007-07-26 13:01:26 UTC
From: N2EY@AOL.COM
Message-ID: <1185445443.866953.66050@i13g2000prf.googlegroups.com>
Source record: 4051

These are the number of current,
unexpired FCC-issued amateur
radio licenses held by individuals
on the stated dates, and the
percentage of the total number
of active licenses that class contains.

Percentages may not add up to exactly
100.0% due to rounding.

These totals do not include licenses
that have expired but are in the grace
period, nor do they include club, military
and other station-only licenses.

Effective April 15, 2000, FCC no longer issued
new Novice, Technician Plus and Advanced
class licenses, so the numbers of those license
classes have declined steadily since then.

Also since April 15, 2000, FCC has renewed all
existing Technician Plus licenses as Technician.
It is therefore informative to consider the totals of
the two classes, since the Technician class
includes a significant number of Technician Plus
licenses renewed as Technician.

On February 23, 2007, the last Morse Code
test element, the 5 wpm receiving test, was
eliminated as a requirement.

The ARS License Numbers:

As of May 14, 2000:

Novice- 49,329 (7.3%)
Technician - 205,394 (30.4%)
Technician Plus - 128,860 (19.1%)
General - 112,677 (16.7%)
Advanced - 99,782 (14.8%)
Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total all classes - 674,792

As of February 22, 2007:

Novice - 22,896 (3.5%)
Technician - 293,508 (44.8%)
Technician Plus - 30,818 (4.7%)
General - 130,138 (19.9%)
Advanced - 69,050 (10.5%)
Extra - 108,270 (16.5%)

Total Tech/TechPlus - 324,326 (49.5%)

Total all classes - 654,680

As of July 1, 2007:

Novice - 21,738 (3.3%)
Technician - 286,771 (43.8%)
Technician Plus - 26,257 (4.0%)
General - 141,321 (21.6%)
Advanced - 67,506 (10.3%)
Extra - 110,799 (16.9%)

Total Tech/TechPlus - 313,028 (47.8%)

Total all classes - 654,392

As of July 15, 2007:

Novice - 21,677 (3.3%)
Technician - 286,791 (43.8%)
Technician Plus - 25,916 (4.0%)
General - 141,991 (21.7%)
Advanced - 67,426 (10.3%)
Extra - 110,936 (16.9%)

Total Tech/TechPlus - 312,707 (47.8%)

Total all classes - 654,737

As of July 23, 2007:

Novice - 21,627 (3.3%)
Technician - 287,171 (43.9%)
Technician Plus - 25,719 (3.9%)
General - 142,014 (21.7%)
Advanced - 67,331 (10.3%)
Extra - 111,031 (17.0%)

Total Tech/TechPlus - 312,890 (47.8%)

Total all classes - 654,893

Changes:

>From May 14, 2000, to February 22, 2007:

Novice - decrease of 26,433
Technician - increase of 88,114
Technician Plus - decrease of 98,042

General - increase of 17,461
Advanced - decrease of 30,732
Extra - increase of 29,520

Not a new guess but a snapshot of where we stand now:

The total number of current unexpired FCC-issued amateur radio licenses, held by individuals of all license classes has increased from 654,680 on February 23, 2007 to 654,893 on July 23, 2007. That's five months.

An increase of 213 hams, which works out to .033% (rounded to three significant figures).

While I expected a lot of upgrading to happen, this is more than I would
have expected in so short a time. And yet in another way, I'm surprised
that there are not even more people upgrading. I wonder if there are a lot
of inactive hams that just aren't getting the word?

Consider a few factors, Dee:

1) There was a lot of notice that the changes were coming.
2) The changes reduced the number and types of test needed to upgrade
to General or Extra. Like a price reduction on an item.
3) While the raw numbers may look like a lot, compare them to the
percentages. Generals went from being 19.9% of US hams to 21.7%, while
Extras went from 16.5 to 17.0 %.

> And yet in another way, I'm surprised
> that there are not even more people upgrading. I wonder if there are a lot
> of inactive hams that just aren't getting the word?

All sorts of factors:

- Some hams haven't gotten the word
- Some hams are inactive but still in the database
- Some hams are perfectly satisfied with the license they have
- Some hams are studying for their upgrade, waiting for a nearby VE
session, etc.
- Some hams are holding onto their old license classes for a variety
of reasons. For example, I have had more than one Advanced tell me
that s/he won't upgrade to Extra because the Advanced "proves" the
person passed a code test, while the Extra doesn't. Others have told
me that they're sure FCC will eventually give Advanceds a free upgrade
to Extra, so they're just waiting it out. At least one I know feels
insulted that it takes the same testing to go from General to Extra as
it does to go from Advanced to Extra.

All sorts of other reasons.

Perhaps there is someone out there who is determined to be the last
Extra or the last Novice on the books.

With 10 year licensing, it's possible that a considerable percentage
of the US amateur population has dropped out but still shows up in the
database. For example, if 2% of the US amateur population dies per
year, and the total is relatively stable, there will be approximately
10% of the total who are dead but whose licenses are still valid. (I
got this number by assuming that it's equally likely for a ham to die
in any year of the 10 year license term, which means that the median
would be 5 years. 5 years times 2% is 10%).

2% may be a low number, too - it assumes that the *average* amateur is licensed for 50 years.

In any event, at least the steady decline in the ARS license numbers since 2003 or so seems to have stopped.

For an accurate survey, instead of defining active, we would need to have several questions related to activity. We'd want to first ask the respondent if they considered themselves active, then questions would follow asking about how many times per month they are involved in any of several Amateur related activities.

Just a definition is almost impossible to arrive at. Even if a group came to a consensus, the next person might not accept that at all.

Just here we see where I was looking at activity relating to things on a weekly basis, another poster on more of a monthly/yearly basis, and yet another looked at active as one who takes the trouble to renew their license. All of those opinions are valid, even though that spans an extreme range from someone like me who spends several hours each day involved in one activity or another related to the ARS, to someone who never gets on the air, but renews their license.

In the end, the survey folks tend to express results in terms of percentages, such as "20 percent of those who responded use their radios on a daily basis." 30 percent of respondents participate at least once a year in a public service event.

The nasty little line in all that is "those who responded". And just like college football rankings, no matter how sophisticated the computer program, somewhere, someone is going to make the first decisions which will be based pretty much on opinion. GIGO, so to speak.

It truly isn't simple, eh?

I still have prospective Hams tell me that they have to brush up on
their Morse code so they can test. Oddly enough a few fellows continued
in that line of even after I told them they didn't need to.

> - Some hams are inactive but still in the database

Same here! I suppose that if a person runs with a crowd that sees that
as somehow being better than other people it might be legit. Otherwise
it strikes me as really odd.

> Others have told
> me that they're sure FCC will eventually give Advanceds a free upgrade
> to Extra, so they're just waiting it out.

I'd tell them the same thing I told those who waited out element one's
demise: "If the wait doesn't bother you, then go ahead and wait." There

were people telling me to wait it out back in 1999 "because Element 1 will be going away any day now!" But I didn't wait, and I wouldn't trade the extra 7 years I had my General and Extra for anything.

> At least one I know feels
> insulted that it takes the same testing to go from General to Extra as
> it does to go from Advanced to Extra.

Oh my! Does this person want a special test made up just for him? Exactly what dud they see as insulting about having to take the same test? It isn't that any of the tests are or ever were that difficult (I think they are at the correct level of difficulty FWIW)

> All sorts of other reasons.
>
> Perhaps there is someone out there who is determined to be the last
> Extra or the last Novice on the books.

Did you mean Advanced instead of Extra?

> In any event, at least the steady decline in the ARS license numbers
> since 2003 or so seems to have stopped.

While we have discussed lots of reasons for that decline, I know of another possibility, at least for a delay. I know several Hams who waited for the Element one to go away after it was eliminated from the treaty yet not gone from our testing requirements. The long wait made for an upgrade delay on some peoples part. I thought that the delay was actually a harmful thing in that respect.

Amateur Radio Newsline(tm) Report 1563 - July 27, 2007

Amateur Radio Newsline report number 1563 with a
release date of Friday, July 27, 2007 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC says no to a
petition seeking to overturn antenna deed
restrictions, the new ARRL Headquarters Diamond
Terrace is dedicated and a gift of ham radio
love from a ham who truly cared. Find out the
details on Amateur Radio Newsline(tm) report number
1563 coming your way right now.

REGULATORY: FCC TURNS DOWN HFA REQUEST TO PREEMPT CCR'S

The FCC has turned down a request filed by Don
Schellhardt, KI4PMG, representing a group calling
itself Hams For action that sought FCC preemption
over deed restrictions some hams face ip putting
up towers and antennas. Bill Pasternak, WA6ITF, has more:

--

In the petition Don Schellhardt and Hams For
Action challenged the depiction of all CC&Rs as
voluntary. This is because some jurisdictions
require housing developments to adopt CC&Rs and
other areas have little or no housing available
that is not subject to such restrictive
rules. They also cited the role played by hams in disaster situations.

In it letter of denial, the FCC said that it
still views deed restrictions as a personal
contract between a buyer and a seller. As such
they are not subject to Commission oversight.

The FCC also disputed the claim that antennas are
needed at the homes of radio amateurs to handle
disaster relief operations. It said that there
has been no showing by Schellhardt and Hams For
Action that the communications provided by
Amateur Radio operators during emergencies such

as earthquakes and hurricanes have been adversely affected by residential CC&Rs. Rather, says the FCC, communications from areas affected by disasters typically occur from transmitters that are not subject to CC&Rs. These are usually mobile or hand-held radios, or temporarily installations at buildings such as schools, shelters, or government locations.

The bottom line: The FCC says that it does not believe that the anticipation of disaster events is grounds for it to revisit a policy that applies to an Amateur Radio operator's ability to install antennas and antenna support structures where they reside. Nor will it preempt private deed restrictions to make it so.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, at the stidio in Los Angeles.

--

At this point Schellhardt and Hams For action have two choices. They can continue to administrative appeals process or they can take the matter into the federal courts. (FCC)

**

HAM HAPPENINGS: ARRL DEDICATES THE DIAMOND TERRACE

Theres a new edition at ARRL Headquarters. Take a listen as it is dedicated:

Actuality audio of ceremony.

--

That's the sound of ARRL President Joel; Harrisson, W5ZN, and Executive Vice President Dave Sumner, K1ZZ, cutting the ribbon that marked the opening of the new Diamond Terrace at the entrance of ARRL Headquarters in Newington, Connecticut. The ceremony took place at the beginning of the summer Board of Directors meeting.

While the Diamond Terrace may be a point of beauty at the League's headquarters building, it also has deeper meaning. According to President Harrisson, the Diamond Terrace is really a tribute to the ARRL's staff, its leadership and to those who have financially supported the

ARRL's efforts to protect and defend the hobby at home and world-wide.

--

W5ZN: " When you talk to the average ham out on
the street, and you ask him what's important to
him in Amateur Radio, he will tell you, 'I want
to go into my shack, I want to turn on my radio
and I want to get on the air. I want to enjoy
Amateur Radio. You take care of that for me.

And obviously it takes a lot of work behind the
scenes to make things happen. With all that we
have going on in Washington, nationally, with all
the attacks on Amateur Radio's resources, it
takes people like you in Newington, it takes
people like we have on the Board of Directors and
most importantly, it takes people who donate to
our development program to make that all happen."

--

While there were a lot of people working behind
the scenes to make the Diamond Terrace a reality,
likely nobody was more dedicated to the project
than Chief Development Officer Mary Hobart,
K1MMH. And her contribution was not forgotten by
those attending the ceremony. In his remarks,
Dave Sumner gave kudos to her and her
staff. Sumner said that the idea of the Diamond
Terrace originated in the ARRL Development Office
and they saw it through to fruition.

The Terrace will eventually host up to 5000
personalized, 4x8-inch laser-engraved bricks. It
recognizes donors wishing to venerate their own
call signs or to honor or memorialize the call
sign of a family member, club or mentor. There
are also six benches of Vermont granite placed
around the Terrace and also engraved with names
and calls. A short video of the dedication
ceremony has been posted to the YouTube dot com
website. Its in cyberspace at
http://www.youtube.com/watch?v=2hdPAhJGhYs (ARNewsline(tm), ARRL)

**

INTRUDER WATCH: RELIGIOUS BROADCASTERS TAKE TO 10 METES

As if truckers on this side of the Atlantic were
not enough, now reports have been received in the
United Kingdom of religious broadcasts in the 10 meter band.

The transmissions are thought to emanate from Ireland. That nation recently started licensing wireless Public Address services to operate in the 11 meter Citizens Band but German radio amateurs have monitored signals at 28.105MHz.

The Irish Radio Transmitters Society is asking for any reception reports, with beam headings and recordings if possible, to try and help locate the transmitter or transmitters. Reports should be sent to Thomas Caffrey, E-I-2-J-D, by e-mail to thoscaffrey@hotmail.com. Irish telecommunications regulator ComReg says that it is prepared to act on the matter if sufficient information is supplied to it. (GB2RS)

**

RESTRUCTURING: TEMPORARY 4 METER ALLOCATION GRANTED IN ITALY

Italy now has a temporary ham radio allocation in the European 4-meter Amateur band. On July 12th the Italian Authorities released three 25-kHz segments centered around 70.100, 70.200 and 70.300 MHz for use by that nations radio amateurs for use through the end of the year.

According to I0JX posting to QRZ.com, the new allocation began with a request by a few Italian hams to carry out an experimental propagation study under the technical coordination of a university. This to see if the band will offer opportunities of transatlantic contacts during the summer sporadic-E season

The authorization expires on December 31st. I0JX says that the prospects for a permanent 4 meter allocation in Italy appear to be good. Meantime, Italian hams now join those in the United Kingdom and several other European nations who will be beaming toward the United States and Canada in search of cross-band contacts on 10 and 6 meters. (I0JX. QRZ.com)

**

RESTRUCTURING: DENMARK LICENSES 40 MHZ HAM RADIO BEACON

Denmark's telecommunications regulator has approved a permit for a beacon on 40.021 MHz.

Signing the call OZ7IGY, the beacon will be subject to several conditions once it comes on the air. These include no interference to any other spectrum users and a maximum output of 25 watts to a unity gain omnidirectional antenna at

no more than 10 meters above ground.

The permit is valid for a year. Results of the
experiment are to be reported to the regulatory agency.

Denmark's OZ7IGY currently operates beacons on
50.021 and 70.021 MHz and a number of other
frequencies. More information is on-line at www.oz7igy.dk/

By the way, Denmark is the second country to
announce the licensing of an Amateur Radio beacon
on 40 MHz. A couple of weeks ago the GB3RAL
beacon system near Oxford in the United Kingdom
was authorized to operate on the band as
well. Its sponsors hope to have it on the air this fall. (Southgate)

REGULATORY: FCC SAYS NO TO VANITY CALL RECONSIDERATION

Being a little late has cost a Minnesota ham the vanity call sign he had hoped for. This, after the FCC acts on Friday, July 20th to deny the petition of Quinten Erickson, N0RD, requesting a reconsideration of his application for vanity call sign N7AZ. Amateur Radio Newsline's Jeff Fred Vobbe, W8HDU, has the details:

--

The story goes this way. Both Quinten Erickson and Jon Goering had filed for the N7AZ callsign. Erickson lives in Big Lake Minnesota and used to hold the call N7GXA. Goering who formerly held the call NJ7I is from of Apache Junction, Arizona.

According to the FCC, Goering's application for N7AZ was received by the FCC on Sunday, January 14th, 2007. Because the application was received on a weekend, the FCC deemed it to be filed on the next business day. That turned out to be Tuesday, January 16th.

The FCC says that Goering and Erickson's applications for N7AZ were included in a lottery to determine the processing order of applications with a filing date of January 16th. Of the applications that requested N7AZ, Goering's was the first selected. The FCC granted the vanity call to Goering on February 13th and Erickson soon filed an appeal.

In his reconsideration request to the FCC, Erickson argued that the agency should have dismissed Goering's application for N7AZ as being premature. That Goering's application was still reflected in the Commission's licensing records on Sunday, January 14, 2007.

But the FCC disagreed. It said that the fact that Commission's records were not updated until after the weekend does not change the date on which the call sign became available to the vanity call sign system. Based on this, the FCC says that Goering's application therefore was not premature because with the two year grace period the N7AZ call expired on January 13, 2005 and was not available for re-assignment until January 14, 2007. As the 14th was a weekend, the 17th of January was the date the agency said that it did its first vanity call sign business for the week.

As far as the FCC is concerned, the matter is now closed.

For the Amateur Radio Newsline, I'm Fred Vobbe, W8HDU.

--

And a post script to this story. Quinten Erickson is not without a vanity call of his own. He applied for call sign N0RD this past April 10th. He received it on April 28th. (FCC)

**

ENFORCEMENT: FCC TO K6TXH - WE HAVE COMPLAINTS

The FCC has sent a letter to Steve L. Wingate, K6TXH, of Eureka, California. In its note the regulatory agency tells Wingate tat it has complaints alleging his lack of station control and deliberate interference.

The Commission gave K6TXH 20 days from his receipt of his letter to respond to the complaints in detail. And something new this time around. Wingate was also ordered by the FCC to support his reply with a signed and dated affidavit that, under penalty of perjury, verifies the truth and accuracy of the information he submits in his response.

For those not aware, under Federal law, to knowingly and willfully make any false statement or conceal any material fact in reply to a government inquiry is punishable by fine or imprisonment. (FCC)

**

ENFORCEMENT: NO AUTOMATIC CONTROL FOR YOU

The FCC has suspended the automatic remote control privileges of up to a dozen Tennessee repeaters. Its also told the ham whose call sign is on the machines that he has no choice but to solve the user abuse problems or keep the repeaters off the air. Amateur Radio Newsline's Bruce Tennant, K6PZW, teels us about an FCC decision that could be precedent setting:.

--

The story of the FCC involvement in the matter of repeaters operated by John C. Kimbrough, WR3S, goes back to April 10th of this year. That's when the regulatory agency wrote to notify him that a problem existed and required his attention.

The FCC said that its Enforcement Bureau had monitoring information indicating that on various dates in March that repeater stations identifying as or by WR3S operated without proper control and re-broadcast portions of commercial TV programming and music. The FCC says that the

monitoring also showed that operators on the system failed to identify properly and used false call signs.

The letter went on to warn Kimbrough that the Commission requires that repeaters be under the supervision of a control operator and not only expects, but requires, control operators to be responsible for the proper operation of the repeater system. Also, that control operators must take whatever steps are appropriate to ensure compliance with the rules. This might include limiting the repeater use to certain users, converting the repeater to a closed system or taking it off the air entirely.

In his response, Kinbrough indicated to the FCC that he oversees a dozen repeaters on the 2 meter and 223 MHz bands. Also that he used at least ten control operators.

But the FCC stated that the failure of all ten of control operators to prevent or eliminate these violations is inexcusable, especially in view of the wide scale linking of these repeaters. The FCC then told WR3S that he will soon receive a directive from the Atlanta office of the Commission removing the automatic control privileges of your repeater systems. This means that you may not operate any repeater stations under his callsign unless he is the control operator and at the control point at all times. This, to make certain that Commission rules are being followed and that no interference is occurring.

But here is the kicker. The FCC is forbidding Kimbrough from simply delegating control authority to other area hams. In what may well be a first of a kind order, the FCC has told WR3S that at those times when he is unable to function as the control operator of the stations identifying with his call sign, they may not transmit. In other words, if he is not at the specific geographic point where the controls are to physically located, that repeaters must stay QRT. The FCC says that Kimbrough has no other choice.

For the amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

The FCC order to WR3S does not end there. It tells Kinbrough that his failure to control stations bearing his call sign, or any

communications over his repeaters not complying with Commission rules, will result in enforcement action against his license. The FCC says that this could take the form of a fine, the modification of his license to remove all voice operating privileges or even the suspension and revocation of Koimbrough's Amateur ticket. It also directed him to contact the local frequency coordinator and clear up the records as to which systems actually belong to him, and which are the property of other hams and only utilize his call. (FCC)

**

REGULATORY: FCC TO ICOM - NO CHANGE AT 150 MHZ

It took three years, but FCC has denied a June 15, 2004, Petition for Rule Making filed by Icom America. . One that asked the Commission to begin a proceeding seeking comments on the re-designation and related transfer of certain spectrum in the 150 MHz . This, band from the Public Mobile Radio Service to the Public Safety Radio Service.

On Tuesday, July 24th, the FCC finally concluded that, based on the record before it. Icom had not made a sufficient showing to support the commencement of a rulemaking. Therefore it was denying the Icom request. (FCC)

RESCUE RADIO: NO LA NINA DOES NOT MEAN FEWER TROPICAL STORMS

Back in the USA, the hurricane season is here and hams are preparing for a worst case scenario. And they are not getting as much help

from Mother Nature as they might have hoped.

National Oceanic and Atmospheric Administration has predicted that a cooling of Pacific Ocean waters that generally brings a more active Atlantic hurricane season will be absent for the next two months. But Dennis Feltgen, a meteorologist and spokesman for the National Oceanographic and Atmospheric Administration in Miami says that the non-appearance of what forecasters call La Nina doesn't necessarily mean a tame summer for tropical storms and the hurricanes some grow into.

This year, forecasters have predicted an above-average hurricane season, which runs June 1 through November. They believe there will be 13 to 17 named storms. Seven to ten of them will become hurricanes and three to five of those will reach at least Category 3 velocity.

But meteorologist Feltgen says that there are so many other ingredients that contribute to the development of tropical cyclones. He adds that it's not just the fact that we don't have a La Nina that comes into play here. For hams involved in severe weather spotting it means to keep your go kit ready and your batteries fully charged. (Science Online)

REGULATORY: SENATE WANTS FCC OBSENITY RULES ENFORCED

A Senate committee is working to restore the government's authority to fine radio and T-V broadcasters for airing obscenities.

The committee has approved a bill to undo an appeals court ruling that invalidated the FCC's new profanity procedure. That ruling overturned the regulatory agency's resolve to punish any use of two common profanities. This, even if they were used in fleeting

reference.

Before the new rules went into place the FCC only punished use of the words if they referred to sexual activity or bodily functions. Now the agency says both words are inherently indecent.

The bill that the Senate committee approved would require the FCC to have a policy in which a single word or image could be considered indecent. Broadcasters and civil rights advocates have vowed to fight the imposition of any regulations that they feel might stifle creativity or impinge on their rights to freedom of speech. Meantime. the FCC is still pondering what action to take on the appeals ruling. (Published news reports)

RADIO FUN: THE TOP 5 HAM VIDEOS ON YOUTUBE.COM

Antenna Stirs Up Controversy has become the number one most viewed ham radio video on YouTube dot com. Its actually a posting of a television news report showing how the sight of ham radio antenna has angered neighbors in exclusive neighborhood. As of this weeks newscast being prepared, it has been viewed 45,780 times.

Coming in second this month is the music video "The Contrest" performed by Andrew John Huddelston, OZ5E and the Ham Band. The 4 minute and 15 second presentation also features a video montage of the famed OZ1ADL and OZ5E Contest Station with lots of famous guest operators. Its sitting with 43,639 views.

Dropping to third place is the ARRL sponsored production of Amateur Radio Today. Hosted by retired CBS newsman Walter Cronkite, this show tells the story of ham radio in emergency situations that include the 911 terror attack on New York City and the 2003 Colorado wildfires. Its currently at 33,361 screenings.

In number 4 position is the Tonight Show bit that pitted two ham radio operators using Morse code versus a text messaging champion and his assistant. As you might already know, the hams running Morse beat out the text messaging by a mile. That video has been looked at 30,781 times.

Rounding out the top five the Ham Band is back with their music video titled "Come And Join Us

On The Airwaves." This show again features lead singer Andrew John Huddelston, OZ5E, this time in a tuxedo and top hat hanging off the top of a 120 foot high tower while singing the praises of Amateur Radio. Its currently at 29,155 views.

Keep in mind that the ratings system on YouTube is very dynamic. This means it changes all the time based on how many people stop by a given video to watch. (ARNewsline (tm))

EMERGING TECHNOLOGY: FREE WI FI TRAVELING IN CALIFORNIA

Travelers on California State Highway 99 now have access to free wireless Internet service at two rest stops near Tipton and Turlock. The state is offering free Wi-Fi Internet access at those San Joaquin Valley rest stops under a one-year pilot program through a Web portal called "Road Connect." Using the hot spots travelers can now go online to visit sites with information on road conditions, tourism, weather reports and parks and lots more. The two Wi Fi hot spot locations are the first in the state. (CALTRANS)

WORLDBEAT - BULGARIA: CELEBRATING THE RADIO BULGARIA DX PROGRAM WITH LZ50DX

Radio Bulgaria's DX Editor Dimiter Petrov, LZ1AF is using the Special Event call sign LZ50DX until December 31 to commemorate the 50th anniversary of his weekly DX Program.

He is active on all bands 160 through 10 meters on CW usually for a while around 05 UTC and after 21.30 UTC on weekdays, as well as more on weekends.

Special QSL cards depicting the people involved in the DX Program and Radio Bulgaria's mighty antenna array will be sent via the LZ QSL Bureau to confirm all contacts and SWL reports. You can also arrange a contact with LZ50DX especially on SSB by e-mail to lz1af@yahoo.com.

Have in mind that he will be on leave vacationing in a tent on the Black Sea coast August 3 through 18, thus, no activity on the air! (Southgate)

**

WORLDBEAT - CANADA: NEW TOWER SITING RULES ANNOUNCED

Telecommunications regulator Industry Canada has released its long-awaited new policy and procedures on towers and antenna siting. The document was released on June 28th by Industry Canada without a final review by tower proponents despite their requests.

Radio Amateurs of Canada says that is now analyzing the new tower policy to see what impact it might have on ham radio operations. It will describe its impact for the Canadian Amateur Radio service in an upcoming issue of The Canadian Amateur magazine.

The new tower siting procedures will come into effect on January 1st 2008. Until then Canadian hams should follow the current guidelines dated June 24, 1995. (RAC)

THAT FINAL ITEM: DECEASED HAMS GEAR GOES TO UNDERPRIVELEGED YOUNGSTERS

And finally this week, a truly nice story out of Saint Louis, Missouri. That's where a radio amateur from a suburban community has made a donation of ham gear that could open a new world to some of the city's disadvantaged youth. Amateur Radio Newsline's Mark Abramowicz, NT3V, tells us how the station of a Silent Key will now live on:

--

Carl Hohenberger, WB0BZP, was passionate about being a ham. This despite physical disabilities that pretty much confined him to home.

His sister, Carol, recalls how he overcame his challenges to become one of the St. Louis area's most recognized operators...

"My brother was a quadriplegic, he was almost 7 foot tall," Carol recalls. "And, had he been normal, I think he would have been a basketball player at least - hands very large to take the basketball. He was always interested in sports, that was certainly a great hobby for him, the interest in sports.

"But we were looking for something else to challenge his mind and to open the world for him and I heard about CB radio. And, so I believe it was in 1968 I bought him a little 69-dollar CB radio."

Wait a minute! CB Radio? That's what Carl's neighbor at the time said, Ben Ward, W0BWD. He was scandalized by the purchase and Carol remembers he decided, no, Carl would need something more - as in ham radio.

She said Ward Elmered Carl and he was successful in passing license tests and setting up a pretty respectable station that she said he operated for some 25 years.

Carol says amateur radio became a family affair.

"My dad was WB0RIP and I'm KA0HZS," Carol says. "I never was very active but I did have some rigs. And my mother, who did not get her license, however, was kind of a cook and bottle washer and made many a desert for many a meeting that we would have and it became very important to all of us."

Carol says her brother died in 1996 and it was difficult for her family to part with his equipment. She says she thought about what to do with it a few times over that period, but never really had an answer.

Enter, Dennis McCarthy, AA0A.

"She thought that it could best be used to help other young hams become ham operators," McCarthy says. "And, Jim Berger, WA0FQK, and I go out to Camp Wyman to give demonstrations of amateur radio but they had no equipment. So I suggested to Carol that that would be a good place to send it, and she said: 'Go for it.' "

Camp Wyman is a camp for urban youngsters who face a variety of challenges in their lives. And,

McCarthy says, it's a place that can really use the gear.

"Carol donated a TS-440, a Butternut antenna, all
the accessories, a power supply and other
equipment, including SWR bridges and even a
couple of scanners which in this tornado- and
severe-storm prone area might be of great value
for the kids and people out at Camp Wyman," McCarthy says.

McCarthy says it's a fitting tribute to Carl.

"Carl brought a world into his house if he
couldn't go out into the world and of course,
viz-a-viz, he brought his mom, his dad and his
sister into the world of Amateur Radio and a world outside the house."

Carol says her brother would be pleased to know
his love of amateur radio will live on.

"I know he would have wanted this to go to some
young people," Carol says. "And, over the years,
I looked for a group that dealt with young people
to expose them to ham radio and communications."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Carl Hohenberger, WB0BZP, may be gone, but his
station will surely bring a lot of joy to
youngsters who might otherwise never even what
ham radio is really all about. (ARNewsline(tm))

Yet that could also be attributable to other factors. There is insufficient correlation to attribute it to the change in licensing. For example we are now probably close to the end of shaking out those who got licensed as whole families in the 1990s for family communications around town. While some developed further interest in amateur radio, there were quite a few who have let their licenses lapse as they went to cell phones or otherwise had no further need of that type of communication.

Which is a better indicator of Morse Code skill:

1) Once upon a time, maybe decades ago, a person passed a particular
test under certain conditions

or

2) A person demonstrating their *current* skills under real-world
operating conditions?

Seems to me #2 is the better indicator.

> > Others have told
> > me that they're sure FCC will eventually give Advanceds a free upgrade
> > to Extra, so they're just waiting it out.

Even when I point out that FCC has repeatedly turned down auto-upgrade
proposals, they aren't convinced.

> I'd tell them the same thing I told those who waited out element one's
> demise: "If the wait doesn't bother you, then go ahead and wait." There
> were people telling me to wait it out back in 1999 "because Element 1
> will be going away any day now!" But I didn't wait, and I wouldn't trade
> the extra 7 years I had my General and Extra for anything.

When I got my Extra in 1970, some folks said I was wasting my time and
effort because "incentive licensing won't last - in a few years
Generals will have all privileges again..."

> > At least one I know feels
> > insulted that it takes the same testing to go from General to Extra as
> > it does to go from Advanced to Extra.
>
> Oh my! Does this person want a special test made up just for him?

Actually, yes - or rather, for all Advanceds.

> Exactly what dud they see as insulting about having to take the same
> test?

He was angry that having passed the old Advanced written did not carry
any testing credit towards Extra.

> > Perhaps there is someone out there who is determined to be the last
> >

make that "Advanced"

>or the last Novice on the books.

> Did you mean Advanced instead of Extra?

Yes - sorry!

Sooner or later, the last of those closed-off licenses will disappear.
It may take a very long time, though - the number of Advanceds today
is about 67% of what it was when the license class was closed to new
issues.

> While we have discussed lots of reasons for that decline, I know of
> another possibility, at least for a delay. I know several Hams who

> actually a harmful thing in that respect.

IOW: "if you're going to change the rules, change 'em! Don't take
3-1/2 years to make such a simple change!"

I think the amateur radio organizations that pushed for the changes
bear some responsibility for that delay.

Here's why:

It seems to me that the way we US hams deal with the FCC is completely
backwards.

What happens is that an individual or group puts together a proposal
and sends it to FCC, who then assigns it an RM number and puts it up
there for comments. FCC gets anywhere from a few to a few thousand
comments of all kinds, somebody at FCC has to read them and categorize
them and figure out the best course of action.
Often the comments are all over the map, or solidly against the
proposed change.

What all this does is make a lot of unnecessary work for the FCC.

Two examples:

When the ITU treaty changed, FCC got more than a dozen different proposals about changing the license structure. One organization, NCVEC, sent in two proposals! Some of the proposals were essentially identical to others, such as the NCI proposal and the first NCVEC proposal.

The result was that FCC had to assign RM numbers and deal with thousands of comments before taking any action. Which then resulted in an NPRM, still more comments, and finally action after 3-1/2 *years*.

Or consider the ARRL "regulation by bandwidth" proposal, and the "Communications Think Tank" proposal to eliminate subbands-by-mode. Both proposals were opposed by a vast majority of commenters (I counted something like 7 to 1 against the ARRL proposal and 8 to 1 against the CTT proposal) and both were quietly withdrawn by those who proposed them - after they had generated a lot of work for FCC.

What *should* be done, IMHO, is for amateur organizations to do the legwork up-front. IOW,
I think the way to do a proposal is:
1) Gather up lots of opinions from the amateur community
2) Write a draft proposal
3) Present it to the amateur community, with clear explanation of what is proposed and why.
4) Gather more opinions by means of surveys, polls, etc.
5) Rework the draft proposal based on the input received
6 Repeat steps 3 through 5 until a proposal gets a clear and compelling majority of support from the amateur community, and the opposition's points are dealt with.IOW, build a consensus *first*
7) Submit the proposal to FCC, including the survey/poll results.

If all that were done, FCC would assign an RM number and then be flooded with supportive comments. FCC could then easily rubber-stamp approval of the proposal.

But doing it that way takes a lot of grunt work, time, and effort. Also takes compromise.

73 de Jim, N2EY

==> ARRL Board of Directors Acts on Background Checks, Digital Issues at
July Board Meeting

The ARRL Board of Directors took action on two pressing matters,
background checks and emerging digital technologies, at its second
meeting of 2007, held July 20-21 in Windsor, Connecticut. Invited guests
included IARU Vice President Tim Ellam, VE6SH, and Radio Amateurs of
Canada President Earle Smith, VE6NM.
```

A major concern at this Board meeting was the topic of served agencies and background investigations. The Ad Hoc Background Investigation Committee agreed that pursuing federally recognized credentialing for Amateur Radio volunteers was critical for the Amateur Radio Emergency Service (ARES) to function. The Committee chairman, ARRL Atlantic Division Director Bill Edgar, N3LLR, proposed that the Board adopt a policy with regard to Memoranda of Understanding with the various served agencies.

The Board adopted a policy that "communications volunteers participating in ARRL-sponsored programs should not be required by served agencies to undergo background investigations of any kind," but notes that criminal background checks--performed by law enforcement agencies--are "generally acceptable." The policy continues, "It is not reasonable for a served agency to require these volunteers to consent to credit checks, mode of living investigations or investigative consumer reports. In negotiating or renegotiating Memoranda of Understanding that commit the League to provide volunteer emergency communications support, the League must be assured that these volunteers will not be required by the partner organization to consent to credit checks, mode of living investigations or investigative consumer reports."

Digital communication was another topic up for discussion at the Board meeting. One question was the extent to which D-STAR systems fall within the FCC definition of "repeater." Some repeater coordinators do not consider D-STAR to be a repeater.

The Board also thanked existing VHF/UHF frequency coordination groups for their efforts "to promote orderly use of amateur frequencies." The Board requested that such groups "extend their efforts to coordinate digital systems such as D-STAR" and consider the bandwidths actually required for successful operation.

In a related action, the Board thanked those involved in digital networks that serve ARES, specifically radio e-mail systems, for creating a system that facilitates Amateur Radio's ability to provide emergency communications. The League affirmed its desire to work with developers of digital systems to improve efficiency, address control issues and enhance compatibility with other users of the Amateur Radio bands.

John Chwat and Janet Worthington, KB3PDS, of Chwat & Company, ARRL's Washington, DC legislative consultant, presented the Legislative Relations report. In this session of Congress, the firm hired Worthington, who with more than three years' experience on Capitol Hill, actively advocates on behalf of the League. Chwat & Company has continuously monitored and reported on congressional legislation and activities to the ARRL, and networks ARRL legislative priorities with House and Senate members and staff. They have also conducted targeted lobbying on the key issues of Broadband over Power Lines and antenna placement, assisted in the grassroots networking of ARRL Officers, Directors and members to contact their elected officials, as well as constant monitoring the legislative activities in all 50 states. Chwat

and Worthington also work closely with General Counsel Chris Imlay, W3KD, on relevant legislative matters.

The report also discussed the status of two bills pending in the US Congress, HR 462 and S1629.

In January, Rep Mike Ross, WD5DVR (D-Arkansas), introduced HR 462, the "Emergency Amateur Radio Interference Protection Act of 2007." It calls on the FCC to study the interference potential of BPL technology and report its findings back to Congress. It has been referred to the Subcommittee on Telecommunications and the Internet.

In June, Senator Mark Pryor (D-Arkansas) introduced S1629, "The Emergency Amateur Radio Interference Protection Act of 2007." This bill is currently pending in the Commerce, Science and Transportation Committee.

The Board also voted to support HR 2743, "The Military Affiliate Radio System Emergency Communications Act of 2007." This bill would permit the continued use of the MARS and SHARES programs of frequency-stabilized Amateur Radio equipment that meets FCC Part 97 technical standards. Otherwise, volunteers in these programs might be prevented from using their regular station equipment.

Recognizing the significance of recent FCC actions that included the removal of the Morse testing requirement, the Board set a goal of attaining 30,000 new licensees in 2008, increasing in the following years. With approximately 6,000 licensees disappearing from the ranks of amateurs each year through attrition and non-renewal, the Board recognized the importance of striving to create real growth in the Service. The new licensing regime along with the approaching increase in sunspots can provide the motivation and inspiration for all hams to use to increase the numbers of licensees as well as the interest level of all.

The Board decided to ask the Programs and Services Committee to evaluate how the Section Field Organization is governed. In doing so, the Board will request progress reports from the Committee regarding this study, with final results reported to the Board no later than the July 2008 Board meeting.

The Rules and Regulations concerning the League's elections were clarified to and amended with regard to "mass communication" of campaign material during Director, Vice Director and Section Manager elections. The Board prohibited "communications by mail, electronic distribution, posting to a Web site, e-mail, hand delivery or any other means of distribution to League members in the particular Division or Section" involved in an election at League expense during the campaign period if the material might reasonably be expected to affect the outcome of the election.

At the close of the meeting, President Harrison noted that Director Frank Butler, W4RH, after 50 years of elected service to the ARRL

(starting out as Western Florida Section Communications Manager in 1957), was not standing for re-election this October. Everyone present gave him a standing ovation in appreciation of his long service.

The next meeting of the ARRL Board of Directors is scheduled for January 18-19, 2008.

==> FCC Commissioner Lauds BPL in House Testimony; ARRL Responds

On July 24, FCC Commissioner Jonathan S. Adelstein testified at a House Subcommittee on Telecommunications and the Internet hearing that "three of the many urgent priorities we face" include the need for "a national broadband strategy to ensure the ubiquitous deployment of affordable, high speed broadband infrastructure to this country." FCC Chairman Kevin Martin and Commissioners Tate, McDowell and Copps testified as well at the "Oversight of the Federal Communications Commission" hearing.

ARRL Chief Executive Officer David Sumner, K1ZZ, responded via fax on July 25 to Commissioner Adelstein's remarks. "I cheered silently when I came to your reference to the 'current anemic definition of high-speed' that includes service that is too slow to meet citizens' reasonable expectations," he wrote. "I was even more impressed with your statement in the next paragraph, 'We must take a hard look at our successes and failures.'"

Sumner, however, expressed "great disappointment" over Adelstein's reference to "broadband over power line" (BPL) as "a technology deserving of 'increasing incentives for investment.' None of your colleagues' testimonies contain a similar reference," he pointed out.

Sumner reiterated the ARRL's position with regard to BPL technology and "its propensity to interfere with radio communication, a flaw that is not shared by other broadband delivery platforms. As long as interference is avoided," Sumner said, "it is of no concern to us whether private investment is devoted to BPL. However, we must object to your identification of BPL as a technology that is particularly deserving of favorable public policy treatment."

Calling the FCC's "inexplicable favoritism of BPL in the face of contrary evidence" one of the Commission's "failures," Sumner noted that according to the Commission's own latest figures, "of 64,600,000 'high-speed' lines, only about 5000 are BPL. This is a share of 0.008 percent, a share that actually declined in the six-month period between reports--and if an 'anemic' definition were not used, none of the 5000 or so BPL lines would qualify."

ARRL's concern, Sumner said, at the "prospect of an even greater encouragement of BPL, as your testimony suggests, is that--even at the very low level of deployment that exists to date--the FCC's enforcement efforts have proved to be woefully inadequate to address ongoing cases of harmful interference from BPL systems."

Sumner went on to note "one example of documented interference (Enforcement Bureau File No. EB-06-SE-083) has been caused by the Ambient Corporation's Briarcliff Manor, New York installation for more than three years without being corrected and without penalty to the system operator...If the Commission is unable to protect its licensees from harmful interference from BPL now, it is difficult to imagine how it will be able to do so should BPL be more widely deployed in the future."

Sumner also attached a letter from William E. Burton, Chairman of the Public Safety and Security Committee of the Westchester County Board of Legislators. Burton's letter described the interference BPL is causing to local Amateur Radio operators in the village of Briarcliff Manor. He stressed that the FCC "should require that...Ambient cooperate with the ARRL and its BPL technical experts forthwith...This would include both the current experimental system, as well as any future or 'second generation' technology."

Burton's letter went on to say that "the best way for the FCC to promote a new technology while protecting public safety...[is to] make clear that complaints concerning harmful interference are taken seriously."

Sumner concluded his comments: "We respectfully submit that BPL has not earned a place in the much-needed national broadband strategy to benefit all Americans. Resources are better devoted elsewhere, to more promising technologies that do not pose a threat to the Commission's radio service licensees."

==> Now Appearing on the ARRL Stage at the 2007 National Convention...

One of the main features of the 2007 ARRL National Convention, to be held in conjunction with the Huntsville Hamfest August 18-19 in Huntsville, Alabama, is the ARRL EXPO area. Part of the ARRL EXPO is the ARRL Stage. ARRL Headquarters staffers and Field Organization leaders will be giving short mini-forums on the ARRL Stage during the Convention. Topics will range from how to write an article for QST, to membership benefits, to BPL, to Logbook of the World, to education and more!

ARRL Laboratory Manager Ed Hare, W1RFI, will give the latest on Broadband over Power Lines (BPL) and how they affect Amateur Radio. ARRL News Editor S. Khrystyne Keane, K1SFA, will present two talks: How to write for QST, and a general Q-and-A session about Amateur Radio and the news. ARRL Membership Manager Katie Breen, W1KRB, will discuss the "ever-expanding benefits of ARRL membership."

ARRL Regulatory Information Branch Manager Dan Henderson, N1ND will speak about the responsibility every amateur shares when they get on the air--operating legally, safely and appropriately. ARRL Contributing Editor Ward Silver, N0AX, will present Dr Beldar's Contest Emporium, always a crowd-pleasing hit at the ARRL EXPO.

ARRL Chief Development Officer Mary Hobart, K1MMH, will talk about the newly dedicated Diamond Terrace and ways amateurs can be a part of this

lasting tribute at ARRL Headquarters. ARRL Education Services Manager Debra Johnson, K1DMJ, will speak about opportunities with ARRL for mentors and instructors. ARRL Emergency Preparedness & Response Manager Dennis Dura, K2DCD, will be introducing himself and meeting hams interested in or already involved with public service. DXCC Manager Bill Moore, NC1L, will discuss operating awards and the QSL service.

ARRL Alabama Section Manager Greg Sarratt, W4OZK, will host the ARRL Section Manager Forum, while ARRL Southern Florida Section Manager and Chairman of the ARRL's Public Relations Committee Sherri Brower, W4STB, will talk about why Public Information Officers are so crucial to the ARRL Field Organization.

Stay tuned for more details. For more information on the ARRL 2007 National Convention, please visit the ARRL EXPO Web site <http://www.arrl.org/expo>.

==> ARRL Board of Directors Names 2006-2007 Award Recipients

The ARRL Board of Directors named four ARRL award recipients at their July 20-21 meeting in Windsor, Connecticut. The four awards conferred were the 2007 Philip J. McGan Memorial Silver Antenna Award, the 2006 Herb S. Brier Instructor of the Year Award, the 2006 Hiram Percy Maxim Award and the Joe Knight Distinguished Service Award.

The recipient of the 2007 McGan Award is Daniel M. McMonigle, N3IXQ, of Newtown Square, Pennsylvania. McMonigle has been involved with public service and emergency communications, making speeches to civic and community groups. In 2007, through his tireless efforts, permission was received from the Comcast East cable network to place ARRL public service announcements on the company's networks. The cable air time value of this advertising was valued at more than $1.5 million. The McGan award is named for Philip J. McGan, WA2MBQ (SK), the first chairman of the ARRL's Public Relations Committee. After his death, friends in the New Hampshire Amateur Radio Association joined with the ARRL Board of Directors to pay a lasting tribute to the important contributions he made on behalf of Amateur Radio. The McGan Award goes to that ham who has demonstrated success in Amateur Radio public relations and best exemplifies the volunteer spirit of Phil McGan. Public Relations activities for which the McGan Award is presented include efforts specifically directed at bringing Amateur Radio to the public's attention (and most often the media's) in a positive light. This may include traditional methods, such as news releases, or non-traditional methods, such as hosting a radio show or being an active public speaker.

The recipient of the 2006 Instructor of the Year Award is Dr William P. Birmingham, KC8WBD, of Grove City, Pennsylvania. Over a period of many years, Dr Birmingham has demonstrated his commitment to teaching Amateur Radio in the classroom, as well as promoting Amateur Radio outside the classroom. Herb S. Brier, W9AD, long-time CQ Novice Editor, represented the spirit of effective, caring Amateur Radio instruction. The ARRL, in

conjunction with the Lake County (IN) Amateur Radio Club, sponsors this award in his memory to recognize the very best in volunteer Amateur Radio instruction and recruitment.

The recipient of the 2006 Maxim Award is Greg S. Davis, N3ZL, of Florence, South Carolina. This award, given annually to a licensed radio amateur under the age of 21, takes into account the nominee's most exemplary nature of accomplishments and contributions to both the community of Amateur Radio and the local community. Davis, first licensed at 14, upgraded to Amateur Extra class before he turned 16. While his first love is ragchewing, he likes to DX, contest and operate all digital modes and SSTV. Davis is interested in and active in emergency communications. As part of his Eagle Scout project, he was responsible for planning, assembling and installing emergency communications antennas at Red Cross emergency evacuation centers.

The recipient of the Distinguished Service Award is ARRL Puerto Rico Section Manager Victor Madera, KP4PQ. This award, first established in 2003, honors the exceptionally notable contributions by a Section Manager to the League's health and vitality. It is named for New Mexico Section Manager Joe Knight, W5PDY (SK), who served as New Mexico's Section Manager for 27 years.

==> Revamped ARRL Membership Pages Go "Live" on the Internet

The fully automated, easy-to-use, online membership application, <http://www.arrl.org/join> which now provides immediate confirmation to ARRL members, became a reality July 22. "Our new membership Web page went live due to the inter-departmental team effort of Membership, Circulation, Web Services, Accounting, IT and Business Services," commented ARRL Membership Manager Katie Breen, W1KRB.

"ARRL Circulation Manager Amy Hurtado, KB1NXO, and I visited many membership organization Web sites to see if we could find details we liked and wanted to use for our site. We then took those bits and pieces to ARRL graphic artist Diane Szlachetka, KB1OKV. Diane worked to decipher our notes, and ultimately we ended up with this awesome set of pages," she said.

But it doesn't stop there. "Having a front page was only the beginning. We needed to get all the systems behind the scenes to talk to each other. One of the big parts related to credit card processing. ARRL Web Developer Hugh Brower, KB1NFI, spent countless hours working with our merchant services company to set up all kinds of security protocols, and ARRL Web Applications Developer Micah Murray created all the nitty-gritty scripts to make the site actually work! Wow--what a process!" Breen said.

Breen said the online membership process "definitely needed an overhaul." She added that more than 65 percent of ARRL members use the ARRL Web site to join or renew their membership. "For existing members who renew, when they log in to their member page and follow the link to

"Renew," the page will automatically populate with their existing information. When a new ham joins and enters their call sign, their page is automatically populated with data from the FCC. Again, the idea is to make it as easy and streamlined as possible."

Calling the old online membership process "cumbersome," Breen said it did not allow ARRL members to add family members at the same time, make additional donations to the League or even add a subscription to QEX or NCJ. "You can now also choose a Life Membership online, which previously was not available. You can upgrade to Diamond Club while in the system--again, this was not an option previously. Now when you join or renew, you will receive an immediate confirmation by e-mail that includes the type of membership selected, when it expires and when the first issue of QST will arrive."

Breen said she hopes ARRL members will find this new Web page beneficial and she welcomes any feedback. She can be reached via e-mail <w1krb@arrl.org>.

==> FCC Denies Vanity Call Sign Petition

On Friday, July 20, the FCC denied the petition of Quinten R. Erickson, N0RD (formerly N7GXA), of Big Lake, Minnesota, requesting a reconsideration of his application for vanity call sign N7AZ. The FCC granted N7AZ to Jon F. Goering (formerly NJ7I) of Apache Junction, Arizona on February 13, 2007.

Section 97.19(c)(1) of the Commission's Rules provides that a call sign shown on an expired license is not available to the vanity call sign system for two years following the expiration of the license. This two-year period corresponds to the grace period during which the licensee of an amateur station may apply for renewal of the station and operator license. The expired call sign becomes available for reassignment the day after the two-year period ends. Call sign N7AZ expired on January 13, 2005 and was available for assignment on January 14, 2007.

Goering's application for N7AZ was received by the FCC on Sunday, January 14, 2007. Because the application was received on a weekend, the FCC deemed it to be filed on the next business day, Tuesday, January 16. Erickson argued that the FCC should have dismissed Goering's application for N7AZ as "premature." The FCC said that Erickson "assert[s] that Mr. Goering's application should have been dismissed because the prior license was still reflected in the Commission's licensing records on Sunday, January 14, 2007. We disagree. That the Commission's records were not updated until after the weekend does not change the date on which the call sign became available to the vanity call sign system. Mr. Goering's application therefore was not premature."

Goering and Erickson's applications for N7AZ, the FCC said, were included in a lottery to determine the processing order of applications with a filing date of January 16, 2007. Of the applications that

requested N7AZ, Goering's was the first selected. "Consequently, we conclude that his application was properly granted, and your application was properly dismissed," the Commission said.

Erickson subsequently applied for vanity call sign N0RD on April 10, 2007 and received it on April 28, 2007.

==>IN BRIEF:

* This weekend on the radio: This weekend, the NCCC Sprint Ladder is on the air July 27 and the ARD Flight of the Bumblebees is July 28. The RSGB IOTA Contest is July 28-29. Next weekend, look for the ARRL UHF Contest, 1800 UTC August 4-1800 UTC Saturday, August 5. The TARA Grid Dip Shindig and the European HF Championship are August 4, while the 10-10 International Summer Contest (SSB), the National Lighthouse Weekend QSO Contest and the North American QSO Party (CW) are August 4-5. The RSGB RoPoCo 2 and the SARL HF Phone Contest are August 5. The ARS Spartan Sprint is scheduled for August 7. See the ARRL Contest Branch page http://www.arrl.org/contests/, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education Course Registration: Registration remains open through Sunday, August 5 for these online courses that begin on Friday August 17: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF--Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Get Ready for the 2007 ARRL On-line Auction: Planning for the ARRL On-line auction, scheduled for October 24-November 2, is already in high gear, according to ARRL Business Services Manager Debra Jahnke, K1DAJ. "We have a head start this year, as many of the items used in QST's product review articles will be part of the Auction." In past years, product review items were auctioned off throughout the year via announcements in QST and written bids. QST "Old Radio" columnist John Dilks, K2TQN, started off the donation process when he dropped by ARRL HQ with a Hallicrafters SX-25 Super Defiant receiver and matching speaker. Jahnke commented: "During and after the conclusion of the first ARRL On-Line Auction last year, we were bowled over with the level of interest and the extremely positive feedback from both bidders and our generous donors. We anticipate another terrific turnout and will have even more items to bid on--a large selection of new and vintage equipment, Amateur Radio-related products and services--and a few surprises, too! Our goal is to make this an exciting, fun event for everyone."

* National Contest Journal: The July/August issue of NCJ is on the streets. This issue features an article about the 2007 Contest University held at this year's Dayton Hamvention. This exciting event, led by Tim Duffy, K3LR, and an instructor staff of 10, brought together more than 150 contesters, ranging from beginner level to expert, for a day of contesting topics such as propagation, shack design and layout, DXpedition contesting, contest logging software and antennas. John Unger, W4AU, writes about participating in the Pennsylvania QSO Part as a Multi-Multi station, and Pete Smith, N4ZR, reviews the new Elecraft XG-1. Ranko Boca, YT6A, writes about contest techniques and wonders if there are more yet to be discovered. There are also articles on contesting activities at the Visalia DX Convention and a profile of Geoff Howard, W0CG.Regular columns, such as "Contest Tips, Tricks and Techniques," "RTTY Contesting," "VHF-UHF Contesting" and "Workshop Chronicles" are included. Visit the National Contest Journal's Web site <http://www.ncjweb.com>. Carl Luetzelschwab, K9LA, is Editor of NCJ. He can be reached via e-mail <ncjeditor@ncjweb.com>. NCJ is available from the ARRL and starts at $20/year (6 issues). To subscribe to NCJ, visit the NCJ Subscription Web site <https://www.arrl.org/forms/ncjsub.html> or call 1-888-277-5289.

* DXpedition Approved for DXCC Credit: The ARRL DXCC desk reports that the 2007 DXpedition to Burundi, 9U0X, has been approved for DXCC credit. ARRL DXCC Manager Bill Moore, NC1L, said, "If you had cards rejected for this operation, please send an e-mail <dxcc@arrl.org> and you will be placed on the list for update."

* ARISS Update: ARRL Amateur Radio on the International Space Station (ARISS) Coordinator Rosalie White, K1STO, said that the ARISS program is moving along splendidly. On Tuesday, July 17, long-term hospitalized children at the Arnold Palmer Hospital for Children in Orlando, Florida, spoke with astronaut Clay Anderson, KD5PLA, aboard the ISS. Anderson answered the children's 33 questions. The Challenger Learning Center of Lucas County, in Oregon, Ohio has been scheduled for an ARISS contact on Wednesday, July 25 at 1148 UTC. The center has a science lab that is used for the summer camp programs, and schools from northwest Ohio and southeast Michigan participate in the programs which reach approximately 3000 students each year. An ARISS contact has also been has been planned for the 21st World Scout Jamboree in Chelmsford, England. Special Event Station GB100J will operate at the Jamboree from July 27-August 8, 2007. Approximately 40,000 scouts from 200 countries are expected to attend this event. The contact will take place on Saturday, August 4 at 2110 UTC. There have been 306 ARISS International Space Station-to-Earth school contacts to date.

* Syria to Celebrate 60 Years of Amateur Radio: The Technical Institute of Radio, the IARU member-society in Syria, will celebrate 60 years of Amateur Radio in that country from October 15-November 15. In honor of this important milestone, TIR members will be using special prefix 6C60 on all HF bands during the month.

* Let Us Know: What's your favorite part of The ARRL Letter? What kind of stories would you like to see in the Letter? Would you prefer the Letter in an HTML format? This is your Letter and your chance to let your voice be heard. Please send your suggestions to ARRL News Editor S. Khrystyne Keane, K1SFA, at k1sfa@arrl.org, with the subject line "ARRL Letter Suggestions." All messages will be read and discussed, and we look forward to implementing positive suggestions into the ARRL Letter.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

1356. WIANEWS for week commencing JULY 29 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-07-28 10:00:25 UTC
From: nationalnews@wia.org.au
Message-ID: <200707281000.l6SA0B821061@panix2.panix.com>
Source record: 4061
Cross-posted to: rec.radio.amateur.moderated,aus.radio.amateur.misc,rec.radio.info

This is WIANEWS for week commencing JULY 29 2007

VK1WIA - WORLD NEWS.

RSGB asks for input.

The main news of the week in Amateur Radio is taking place in the UK.

Extensive flooding across many parts of the country.

The RSGB is aware of many RAYNET groups being put on standby due to the flooding and continued flood warnings.

As this is an ongoing scenario, The UK Society is unable to bring us news of the RAYNET groups who have been involved but will broadcast full details when known.

RAYNET groups actively involved are requested to inform RSGB HQ of their activities and to what level they have been able to assist emergency services.

RD WEEKEND NEWS PLANS

August 11 and 12 is the RD weekend and the news will be produced as usual, so you "don't miss a thing".

HOWEVER

It is up to the individual rebroadcasters as to when they will transmit.

I'd suggest you do ask when you check in after this weeks news as to when the RF edition in your area will be heard.

Of course no matter where you are in Australia the WIA Audio in mp3 can be accessed after 0100 hours UTC Saturdays each and every week, just point your internet browser to wia.org.au and click on "broadcast".

Speaking of the broadcast, last week with some 95 RF checkins to the 9am edition on VK5RAD Adelaide, if each of those 95 were to call back on the RD weekend AND submit contest logs, by my reckoning, VK5 would scoop the pool in this 2007 Remembrance Day Contest.

And also don't forget prior to the 08ooUTC Saturday start of the RD, the annual opening address will be broadcast, we remind all rebroadcasters to make sure they are subscribed to wiabroadcasters at yahoogroups dot com so they are advised of both the duration and the site of this address.

This is played at 5:45pm aest as it runs (including 1 minute silence) 15 mts.

(to subscribe blank email to wiabroadcasters-subscribe@yahoogroups.com)

BPL INTERFERENCE - THE BATTLE CONTINUES

BPL (PLT IN SOUTH AFRICA) CONTINUES TO BE PUNTED BY VENDORS

This past week PLT was again the subject at a conference held in Sandton SA.

A new company which has been very active promoting PLT is IPOWA.

According to their website IPOWA is the exclusive local provider of the world's leading broadband-over-Powerline (BPL) system. A proven, cost-effective and robust route to rapid broadband deployment, iPOWA is the last-mile solution for which utilities, ISP's, hotels, schools and property developers have been waiting for.

By leveraging existing infrastructure and utilizing a unique plug 'n play system, iPOWA is the key to high-speed access that works - fast.

Three of their representatives presented their case at Internetics 07, a conference about IT and the internet, sponsored by Internet Solutions.

iPOWA's approach has been somewhat different from their previous presentation at a broadband conference a few weeks ago. This time they are promoting it as the fixed line solution that powers the internet 15 times faster than ADSL and that besides the internet provides opportunities for power management, meter reading, electricity demand control to prevent black outs, security cameras and traffic management.

Problems such as interference to HF never entered into their discussion.

They however did admit that they are waiting for ICASA to license PLT, which is the official name for BPL.

The interference issue of PLT and possible interim standards is on the Agenda of Committee TC73, the SABS committee on EMC standards which meets mid August.

The SARL is keeping a close watch.

In the last couple of weeks we've heard several items about the national band plans. I think last week's broadcast highlighted the fact that band plans are a very good idea.

Our hobby covers a wide range of different interests. So we have different band segments for different modes such as SSB or FM, and different channels for repeaters and simplex. And within the simplex segment, we have different channels for voice, packet, SSTV, and so on. This allows everyone to follow their different interests without getting in each other's way.

One of the main features of the band plan is the national voice simplex calling frequency, on 146.5 MHz. This is a channel where anyone can make a call, or listen for other stations, no matter where they are. But that means that the channel needs to be used for the same purpose everywhere in the country. If it is used for

links, or nodes, or audio streaming, it can't be used as a calling frequency. And this leads to the kind of clashes and arguments we've heard about in the last couple of weeks.

As new operating modes come along, we need to keep the band plans up to date and recommend suitable frequencies for them. In the last few years we have added recommended national frequencies for APRS and for digital DX modes, and these are working very well. And it has also been done for new linking systems like EchoLink.

The band plan includes four recommended channels for simplex IRLP and EchoLink nodes.

These frequencies are between 145.325 and 145.400 MHz - and they were recommended because they don't clash with any existing activity.

If you would like to look further into the band plans, you can find full details in a PDF file on the WIA web site. And if you'd like to make any comments or suggestions about the band plans, the email address to use is tac@wia.org.au

(via John Martin VK3KM, chairman WIA National Technical Advisory Committee)

HAMS ACROSS AUSTRALIA.

VK2

WESTLAKES AMATEUR RADIO CLUB say anyone wishing to take part in a future Foundation Class can leave their details on the form to be found on the Club notice board.

Foundation manuals are also available.

Westlakes Amateur Radio Club is located in York Street Teralba and is open for business on Saturday from 12 noon and Tuesday evening from 6.30pm. Call in and say hello - Tea and Coffee are always on.

Best of all Westlakes Amateur Radio Club have a 24-hour voice mail box on 02 49 581 588.

VK3

The Shepparton and District Amateur Radio Club Hamfest is on the 9th of September, at the regular venue " The St. Augustine's Hall" in Orr St. Shepparton.

Doors open to the public at 10am and for traders at 7.30am.

Anyone wishing to book trading tables should make contact early.

vk3kl@netspace.net.au

VK7

REAST in VK7 have run an RD Contest information night which was well attended and hopefully encouraged all to contest on the 11th & 12th of August.

They went through a little history of the RD contest along with a special VK7 link in Max Loveless VK7ML (SK) and "Winnie the War Winner".

Then the group went into an outline of the rules, especially the new ones for this year and finished up with a demonstration on the big screen of the three RD specific contest loggers.

REAST looked at John, VK5DJ's logger, the VK Contest Logger – RD section by Mike VK3AVV and WinRD+ by James VK6FJA.

Seems the general consensus was that VK5DJ's logger was the preferred logger as it was easy to use and setup and was the only one that didn't require the running of more than one instance of the application.

The presentation that was given on the night is available at the website address that can be found on the email and internet editions of this broadcast.

http://reast.asn.au/events.php#rdinfonight

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6FXYL

F-Troop in Victoria

Jim Linton, VK3PC tells us that some interesting topics have been raised over recent months on the F-Troop Net that occurs on the Mt Macedon VK3RMM two-metre repeater on Sunday morning straight after the VK1WIA broadcast call-back.

Virtually any amateur radio topic is welcome. The net controller is usually either Ross Pittard VK3FCE or Terry Murphy VK3UP.

The idea behind F-Troop is to get more experienced radio amateurs, such as WIA Assessors and course trainers, to provide advice and help in the spirit of amateur radio.

Standard and Advanced Licence holders will also be most welcome to join in.

Please don't just listen, join in and make it a useful and worthwhile exercise.

F TROOP IN QOUEEENSLAND

The Maryborough Electronics & Radio Group ("Merge") are gathering together prospective "F" Troopers for their 3rd training group.

Kathy Johns VK4YMS, and Ray Stockdale VK4TPT, will be conducting the training and it is hoped that they will be respectively WIA accredited assessor and training facilitator in time to conduct the exam and assessment at the end of the course.

Any persons in the Wide Bay area interested in obtaining their Foundation Certificate or up-grading to Standard or Advanced Certificate are asked to contact Kathy, (07) 4123 3098, kathy.johns@bigpond.com.au or Ray, (07)4123 2958, vk4tpt@bigpond.net.au

TOKYO TO HOST WORLDS TALLEST TOWER

Wired.com says the tallest broadcasting tower ever built is coming to Tokyo, Japan.. The 2001 foot high structure, which still doesn't have a name, will host the digital radio and television transmissions plus a mobile TV network. When completed in 2011 the concrete-and-steel tower will be the highest free-standing antenna in the world. (ARNewsLine)

New look Canadian HF band plan

We have been speaking a fair bit of late about bandplans, the why and how, well Jim Linton VK3PC tells us that "Radio Amateurs Canada" has released its proposed HF band plans which generally align with the IARU Region 1 plans but have some unique features.

These mainly come in the form of notations to identify suggested frequencies or centre of activity for things like QRP, QRS CW, SSB DXpedition priority (14.190 - 14.200MHz), IOTA, AM, Global Emergency, Image Modes and Very Narrow Digital.

Also among the proposals is an expansion of the DX window to 3.775 to 3.800 for two hours either side of dusk and dawn to aid Grey Line propagation.

For the website link, check out the text edition of this broadcast.

The draft plan can be read at:
www.rac.ca/service/RAC_Draft_HF_Band_PlanR1.pdf

==========
NEWS FROM ARNEWSLINE

HAM RADIO IN SPACE: SUPER EFFICIENT AMPLIFIER DESIGNED BY AMSAT HAMS

The Amsat News service reports that Allen Katz, K2UYH and Marc Franco, N2UO have developed a VHF, high-efficiency, class-E, R-F power amplifier. One with a DC to RF efficiency of 86.8%.

A-N-S says that their design is based on silicon carbide metal-semiconductor field effect transistors. The amplifier efficiency was measured at around 86 to 88% with this number holding quite well at almost any drain voltage or output power.

The AMSAT News Service says that this type of amplifier is under consideration for the envelope elimination and restoration linear amplifier planned for the upcoming AMSAT Eagle ham radio satellite.

The design was presented in a paper at the IEEE International Microwave Symposium in Hawaii. It is now available on-line at

http://www.cree.com/products/wireless_docs.htm titled
"Class-E Silicon Carbide VHF Power Amplifier" (ANS)

INDONESIA: ORARI PROVIES A NEEDED EMCOMM SERVICE

Indonesian Amateur Radio Organization Vice President M Jusuf Kalla says that his organization is still needed. Especially during emergencies and also to reach areas not accessible by telephones.

In a recent interview with the Antara News Service, Kalla is quoted as saying that experience has shown that telephone transmission towers and cellular phone networks are usually among the first structures to collapse in disasters like earthquakes. Kalls says that in those such situations, Indonesian Amateur Radio Organization members often provide out to be a welcome alternative means of communication.

According to the Kalla, every telecommunication technology device has its advantages and disadvantages. He noted that not all areas of Indonesia's vast territory are accessible by telephones. As such, two-way radio is still needed as a means of communication with people in these remote areas.

Now in its 39th year, the Indonesian Amateur Radio Organization has been in providing communication support during disaster-caused emergencies in the country (ANTARA News)

==========

WEIRD N WONDERFUL

The Maryborough Electronics & Radio Group in Queensland is trying to gather together 300+, 35mm film canisters and a similar quantity of the red caps from the PET bottles of a well known Cola drink.

Why? you ask. Well, according to Ray Stockdale VK4TPT, President of MERGE has been requested to build a means of checking the speed of human powered vehicles in the pit lane during the 24hr Technology Challenge on 15th-16th September.

Budgetary and Manpower constraints preclude the use of Radar Speed Guns so "MERGE" have decided to utilise a LED chaser circuit with the speed set to give the appearance of a string of moving lights at the required 10Km/hr limit.

As the pit lane is 300 meters long this would require at least 300 lamps, each containing a cluster of ultra bright LEDs to be seen in bright sunlight and normal LEDs for night time.

Even if such devices were available commercially, the cost would be prohibitive, hence the canisters and Cola caps.

"MERG" is draining the local photo processing outlets but will not reach the required qty in time so they are asking Amateurs to go to their local photo processors and collect as many 35mm canisters as possible.

The desired ones are black with grey lids as the Cola caps fit snugly inside.

Ray suggests that, aside from any "Colaholics", the best source of the caps may be the local re-cycling depots as the caps must be removed before sending the PET bottles for re-processing.

So there you are Guys & Girls. See what you can collect and contact Ray VK4TPT on (07) 4123 2958 or vk4tpt@bigpond.net.au to arrange postage.

CONTEST COLUMN - D A T E L I N E

Boat Anchor Sprints:
August (11), October (13).
Local ZL time: 2000 to 2100 hrs

Section 1: Old radios - all valves - i.e. ZC1, 19 set, Heathkits, any home brew set, but must have all valves.

Section 2: Any Hybrid transceiver (must have valve finals i.e. FT200, FTDX400/401, Drake, FT 101s, etc..

Amplitude Modulated signals only.

The overall winner shall be the entrant having the highest points score which will be published in the following New Zealand "Break-in".
(Jamie Pye ZL2NN, Editor NZART's InfoLine)

AUGUST 11/12 Remembrance Day Contest (The RD) wia.org.au

SEPTEMBER 22

The Second running of the Westlakes Cup is coming up on Saturday 22nd September commencing at 8.30 Eastern Australian Standard Time (10.30 Z).

The band of operation is 80 Meters and the Mode of operation is phone (SSB, DSB and AM)

Full details of the Contest can be found on the Westlakes Website westlakesarc.org.au and all Australian Radio Amateurs are welcomed to participate.

There are two bonus stations active in the Contest, VK7VH Vince and VK2FJES Jessica.

Club and WIA stations are also worth extra points in the Contest so a great fun hour of Contesting is guaranteed.

(Richard VK2KRM Contest Manager Westlakes Amateur Radio Club)

SPECIAL EVENTS, BEACON AND NET ADVICE

New beacons on 40 MHz

Last week we Jeremy Boot G4NJH told us of the new Rutherford Appleton Laboratory beacons, allocated 60.050 and 40.050MHz.

Now we learn Denmark is to get a 40 MHz beacon.

On July 18, Denmark's regulator issued a permit for the beacon OZ7IGY to operate on 40.021 MHz.

The beacon will be subject to the following conditions:
Non interference
Max. 25 Watt to an Omni directional antenna max. 0 dBd,
max. 10 metres above ground (100m asl).

The permit is valid for a year and the results of the experiment are to be reported to the ITST.

OZ7IGY currently operates on 50.021 and 70.021 MHz and a number of other frequencies.
(see http://www.oz7igy.dk/)

(Southgate arc)

Sheffield Island Lighthouse DXpedition

The Greater Norwalk Amateur Radio Club (GNARC) will be sponsoring a DXpedition to activate Sheffield Island Lighthouse for International Lighthouse Weekend (ILLW), August 18-19th.

Operation of N 1 E V will begin 1600z, August 18th and end around 1800z 19th.

Activity will be on 80-10 meters SSB/CW/FSK.

Operations will take place in or around the IOTA calling frequencies. Plans are to run at least 2 stations for the entire event.

Sheffield Island reference numbers are:
IOTA-NA-136, USI-CT-008 and ARLHS-USA-753

(Southgate arc)

A GREAT CALL-SIGN DISALLOWED

FCC DENIES UFO CALLSIGN

Amateur Radio Newsline say the FCC has denied a request that the call sign NM 5 UFO be assigned to the New Mexico's Saucer Ridge Amateur Radio Association.

In filing its request the club had maintained that the assignment of NM5UFO would be in keeping with the theme that Roswell, New Mexico which has been known since 1947 as the site of a UFO crash.

In denying the request the FCC simply said that the requested call did not follow the agency's sequential callsign assignment system.

Plan ahead to work San Andres as K3WT, N0STL, W0OR and N0AT will be active from there between November 19th and the 27th. Operations will include the CQ World Wide DX CW Contest on November 24 and 25. This will be a Multi-Single entry.

Also coming on this November is Greneda. This with seven operators active as J3A also during the CQ World Wide DX CW Contest. Outside the contest they will be using their own personal callsigns.
QSL J3A via WA1S.

THE QNEWS WORK BENCH - the nuts and volts report -
(Measure twice - Cut once!)

EMERGING TECHNOLOGY: NEW HIGH SENSITIVITY CAMERA CHIPS

A new image sensor could revolutionize the way you take pictures. Even those you send via A-T-V. Jim Davis, W2JKD, says:

"Eastman Kodak says it's developed a colour filter technology that will at least double the sensitivity to sensors used in digital cameras. Kodak expects to provide samples of the new chips to a variety of camera manufacturers in the first quarter of 2008.

The new technology is likely to be quickly incorporated into mass-market point-and-shoot cameras and camera-equipped cellular telephones phones beginning sometime next year."

The new sensors are not quite see in the dark devices, but are the next step in getting there.
(ARNewsLine)

MEDIA WATCH

AMATEUR LOGIC TV

A month or so back we heard from the Australian reporter for this Amateur Radio hobbyist show produced in Mississippi, namely Peter VK3PB

Well Peter reports that episode 14 of Amateurlogic has just been released. It can be downloaded from the downloads section at amateurlogic.tv

In the new episode Peter interviews 3 of the EMDRC Guys about the impact of the Aussie Foundation Licence, and wearing his WIA Directors hat Robert Broomhead.

Friday nights if your in Melbourne, tune into ATV repeater VK3RTV from 8.00 PM Friday nights.

WIRELESS WEATHER

Paul Vk2HV from Westlakes Club says we all should circle Sunday, August 12 and write "all night meteors!"

Yes it's time for the 2007 Perseid meteor shower.

The Moon is new on August 12th--which means no moonlight, dark skies and plenty of meteors. It is estimated one or two Perseids per minute at the shower's peak.

The show begins between 9:00 and 10:00 pm on Sunday, August 12th, when Perseus rises in the northeast. This is the time to look for Perseid Earthgrazers--meteors that approach from the horizon and skim the atmosphere overhead like a stone skipping the surface of a pond.

And if your a meteor scatter 'buff' the band should be "pinging!"

By 2 am on Monday morning, August 13th, dozens of Perseids may be flitting across the sky every hour. The crescendo comes before dawn when rates could exceed a meteor a minute.
(Westlakes News)

NOW ROBERT BROOMHEAD - VK3KRB.

WW SPECIAL INTEREST GROUPS --- IOTA
http://rsgbiota.org

The 15th IOTA (Islands On The Air) Contest is taking place this weekend, July 28-29th.

One station worth searching for will is operating from Cyprus.

C 4 M G

This coastal island of Cyprus (AS-004) has not been activated (as far as the group know) since their previous expedition of July 2001, so there should be quite a few island chasers that are in need of this one.

The group have 2 stations active, one with a linear amplifier.

Antennas include a 5-band Spiderbeam, a TA33Jr tribander and HF2V and R7000 verticals. Operation will take place with the 5B4NC/P callsign outside the contest and with the callsign C4MG during the IOTA contest.

QSL Manager for both callsigns will be George/ 5B4KH.

WW SPECIAL INTEREST GROUP --- MILITARY

The Brisbane Military Radio Collection is having a couple of Open Days to view the collection of Military Communications Equipment. What better time than over the RD weekend itself, Saturday 11th August at 1.00pm and Sunday 12th August at 1.00pm

72 Steven Street Camira (last house on left in cul-de-sac)

There will be a small "junk" sale as well.

More on this in the local VK4 area news, "QNEWS."

WW SPECIAL INTEREST GROUPS --- RADIO SCOUTING
http://www.scouts.com.au
http://www.scout.org/jota
http://www.wiaq.com/nationalnews/jotahead.htm

SCOUT JOTA HF Voice Calling Frequencies
3590, 7090, 14190, 21190, 28590 kHz
14290, 18140, 21360, 24960, 28390 kHz (DX)

This years 50th JOTA will run from October 19th at 22:00
hours to October 21st at 24:00 hours YOUR local time.

An official start will be given by the World Scout Bureau
radio station in Geneva, Switzerland on October 19th at
21:00 h UTC with a transmission in the 20 and 80 meter
bands and on EchoLink.

In VK3, the Scout Radio and Electronics Service Unit have advised
both Youth and Adult members of Scouts Australia, Victoria Branch,
a Training Program is available for those interested in
Amateur Radio.

Members have been asked to down load flyers and distribute
them to Scout's and Venturers.

These Training Programs can be carried out in regional areas
providing a minimum number of participants are available.

Further information on the activities of the SRESU can be
viewed online at www.sresu.asn.au

Still with scouting, a VK6 activity which has not been reported on was
passed onto us via the UK Southgate Amateur Radio Club news.

Seems a camp on Brownsea-on-Heirisson Island, Perth will be held from
today 29 July for a few days to commemorate the centenary of Scouting,
and the original Brownsea Island camp.

Heirisson Island is right in the centre of Perth, in the Swan River.

VK6SAA callsign will be operating HF, VHF and UHF,
IRLP Node 6772 & EchoLink Nodes 317 406 and 570 81

THE FINAL FINAL

WALKS

Jeff VK4XJJ is still going strong on his walk across Australia.

But he still wants to hear from YOU, and it is these calls in particular that keep him going!!

Tuesday 17th to Monday 23rd July, in Boulia waiting for parcels.

Good interview with Carter Edwards last Sunday night 2HD 1143 Newcastle.

Carter Edwards (Sunday 6 p.m. to midnight in Newcastle) will talk to Jeff each Sunday night till Karumba.

Monday 23rd July Jeff left Boulia after an enjoyable "rest" including two days at the camel races. He thanks Matt and Sally for their kindness while in Boulia.

Tuesday 24th. 35 km north of Boulia at noon. Walked 31 Km today. Temperature range 13 to 27 degrees. Six vehicles stopped to chat.

Wednesday 25th. Walked 28 road Km. Temperature range 14 to 29 degrees. 25 vehicles on the road and five stopped to chat. Hopes to walk 30 Km tomorrow.

Mount Isa is organising some fund raising. Will include a walk challenge in town to cover 35 Km. Ambulance service very cooperative and caring, keeping an eye on Jeff all the way to Karumba.

Second major equipment failure, camera stopped working. Replacement posted Wednesday. Other problem was with flexible solar panel, several wiring problems. Jeff repaired when required in towns.

Jeff thanks you Graham, the WIA again and the amateur operators who have called in, assisted on air and written to him via the web site.

Regards, Bill Johnson VK2FWGJ for Jeff Johnson VK4XJJ Walking for DeafBlind awareness. Web design & relay station Roger Stierli VK4BNQ

www.jeffswalk.com

Every Day, from 5:30pm Eastern on 40 meters, 7045 put out a call to VK4XJJ

> let their licenses lapse as they went to cell phones or
> otherwise had no
> further need of that type of communication.

That's certainly possible. Here's another possibility:

I think the distribution of amateur licenses by expiration date
isn't uniform. I suspect this is driven by many factors, one of
which is rules changes for things like vanity callsigns.

Another factor is the long-term trend for older people to be
new hams. Nothing wrong with that at all, but if someone got
their first license in the early 1980s as a retiree, they're pushing
90 now (if they're still with us).

Still another possibility is that the impending rules changes
caused the decline of the past few years, if prospective
hams delayed their entry into amateur radio, waiting for the
rules to change. If you knew that the price of flat-screen
HDTV sets was going to take a nosedive a year from now, you
might hold off on buying one till then.

On top of all that is the fact that, whatever we speculate on the
causes, it's only been 5 months. There's no way to tell if there
is a long-term trend/change at work or not.

73 de Jim, N2EY

SOUTH AFRICA TO BE REPRESENTED AT GAREC 2007

REGISTER FOR THE CLASS B EXAMINATION NOW - 2 DAYS LEFT

PRESIDENT'S NET AND INTECNET TONIGHT

RADIO TECHNOLOGY IN ACTION PROGRAMME FOR GAUTENG NOW ON THE WEB

100th ANNIVERSARY OF THE SCOUT MOVEMENT

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

SOUTH AFRICA TO BE REPRESENTED AT GAREC 2007

The SARL will be represented at the 2007 Global Amateur Radio Emergency Communications (GAREC) Conference, which will be held in Huntsville, Alabama, on Thursday, 16th and Friday, 17th August 2007. GAREC-07 is

focussing on the application of advanced technologies in emergency communications.

GAREC started as an initiative of IARU Region 1. In 2005, Seppo Sisatto, OH1VR, now IARU Region 1 Emergency Communications Coordinator, organized the first meeting in Tampere, Finland - the "Capital of Emergency Telecommunications." It was here that in 1998 the United Nations and the International Telecommunication Union convened an intergovernmental conference, ICET-98, which adopted the "Tampere Convention." This international treaty facilitates the use of telecommunications in humanitarian assistance, and made "Tampere" known throughout the telecommunications community. Conferences on the same subject were held in the following years. In 2006 GAREC met in Tampere for the second time, now in connection with the International Conference on Emergency Communications, ICEC-2006 and the UN Working Group on Emergency Telecommunications.

The agenda of GAREC-07 will focus mainly on the topics discussed in Tampere. Most of all, GAREC wants to be a forum for the exchange of information. Many IARU member-societies and specialized emergency communications groups have developed and implemented emergency concepts. Many others want to benefit from their technical, operational and, not the least, their administrative or even "political" experiences when establishing the necessary cooperation with partners in emergency and disaster response. South Africa, and more specific the SARL in its own right, has been able to share information and has added value to the conferences in the past. GAREC also developed new concepts, such as the "Centre of Activity Frequencies," meanwhile adopted by IARU Region 1 and 3 conferences.

The review of advanced, digital technologies and their applications to emergency telecommunications will be an additional element for GAREC-07. The two-day conference will be packed with practical information, and experts will arrange demonstrations of the capabilities of 21st century ham radio!

With the support of the Department of Transport, the SARL will be represented by HAMNET's National Director Francois Botha, ZS6BUU. Charles Norval of SASAR, in his letter supporting the SARL's participation, said that the SARL's attendance will be of benefit to both the South African Search and Rescue (SASAR) and the Air Traffic and Navigation System.

REGISTER FOR THE CLASS B EXAMINATION NOW - 2 DAYS LEFT

The next class B examination will be held on 23 August. The closing date for registration has been extended to 31 July, which is in just a few days time. No late entries can be accepted.

Registration for the examination is R300. The cost for students and learners under the age of 25 years is only R200. To register, download all the forms from the SARL web and after completion fax the forms to

088 011 675 2793. You can also request the forms by sending a mail to admin@sarl.org.za. Carefully follow the checklist printed on page 2 of the RAE registration form. Links to the form can be found on the home page article.

PRESIDENT'S NET AND INTECNET TONIGHT

The President's Net will be on the air tonight. Join Graham Hartlett, ZS6GJH, at 19:00 for an update on he SARL and the various activities planned for the next few months. Graham will also talk about the SARL's plans to promote ARDF - Amateur Radio Direction Funding, an activity that is current attracting a lot of attention from the youth in Europe and the USA.

The President's Net will be followed at 20:00 CAT by the Intecnet with Dr Pieter Kotz as the guest speaker. His presentation is entitled: 'Implications of Living on a Giant Magnet'. The presentation slides can be downloaded in PDF format. Visit the SARL web at www.sarl.org.za and click on ARMI.

Clubs wishing to link their repeaters should send an email to armi@sarl.org.za before 12:00 today. Both nets will be streamed on Echolink by ZS6FCS and on the web. Go to www.sarl.org.za and click on ARMI and follow the links.

RADIO TECHNOLOGY IN ACTION PROGRAMME FOR GAUTENG NOW ON THE WEB

The programme for the Radio Technology in Action day in Gauteng on 18 August is now available on the web. The programme features a variety of interesting presentations and demonstrations. Learn how the Eastern Cape radio amateurs built the world's largest repeater linked network, or watch the FT5XO Kerguelen island DXpedition video, join SARL Councillor for Technology Andrew Roos, ZS6AA, as he discusses the SARL transceiver project or build a 40 m receiver with Hannes Coetzee, ZS6BPZ.

It is a day no one interested in amateur radio and technology would want to miss. Diarise the date 18 August at the National Amateur Radio Centre. Entrance is R20. Students and learners attend free.

100th ANNIVERSARY OF THE SCOUT MOVEMENT.

A Sunrise Ceremony in Mafikeng by ZS100MAF on Wednesday, 1 August 2007, will mark "The Dawn of a new Century for Scouting around the World".

On 1st August 1907, Scouting's Founder Robert Baden-Powell held what is now known as the World's first Scout camp on Brownsea Island near Portsmouth, England. This date thus marks the beginning of the Scout Movement.

Baden-Powell had strong ties with Mafikeng where he formulated many of his ideas. Thus Evan Davies, ZS6EVD, Eddie Leighton and the Lichtenburg ARC will be running a special event station ZS100MAF at SCENE the scout camping grounds of the town. Please support this station as Evan, Eddie

and LARC have done a tremendous amount of work for this event.

The main idea is to have scout greetings following the rising sun, from East to West.

Another aim is to link up with the scouts at GB100BI on Brownsea Island and GB100J at the 21st World Scout Jamboree at Chelmsford just outside London. These two stations will be in operation from 27-07-2007 to 08-08-2007. As Gilwell Park is an activity centre its permanent station GB2GP will be operational for the same time.

With modern technology Scouts will be able to join in the Brownsea celebrations and those of the 40 000 Scouts at the nearby World Scout Jamboree using other digital modes.

Please note that other countries will also be represented on 1st August, BP100S - Tapei, 8J100S -Tokyo, EI100J - Dublin and SX100VAR - Athens, etc.

When you call these stations try the World Scout Frequencies:

20 m - 14,290 MHz; 17 m - 18,140 MHz; 15 m - 21,360 MHz; 12 m - 24,960 MHz; 10 m - 28,390 MHz; 6 m - 50,160 MHz.

RAE COURSE IN THE WESTERN CAPE

Prospective students for the October Class A RAE who wish to attend a course in the Western Cape can contact Karl, ZS1KC, by phone on 021 976 5237 or cellphone 083 955 7177. The course is planned to start on 7 August. The classes wil be presented once a week at the Oakdale Sport Club.

CONTEST NEWS

The SARL HF Phone Contest will be on the air next Sunday 5 August 2007 starting at 15:00 and ending at 18:30 CAT with activity on certain sections of the 20, 40 and 80 metre bands. Participation can be as a single operator, multi-operator or SWL. Further sub-divisions are low power, high power, all band, single band or my best hour. The exchange is a RS report and a serial number.

Southern Africa is divided into 8 zones for this contest and participants must try and work stations in each of these zones for bonus points, further bonus points are obtained for working the same station on all 3 bands.

The rules and log sheets are available in the 2007 SARL Contest Manual at www.sarl.org.

On Sunday 12 August, the SARL 40 Metre Mobile Sprint will be on the air.

Johan, ZS4SS, wins the SARL Digital Contest.

The contest committee received five contest logs and one check log for the SARL Digital Contest run in June. The results are as follows:

Single operator, All band - Low power: Johan, ZS4SS - 280 points

Single Operator, Single band - High Power: Eddie, ZS6BNE - 228 points; Jack, V51KC - 144 points; Jan, ZS4JAN - 90 points; Jacques, ZS1JY - 20 points.

Jan, ZS6BMN, submitted a check log.

Johan, ZS4SS, is clearly the winner of the annual Digital modes competition and will be receiving the Yaesu VX-2R Handheld Transceiver at a suitable occasion. Well done Johan!

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, was not available to do the propagation report this week. This report is by Hans, ZS6AKV.

Spaceweather.co.za reports that the solar wind speed has reached 500 km/s. Geomagnetic conditions are at unsettled to active levels. Local HF working frequencies are unstable to depressed. The outlook is that a coronal hole has rotated into a geo-effective position on the solar disk, with another one due within the next week or so. Expect disturbed HF conditions for most of the week.

20 metres seem to be the best DX band. In the early morning contacts with Australia are possible and late afternoon to early evening there is a glimmer of hope to make a QSO or two with stations situated on the both the East and West coast of the USA. For Europe 20 metres is likely to offer best results between mid morning and late afternoon.

Propagation prediction is not an exact science, so always call on a band to check if it is open. If you and everyone else only listen, you will never know.

Hannes will be back next week

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

28 July - President's Net and Intecnet - tonight; 1 August - Special station ZS100MAF on the air; 5 August - SARL HF Phone Contes;t 12 August - SARL 40 Metre Mobile Sprint; 18 August - Radio Technology in Action day in Gauteng; 23 August - Class B RAE; 6 October - SA AMSAT Space Conference; 18 October - Class A RAE.

SARL News invites clubs and individuals to submit news stories of interest to radio amateurs and shortwave listeners. Submit news stories if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to the programme Amateur Radio Mirror International, on the air every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 590 kHz. For the web stream and echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links. A repeat transmission can be heard Mondays at 21:00 CAT on 3 215 kHz. Sentech sponsor the ARMI transmissions on the non-amateur frequencies.

Today's South African Radio League news bulletin was compiled by Roger, ZR3RC, and transmitted by (your name and call sign)

Thank you for listening. 73

1 GB2RS NEWS Sunday 29 July

The news headlines

* RAYNET groups on standby

* Flood minister gets RAYNET briefing

* Amateur Radio club wins cash grant from BT

The main news of the week is the extensive flooding across many parts of the country. We are aware of many RAYNET groups being put on standby due to the flooding and continued flood warnings. As this is an ongoing scenario we are unable to bring you news of the RAYNET groups who have been involved but we will broadcast full details when known.

RAYNET groups actively involved are requested to inform RSGB HQ of their activities and to what level they have been able to assist the emergency services.

The South Yorkshire Repeater Group attended the Dearne Community Carnival held at Goldthorpe South Yorkshire on 14 July.

The Carnival was supported by the South Yorkshire Community Foundation which funds charities in the region and is administrators of the Local Network Fund.

Through the Foundation the SYRG were successful in obtaining a grant of ₱7,000 for upgrading the groups 3 repeaters and for foundation licence training.

John Healey, MP for Wentworth in South Yorkshire and a Minister of State at the Department for Communities and Local Government visited the groups stand. He was met by Ian, G3ZHI, and told about the work of RAYNET and how amateur radio can be used, on behalf of user services in times of disaster.

Ian also briefed him on the work of the Sheffield and Rotherham RAYNET groups in the recent South Yorkshire floods.

Anyone who would like more information on how to apply for a grant for their radio club or repeater group should contact Ian, G3ZHI, on 01709 799911 or e mail him on g3zhi@hotmail.com.

Mid Sussex Amateur Radio Society, MSARS, has been awarded a grant of ₱225 under the BT Community Champions Award Scheme. This scheme is designed to reward those clubs and societies who offer assistance to

their community. MSARS earned the award for the significant number of people who have received training to qualify for the grant of an Amateur Radio Operators Licence over the past few years. MSARS will use the cash to part fund the purchase of a computer projector which will enable the society to upgrade their training courses for future amateur operators.

Further information about the MSARS and the BT Community Champions Award Scheme may be obtained by contacting Gavin Keegan on 01825 722045.

The Chelmsford Amateur Radio Society, CARS, is pleased to announce that their candidates achieved a 100 per cent pass rate in the recent Intermediate exam.

This was the first Intermediate exam to be held under the new syllabus that was introduced following last years licence changes. It meant candidates had to unlearn some of the regulations they had learnt when doing the Foundation course. As well as the theory there were several practical aspects to the Intermediate

2 exam such as learning to solder and construct a radio. Having been introduced to home construction by the course the new 2E0's will hopefully be making some of their own radio equipment in the future.

The club had to rewrite many of their Power Point presentation slides to cater for the licence changes and the slides can be freely downloaded from the club website.

The Chelmsford Echolink node MB7ICM is now on the air. Built and run by Anthony, M1FDE, this node provides Echolink coverage of Mid-Essex on 6 metres.

Anthony also managed to get the node operational in time for the World Scout Jamboree at Hylands Park Chelmsford attended by over 40,000 scouts.

MB7ICM operates on a frequency of 50.530 MHz FM and uses a 110.9 Hz CTCSS tone. The node number is 276252.

The Greater Norwalk Amateur Radio Club, GNARC, will be sponsoring a DXpedition to activate Sheffield Island Lighthouse for International Lighthouse Weekend, ILLW, 18 to 19 August. Operation of N1EV will begin 1600z on 18 August and end around 1800z on 19 August. Activity will be on 80 to 10 meters SSB/CW/FSK. Operations will take place in or around the IOTA calling frequencies. Plans are to run at least 2 stations for the entire event. QSL direct to N1EV. SASE for domestic QSLs; DX send green stamp or IRC.

Last week GB2RS carried an item informing you that the Irish Radio Transmitters Society had been notified by the national coordinator for the IARU Intruder Watch for the German National Society DARC, that transmissions of church services, which seem to be coming from Ireland,

have been taking place in the 28 MHz amateur band.

WAV files have been provided of such transmissions on 28.105 MHz FM. It has now been established that a Church broadcast is being transmitted on 28.105 MHz FM in the Dublin area. Some further work is required to identify the Church concerned. Mass is transmitted at 0900, 1000 and 1100 local on Sundays and at 1000 on weekdays.

The IRTS asks stations in the greater Dublin area to listen on this frequency at these times to see if the location can be positively identified. Stations located outside Dublin should listen on the lower end of the 28 MHz band generally to see if any unauthorised activity is taking place in the band in their areas.

If you hear anything worth reporting you should send a report to Thos Caffrey EI2JD the IRTS Intruder Watch coordinator at QTHR or to "thoscaffrey at hotmail dot com" with a copy to Sean Nolan, EI7CD, at QTHR or to EI7CD at "gofree dot indigo dot ie".

Each year a report on UK activity during JOTA is compiled by the National JOTA Organiser. The 2006 JOTA report is now available on the radio scouting website along with reports for the previous 5 years. See www.radio-scouting.org.uk/index.php?module=pagemaster&PAGE.

Whitton Amateur Radio Group in west London is a registered examination centre for all levels of licence and at the present time is offering courses for the Foundation and Intermediate levels. To apply for either licence please email Chris at chris@the-grooms.com or telephone 0870 6705082. Whitton is not offering an Advanced examination course at present, but plan to offer revision evenings before each exam.

And now for the details of rallies and events for the coming week On Sunday 29 July the Horncastle Summer Rally takes place from 1030 at Horncastle Youth Centre, Horncastle, Lincolnshire. Details from Tony, G3ZPU, on 01507 527835, or by email to G3ZPU@hotmail.com.

3 On Sunday 29 July the Colchester Radio and Computer Rally takes place from 1000 at St Helena School, Sheepen Road, Colchester. Details from James, M0ZZO, 01255 242 748, or by email to James@M0ZZO.com. More details of these and future events can be found on pages 88 and 89 of the August edition of RadCom.

Now for the news of special events From 29 July to 4 August Hampshire Scout Centenary will be putting on a special event station GB0HSC. It will operate on HF and VHF close to the scout frequencies operated with the assistance of Itchen Valley Amateur Radio Club. Special event station II1TS will be active on the HF bands SSB, CW and FSK from Genova until 31 July for the Tall Ship Races 2007. QSL via IZ1GJK, direct or bureau. Information on the event and the relevant award can be found at http://www.assoradiomarinai.tk/ To mark the 100th anniversary of Scouting, special event station GB100J will be active from 27 July until 7 August. Operating from Hylands Park, Chelmsford, the station is expected to be on air 24 hours per day on 80m through to

6m. Depending on the availability of an Internet connection, the station also hopes to be active on Echolink. More details at www.radioscouting.org.uk. Special event station 8J1ESP will be operated on 40, 20, 15 and 10 metres by PY3DF, JA1FXZ and a group from the International League of Esperantists Radio Amateurs between 31 July and 31 August. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources. Iain, M0PCB and Chloe, 2E1IDT, will be active as MJ0PCB and 2J1IDT from Jersey (EU-013) until 31 July. Operation will be QRP with small portable antennas. They will also be active for parts of the IOTA contest. QSLs via the bureau to their home calls, or direct to M0PCB. Jorge, EA8TL, will be active as EA8TL/EA6 from Ibiza and Formentera, Balearic Islands (EU-004) from 31 July to 24 August. He plans to operate on 80, 40, 20, 17, 15, 12, 10 and 2 metres SSB. Laci, HA6NL, Gyuszi, HA2VR, Zsolti, HA6PS, Sanyi, HA7JJS and Laci, HA7PL, will be active as 9A6NL and 9A/homecall from Pasman Island (EU-170) until 31 July. They will operate CW and SBB plus some digital modes as well on the HF bands and 6 metres. All of them will participate in the IOTA Contest with different calls, in different categories. QSL 9A6NL via HA6NL, others via home call, direct or bureau. The FM Ham Radio Association, FM.HAM.R.A, will be active on 80, 40, 20, 17, 15, 12 and 10 metres SSB, RTTY and PSK31, plus 6 and 2 metres as TO1YR from 29 July to 5 August for the annual Tour des Yoles Rondes de la Martinique. QSL via FM1HN. Giovanni, IW7DOL, reports he will be active as SV8/IW7DOL from Kerkyra Island (EU-052) from 28 July to 2 August. Jim, MM0BQI, will be active as MM0BQI/p from Tanera Mor, Summer Isles (EU-092) until 4 August. He plans to operate CW, SSB and RTTY on 80 to 10 metres. QSL via home call, direct or bureau. Caudio, IN3DEI/ W1ADX, will operate holiday style as 9A/W1ADX from a few Dalmatian islands, Dugi Otok, Molat, Pasman, Ugljan in the EU-170 IOTA group from until 7 August. QSL via IN3DEI.

4 Now the contest news The RSGB 70MHz activity takes place on 31 July from 2000 to 2230 local on the 70m band, all modes. The exchange takes the form of RST, serial number and locator. The European HF Championship takes place on 4 August at 1200 to 5 August at 2359 on the 1.8MHz to 28 MHz bands, on CW and SSB modes. The exchange takes the form of RST and year first licenced. The RSGB Ropoco 2 Contest takes place on 5 August between 0700 to 0900 on 3.5MHz band, CW mode. The exchange takes the form of RST and serial number. The RSGB 144MHz Low Power Contest takes place on 4 August between 1400 to 2000, all modes. The exchange takes the form of RST, serial number, locator and postal. The RSGB 432MHz Low Power Contest takes place on 5 August between 0800 to 1200 on all modes. The exchange takes the form of RST, serial number, locator and postal. Now the solar factual data for the period from 16 July to 22 July, compiled by Neil Clarke, G0CAS The only sunspot visible at the start of the period gradually decayed to a single spot by the 19th, also on the 19th it rotated out of view. The solar disc then remained spotless. Solar activity was very low with no solar flares taking place. Solar flux levels declined from 73 units on the 16th to 66 by the 21st. The average was 69. The 90 day solar flux

average remained unchanged at 74 units. X-ray flux levels remained below the minimum A1 level everyday. Geomagnetic activity started at quiet levels with an Ap index of only 3 units on the 18th and the 19th. As forecast, a coronal hole disturbance arrived on the 20th and lasted into the 21st. The Ap index was 12 units on both days. The average was Ap 6 units. The ACE spacecraft saw solar wind speeds increase from 300 kilometres per second to 570 by the 21st. Particle densities were low except for a sharp rise to 63 particles per cubic centimetre around midday on the 20th. Bz varied between minus 2 and plus 1 nanoTeslas on the quiet days and between minus 11 and plus 12 nanoTeslas on during the disturbance. HF band conditions were what could be expected on some days. However, particularly during the disturbances conditions were poor. Sporadic E took place everyday and increased activity on 28 and 50MHz. Some auroral reports were received from stations in the far north.

And finally the solar forecast. This week the slightly more active side of the Sun is expected to rotate into view. However, solar activity should continue at predominately very low levels. Solar flux levels are expected to remain in the 70's. Geomagnetic activity should be mostly quiet except for a small recurring coronal hole disturbance which should take place on Tuesday. MUFs during daylight hours at equal latitudes are expected to be around 19MHz for the south and 16MHz for the north. The darkness hour lows should be about 10MHz. Paths this week to South America should have a maximum usable frequency with a 50 per cent success rate of around 23MHz. The optimum working frequency with a 90 per cent success rate will be about 21MHz. The best time to try this path will be between 1200 and 2100 hours UTC. Sporadic E should take place most days, but now openings on 144MHz will become less frequent. And that's all for this week from the propagation team.

5 Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies can be found on the RSGB website, including e-mail addresses

and website links where known.

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Sunday 29 July Basingstoke Amateur Radio Club is having a foxhunt. Contact Frank, M0AEU, by email to barc@2lo.info.

On Sunday 29 July Hilderstone Radio and Electronics Club is having a WOK event field day. Contact Mike, G4MIX, on 01304 813 175, g4mix@waitrose.com.

On Wednesday 1 August Chesham and District Amateur Radio Society is having a general meeting. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 1 August Dover Radio Club School is having a social evening at the Marquis of Granby, Alkham. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 1 August Fareham and District Amateur Radio Club is having a natter night and is operating with G3VEF/G8KGI. Contact Jim, M1JJN.

On Wednesday 1 August Havering and District Amateur Radio Club is having a talk on technical topics by Oliver, G3TPJ. Contact Dave, 2E0EBV, on 07956 594 514.

On Wednesday 1 August Horsham Amateur Radio Club is having a fox hunt all members welcome. Contact information at www.harc.org.uk.

On Wednesday 1 August Norfolk Amateur Radio Club is having a talk by Dave Wilkins, G5HY, from Kenwood UK Communications Division . Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Wednesday 1 August Southdown Amateur Radio Society is operating at Halisham. Contact John, G3DQY, on 0124424319, or by email to vaughdqy@aol.com.

On Wednesday 1 August Worthing and District Amateur Radio Club is having a session on how to keep up to date with the advance exam questions. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 2 August Cray Valley Radio Society is having its summer bbq at the Bull in Shooter's Hill. Contact Bob, BRS32525, on 020 8265 7735 after 8pm.

On Thursday 2 August Horsham Amateur Radio Club is having a talk on The Mechanics of Orbits by Ron Polly, G3PYC, or on the web at www.harc.org.uk.

On Friday 3 August Cambridge and District Amateur Radio Club is having a valve test evening. Contact David, G8JKV.

On Friday 3 August Crystal Palace Radio and Electronics Club is having a talk on home construction techniques. Contact Bob, G3OOU, on 01737 552 170.

6 On Friday 3 August Mid-Sussex Amateur Radio Society is having its Chairman's bbq. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 3 August Torbay Amateur Radio Society is operating GB60TR. Contact Dave, G6FSP, by email to g6fsp@tars.org.uk.

On Friday 3 August Wey Valley Amateur Radio Group is having a club night and a talk on mobile working with a difference by Olof Lundberg, G0CKV. For more information log onto www.weyvalleyarg.org.uk.

On Friday 3 August Wimbledon and District Amateur Radio Society is having its club bbq at summer camp. Contact Jim, M0CON, on 020 8874 7456.

On Saturday 4 August Gorleston Amateur Radio Society is having a lunch meeting at the Short Blue public house, Gorleston High Street. Contact David, G3OEP, on QTHR, 01493 662 323.

On Sunday 5 August Leiston Amateur Radio Club is having a LARC foxhunt and bbq at Blaxhall Village Hall. Contact Dave, G4HUP, on 01473 737 717, g4hup@btinternet.com.

On Sunday 5 August Surbiton Heritage Amateur Radio and Electronics Society is having a combined on the air day and CADS broadcast (local school venue). Contact Tony, G7DGW, on g7dgw@shares.uk.net, or on the web at www.shares.uk.net.

NEWS FOR THE SOUTH-WEST

On Wednesday 1 August Cornish Radio Amateur Club is having a meeting on the live demo of BHI noise cancelling loudspeaker. Contact Ian, 01872 561 058.

On Wednesday 1 August South Bristol Amateur Radio Club is having a workshop on Multimeters. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 1 August Thornbury and South Gloucestershire Amateur Radio Club is having a pedestrian amateur radio foxhunt in the Thornbury area. Contact Tony, G0WMB, by email to tonytsgarc@beeb.net.

On Thursday 2 August Saltash and District Amateur Radio Club is having a bbq. Contact Brian, M0BHG, on 01752 844 321.

On Thursday 2 August Yeovil Amateur Radio Club is having a talk on which HF bands to use. Contact Gary, 2E0BFJ, g.swain@tesco.net.

NEWS FOR THE MIDLANDS

On Monday 30 July Stourbridge and District Amateur Radio Society is having a discussion on sheep walks and a bbq. They will also be on the air. Contact John, M1EJG, on 01562 700 513.

On Tuesday 31 July Derby and District Amateur Radio Society is on the air. Contact Martin, G3SZJ, on 01332 556 875.

On Tuesday 31 July Loughborough and District Amateur Radio Club is having their 5th DF of 2007 - 160m. Contact Chris, G1ETZ, on 01509 504 319.

On Tuesday 31 July Worcester Radio Amateurs Association is operating at sunrise camp Scouts Centenary at Rhydd Covent. Request details by email to info@wraa.co.uk.

7 On Thursday 2 August Lincoln Short-Wave Club is operating as GB2CWP at the BBC Antiques Roadshow at East Kirkby Aviation Centre. Contact John, G1TSL, on 01526 323 153.

On Thursday 2 August Salop Amateur Radio Society is having a mini talk by G3ZG Capacitors and ESR. Contact Glenda, G1YJB, on 01939 235 412.

On Friday 3 August Coventry Amateur Radio Society is having a talk on the Coventry Watch Museum. Contact John, G8SEQ, on 02476 273 190, or by email to johng8seq@ntlworld.com.

On Friday 3 August Hucknall Rolls-Royce Amateur Radio Club is on the air. Details on the web at www.hrrarc.com.

On Saturday 4 August Lincoln Short-Wave Club is having a Hamfest setup. Contact John, G1TSL, on 01526 323 153.

On Sunday 5 August Lincoln Short-Wave Club is having a Lincoln Hamfest at Newark Showground. Contact John, G1TSL, on 01526 323 153.

NEWS FOR THE NORTH OF ENGLAND

On Monday 30 July Sheffield Amateur Radio Club is having a talk on satellites. Contact Trevor, M0TWS. On Monday 30 July South Manchester Radio and Computer Club is having its monthly technical forum. Contact Ron, on 0161 969 3999.

On Tuesday 31 July Chester and District Radio Society is having a pie and pint night at the Helsby Arms. Details on the web at www.chesterdars.org.uk, info@chesterdars.org.uk.

On Tuesday 31 July Halifax and District Amateur Radio Society is having its technical evening at Rishworth School. Contact Brenda, 2E0YKS, by email to wrenuk10@yahoo.com.

On Wednesday 1 August Great Lumley Amateur Radio and Electronics Society is on the air. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Friday 3 August South Manchester Radio and Computer Club is holding the "Ged and Zed Show" with G8RSI and G4EDM. Contact Ron, on 0161 969 3999.

On Friday 3 August Tynemouth Radio Club is having an operating and Morse night. Contact Tony, G8YFA, by email to tonyregnart@blueyonder.co.uk.

NEWS FOR SCOTLAND

On Thursday 2 August Aberdeen Amateur Radio Society is having a junk sale. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

On Thursday 2 August Border Amateur Radio Society is having a surplus gear sale. Contact Ray, GM0CDV, on 01573 228730.

On Friday 3 August Cockenzie and Port Seton Amateur Radio Club is having a club night. Contact Bob, GM4UYZ, on 01875 811 723.

8 NEWS FOR WALES On Monday 30 July St Tybie Amateur Radio Society is on the air operating on GC0VPR. Contact Eileen, 2W1BPS, on 01550 777 234, eileenm@fsmail.net, or on the web at www.s-t-a-r-s.co.uk.

On Saturday 4 August St Tybie Amateur Radio Society is having an open day. Contact Eileen, 2W1BPS, on 01550 777 234, eileenm@fsmail.net, or on the web at www.s-t-a-r-s.co.uk.

NEWS FOR NORTHERN IRELAND

No news items have been received for Northern Ireland this week. And that's the end of this week's GB2RS news broadcast,

prepared by the Radio Society of Great Britain.

The only valid "proof" of code proficiency is a practical demonstration on the
air. If we can hold a QSO (actual speed is not important), then you've passed
my code test. Your license class is of no importance in this.

"....contributed to the hobby"?

I hear a lot of "active" hams (regularly on the air) whose "contribution" is
"59 Old Man, QTH here is Resume Speed, Arizona, and the name is Broken Old
Bottle. Sebentee Tree. XYL is calling me for lunch". Good for them. They're
enoying themselves.

I don't think "being active" has any direct correlation to "contributed to the
hobby in the recent past".

Most of us are involved in the hobby for our personal enjoyment, no more, no
less. Some small percentage may consider that they are "contributing".....
good for them, but such noble purpose isn't a requirement to be considered
"active".

Then they're obviously not properly motivated and not "contributing to the
hobby", and clearly not active in fishing.

Like "active", "contributed to the hobby" requires a definition (which I
didn't provide).

> I don't think "being active" has any direct correlation to "contributed to the
> hobby in the recent past".

An iteresting idea. I was equating "active" with "contributed to the
hobby". This is, perhaps, naive.

Back when I was a kid, I listened to hams on the air, and was motivated
to get my license. I wonder if people today, listening to much of what
I hear on the ham bands, would be motivated to get involved in the
hobby. Are these guys "contributing to the hobby"? I do wonder.

> Most of us are involved in the hobby for our personal enjoyment, no more, no
> less. Some small percentage may consider that they are "contributing".....
> good for them, but such noble purpose isn't a requirement to be considered
> "active".

You are, reasonably, interpreting my words in a different way than I
meant them. I was equating "generating RF on the ARS frequencies" with
"contributing to the hobby". I was actually trying to be more liberal
and include the folks whose interests involved designing or building
equipment (whether they used it or not on the air) or other positive
contributions like teaching classes, being active in their local club,
and so on.

Now that you mention it, I realize that "contributed to the hobby" and
"active" can be quite different. The malicious jammer, or the frequency
policeman on 75 meters, are "active". They may not be contributing to
the hobby.

Food for thought.

Back in 2000, when the FCC lowered the code speed to 5 WPM and restructured licenses, there was an article in one ham magazine, I think CQ, proposing an exam for Extra hams to take which would demonstrate current lack of knowledge about Extra material, thereby demoting these Extras back to Advanced. That way their license listing would show the world that they passed a code test faster than 5 WPM.

The article did caution would-be test takers to make sure they didn't miss too many questions on that exam, lest they be demoted all the way to Technician!

Irish Radio Transmitters Society
Radio News Bulletin

Sunday July 29th 2007

Theory Examination

The results of the theory examination for the Experimenter's Licence held on the 28th of June were issued by ComReg on Tuesday last. Of the 45 candidates who sat the examination 23 passed. Congratulations to all those who passed and we hope to welcome them on the air very soon. We wish those who were unsuccessful the best of luck at a future attempt.

Five examinations have been held since the IRTS took over responsibility for the exam process just over two years ago. In that period 111 candidates have sat the examination and of these 67 were successful. The arrangements negotiated between ComReg and the IRTS for the running of the licence examination are working very smoothly and have at last put the examination process on a firm footing.

Church Broadcasts

Last week we carried an item telling you that it has now been established that a church broadcast is being transmitted on 28.105 MHz FM in the Dublin area. Some further work is required to identify the Church concerned. Mass is transmitted at 0900, 1000 and 1100 local on Sundays and at 1000 on weekdays. Initial bearings would indicate that the transmissions are originating somewhere on the northside of Dublin.

It would help greately if bearings on the station from areas such as Blanchardstown, Malahide and the north side generally could be provided, as these would help to further pin down the general area from which the transmission originates. The local Church notices can be of assistance in positively identifying the Church concerned. If you cannot identify the station and you have a beam antenna you could take a bearing on the

peak signal from anywhere in the greater Dublin area which in conjunction with similar bearings taken by other stations could help in locating the source of the transmission. Stations located outside Dublin should listen on FM the lower end of the 28 MHz band generally to see if any unauthorised activity is taking place in the band in their areas.

If you hear anything worth reporting you should send a report to Thos Caffrey EI2JD the IRTS Intruder Watch coordinator at QTHR or to ﷺthoscaffrey at hotmail dot comﷺ with a copy to Sean Nolan EI7CD at QTHR or to ﷺei7cd at gofree dot indigo dot ieﷺ. The report should include date, time, frequency, signal strength, possible location of station if identified, beam heading in degrees from true north and any other relevant information. If the station is identified from an announcement of local events, details should be given. Should you hear anything, no action should be taken other than forwarding a report as requested.

It is in our own interests to identify any unauthorised activity so as to preserve the exclusive nature of the 28 MHz allocation. The matter has already been reported to ComReg who will act on the matter if we can provide appropriate information.

South Dublin Radio Club

South Dublin Radio, EI2SDR is closed for the next two weeks. Classes are continuing in two weeks time at SDR. Anyone interested are welcome to attend. Classes run from 8 p.m. to 10 p.m. at the Ballyroan Community Centre during the club meeting.

Tipperary Amateur Radio Group

The next meeting of the Tipperary Amateur Radio Group will take place on Thursday next the 2nd of August at 8.00 pm ,All are welcome.

South Eastern Amateur Radio Group

The next general meeting will take place on Monday the 30th of July at 8.00 p.m. in the Roanmore Centre, Waterford. Congratulations to all those on the SEARG theory course who recently passed the test. Anyone requiring help in filling out the application forms are welcome to come along to Mondays meeting where members

will be happy to give assistance.

Field Days and Contests

The 2 metres counties contest will take place on the 26th of August. The SSB field day will take place over the first weekend (1st and 2nd) of September. Again the grounds of Garbally College, Ballinasloe, Co. Galway will be available, thanks to Niall EI4CF and once again the Shannon Basin Club will be hosting their now famous Barbeque. Of course, the big event will be CQIR over the last weekend, so plenty to look forward to.

Please note that the deadline for submission of logs for the VHF/UHF Field Day is the 7th of August.

Foyle and District ARC Rally

The Foyle and District Rally will take place on Sunday the 4th of November 2007 at the White Horse Hotel, Derry, 3 miles from Derry on the main Limavady Road. Doors open at midday. The club's web address for more information is www.mn0aku.org.uk.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to ﷺ for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday﷽s bulletin.

The derisive comment above sounds like that of my very sarcastic
brother who, in spite of holding an extra class license for many
years, hasn't been on the air for the same very many years because he
doesn't want to talk to hams who sound like that, thereby assuming
that all hams do.
>
>Like "active", "contributed to the hobby" requires a definition (which I

Hams who sound like the above "contribute to the hobby" by:

(a) occupying spectrum space which otherwise would show up as
"unoccupied" , i.e. available for grabbing by some "untouched-by-
human-brain" electronic occupancy detector, and

(b) providing an example of what not to sound like on the air so that
newcomers will know what to avoid doing.

I've been saying that for months. If you take one step outside of
amateur radio circles, they know NOTHING about any changes to the
licensing system.

To a large extent, that is expected from those who aren't really interested in amateur radio. The word will filter slowly to the general public. I've been seeing a number of the ARRL "Hello" commercials recently, which is a help. But it will still take a while

I am a little surprised about those who are interested and still don't know.

>
> I just don't understand that at all.

The latest example for me was while getting a key made. THe fellow brehind that counter saw my PAQSO Party T-shirt, ans asked if I was a Ham. I told him yup, and we had a nice conversation about his wanting to become a Ham. He showed me the Morse Program on his Palm Pilot that he was using to study for the test. I told him that while he would still want to study it, He didn't need to learn Morse for the test because they didn't test for it any more.

Our talk moved on to other testing issues. I explained that our club held test sessions at our monthly meetings, and suggested he come to one and do the test. He said "Maybe in a few months, because I still am not up to speed for the Morse code part of the test".....

>>> For example, I have had more than one Advanced tell me
>>> that s/he won't upgrade to Extra because the Advanced "proves" the

> operating conditions?
>
> Seems to me #2 is the better indicator.

Absolutely. If a person knows how to "walk the walk" then they are
there. What test they took is close to irrelevant. IMO, the Testing
process is the beginning, not the destination.

>>> Others have told
>>> me that they're sure FCC will eventually give Advanceds a free upgrade
>>> to Extra, so they're just waiting it out.
>

It's what I call positive thinking enhanced by not wanting to have to do
any work...

>> I'd tell them the same thing I told those who waited out element one's
>> demise: "If the wait doesn't bother you, then go ahead and wait." There
>> were people telling me to wait it out back in 1999 "because Element 1

>
> When I got my Extra in 1970, some folks said I was wasting my time and
> effort because "incentive licensing won't last - in a few years
> Generals will have all privileges again..."

Kinda another example of what I was talking about above. Even if they
were correct that the incentive licensing would go away, it's hard to
fault picking up knowledge.

>>> At least one I know feels
>>> insulted that it takes the same testing to go from General to Extra as
>>> it does to go from Advanced to Extra.
>> Oh my! Does this person want a special test made up just for him?
>
> Actually, yes - or rather, for all Advanceds.

Some of us might think that was a pretty hefty sense of entitlement!

>
>> Exactly what dud they see as insulting about having to take the same
>> test?
>
> He was angry that having passed the old Advanced written did not carry
> any testing credit towards Extra.

Wow. I guess that the only way to sate this fellow might be to throw
away a lot of the questions. Of course then he might be angry that he is
paying the same that a General pays to upgrade! He'd be paying more per
test question! ;^)

> Sooner or later, the last of those closed-off licenses will disappear.
> It may take a very long time, though - the number of Advanceds today

>> actually a harmful thing in that respect.
>
> IOW: "if you're going to change the rules, change 'em! Don't take
> 3-1/2 years to make such a simple change!"

Absolutely. While I didn't win the poll that we had a long time ago in another group, I wasn't all that far off. It should have only taken 6 months, a year tops. Even then, it could have been more like "this is what is going to happen then, instead of being a minor mystery until the end.

> Also takes compromise.

Jim, that is an excellent proposal. I think it might be a great way to keep the league in (better?) touch with the Ham community. It would certainly allow Hams to offer feedback and interactivity. It would be a semi-direct conduit, coordinated by the organization(s).

translation by: Bob, DL7VOA
(e-mail: dl7voa@darc.de)

CU - AZORES ISLANDS, EU-175
Jorge,CT1FMX, Mary,CT1YTS, and J. Vitor,CU3EQ, will use the call CU3F
from Terceira Island (EU-175) working in SSB/CW/RTTY/PSK31 on 80-6m
from Aug 2-9. QSL via CT1FMX, direct or via bureau.

CY0 - SABLE ISLAND, NA-063
The next operation from Sable Island is scheduled for 2009 and is
already announced now to attract more sponsors for this expensive
DXpedition. Operators are still wanted as well. Following OPs already
confirmed their participation: Duane,WV2B (CW/SSB), Rich,AI5P (CW/SSB),
Dick,VE1AI (CW/SSB), and Scott,KA3QLF (RTTY/SSB). CY0ZZ is projected
to hit the airwaves with at least three stations on all bands from
6-160m. The DXpedition website is: http://www.sabledx.com

FG - GUADELOUPE, NA-102
David,FG/F1JXQ, will be QRV from Guadeloupe (NA-102) working in SSB
on 10m/6m/2m from 1000-1600 UTC on Aug 4-20. QSLs direct or as eQSL.

FW - WALLIS AND FUTUNA, OC-054
Mike,KM9D, and Jan,KF4TUG, were travelling through the Pacific area
during the last years and now showed up from Nukutapu (OC-054) shortly
before the IOTA Contest last weekend. Their calls are FW0MO (Mike) and
FW0YL (Jan) and they plan to stay there for quite some time.
QSL cards direct via OM2SA or via LotW.

JD1/MT - MINAMI TORISHIMA, OC-073
Alrady announced as JA6GXK/JD1, Masafumi finally became active from
Minami Torishima (OC-073) as JD1BMM. He has already bee spotted on 20m
in RTTY on 14.075 MHz and in CW on 14.050 MHz. See also DXNL 1528.
QSLs via his homecall JA6GXK.

SV9 - CRETE, EU-015
Marc,ON7SS/OO9O, announced his activity as SV9/OO9O/p during his

holidays from Aug 7-17. QSLs via ON7SS, direct or via bureau.

VP6 - PITCAIRN ISLAND, OC-044
Tom,ZL2HGR, hit the airwaves as VP6TD like announced in DXNL 1517
and intends to stay there until the beginning of september.

VP6AL (OP and QSL route: ZL1UFB) is another call from Pitcairn (OC-044)
enrichening the airwaves for the next six weeks. His name is Al and
he has already been worked in SSB on 20m.

FRANCE, SPECIAL EVENT STATION
TM0FIL is active on the bands between Jul 30 and Aug 12. QSL via F6KPQ.
More information can be found at: http://www.festival-interceltique.com

JAPAN, SPECIAL EVENT STATIONS
8J1A will be a special event station at the Amateur Radio Festival 2007
and can be worked from Aug 1-26. QSLs via the JARL bureau.

The Japanese foxhunters will activate the special callsign 8J3ARDF
between Aug 1 and Oct 21. QSLs via the JARL bureau as well.

DXCC: QSLs for the 2007 activity of 9U0X are accepted for DXCC credit now.

LINKS: Photos and video clips of the latest Market Reef DXpedition by OH0RJ,
SM0BSO, SM0LQB, SM1TDE and SM0EPO can be downloaded from the internet
at: http://www.sm0lqb.se/OJ0

The QSL database of OZ7C can be found online at http://www.ddxg.dk/oz7c
Since March 2007 it has seen 3.787 new entries and 1.417 updates and
lists 403.974 different QSL routes now.

The HAMATLAS (http://www.waz.hamatlas.eu) of Darek,SP6NVK, introduced
at this place before, has been updated with new maps showing exact
borders of the CQ zones now.

Current SOTA activities (mountain summits) are announced at:
http://sotawatch.sota.org.uk/activations.php or
http://sotawatch.sota.org.uk/spots.php

SILENT KEY

Axel Rohrbeck,DL7PR, a very wellknown German DXer passed away on
July 25, at the age of 65. Axel hold his licence since 1969, worked
the 5-Band-DXCC (#86) only two years later, had a Full House DXCC in
SSB/mixed and missed only North Korea (P5) in CW.

UPCOMING CONTESTS

Aug 4: EU HF Championship
Aug 4/5: DARC VHF Summer Fieldday

IOTA collected by Fredy,DE0MST (e-mail: iota@dxhf.darc.de)

Island activities:
NA-235(p), Semidi Islands, NA-238, and South Alaska Centre Group:
Lanny,W5BOS, plans two IOTA activities from Alaska from Aug 2-7.
The first activity as W5BOS/KL7 will take place from an island within
the Semidi Islands (NA-238). The second activity as W5BOS/ALO will take
place from Unavikshak Island. All QSLs via N6AWD.

EU-123, GM, Scottish Coastal Islands: Some members of the Ayr and Kilmarnock
Radio Club (GS0AYR) plan to hit the airwaves with two stations from the
island Ailsa Craig (SCOTIA DI01) on Aug 5. QSLs via GM7OKX.

EU-123, GM, Scottish Coastal Islands: Andre,GM3VLB, intends to activate
five different islands: Eilean Hoan, Rabbit Island, Eilean Nan Ron,
Stroma Island and Neave Island (EU-005) during the end of July and the
beginning of August. QSLs via homecall (direct).

I suspect that that's what the ARRL thinks they're doing now.

The problem is that on any issue that's controversial, step 6 is going to be tough, if not impossible. Think of how hard it is to get a "compelling majority of support from the amateur community" on the issue of what the code requirements should be for the various classes of license.

> If all that were done, FCC would assign an RM number and then be
> flooded with supportive comments. FCC could then easily rubber-stamp
> approval of the proposal.

Contentious issues tend to split the amateur radio community into segments that are unlikely to agree on any single proposal. No matter what you end up with, there is going to be a significant fraction of the fraternity that will file negative comments.

For example, I have to wonder whether the regulation by bandwidth proposal died because the ARRL didn't work hard enough for consensus, or because the amateur radio community is simply opposed to any regulation by bandwidth proposal. I honestly don't know; perhaps if ARRL had worked harder for consensus, there would have been less negative comments filed.

Then there are the comments from the NON-ham-radio community. BPL, for example . . . there are plenty of segments that will file comments against whatever the ARRL might come up with. There's nothing that they can do about that.

> But doing it that way takes a lot of grunt work, time, and effort.
> Also takes compromise.

And without the compromise, the work, time, and effort go for naught. I have not observed that hams, in general, are eager to compromise.

Certainly correct, Steve. I think what we need to eventually get into
is that sometimes decisions need to be made, and if we can make them as
democratically as possible, then we have done the best we can. There is
a subculture within amateur radio that sees every change as a life
threatening problem.

I think that the regulation by bandwidth's death was a hint of how the
process could work.

>> If all that were done, FCC would assign an RM number and then be

You're right, and I sometimes wonder about that. We still have people
complaining about age-old grievances. It would be great to evolve the
service from members carrying lifetime grudges to one in which they

accept what happens and if they don't like it, work to change it - but give up old battles which mean nothing any more. Kind of like those Hams that Jim was speaking of who wouldn't test because of wanting to prove they took a "harder test" than someone like me. Or not upgrading because of taking the same written that I did when I went from General to Extra.

I suspect that there was a lot of opposition to the proposal. I know most of what I heard or read about was ramifications of what would happen if it were to be accepted.

> Then there are the comments from the NON-ham-radio community. BPL, for
> example . . . there are plenty of segments that will file comments

BPL unfortunately is another nasty kettle of fish. As something that happens both outside and inside of amateur radio, it will get commentary from both ham radio and outside users.

>> But doing it that way takes a lot of grunt work, time, and effort.

>
> And without the compromise, the work, time, and effort go for naught. I
> have not observed that hams, in general, are eager to compromise.

You are correct in that. I think that maybe the tide might be turning in that respect - at least I hope so. In any political atmosphere - and for better or worse, we are stuck in one - when no one compromises, it is a great failure mode. If not right away, all we have to do is wait.

I've seen them on Discovery and the History Channels. That was probably pretty well targeted demographic-wise. They had a basic "Hello" commercial, in which a number of people repeated the theme, and they had one about emergency communications. Both were well done commercials.

I'd guess that he simply didn't understand you.

Remember that we have had no-code-test ham licenses in the USA for 16
years now. But we've only hand no-code-test ham licenses in the USA
for five months!

Actually I would say it was relevant the other way - if a person
passed a test once upon a time, but couldn't pass it today. I am
particularly concerned when I read or hear hams say they could not
pass the current exams for the licenses they hold!

> IMO, the Testing
> process is the beginning, not the destination.

I disagree. It's not a destination, it's a journey.

> > When I got my Extra in 1970, some folks said I was wasting my time and

Sort of. If you don't have an HDTV, but want one, and you thought the
price would drop significantly in the near future, you'd probably wait
a bit.

However, it's been 37 years since I was told that incentive licensing
would go away soon....

I think the only thing that would have made him happy would have been
to either auto-upgrade all Advanceds to Extra with no test, or to keep
alive the old Element 4B just so Advanceds could take it instead of
Element 4.

I remember when the treaty changed in 2003, and the ARRL story on it
said the process would take two years. I thought that was wildy
exaggerated. Turns out it was short by over a year.

It's not just ARRL that I'm referring to - it's anyone writing a
proposal.

With all due respect, it may be what they think they are doing, but
it's not what they *are* doing.

For example, was the original "Regulation By Bandwidth" proposal shown
in QST and on the website where it could be seen by all? I don't
recall that - instead, I recall it being described, but not the whole
text given out.

Was there a questionaire of all ARRL members about the proposal
before it was sent to FCC?

Were the results of such research published, and the proposal modified
because of it?

> The problem is that on any issue that's controversial, step 6 is going
> to be tough, if not impossible. Think of how hard it is to get a
> "compelling majority of support from the amateur community" on the issue
> of what the code requirements should be for the various classes of license.

I think the biggest part of that difficulty is lack of clear
communications.

Imagine if there had been a detailed survey of all ARRL members, or
all US hams, on that very subject back in 2003 or so.

Imagine if the results of such a survey were made public, so that
everyone could see that X percent of US hams support Y amount of code-
testing for license class Z

Imagine if a proposal were crafted to follow that information, and the information presented to FCC along with the proposal.

And imagine if there were creative options proposed on divisive issues. For example, look at how Canada solved the Morse code test issue. Why wasn't something like that proposed by ARRL? (I put it in my comments, btw).

> > If all that were done, FCC would assign an RM number and then be

Of course. But having a significant fraction opposed is a lot better than having a *majority* opposed!

> For example, I have to wonder whether the regulation by bandwidth

> because the amateur radio community is simply opposed to any regulation
> by bandwidth proposal. I honestly don't know; perhaps if ARRL had
> worked harder for consensus, there would have been less negative
> comments filed.

I think it's a combination of factors.

First off, the "RBB" proposal would have allowed data modes in the 'phone subbands. A lot of hams didn't like that, even though RBB also widened those subbands.

What really ticked off a lot of folks was that RBB would have changed the rules on "robot" data stations.

The kicker, IMHO, was that ARRL did not do the hard work to get the support *before* submitting the proposal. All that did was galvanize the opposition to action.

And it's not just an ARRL problem. Look at the "Communications Think Tank" proposal, and how much opposition it generated! Made RBB look popular by comparison.

> Then there are the comments from the NON-ham-radio community. BPL, for
> example . . . there are plenty of segments that will file comments
> against whatever the ARRL might come up with. There's nothing that they
> can do about that.

No, there isn't. But if you look at the various Part 97 RM and NPRM comments that have come down the pipe in the past decade or two, the vast majority are from already-licensed hams. It's really a rare event when a nonham sends in comments.

> > But doing it that way takes a lot of grunt work, time, and effort.
> > Also takes compromise.
>
> And without the compromise, the work, time, and effort go for naught. I
> have not observed that hams, in general, are eager to compromise.

Well, we'll have to disagree about that. What I've seen is that people in general and hams in particular are willing to compromise *if* what is proposed is a true compromise - which means you give some and you get some.

For example, consider again the RBB proposal. It offered the HF 'phone op slightly wider subbands - and the possibility of having to deal with wide data signals from robots all over those subbands! Not a good compromise.

Or consider the CW op. RBB offered *narrower* subbands and the possibility of robot QRM all over those narrower subbands! (Yes, I know CW can legally be used anywhere, but how much actual real CW operation goes on in the 'phone subbands?)

The end result was a coalition of "NO!"

Now suppose RBB had included things like a slice of CW-only space for the CW ops, a slice of no-data space for the 'phone ops, and a slice of "all modes" space for everybody. The result might have been very different.

The big mistake ARRL (and CTT, and many others) make is that they don't really know how popular their proposals are *before* submitting them to FCC.

Whatever is the point of *any* amateur radio group submitting a Part 97 proposal that generates 70, 80, 90% negative comments? All that does is annoy FCC, IMHO.

The way I see it is that indeed the proposal was a big mistake. The folks who were all about the robot stations effectively took over the process, and hoped to push things through with their agenda intact.

This is not an unusual thing. Many different groups see their own interests as paramount to the "big picture" in Ham radio (though it isn't exclusive to the ARS) I've sat through lectures from Emergency Operation fans on how amateur radio MUST change to acommodate their particular view. Pro contesters/anti contesters, the different folks involved all have a vision of what the service needs to be.

In the case of the RBB, the big picture was circumvented, and the result was predictable and hams did their job. Some people look at it as a failure. I look at as a shining success. A bad idea was beat down.

Of course, after being chased around the bands by some of those stations while trying to enjoy some psk31, I suppose that would be natural on my part. ;^)

I don't know if 'the folks who were all about the robot stations' took
over the process or not. But that doesn't matter.

What I do know is that there was a widespread *perception* that RBB
was "all about robots" and conducted behind closed doors. That
perception was pure poison when comment-time came around. It
galvanized so many hams into writing anti-RBB comments that the good
parts of the proposal were lost in the uproar.

The really sad thing is that the BoD, who OK'd the proposal, didn't
see all that ahead of time.

> This is not an unusual thing. Many different groups see their own
> interests as paramount to the "big picture" in Ham radio (though it
> isn't exclusive to the ARS)

Of course.

And the way you get around that sort of resistance is to let all
groups have their say, and come up with proposals that give everybody
something of what they want.

> I've sat through lectures from Emergency
> Operation fans on how amateur radio MUST change to acommodate their
> particular view. Pro contesters/anti contesters, the different folks
> involved all have a vision of what the service needs to be.

Sure. And they're almost all right! The trick is to make room for
everyone.

For example, I think WinLink/Pactor/robots are a great thing in
Amateur Radio. I think many of our rules on them are outdated and in

need of rewriting. I even think the "no-data-in-the-phone-bands" rule has to go.

But at the same time, I do not think that simply allowing robot operation everywhere is a good thing. That's why I opposed both RBB and CTT.

> In the case of the RBB, the big picture was circumvented, and the result
> was predictable and hams did their job. Some people look at it as a
> failure. I look at as a shining success. A bad idea was beat down.

It was a failure in my view because:

1) A lot of good ideas in RBB were beat down too
2) The beat-down of the bad ideas should have happened *before* it was ever sent to FCC, not after.
3) The proposal asked a lot of hams to give something up, without giving them anything in return, or not enough in return. Meanwhile, other hams would gain something without giving anything up. Or at least it seemed that way to many hams.

This is why proposals like RBB and CTT go nowhere, IMHO.

Suppose somebody came up with a composite mode that combined SSB voice and a PSK31-like data mode in a bandwidth of less than 3 kHz. I think that would be a good thing for Amateur Radio, and under RBB it would be legal. Under current rules it's not allowed on US HF amateur radio, though, and with the mess created by RBB and CTT, it won't be for many years to come.

IMHO, one of the reasons it takes *years* for FCC to make even simple changes to Part 97 (like dumping the code test) is because we USA hams don't get our act together before sending proposals to FCC.

Look at how Canada handled the code test thing. They sent out surveys, got ideas, and put together an innovative plan that generated consensus among VE hams. Only when they could point to hard numbers about how much widespread support their was for their proposal did they send it to Industry Canada.

And Industry Canada put the change in place with little hassle. The whole process was a done deal long before the USA got around to changing Part 97, and IMHO the Canadian change generated less animosity among VE hams than the USA process did here.

Amateur Radio Newsline(tm) Report 1564 - August 3, 2007

Amateur Radio Newsline report number 1564 with a
release date of Friday, August 3, 2007 to follow in 5-4-3-2-1.

The following is a Q-S-T. The ARRL Board of
Directors say NO to lifestyle and checks of ham
radio volunteers. Also, the ARRL will not
revisit Regulation by Bandwidth right now, the
FCC says yes to a 700 MHz rescue radio bandplan
and NCVEC meets with the FCC. Find out the
details on Amateur Radio Newsline(tm) report number
1564 coming your way right now.

(Billboard Cart Here)

**

ARRL POLITICS: ARRL BOD SAYS "NO" TO BACKGROUND CREDIT CHECKS

The ARRL Board of Directors has issued a policy
statement saying no to the demand by served
agencies for lifestyle and financial background
checks on Amateur Radio volunteers. The action
came at the recent Board of Directors Meeting
held July 20th and 21st. Don Carlson, KQ6FM, is in Reno with more:

--

A major concern to the ARRL Board of Directors
was the topic of served agencies and background
investigations. An Ad Hoc Background
Investigation Committee empanelled by the ARRL
some time ago agreed that pursuing federally
recognized credentialing for Amateur Radio
volunteers was critical for the Amateur Radio
Emergency Service to function. The Committee
chairman, Atlantic Division Director Bill Edgar,
N3LLR, proposed that the Board adopt a policy
with regard to Memoranda of Understanding with the various served agencies.

After some discussion the Board did approve a
policy on this issue. One that says
communications volunteers participating in ARRL
sponsored programs should not be required by
served agencies to undergo background

investigations of any kind. The Directors did
however note that criminal background checks as
performed by law enforcement agencies are generally acceptable.

But the policy statement also seemed to refute
the American Red Cross demand that its
contractor, mybackgroundcheck dot com, be given
free reign to delve into a volunteers personal
finances and lifestyle. While the ARRL Board did
not name the American Red Cross in its policy
statement, to anyone familiar with the position
of the American Red Cross on this issue the
intent is hard to miss. The ARRL policy continues -- and we quote:

"It is not reasonable for a served agency to
require these volunteers to consent to credit
checks, mode of living investigations or
investigative consumer reports. In negotiating
or renegotiating Memoranda of Understanding that
commits the League to provide volunteer emergency
communications support, the League must be
assured that these volunteers will not be
required by the partner organization to consent
to credit checks, mode of living investigations
or investigative consumer reports." - End quote.

The ARRL policy stopped short of telling those
radio amateurs wanting to volunteer to agencies
that require credit and lifestyle checks not to
do so. That said, many hams will likely now
think twice before clicking away their financial
information to any group that wants them to work for free.

In Reno, I'm Don Carlson, KQ6FM, for the Amateur Radio Newsline.

--

The bottom line.: It appears that the ARRL Board
of Directors has now thrown the hot issue of
lifestyle and credit check demands back in the
lap of the American Red Cross and any other
served agency that might make such a demand of
ham radio volunteers. That also leaves the next
move is up to them. (Adapted from ARRL)

**

ARRL POLITICS: BOD VOTES TO EVEN ELECTION PLAYING FIELD

The ARRL Board of Directors has leveled the
proverbial playing field in regard to the
election process for Directors, Vice Directors
and Section Managers. This by clarifying the

Rules and Regulations concerning mass
communication of campaign material at the ARRL's
expense. Henry Feinberg, K2SSQ, reports:

For years, challengers in ARRL divisional
elections have claimed that incumbents have had
an unfair advantage in that they had access to
materials that the challenger did not. Now the
Board of Directors has acted to prohibit all
types of mass communications by any candidate
for these three offices where-in the ARRL winds
up paying any of the costs involved.

Specifically prohibited is any communications
where the material is distributed at League
expense by mail, electronic distribution
including Web sites, hand delivery or any other
means to League members in the particular
Division or Section involved in an
election. This if the material might reasonably
be expected to affect the outcome of the election during the campaign
period.

According to ARRL specialist Dave Patton, NN1N,
this basically means that all candidates running
for office candidates cannot use ARRL resources
to campaign. However, the new rule does not
prohibit a candidate from creating his or her own
materials and distributing them using any means
he or she may desire, as long as its done at the candidates own expense.

For the amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, in New York.

--

The new election rule is effective immediately. (ARRL, ARNewsline(tm))

**

ARRL POLITICS: ARRL ASKS COORDINATORS TO COORDINATE D-STAR

The American Radio Relay League has at least
tacitly endorsed the JARL-developed D-STAR
digital voice and data communications scheme for
relay system use on the VHF and UHF ham
bands. Its also asking current FM repeater
coordinators to both recognize and accommodate it
and other digital voice ciphers through the
formal coordination process. Bill Pasternak, WA6ITF, is here with more:

--

Though D-STAR and, to a lesser degree, APCO 25 protocols are gaining in popularity as a replacement for analog F-M repeaters, some coordinators have come to wonder to what extent either of these systems fall within the FCC definition of an Amateur service relay device? A repeater if you will.

But the ARRL is leaving that to be decided by the FCC at some later date if the regulatory agency ever chooses to do so. For its part the ARRL Board has requested that coordinators begin now to extend their efforts to recommend operating channels to digital voice systems and to consider the bandwidths that they actually required for successful operation.

Currently only Icom supplies D-STAR ham radio gear but other manufacturers are expected to quickly jump on the D-STAR bandwagon. Especially now that there are more than 60 D-STAR repeaters in operation across the United states and more on their way.

The main reason APCO 25 is lagging so far behind D-STAR is the licensing fee required by its codec patent owner. While the P 25 platform is public domain, the encoder decoder is not and carries with it a fairly steep cost. On the other hand D-STAR requires no license fee be paid. The Japan Amateur Radio League saw fit to put its technology fully in the public domain. Anyone with the ability to do so can design a codec for it, but it must be made available to anyone to use.

For the Amateur Radio Newsline. I'm Bill Pasternak, WA6ITF. I'm in the studio in Los Angeles.

--

How the more than fifty repeater coordinators nation wide will react to this ARRL Board request to coordinate digital repeaters will take some time to be known. The ARRL Board did thank all existing VHF/UHF frequency coordination groups for their efforts to promote orderly use of Amateur Radio frequencies. (ARRL)

**

RADIO RULES: ARRL WILL NOT REFILE NOW ON REGULATION BY BANDWIDTH

Sometimes its what you don't say that means a lot. While the ARRL is vocal regarding digital in the world above 50 MHz, it's a different story on the high frequency bands. This with word what the ARRL Board did not appear to even discuss

another petition to the FCC on the controversial
subject of Regulation by Bandwidth. Don Wilbanks, AE5DW, reports:

--

While the League has yet to make a formal
announcement, word leaked to the ham community by
those with knowledge of what transpired at the
recent ARRL Board of Directors meeting. They say
that the matter was only briefly touched on and
that the directors have at least unofficially
decided to take a wait and see position. This,
while the nations ham community continues to
discuss and debate the issue on the air and on-line.

It was only last April that the ARRL withdrew the
controversial November 2005 Regulation by
Petition for Rule Making RM-11306. It did so it
cited what it called "widespread misconceptions"
surrounding the petition as a primary reason for
deciding to remove it from FCC consideration. At
that time the ARRL left open the option of
refileing the same or a similar request in the
future, however it appears as if now is not that time.

But this does not mean the issue of Regulation by
Bandwidth is dead. Its quite conceivable that
one or more petitions asking for a change away
from designated subbands and over to some form of
regulation by bandwidth will be generated from
various interest groups within the ham community.

I'm Don Wilbanks, AE5DW.

--

As we go to air there are no Regulation by
Bandwidth petitions currently awaiting any action
before the FCC. (ARNewsline(tm), listener input)

Break 1

From the United States of America, We are the
Amateur Radio Newsline, heard on bulletin
stations around the world including the
Hamfesters Radio Club net serving Bedford Park, Illinois

(5 sec pause here)

**

ON THE AIR: 6 AND 2 OPEN THE LAST WEEK OF JULY

An amazing last week of July foir D-X on 6 and 2 meters. Hams around the world are reporting superb conditions in the world above 50 MHz that began on the 28th U-T-C.

For example, Scott Avery, WA6LIE, up in Silanas, California reports that he was alerted to the opening by his television set. That from 1600 to 2200 UTC he saw television channel 2 from Seattle with a clear picture and 59 audio. On the ham bands Scott says there were a lot of double and triple hop signals on both bands. At 2110 UTC he talked to VE6EGN ingrid square DO23 on 144.200 Mhz while running only 45 watts to a 13 element beam at 40 feet.

Meantime, Bob Brown, KR7O, says over the VHF Reflector that he made contact with stations in grids CM 97 and CM98 during that same frame of time. KR7O adds that at 2125 UTC that 6 meters was wide open again to Washington, Idaho, Montana and up into Canada as well.

On July 29th, at 23:53, Bob Cox, K4AVO, in central North Carolina reported over the 50 MHz Prop Logger that he was hearing the VE1SMU propagation beacon on 50.001. Its located in Halifax Nova Scotia almost a thousand miles away.

On the other side of the world, Hatsuo Yoshida, JA1VOK, in grid square QM05 reports hearing the BV2NT propagation beacon in Taipei, Taiwan also on 50.001 MHz. It was hitting his QTH in Chiba, Japan, with a very strong 599 signal.

And on July 30th Bob Cox, K4AVO, in Grid FM06 reported hearing CO8LY calling C-Q on 50.095 in C-W. CO8LY is located in Cuba.

Lots of D-X out there on 6 and 2 meters. All you have to do is fire up and keep an ear on the calling frequencies of 50 point 125 and 144 dot 200 MHz. Its there for you to enjoy. (ARNewsline(tm))

**

RADIO LAW: FCC CREATES INTEROPERABLE 700 MHZ RESCUE RADIO BANDPLAN

The FCC has revised its 700 MHz bandplan and service rules to promote the creation of a nationwide interoperable broadband network for public safety. The congressionally mandated change will also facilitate the availability of new and innovative wireless broadband services for consumers.

In a Second Report & Order adopted on Tuesday, July 31st, the Federal Communications Commission revised the band plan which runs from 698-806 MHz. This spectrum is currently occupied by television broadcasters but will be made available for other wireless services, including public safety and commercial use, as a result of the digital television transition.

The Digital Television and Public Safety Act of 2005 set a firm deadline of February 17, 2009, for the completion of the DTV transition. In implementing Congress' directive to reallocate the 700 MHz airwaves, the Commission was focused on serving the public interest and the American people. The service rules that the Commission has now adopted should help create a national broadband network for public safety that will address the interoperability problems of today's system. It should also provide for a more open wireless platform that will facilitate the emergence of next generation wireless broadband services in both urban and rural areas. (FCC)

**

RADIO TESTING: FCC AND NCVEC HOLD ANNUAL MEETING

The 2007 meeting of the National Conference of Volunteer Examination Coordinators and the FCCs was held in Gettysburg, Pennsylvania, on Friday, July 27. Amateur Radio Newsline's Bruce Tennent, K6PZW, tells us what went on:

--

There were 11 Volunteer Examination Coordinators represented at this years gathering between the National Conference of Volunteer Examination Coordinators and the FCC. Together these groups represent more than 98% of all examinations administered in the Amateur Service in the United States.

Also in attendance were FCC staffers Donna Scott, Sandra Eckenrode, Terry Fishel and Riley Hollingsworth. Bill Cross, W3TN, from the Wireless Telecom Bureau acted as moderator for the FCC discussions.

Cross first reviewed recent Commission decisions that have affected the VEC's including Wireless Telecommunications Bureau docket items 04-140 and 05-235. He was followed by Riley Hollingsworth who said that complaints have been greatly reduced over the past two years.

In his remarks Hollingsworth noted that enforcement of amateur service rules will continue to be a permanent part of the FCC's regulatory effort. He also noted that although the licensing structure is now simpler, that VECs remain vigilant.

Question Pool Committee Chairman Jim Wiley, KL7CC of the Anchorage VEC gave a preliminary report. He said that the committee is now looking ahead to revising the Element 4 question pool to be used for Extra Class written examinations effective July 1, 2008. The Question Pool Committee is planning to release the entire pool which will include the syllabus on or around December 1st of this year.

Another of the agenda items was a discussion on whether or not the NCVEC should develop a position and issue a statement about foreign language exams. In this regard the ARRL VEC made a motion that N-C-V-E-C approved Spanish language question pools and make them available in addition to the English language version. That motion did not carry.

For the Amateur Radio Newsline. I'm Bruce Tenbnent, K6PZW, in Los Angeles

--

The VEC Conference has been held annually since 1985 with the exception of 1999. The complete report on this years NCVEC and FCC meeting is on line on the front newspage at www.qrz.con (NCVEC, QRZ.COM)

**

ENFORCEMENT: HAM ASKED TO EXPLAIN HIS OPERATIONS

Turning to enforcement news, the FCC has written to Robert J. Langston, W2ENY, of Cornwall on Hudson, New York asking him to explain a complaint regarding the operation of his station. The FCC says that the complaint alleges transmission of recordings, including recordings of the radio transmissions of other operators, and false identification of transmissions.

The FCC says that if the information in its possession if true, it raises serious questions regarding Langston's qualifications to retain an Amateur license. It asks him to respond in detail to a number of questions regarding the complaint and to support his response with a signed and dated affidavit or declaration. One that under penalty of perjury, verifies the truth

and accuracy of the information submitted in his response.

The FCC also told Langston that his license is due for renewal in December of this year. As such the Commission the authority to obtain information from applicants and licensees about the operation of their station and their qualifications to remain a licensee. (FCC)

**

ENFORCEMENT: THAT FREQUENCY IS NOT FOR USE

The FCC is asking Frederick C. Severa, AH8I, of Pago Pago, American Samoa, to explain why he has been monitored as operating SSB on 7.055 MHz. This, back on February 12th of this year.

In its July 25th letter to Severa sent via the American Samoa DX Society in California, the Commission says that such operation may reflect adversely on his qualifications to retain an Amateur Radio license.

The letter directs Severa to contact the FCC within 30 days to discuss the matter with peial Counsel Riley Hollingsworth. It also asks Severa to verify his current address since the Commission's first attempt to contact him was returned as undeliverable. (FCC)

**

ENFORCEMENT: UNLICENSED OPERATION BRINGS $10000 FINE

A big fine for a Texan who put a radio on the air without FCC permission to do so. Again, Amateur Radio Newsline's Don Wilbanks, AE5DW, has more:

--

The FCC has issued a a monetary forfeiture in the amount of $10,000 to Michael Thomas McCollum of Houston, Texas. This for his alleged willful and repeated violation of Section 301 of the Communications Act by operating a radio transmission apparatus without a license.

By way of background, on May 23, 2007, the FCC's Houston Office issued a Notice of Apparent Liability for Forfeiture in the amount of $10,000 to McCollum. The FCC says that McCollum has not filed a response to the N-A-L. So based on the information before it, the FCC acted on July 13th to affirm the forfeiture.

--

McCollum was given the customary 30 days to pay or to file an appeal. (FCC)

RADIO EDFUCATION: FAR ANNOUNCES 2007 SCHOLARSHIP AWAR WINNERS

The Foundation for Amateur Radio has announced
the winners of 56 scholarships for the 2007
academic year. The list is far to long to
include here but will shortly be available in
numerous ham radio print publications.

The Foundation for Amateur Radio is a District of
Columbia based non profit organization
representing one 50 radio clubs along the central
Atlantic coast. The scholarships it administers
are open to all licensed radio amateurs who meet
the qualification and residence requirements of
the various sponsors More information about the
foundation and the scholarship program is on line
at www.amateurradio-far.org/ (FAR)

ON THE WEB: FREE ON-LINE REPEATER MAP LOCATOR FROM K5EHX

A new free service for those who want to know
where a repeater is located and its approximate
service area. Thanks to Tom White, K5EHX, in
Tulsa, Oklahoma, such a place in cyberspace now exists.

Toms repeater database is tied to Google Maps and
lets you search by tags, city, state or zip
code. Tom says that the original idea was to
make it easier to search for repeaters in a given area for planning a trip.

You can try it for yourself at
http://k5ehx.net/repeaters/ We did. Its fun and
it works very, very well.. (K5EHX)

**

EMERGING TECHNOLOGY: NEW DIGITAL HAM RADIO REMAILER FORMED

And a new cyberspace retailer dedicated exclusively to the emerging world of digital Amateur Radio communications has been formed on Yahoogroups. This e-mail reflector will primarily discuss the use of digital voice and data communication techniques on the VHF and UHF bands. Technology to be addressed will include D-STAR, APCO P25, packet radio including APRS, High Speed Multi Media, Wi-Fi, P-S-K and F-S-K. To join the group just take your web browser to http://groups.yahoo.com/group/illinoisdigitalham/ and follow the sign up instructions. (WB9QZB)

**

RESTRUCTURING - FOLOOW UP: DENMARK LICENSES 40 MHZ HAM RADIO BEACON ACTIVATED

A follow-up to last weeks story on Denmark's telecommunications regulator having approved a permit for a ham radio beacon on 40.021 MHz. According to OZ7IS, the OZ7IGY beacon came to life at 18.20 UTC on July 26th. The output power is 22 watts to a dipole antenna. That will shortly be changed to an omni-directional Turnstile radiator. The license for OE7IGY is valid for a year. Reception reports from around the world 64-oz-beacon go by e-mail to oz7is at qrz.dk (Southgate)

**

PUBLIC SERVICE: MARSGRAM SERVES KIDS AT CAMP

The Army MARS new Winlink Messaging System has provided real-life connections for some 200 boys and girls whose separation from family members had very special significance. Capt. Jeff Hammer N9NIC who holds the MARS call sign AAR5WL is an Afghanistan veteran. HE recently set up his portable MARS station at the Indiana Guard's Family Program Youth Camp at Camp Atterbury . He briefed each camper's family on sending a MARSgram.

MARSgrams are free radio messages that connect service personnel and their family and friends. As in many summer programs, phone calls and e-mail were not allowed. The MARSgram was Hammer's solution.

Before e-mail and the cell-phone, amateur radio operators in the Military Affiliate Radio System

handled hundreds of thousands of them for troops in the Korean War, Vietnam and the first Gulf War. The service is still available though not as frequently utilized as it once was. (ACapitalNewsOnline)

HAM RADIO IN SPACE: P3E HARDWARE TO BE READY BY YEARS END

The hardware for the eagerly awaited AMSAT Phase 3E ham radio satellite should be completed by the end of 2007. The announcement came at the recently concluded AMSAT-UK International Space Colloquium. That's where it was also made known that Phase 3E will be the first Amateur satellite to operate at 47 GHz. It is also will use 145 MHz and 435 MHz along with the 1.260, 2.4, 5, 10 GHz Amateur Radio Microwave bands.

As yet there is no launch date. AMSAT is exploring possibilities of an Arianne launch from the ESA site at Kourou in 2008 or on a Soyuz launcher from the new Russian launch site under construction also at Kourou. (ANS)

**

HAM RADIO IN SPACE: AMSSAT-UK BEGINNERS WORKSHOP A HIT

The recent AMSAT - UK Beginners Workshop is being described as a truly smashing success and attracted a lot of newcomers to the hobby. Among the many attendees were six members of the University of Surrey Electronics and Amateur Radio Society, all of whom hold Foundation or Intermediate licenses.

AMSAT-UK has held Beginners Workshops at its Annual Colloquium in Guildford, England for 20 years. The aim of these workshops is to show new hams how to get started in the exciting world of Amateur Satellite Communications. It was AMSAT-UK that successfully campaigned to have access to the Amateur Satellite Service available to all United Kingdom amateurs, regardless of the license class that they hold. (Southgate)

**

HAM RADIO IN SPACE: JAPAN AMSAT DONATES 1,000,000 YEN TO P3E

Peter Gï¿½lzow, DB2OS reports on the AMSAT D L web site that Japan AMSAT has donated 1,000,000 Yen in support of the Phase 3-E satellite. 1,000,000 yen is the equivalent of 6,136 Euros or $8,407

U-S dollars at the current rate of exchange. The monies will be used to help complete and launch the Phase 3 E bird. More is on-line, in German. At the U-R-L in this weeks Amateur radio Newsline report. (ANS)

**

WORLDBEAT - SOUTH AFRICA: SARL WT ATTEND GAREC O7

The South African Radio League has added its name to the growing list of groups that will be represented at the upcoming 2007 Global Amateur Radio Emergency Communications Conference.

The gathering is slated to be held in Huntsville, Alabama, on August 16th and 17th just prior to the opening of the 2007 Huntsville Hamfest. This years meeting is focussing on the application of advanced technologies in emergency communications.

The two-day conference will be packed with practical information, and experts will arrange demonstrations of the capabilities of 21st century communications technology. This will include many diverse aspects Amateur Radio as applied to emergency and disaster response. (Southgate)

**

DX

Six members of the Japan Amateur Radio League's Kyoto Club will be operating JA3YAQ portable J60 through August 6th. This, to celebrate the 60th anniversary of their club on the island of Pohnpei. The operation will use CW, SSB, FM, RTTY and PSK31 on 160 through 6 meters from the South Park Hotel. QSL as directed on the air.

Also on right now are DL2RMC and DL1RTL who will be active portable TK from Corsica through August 8th. Look for them on 160 through 6 meters on CW and the Digital modes. They will have vertical antennas for the low bands with their activity also being a holiday style operations. QSL via their home callsigns.

And, listen out for W1ADX, will be active portable 9A from a few of the Dalmatian Islands through August 7th. Activity will be holiday style as time permits. QSL via IN3DEI.

Lastly, for those of you who worked KL7FF in June there is now a QSL route. You can send your QSL,

along with an Self Addressed Stamped Envelope to
to Paul Kiesel, K7CW , P.O. Box 112 Tahuya,
Washington, 98588. Paul says that he has
received the cards from the printer and will send
you a KL7FF card immediately on receipt of your card.

(Above from various DX news sources)

THAT FINAL ITEM: THE ARTISTRY OF ANCIENT GREECE IS IN THE SOUND

And finally this week, another kind of
communications. That of the human voice and the
way it could be heard for thousands of feet long
before microphones, amplifiers and loud speakers
were invented. The story is from ancient
Greece. A not so ancient Jim Meachen, ZL2BHF,
takes us back in time to about the 3d Century BC:

--

Science Daily reports that researchers at the
Georgia Institute of Technology have pinpointed
the elusive factor that makes the ancient
amphitheater the ancient Greek amphitheater at
Epidaurus an acoustic marvel. It's the seats.

The scientists say that the rows of limestone
seats at Epidaurus form an efficient acoustics
filter that hushes low-frequency background
noises like the murmur of a crowd. At the same
time it reflects the high frequency noises of the
performers on stage off the seats and back toward
the seated audience member. This in turn carries
the performers voice all the way to the back rows of the theater.

While many experts speculated on the possible
causes for Epidaurus' acoustics, few guessed that
the seats themselves were the secret of its
acoustics success. There were theories that the
site's wind which blows primarily from the stage
to the audience was the cause. Others credited
masks that may have acted as primitive
loudspeakers or the rhythm of Greek speech. More
technical theories took into account the slope of the seat rows.

The report appeared in the April issue of the
Journal of the Acoustics Society of America.

From Auckland, New Zealand. for the Amateur
Radio Newsline, I'm Jim Meachen, ZL2BHF,

--

The theater at Epidaurus permits almost perfect intelligibility of un-amplified spoken word from the stage to all 15,000 spectators, regardless of their seating. What's not known if whether or not those who designed it were aware of the science of acoustics or if it was all nothing more than a lucky guess.

More about Epidaurus and its famed theater is on-line at http://en.wikipedia.org/wiki/Epidaurus and http://www.greeklandscapes.com/greece/epidaurus.html (Science Daily OnLine)

A very wise man once told me that if enough people have a perception of
something, it doesn't matter what the truth is, the perception becomes
the truth. And as hard as that may be to swallow, it is just how things are.

> The really sad thing is that the BoD, who OK'd the proposal, didn't

> everyone.

Actually I'm not so sure about everyone being right. My experience has
been that people who are intensely interested in one thing or the other
don't believe that others needs are of sufficient interest. Which is why
it is important that any BOD is interested in the big picture.

> For example, I think WinLink/Pactor/robots are a great thing in
> Amateur Radio. I think many of our rules on them are outdated and in
> need of rewriting. I even think the "no-data-in-the-phone-bands" rule
> has to go.

I think that the stations have to become a whole lot better behaved
before they are allowed anywhere. The business of just opening up
whenever and wherever is bad stuff.

> But at the same time, I do not think that simply allowing robot
> operation everywhere is a good thing. That's why I opposed both RBB
> and CTT.

As a person chased off the air (or at least to another frequency) by
the machines, I couldn't agree more. There has been a lot of discussion
re the PSK31 "segment", with a lot of people telling us to "just move".
Yeah, I guess we could. The nature of PSK31 is such that making it's
practitioners fly all over the band in search of a free spot is a great
way to kill it. especially for those who use the rockbound radios. A lot
of the PSK units are just a rockbound transceiver tied to a laptop. It
got bad enough that at least in the Digipan PSK software, the programmer
put in receive only for the robots so that we could ID them and complain
to the F.C.C. All that fuss over 1 3KHz piece of the band!

>> In the case of the RBB, the big picture was circumvented, and the result
>> was predictable and hams did their job. Some people look at it as a

>
> This is why proposals like RBB and CTT go nowhere, IMHO.

And that is why I consider it a good thing. I agree with you that ideas
should be tested out before submission.

I really strongly believe that when special interest subgroups get hold of the process, they invariably subvert it to their interest. While there may have been good ideas in RBB, the bad ones were bad enough that it was worth losing the whole thing. Hopefully the BOD paid attention to that fact.

> Suppose somebody came up with a composite mode that combined SSB voice

We can do it also. At least in principle. Practice will be a lot harder, as I suspect that we might be a little more of a contentious lot than our VE brethren.

While a criminal activity check is a fine idea - and pretty painless,
the business of conducting lifestyle checks and credit checks is just
plain invasive. If they check lifestyle, they make judgments on it.

> The ARRL policy stopped short of telling those radio amateurs wanting to

Good point. I'll happily submit to any of the State Police background
checks. But it they want more than that, I'll find some other way to
give back to the community.

After all, I have something to hide.... I'm a registered Independent
voter!, heheh...

==> ARRL Files Federal Court of Appeals Reply Brief over BPL

On July 31, the ARRL filed its reply brief at the US Court of Appeals for the District of Columbia Circuit. This brief follows the FCC's brief that attempted to rebut the ARRL's challenge to the FCC's Broadband over Power Line (BPL) rules enacted in late 2004 and affirmed by the agency in 2006. According to ARRL General Counsel Chris Imlay, W3KD, "The FCC's

brief does not accurately describe ARRL's arguments concerning harmful interference." The ARRL, in its reply brief, accuses the FCC of, "engaging in misdirection -- rebutting hyperbolic arguments ARRL never made, refusing to address the precedents ARRL cited and attempting to rewrite the Orders as if they made factual rather than legal determinations."

The League's reply brief, according to Imlay, "focuses largely on the FCC's unprecedented failure to protect mobile stations from interference if the BPL operator reduces its radiated emissions by 20 dB below the Part 15 maxima, even if harmful interference persists thereafter. The reply brief also addresses the inapplicability of the 40 dB per decade of distance extrapolation factor applied to BPL system measurements in the high frequency bands."

The ARRL's reply brief looked at four main points:
* The FCC's failure to reconcile the Orders with the FCC's decades-old interpretation of Section 301.
* The FCC's failure to justify its nondisclosures of portions of the studies on which the Orders were expressly based.
* The FCC's failure to justify its refusal to consider contrary evidence, as well as a proposed alternative to its extrapolation factor for measuring interference.
* The FCC's failure to justify its summary dismissal of an alternative that could have accommodated BPL without causing the same harmful interference.

The ARRL's brief states that this case "is about an unlicensed operator's legal duty to cease harmful interference once it arises, not the standard for authorizing unlicensed transmissions."

For decades, the FCC has interpreted Section 301 to mandate two restrictions on unlicensed operators: The proposed operations will not have a significant potential for causing harmful interference, and; if harmful interference does occur, the unlicensed operations are to cease immediately. For the first time ever, the FCC excluded mobile operators from the second part of the mandate.

The FCC suggests in its brief that BPL emissions (that are reduced by the 10 or 20 dB that are the minimum notching requirements in the rules) will "never cause harmful interference to licensed mobile users, but there is no evidence to support this," the ARRL's brief states. The ARRL contends the FCC's brief "ignore[s] the express acknowledgement in the Reconsideration Order that 'harmful interference...may occur' even when BPL systems meet the FCC's technical standards and that when it occurs 'we will not provide further protection to mobile operations.'"

The FCC goes on to say, according to the ARRL's brief, that licensed mobile users "do not need the protection of the cease-operations rule because mobile users suffering from interference can move elsewhere." The ARRL contends that the FCC "has never before put the burden on the license-holder to move away from an unlicensed interferor, to the

contrary, its rules require the interferor to cease interfering immediately. A BPL system deploys radiation-emitting devices ubiquitously throughout a service area, making it difficult to avoid harmful interference and impossible to conclude that harmful interference will 'never' occur."

The ARRL's brief states that "the FCC cites nothing to defend the Reconsideration Order's ruling that Section 301 is inapplicable to 'unintentional radiators.'" The ARRL's brief points out that the FCC's brief "fails to defend the Reconsideration Order's holding that unintentional radiators like BPL devices 'as such' are outside the scope of Section 301's license requirement. The brief actually admits the contrary -- that unintentional radiators are within Section 301." The FCC's brief mentions "but fails to acknowledge Section 302, which extended the FCC's authority to cover the manufacture and sale of interfering devices, is irrelevant to the scope of Section 301."

In its brief, the FCC failed to justify its "nondisclosure of significant portions of the technical studies on which the Orders rely." Instead, the ARRL said the FCC "attacks a straw man, suggesting that ARRL is after 'every internal document in its entirety that the agency's staff prepares in relating to a rule making proceeding."

The ARRL's brief states that the League only sought the full texts of the studies that the FCC "identified and cited as the basis for its conclusions. An agency may not cherry-pick the pages of the studies on which it relies, disclosing the ones that support its conclusions and redacting the others."

The FCC's brief requests that the Court defer to its "technical judgment in adopting an extrapolation factor to measure interference." The ARRL contends that the FCC "is not entitled to deference where it refuses to consider substantial evidence submitted to it -- in this instance, at the agency's invitation -- and fails to consider a responsible alternative proposal."

The ARRL points out three studies conducted by OFCOM, the UK-equivalent to the FCC. Each study reached a conclusion opposite that of the FCC and "plainly were significant to warrant consideration," the League's brief said. "ARRL's proposed sliding-scale extrapolation factor was an alternative entitled to consideration and a reasoned explanation for its rejection."

The ARRL makes the argument in its brief that it proposed a "win-win" solution: Authorize BPL, but "confine it to a generous frequency band that does not present these interference problems." It makes note of the fact that the largest BPL operator has designed its systems this way, and suggests that other operators could follow suit.

Yet the FCC in its brief brushed off these suggestions with a terse, two word sentence: "The other proposed 'solution' -- complete avoidance of all HF frequencies -- would needlessly restrict BPL design and reduce

system capacity, without regard to whether there are amateurs that need protection from a particular BPL installation. This would result in a grossly inefficient utilization of Access BPL capacity, reducing the potential benefits of BPL and increasing its costs to the public, without a corresponding benefit or need."

ARRL, therefore, asked the Court in its brief "to enforce the FCC's 'duty to consider responsible alternatives to its chosen policy and to give a reasoned explanation for its rejection of such alternatives.'"

Pointing out the "multiple legal errors in the Orders," the ARRL stated in the brief that the FCC "require[d] a remand. When the Court remands the Orders, it should direct the FCC to give this alternative the careful consideration required by law."

The ARRL's reply brief can be read in its entirety on the ARRL Web site <http://www.arrl.org/tis/info/HTML/plc/Court_Appeal_ReplyBrief2007july31.pdf>.

==> ARRL Passport to be Featured at 2007 ARRL National Convention

One of the exciting activities at this month's ARRL National Convention is the ARRL Passport, the ultimate hamfest scavenger hunt. Pick up your Passport at the ARRL EXPO area and collect different ARRL Passport codes at participating exhibits and activities at the Huntsville Hamfest. "There are only 2500 ARRL Passports available, so pick them up early while you can," said ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R. "Turn in your completed entry form at ARRL EXPO by Sunday at 12 noon and you could be a winner."

Prizes include two terrific all-mode mobile transceivers: the Icom IC-7000 and the Yaesu FT-857D.

Charlie Emerson, N4OKL, Vice-President of the Huntsville Hamfest Association, said that convention attendance will likely reach unprecedented levels. "The hamfest is getting into the 'unreal' category. We have reports of people coming in from everywhere." Both official hotels, the Embassy Suites (connected to the all air-conditioned Von Braun Center, site of the Convention and Hamfest) and the Holiday Inn (across the street) have sold out. There is availability at the nearby Marriott Hotel, just a short distance away by car. More lodging options are available at the Huntsville/Madison County Convention and Visitors Bureau Web site <http://www.huntsville.org>.

The 2007 ARRL National Convention is August 18-19 in Huntsville, Alabama and is held in conjunction with the Huntsville Hamfest. For more information on the ARRL EXPO, National Convention and the Huntsville Hamfest, check out the National Convention Web site <http://www.arrl.org/expo>.

==> ARRL Files Objection to Ambient's BPL Experimental Authorization Renewal Request

On July 25, the ARRL filed an Informal Objection to Ambient Corporation's request for a renewal of their nationwide experimental authorization that allows them to operate broadband over power line (BPL) operations anywhere in the country they choose. Ambient has been operating its BPL equipment under experimental authorizations for more than five years, an unusual amount of time for an experimental authorization. An Informal Objection is the procedure dictated by the FCC's Part 5 rules protesting the renewal of an experimental authorization. Currently, Ambient operates a BPL system in Briarcliff Manor in Westchester County, New York. Other installations have apparently been shut down by Ambient.

Ambient has been using experimental authorization WD2XEQ, issued in 2005, and its predecessor WB9XQT, issued on June 24, 2002. WB9XQT covered the BPL operation in Briarcliff Manor. It was replaced by WD2XEQ on July 28, 2003, a two-year authorization that was twice extended, most recently through August 1, 2007.

The ARRL states in its Objection that "since the issuance of the first experimental authorization, rules have been enacted for the regular Part 15 operation of BPL systems and there is nothing that has been filed by Ambient which could justify the continuation of experimental operation of this system rather than operation pursuant to the Commission's rules governing virtually all other BPL systems."

The ARRL filed complaints against Ambient and its BPL operation in Briarcliff Manor on October 12, 2004; December 17, 2004; January 7, 2005; March 17, 2005; January 6, 2006; March 29, 2006 and May 31, 2007. The Objection said that each complaint reported "ongoing, harmful interference caused by the unlawful operation of Ambient's BPL project at Briarcliff Manor in violation of the terms of the experimental authorization." These complaints, supported both by documentation by amateurs as well as tests made by ARRL staff, concluded that "this facility was, and now still is, causing harmful interference to Amateur Radio stations. As such, it is in violation of the terms of the experimental authorization."

The terms of Ambient's experimental authorization require that if "any interference" results from its operation, the holder of the authorization will be subject to immediate shutdown. The ARRL stipulates that harmful interference has repeatedly occurred, and such interference has even been witnessed and verified by a member of the FCC's Enforcement Bureau staff, yet the FCC has failed to take any action against Ambient in response to any of these complaints. The ARRL continued: "[i]t would be unconscionable for the Commission to further renew this experimental authorization in the face of these unresolved complaints of interference."

The ARRL does praise the FCC in the Objection, however, for "finally, after years of inaction, commencing an enforcement proceeding" against Ambient's operation in New York (Enforcement Bureau file number EB-06-SE-083). This proceeding is still under investigation, "making renewal of this experimental authorization completely inappropriate."

The Objection further states that the FCC's rules provide that "an experimental authorization will not be granted for a period longer than that which is required for completion of the experimental project." There is nothing offered in Ambient's pending renewal application that would justify the extension of the experimental authorization beyond the five years that it has been authorized to operate. Ambient's extension application offers "no justification whatsoever" for a sixth or seventh year of experimental BPL operation.

By mandating that Ambient operate in accordance with the with the "long-ago-enacted BPL rules rather than allowing it to hide behind an experimental authorization," Ambient would at least be subject to the FCC's regulatory plan for BPL, "however inadequate that plan is in terms of interference avoidance," the ARRL said in its Objection. If forced to comply with the Part 15 rules, as other BPL systems must do, "perhaps at least some of the abundance of unresolved and unaddressed interference problems caused by Ambient would be reduced."

ARRL's Objection included a copy of a July 13, 2007 letter from the Chairman of the Public Safety and Security Committee of the Westchester County Board of Legislators, William E. Burton. In the letter, Burton identifies a number of ongoing concerns related to the interference potential of the Briarcliff Manor BPL system. He goes on to say he is concerned...to have recently learned that Ambient may be planning to request a renewal of its experimental program without making vitally important improvements in its technology...[and] there is no assurance that Ambient may not 'turn up the power' and again exceed emissions levels causing interference again after a license renewal."

Burton noted that at a committee meeting held March 5, 2007, "the representative from [Ambient BPL system sponsor] Consolidated Edison agreed to work with the ARRL to resolve the communications interference problems. That cooperation has yet to take place."

Burton's letter continued: "I am thus requesting that the FCC not renew the experimental Briarcliff Manor BPL license until my concerns about harmful interference are adequately addressed....The Commission should require that Consolidated Edison and Ambient cooperate with the ARRL and its BPL technical experts forthwith....By not renewing the Ambient experimental license until all these concerns are addressed, the FCC can make it clear that complaints concerning harmful interference are taken seriously."

The ARRL summed up the Objection by "respectfully requesting that the Commission deny or dismiss" Ambient's pending application for renewal or extension of its experimental authorization for Briarcliff Manor "and in other locations in the United States where it may be operating BPL systems."

The ARRL's Informal Objection can be read in its entirety on the ARRL Web site <http://www.arrl.org/tis/info/HTML/plc/Ambient_Informal_Objection2007july25.pdf>

==> Dennis Dura, K2DCD, Joins ARRL Staff as Emergency Preparedness and Response Manager

The ARRL is pleased to welcome Emergency Preparedness and Response Manager Dennis Dura, K2DCD, to the Headquarters staff in Newington. Dura's major responsibilities include addressing the development and implementation of an organizational disaster response plan as well as a continuity operations plan, complete with supporting procedures and training. Integral to these plans are the recommendations of the National Emergency Response Planning Committee (NERPC) report. Dura also will play an integral part in the management of ARES, and in future negotiations with served agencies with whom ARRL shares or creates Memoranda of Understanding.

"By instituting these base components for the organization, the emergency communications resources of Amateur Radio and the League will become truly disaster resilient on all fronts," Dura said. "Emergency communications cannot stand alone. As an organization, we must have disaster plans in place and know what we must do to continue operations when they are impacted. Without this, our support to the field will be lacking."

Dura comes to the ARRL with more than 26 years of experience in the emergency management field. He started as a volunteer coordinator in his home township's emergency management program and turned this experience and training into a consulting career, working on off-site emergency plans for nuclear power plants and the jurisdictions where they are sited around the country. At the same time, he joined the American Red Cross as a volunteer Disaster Consultant in New Jersey, leading to paid positions as Manager of Disaster Services in St Louis, Director of Disaster Preparedness in Chicago and a Disaster Preparedness Specialist in New Jersey.

After some years working in the non-governmental organization side of the field, he joined the New Jersey State Police, Office of Emergency Management (NJOEM). Dura progressed through the ranks in NJOEM and served in numerous positions such as Operations Officer and Hurricane Preparedness Officer. As a Principal Planner, he was part of the group to develop the first Terrorism Plan for New Jersey prior to 9/11, specializing in human services issues, especially Mass Care. As part of New Jersey's response to the 9/11 attack, he served on a specialized inter-governmental team to establish the Family Assistance Center at Liberty State Park.

He left NJOEM in 2003 to become the Deputy State Emergency Coordinator for the New Jersey Department of Human Services (NJDHS), the position he held prior joining the League. Dura's focus in NJDHS was spread across several areas such as Community Emergency Response Team (CERT), Mass Care and Business/Continuity of Operations.

During his time at the NJOEM, Dura was the Assistant State RACES Officer. He was also the liaison to the National Weather Service (NWS) for NJOEM and became involved in the SKYWARN program. Through a

successful grant submission, he was able to secure two National Oceanic and Atmospheric Administration (NOAA) All-Hazards Radio transmitters for unserved areas of New Jersey. His work on this project resulted in the Mark Trail Award in 2002. The Chairman of the Mt Holly NWS Forecast Office SKYWARN Advisory Committee for many years, Dennis has also been a member of his county ARES program.

Dura said he is excited to be working at ARRL Headquarters. "It is a tremendous opportunity to take my many years of emergency management experience and apply all of it to the ARRL. It wasn't a hard move [to the ARRL] at all -- take the disaster experiences and meld them with a tremendous hobby...that ends up serving the nation and the world."

Dura holds a BS in criminal justice from The College of New Jersey and is currently completing graduate level work in homeland security and emergency management. He is a Certified Business Resilience Manager and is a member of numerous professional emergency management organizations.

Dura can be reached via e-mail <k2dcd@arrl.org>.

==> ARRL in Action - July 2007: What Have We Been Up to Lately?

The ARRL Board of Directors held its second 2007 meeting in Windsor, Connecticut. It was the final meeting for ARRL Southeastern Division Director Frank Butler, W4RH, who is retiring from the Board after 50 years of volunteer service to the ARRL. Just before the Board meeting, President Joel Harrison, W5ZN; CEO David Sumner, K1ZZ, and Chief Development Officer Mary Hobart, K1MMH, led the dedication of the Diamond Terrace at ARRL Headquarters.

CEO David Sumner responded by fax to congressional testimony by FCC Commissioner Jonathan Adelstein that included support for the expansion of broadband over power lines (BPL).

Dennis Dura, K2DCD, joined the ARRL Headquarters staff as Emergency Preparedness and Response Manager. Senior Assistant Technical Editor Larry Wolfgang, WR1B, has been named Editor of QEX.

The September issue of QST, our first Emergency Communications special issue, was released to the printer. Preparations for the ARRL 2007 National Convention, to be held in conjunction with the Huntsville Hamfest, are in full swing. Web Development staff worked with several departments to update and improve the online membership application.

The ARRL has two Public Relations campaigns for 2007. One concerns ARES and Public Relations, and the other Emergency Communications. Media and Public Relations Manager Allen Pitts, W1AGP, reports a significant increase in the number and quality of Field Day media coverage.

ARES members assisted in two emergencies: the Zaca Fire in Los Padres National Forest northwest of Los Angeles, and flooding in Oklahoma. Regulatory Information Manager Dan Henderson, N1ND, discussed several issues involved with the PAVE PAWS radar situation with US Department of

Defense officials in a teleconference call.

Chief Operating Officer Harold Kramer, WJ1B, made contact at W1AW with special event station VE2XPO in Montreal, Quebec, in commemoration of a similar contact made 40 years earlier from the Amateur Radio station at Expo 67, the Montreal World's Fair. Roland Masse, VE2PX, was at the mic in Montreal, as he had been for the original 1967 contact with W1AW.

Field and Regulatory Correspondent Chuck Skolaut, K0BOG, attended the Arizona State Convention in Williams. ARRL VEC Manager Maria Somma, AB1FM; ARRL Assistant VEC Manager Perry Green, WY1O, and Regulatory Information Manager Dan Henderson, N1ND, attended the annual conference of Volunteer Examiner Coordinators in Gettysburg, Pennsylvania. ARRL Lab Manager Ed Hare, W1RFI, took part in a meeting of the IEEE EMC Society Symposium in Honolulu.

==> FCC Enforcement Actions

On July 25, the FCC's Enforcement Bureau released new Amateur Radio enforcement actions. John C. Kimbrough, WR3S, of Murfreesboro, Tennessee, received notification from the FCC's Atlanta District Director that his automatic control privileges had been removed. This followed up on a letter sent by Riley Hollingsworth that listed various and numerous complaints about Kimbrough concerning "apparent violations of the Commission's rules, including inadequate station control, interference and failure to properly identify." The Letter went on to say that Kimbrough may not resume automatic control until notified by the Atlanta office. "If WR3S is operated under automatic control prior to notification from this office, enforcement action will be taken against your Amateur operator and station licenses for WR3S. This action may include designation of those licenses for a revocation and suspension hearing, and a monetary forfeiture."

Robert J. Langston, W2ENY, of Cornwall on Hudson, New York, received a request for information concerning "allege[d] transmission of recordings, including recordings of the radio transmissions of other operators, and false identification of transmissions," and called into account "serious questions regarding your ability to retain an Amateur license." The FCC gave Langston 20 days to respond to the allegations and include a signed and dated affidavit or declaration under penalty of perjury, verifying the truth and accuracy of the information submitted in your response."

Robert A. DiMezza, W2GGI, of Delray Beach, Florida, received a request for information concerning complaints that allege "among other things, poor signal quality and refusal to make corrections," and was given 20 days to respond to these complaints.

Frank Richards, of Mooers, New York, received a Memorandum Opinion and Order from the FCC regarding his apparent attempted 1995 hijack of an Amateur Radio license from Frank C. Richards, KB4VU, of Ft Meyers, Florida. The New York Richards was initially successful, and the FCC

granted him KG2IC, but after the Florida Richards contacted the FCC to say he'd never moved nor modified his license, the FCC directed the New York Richards to explain. In June 2004, the New York Richards turned in his license. While the FCC did not pursue further enforcement action the, it did tell the New York Richards that the circumstances of the apparent abuse of the license system could become a factor if he ever applied for an Amateur Radio ticket in the future. The New York Richards applied for a Technician license June 28, 2006 and accompanied his application with a letter. The FCC Enforcement Bureau said it was unable to determine whether the Wireless Telecommunications Bureau should grant the application, however, so it now has been designated for a hearing. The FCC's Enforcement Bureau's Motion to Dismiss Application with Prejudice and Terminate Hearing, filed June 25, had a deadline of July 10 for any opposition to be filed. As of July 18, no written appearance had been filed by, or on behalf of, Richards, and no one attended or entered an appearance on Richards' behalf at a prehearing conference July 10. As such, Richards' Amateur Radio license application was dismissed with prejudice.

Frederick C. Severa, AH8I, of Folsom, California, received a warning notice claiming "that Commission monitoring information indicates that on February 12, 2007 at 0221 UTC, you operated in the SSB mode on 7.055 MHz from a location near Reading [sic], CA. That mode is not authorized to you on that frequency under Commission rules." The FCC sent Severa a letter notifying him of this; it was returned as undeliverable. Saying that "Such operation may reflect adversely on your qualifications to retain an Amateur Radio license," The FCC gave him 30 days to respond and to verify his current address.

==>SOLAR UPDATE

Tad "Ain't No Sun(spots) When He's Gone" Cook, K7RA, this week reports: Average daily sunspot numbers rose very little this week, less than 6 points to 7.3. There were no major geomagnetic upsets, only slightly unsettled conditions on the first day of August. We saw eight straight days of no sunspots, then a spot or two over four days, then no spots on the first two days of August. A week from now, August 10, we may see the beginning of several days with a few sunspots every day. Expect unsettled geomagnetic conditions centered on August 7 and again on August 10. Geophysical Institute Prague predicts quiet conditions August 3-5, quiet to unsettled August 6, unsettled to active August 7, and back to quiet August 8-9. Sunspot numbers for July 26 through August 1 were 0, 0, 13, 14, 13, 11 and 0 with a mean of 7.3. The 10.7 cm flux was 68.4, 68.7, 69.9, 69, 68.9, 68 and 68.8, with a mean of 68.8. Estimated planetary A indices were 9, 8, 4, 14, 10, 6 and 17 with a mean of 9.7. Estimated mid-latitude A indices were 6, 6, 3, 11, 10, 4 and 15, with a mean of 7.9. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: This weekend, check out the ARRL UHF Contest, 1800 UTC Saturday, August 4-1800 UTC Sunday, August 5. The TARA Grid Dip Shindig and the European HF Championship are August 4, while the 10-10 International Summer Contest (SSB), the National Lighthouse Weekend QSO Contest and the North American QSO Party (CW) are August 4-5. The RSGB RoPoCo 2 and the SARL HF Phone Contest are August 5. The ARS Spartan Sprint is scheduled for August 7. Next weekend, the WAE DX Contest (CW) and the Maryland-DC QSO Party are on the air August 11-12. The NAQCC Straight Key/Bug Sprint takes place August 15. See the ARRL Contest Branch page http://www.arrl.org/contests/, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education course registration: Registration remains open through Sunday August 19, for these on-line courses beginning on Friday September 7: Technician License Course (EC-010); Amateur Radio Emergency Communications, Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012), and Digital Electronics (EC-013). To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* 2007 ARRL Teacher Institute Is in Full Swing: Forty-eight teachers from around the country signed up for the ARRL Teachers Institute. The first Institutes, held in Rocklin, California and Spokane, Washington are already completed, as is the first of two institutes at ARRL Headquarters in Newington. Each class of 12, ranging from pre-school teachers to college professors, gets the opportunity to explore and experience firsthand wireless technology basics, how to teach basic electronics concepts integral to microcontrollers and robots, as well as how to bring space technology into the classroom. The four day course culminates with building and programming a robot. While the emphasis of the course is not Amateur Radio and teachers need not be hams to attend the all-expenses paid sessions, some do go ahead and take the Technician license exam. Six have received their Technician license so far and one has upgraded to General. Education and Technology Program Coordinator and Director of the ARRL Teachers Institute Mark Spencer, WA8SME, said, "About 80 percent of the non-ham teachers have gone on to get their Amateur Radio license. They get really 'jazzed up' about ham radio while they are here." To find out more about the ARRL Teachers Institute, please see the ARRL Web site <http://www.arrl.orgFandES/tbp/ti.html>.

* New Jersey Radio Club Makes Scholarship Donation to ARRL Foundation: ARRL Chief Development Officer Mary Hobart, K1MMH, attended the Sussex Hamfest in July where the Morris Radio Club (New Jersey) donated more than $31,000 to the ARRL Foundation. This money is earmarked for an annual Morris Radio Club Scholarship to go to a deserving area high school senior who is an Amateur Radio operator. Ron Levy, K2CO, former

W2 QSL Manager, long time New Jersey DX Association (NJDXA) officer and MRC trustee, led the club contingent in presenting the check. Also on hand at the ceremony were ARRL Hudson Division Director Frank Fallon, N2FF, and Vice Director Joyce Birmingham, KA2ANF. If you or your club is interested in doing something of a similar nature, contact Mary Hobart, K1MMH <k1mmh@arrl.org>, at the ARRL Development Office <http://www.arrl.org/development>.

* September Is National Preparedness Month: September is National Preparedness Month and Amateur Radio operators are joining a wide variety of national, state and local organizations, including the US Department of Homeland Security, in educating the public about preparing for emergencies. When unexpected natural or man-made emergencies occur, our greatest individual defense is preparedness. Getting an emergency supply kit, making an emergency plan, and identifying preparedness and response resources within our communities are several things we can do to prepare ourselves. This nationwide effort is to encourage individuals and families to take simple steps to prepare for emergencies in their homes, businesses and schools. Free preparedness resources are just a click away in English <http://www.ready.gov> and Spanish <http://www.listo.gov>.

* Morse Code Study in Pennsylvania: A psychology professor at the University of Pittsburgh is conducting a study involving short-term memory and how it correlates to Morse code. Julie Fiez, the study's principal investigator, said she got the idea of using Morse code in her studies from a family member who is an Amateur Radio operator. She said she liked the idea of using CW in her experiments to see how people process audio tones. "Our interest is in verbal working memory," she said, "which is the ability to keep 'on-line' for a short time, information you can access later." Part 1 of the experiment is an assessment of the participant's Morse proficiency. First, participants will be asked to accurately copy sentences as they are presented in Morse at three different rates (16, 19, and 25 words per minute). Then they will be asked to listen to the entire Morse sentence and recall the sentence from memory. Part two asks participants to recall lists of letters from memory. The letters will either be in English or in Morse. Participants will either hear the letters through headphones or see them on a computer screen. The study will look for differences in memory performance between Morse lists and English lists. The research study is expected to continue through the fall. If you would like to participate, please contact the research team via e-mail <morsestudy@hotmail.com>. Thanks to Tom Mitchell, WY3H, and the Leader Times, part of the Pittsburgh Tribune-Review family of newspapers, for some information

* ARRL DXCC Desk Approves J5UAR Operation: ARRL DXCC Manager Bill Moore, NC1L, said that the 2007 J5UAR DXpedition to Guinea-Bissau has been approved for DXCC credit. "If you had cards rejected for this operation, please send an e-mail to the ARRL DXCC Desk <dxcc@arrl.org> and you will be placed on the list for update," Moore said.

* FAR Scholarship Winners Announced: The Foundation for Amateur Radio (FAR) has announced the 2007 winners of 56 scholarships it administers. The scholarships were open to all licensed radio amateurs who met the qualification and residence requirements of the various sponsors. A non-profit organization incorporated in the District of Columbia, FAR represents more than 50 Amateur Radio clubs in Maryland, the District of Columbia, Virginia, West Virginia and Pennsylvania. It is devoted exclusively to the scientific, literary and educational pursuits that advance the purposes of the Amateur Radio Service. For a complete list of recipients, please see the ARRL Web site <http://www.arrl.org/news/stories/2007/07/25/100/?nc=1>. For more information, contact FAR Scholarships, PO Box 831, Riverdale, MD 20783, or visit their Web site <http://www.amateurradio-far.org>.

* Let Us Know: What's your favorite part of The ARRL Letter? What kind of stories would you like to see in the Letter? Would you prefer the Letter in an HTML format? This is your Letter and your chance to let your voice be heard. Please send your suggestions to ARRL News Editor S. Khrystyne Keane, K1SFA, at k1sfa@arrl.org, with the subject line "ARRL Letter Suggestions." All messages will be read and discussed, and we look forward to implementing positive suggestions into the ARRL Letter.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for

e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

>
I would say that the perception is what drives people's actions, not
that the perception is the truth.

Most of all, what happens in those cases is
that the perception matters more than the truth.
That's what I meant by "It doesn't matter" whether
the folks who are all about robots took drove RBB
or not.

Everyone isn't right. That's why I wrote
"almost".

> My experience has
> been that people who are intensely
> interested in one thing or the other
> don't believe that others needs are of sufficient interest.

Sometimes.

> Which is why
> it is important that any BOD is
> interested in the big picture.

The trouble is that almost every specialized
interest will say *they* are the big picture!

> > For example, I think WinLink/Pactor/robots
> > are a great thing in
> > Amateur Radio. I think many of our rules
> > on them are outdated and in
> > need of rewriting. I even think the
> > "no-data-in-the-phone-bands" rule
> > has to go.
>
> I think that the stations have to become

> a whole lot better behaved
> before they are allowed anywhere.

I'm not proposing that they be allowed everywhere.

> The business of just opening up
> whenever and wherever is bad stuff.

> > But at the same time, I do not think
> > that simply allowing robot
> > operation everywhere is a good thing.
> > That's why I opposed both RBB
> > and CTT.

> As a person chased off the air (or at
> least to another frequency) by
> the machines, I couldn't agree more.
> There has been a lot of discussion
> re the PSK31 "segment", with a lot
> of people telling us to "just move".
> Yeah, I guess we could. The nature
> of PSK31 is such that making it's
> practitioners fly all over the band in
> search of a free spot is a great
> way to kill it. especially for those who
> use the rockbound radios. A lot
> of the PSK units are just a rockbound
> transceiver tied to a laptop.

Which is the beauty of the mode: that it
can give such good results without an
elaborate setup.

Unless I am mistaken, a ham could take
an old computer that's useless for almost
everything else and get on PSK31 with it
and a radio that costs under $100.

> It
> got bad enough that at least in the
> Digipan PSK software, the programmer
> put in receive only for the robots so that
> we could ID them and complain
> to the F.C.C.

Has anyone done that? Such complaints
should also go to the ARRL BoD and the
committee that wrote RBB as well, IMHO

> All that fuss over 1 3KHz piece of the band!

Yep.

> > It was a failure in my view because:

> > 1) A lot of good ideas in RBB were beat down too
> > 2) The beat-down of the bad ideas should have
> > happened *before* it was
> > ever sent to FCC, not after.
> > 3) The proposal asked a lot of hams to give
> > something up, without
> > giving them anything in return, or not
> > enough in return. Meanwhile,
> > other hams would gain something without
> > giving anything up. Or at
> > least it seemed that way to many hams.
>
> > This is why proposals like RBB and CTT go
> > nowhere, IMHO.
>
> And that is why I consider it a good thing.
> I agree with you that ideas
> should be tested out before submission.

I think the submission of proposals that
fail miserably damages the credibility
of the submitting organization. That's
particularly true if the organization says
they represent the amateur community, or
a large part of it. If an organization cannot
motivate its membership to produce a
large number of supporting comments, it
tells FCC that the organization doesn't
really know what its members want.
>
> I really strongly believe that when
> special interest subgroups get hold
> of the process, they invariably subvert
> it to their interest.

I disagree. But I do agree that it's
very possible for them to do so.

> While
> there may have been good ideas
> in RBB, the bad ones were bad enough that
> it was worth losing the whole thing.

I agree. But I think a proposal could
have been developed that kept the
good ideas and lost the bad ones.

> Hopefully the BOD paid attention
> to that fact.

Hopefully.

> > IMHO, one of the reasons it takes
> > *years* for FCC to make even simple
> > changes to Part 97 (like dumping the code
> > test) is because we USA hams
> > don't get our act together before
> > sending proposals to FCC.
>
> > Look at how Canada handled the code test thing.
>
> We can do it also. At least in principle.

I hope so.

> Practice will be a lot
> harder, as I suspect that
> we might be a little more of a contentious lot
> than our VE brethren.

Maybe. But I think if US hams are approached
in a reasonable way, they will be reasonable.

1390. WIANEWS for week commencing AUGUST 5 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-08-04 14:23:55 UTC
From: nationalnews@wia.org.au
Message-ID: <200708041000.l74A08N01028@panix2.panix.com>
Source record: 4095
Cross-posted to: rec.radio.amateur.moderated,aus.radio.amateur.misc,rec.radio.info

This is WIANEWS for week commencing AUGUST 5 2007

This weeks news presented by ALARA President Marilyn VK3DMS and with her in the news room we have from the WIA Office Margaret Williams and Dianne Ashton VK3FDIZ along with ALARA Publicity officer Christine VK5CTY, we also have regulars Kaye VK4VKS Kylea VK6MRS (nee VK6FXYL) Susan VK7LUV and from Sydney, ALARA News Editor Dot Bishop VK2DB. Rounding up the weeks neews from the USA and Amateur Radio NewsLine, Evi Simons in New York, KA0HZS Carol and Linda Reeder N7HVF.

Now here's Marilyn:-

Protection zones declared for submarine telecommunications cables off the New South Wales coast

The Australian Communications and Media Authority said these protection zones will take effect on 1 October.

Activities that could damage the cables are restricted or prohibited within protection zones, and significant criminal penalties apply for breaches of the legislation.

These are the first such protection zones to be declared and are the culmination of extensive consultation over the past 12 months with affected and potentially affected parties. ACMA has established a new international benchmark by creating protection zones that safeguard submarine cables and place appropriate restrictions on other activities occurring in their vicinity.

"The value of these submarine cables to the Australian economy is enormous,' said Chris Chapman, ACMA Chairman. 'It is little appreciated that submarine cables carry about 99 per cent of Australia's international voice and data traffic and in the past, breakage or damage has had serious consequences for Australian businesses conducting international transactions.

The declaration of protection zones minimises the risk of such damage.

Before formally declaring a protection zone, ACMA is required to develop a proposal for the protection zone, consult about the proposal and establish an advisory committee composed of key stakeholders and consisting of no more than 12 members seek and consider the advisory committee's advice on the proposal consult with the Environment Secretary, and consider all submissions.

Australia Switches on DAB+ Test

Australian radio broadcasters recently switched on the first test transmissions of digital radio using DAB+ in Sydney, New South Wales.

The digital radio test is carrying a mix of talk and music, including pop and jazz, to allow the industry to test the sound quality of a variety of content at various bit rates.

A demonstration DAB+ receiver was developed for the test, as DAB+ receivers are not yet commercially available. A number of manufacturers have indicated they will have DAB+ products ready for overseas retail sale before Christmas.

All commercial, SBS and ABC outlets in the capital cities are expected to avail themselves of Digital Conversion.

Australia has also joined a new DAB+ taskforce set up by the Asia-Pacific Broadcasting Union. Warner has been appointed chair of the task force, also represented are Brunei, Singapore and New Zealand.

The taskforce plans to survey of regional broadcasters to ascertain their plans for digital radio, as well as to encourage nations to adopt DAB+. (sourced in part to radioworlddotcom)

Now to the WIA National Office where we hear from Dianne Ashton VK3FDIZ and Margaret Williams.

"Here in sunny Caulfield Victoria, Margaret and I work for the WIA.

Margaret primarily manages the Membership renewals, club affiliation, insurance etc and my primary role is to look after the WIA's examination service.

Our WIA office is open for business 10:00am to 4:00pm Monday to Friday and if you happen to call the office outside of business hours you will be able to leave a message for us with our friendly answering machine. If you do leave a message, please leave us your name, membership number or callsign and of course a return phone number so we can call you back. Or you can alternately email us here, nationaloffice@wia.org.au

One of the questions I often get asked is how long does it take from completing an assessment until I receive my license from the ACMA? After the day of your assessment, your assessor will forward to the WIA office the completed assessment paperwork, it's usually sent to us in an overnight bag and they typically arrive on Tuesday for assessments conducted over the weekend. We then process the results within 5 working days and send to the ACMA the necessary paperwork for the ACMA to be able to issue your license. The License can often take a few weeks, but this timing depends very much on other factors at the ACMA. We recently published a news release on the WIA website that indicated there are currently some delays at the ACMA with the issuing of licences, however it is ACMA's aim to achieve a two-week turnaround time for issuing amateur licences.

One of the other questions I am often asked, is in regard to WIA membership applications. People are often keen to know when they will be likely to receive their membership details in order that they can apply for their WIA email address or perhaps order books from the WIA Bookshop at the special members price. Again with memberships, just like exams, all membership applications are processed within 5 working days and membership certificates

and welcome packs sent out, so you should expect to receive your membership pack in your letterbox in around 10 working days. Again if you have any questions regarding WIA membership or Exams, please give us a call or email us here at the office, that email address again is nationaloffice@wia.org.au

For the WIA news service this has been Dianne Ashton VK3FDIZ and Margaret Webb reporting from the WIA office."

AMATEUR RADIO - HOME OF THE GOOD GUYS

DECEASED HAMS GEAR GOES TO UNDERPRIVELEGED YOUNGSTERS

Carl, WB0BZP, was passionate about being a ham.

This despite physical disabilities that pretty much confined him to home.

His sister, Carol, recalls how he overcame his challenges to become one of the St. Louis area's most recognized operators...

"My brother was a quadriplegic, he was almost 7 foot tall," Carol recalls. "And, had he been normal, I think he would have been a basketball player at least - hands very large to take the basketball. He was always interested in sports, that was certainly a great hobby for him, the interest in sports.

"But we were looking for something else to challenge his mind and to open the world for him and I heard about CB radio. And, so I believe it was in 1968 I bought him a little 69-dollar CB radio."

Wait a minute! CB Radio? That's what Carl's neighbour at the time said, His neighbour, Ben Ward, W0BWD was scandalized by the purchase and Carol remembers he decided, no, Carl would need something more - as in ham radio.

Carol says amateur radio became a family affair.

"My dad was WB0RIP and I'm KA0HZS," Carol says. "I never was very active but I did have some rigs. And my mother, who did not get her license, however, was kind of a cook and bottle washer and made many a desert for many a meeting that we would have and it became very important to all of us."

Carol says her brother died in 1996 and it was difficult for her family to part with his equipment. She says she thought about what to do with it a few times over that period, but never really had an answer.

Enter, Dennis McCarthy, AA0A and Camp Wyman, a camp for urban youngsters who face a variety of challenges in their lives. And, McCarthy says, it's a place that can really use the gear.

Carol donated a TS-440, a Butternut antenna, all the accessories, a power supply and other equipment, including SWR bridges and even a couple of scanners which in this tornado- and severe-storm prone area might be of great value for the kids and people out at Camp Wyman.

A fitting tribute to her Brother Carl.

WB0BZP, may be gone, but his station will surely bring a lot of joy to youngsters who might otherwise never even what ham radio is really all about. (ARNewsLine)

HAMS ACROSS AUSTRALIA with KAYE VK4VKS

VK1

This award is issued by the Canberra Region Amateur radio Club upon receipt of a correctly presented application to any licensed amateur operator or SWL.

The information required is a log extract showing date and time in UTC, mode, callsign of the VK1 station worked and ciphers exchanged.

Short wave listeners should include the station worked by the VK1 station being claimed.

Each VK1 callsign worked counts as one point. Contacts via terrestrial repeater systems are not valid contacts towards this award.

Basic award is 20 points

Application for the award should be addressed to:

The Award Manager
GPO Box 600
Canberra ACT 2601
Australia

(vk1 website)

VK2

ARNSW Radio Veterans' Group Meeting

Their members are mostly retired but not eligible for membership of the "Radio Amateurs Old Timers Club" which is based in Victoria.

The Group has its regular meetings on the third Thursday of the month at Ryde Eastwood Leagues Club, only 200m from West Ryde railway station.

10am morning tea/coffee provided.

Go to the club sign-in desk and they will direct you to the ARNSW Radio Veterans' Group Meeting, next meeting is August 16.

(vk2 website)

VK3

NERG AGM and REUNION MEETING

Thursday 9th August 7:45pm

Start of a new NERG year with a birthday party, and the chance to meet up with people we haven't seen for a while. Official business to be kept to

a bare minimum

Early planning for the Centre Victoria RadioFest

Now almost recovered from running the first RadioFest at Kyneton in April, members of the organising committee are beginning to give thoughts about the next and second RadioFest in 2008.

A very worthwhile debriefing was held recently that looked at all aspects of the inaugural RadioFest to see what worked well and if there was any areas for improvement.

The amateur radio community welcomed the Centre Victoria RadioFest.
It was made possible through the collaboration of Amateur Radio Victoria, Central Goldfields and Midland Amateur Radio Clubs.

Now the organising committee invites suggestions or offers from individual radio amateurs, clubs and groups, and traders, as consideration continues about mounting the RadioFest again next year.

Anyone wishing to provide input can do so via email to radiofest@amateurradio.com.au

Last Aprils event saw eager activity at the ALARA table, under the guidance of Pam VK3NK.

Just across from ALARA, on the Amateur Radio Victoria display ALARA member Michele VK3FEAT was busy...

Always, "ready to please", the ALARA members present apparently 'drew the line'
when one OM visited saying "This would be the ideal site to find a new wife!"

(Jim Linton VK3PC/ALARA newsletter)

VK4

In VK4 the next round of Amateur Radio Assessor Training is being conducted next weekend, the RD weekend of 11th and 12th on the Gold Coast.

This is training provided by the WIA's Nominated RTO and is free of charge.

The Venue is the Gold Coast Amateur Radio Society, 85 Harper St, Nerang.

If you plan to attend, or if you are just your unsure and have any questions regarding the training please contact Ron Bertrand VK2DQ on 07 5573 2795.

Whilst looking at VK4, a VK4 Ham currently in "the west" is Phil VK4KVK who, today at the Northern Corridor Radio Groups HAMFEST in Perth, will be presenting lectures on "Restricted Space Antennas" and promoting many of his other books.

If you'd like to find out more from Kev, surf to www.kvkantennas.com.au

VK5

In "5 LAND" a new comer to our bands is Shirley VK5JSH and since joining ALARA has more than made a difference.
Currently Shirley is Vice President AND Historian.
Sooo if YOU want to find out more about the history of ALARA, come up and talk with VK5JSH on the Monday night 80 meter ALARA net.

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6MRS (nee 6FXYL)

Thanks Kaye, well over here in the west it's our big day today, the Northern Corridor's HamFest so I'll keep this segment short then I'm off to pick up some bargains!

Help to grow amateur radio

Julian Sortland, VK2YJS sent this note to tell us that the Hornsby and District Amateur Radio Club's trainers have assisted over 200 candidates in obtaining their Foundation Licence.

Their next training and assessment session will be the weekend of 8th and 9th August in Baulkham Hills in Sydney's north-west. Well we are not too sure of the validity of those dates! No weekend exists THIS year (2007) with those dates!

Meanwhile, Tony LaMacchia, VK2BTL is commencing classes for the Standard and Advanced licences in Waitara, near Hornsby. For these courses, exams for higher grade licences, or to discuss having the team train your club or youth activities group, use the contact form or telephone numbers on www.hadarc.org.au/

Inquiries about Foundation Licence classes are welcome by the Central Goldfields Amateur Radio Club based at Maryborough. Contact Peter Rafferty VK3CC on 5460 4387

At Bendigo the contact for classes is Ross Pittard VK3FCE phone 5442 8022

In the Greater Melbourne area enrolments are still available for the Amateur Radio Victoria Foundation Licence classes held at Box Hill North on August the 11th and 12th.
The contact is Barry Robinson VK3JBR 0419 808 323 or arv@amateurradio.com.au

Adelaide Hills Amateur Radio Society has been running Foundation licence Courses this weekend at the Aviation Museum, Port Adelaide, they do it all again November 3rd and 4th.
Contact the course convenor, Sasi Nayar on 0417 858 547

CONGRATULATIONS - RESULTS

Mackay AR Club in VK4 CONGRATULATE CHRIS VK4MCK IN UPGRADING TO HIS STANDARD LICENCE and already we hear CHRIS HAS STARTED STUDYING for HIS ADVANCED TICKET

For more information on obtaining the foundation licence manual please visit wia.org.au

INTERNATIONAL NEWS I'M CHRISTINE VK5CTY

As we start this international segment today, I do have to say one of the joys of ALARA membership is meeting, be it in person or on the air, hams from right across the globe.

Amateurs like Unni LA6RHA who, as she has told us, despite being a Viking still needed painkillers regularly after a knee re-construction.

Victoria SV2KBS who is envious of our AMAZING DX around the Pacific, Victoria tells us so far her most exotic DX travels have been to TF Iceland, and JW Svalbard.

Inger OZ7AGR and her Family are flying off to Spain, in the same plane, all TWENTY SEVEN of them! Then late August it's off to the Swedish SYLRA meet.

Another of our ALARA radio friends is Noriko 7K3EOP who enjoys IOTA hunting, and recently even operated as 3V8ST in Tunisia

Yes a truly INTERNATIONAL group we are!!

4 METER ALLOCATION GRANTED IN ITALY

Italy now has a temporary ham radio allocation in the European 4-meter Amateur band. On July 12th the Italian Authorities released three 25-kHz segments centred around 70.100, 70.200 and 70.300 MHz for use by that nations radio amateurs for use through the end of the year.

According to I0JX posting to QRZ.com, the new allocation began with a request by a few Italian hams to carry out an experimental propagation study under the technical coordination of a university. This to see if the band will offer opportunities of transatlantic contacts during the summer sporadic-E season

The authorization expires on December 31st. I0JX says that the prospects for a permanent 4 meter allocation in Italy appear to be good. Meantime, Italian hams now join those in the United Kingdom and several other European nations who will be beaming toward the United States and Canada in search of cross-band contacts on 10 and 6 meters. (arnewsline)

RSQ reporting for digital modes below 30 MHz

A new signal reporting method for digital modes is being considered by the International Amateur Radio Union Region 2 Conference next month.

This very busy meeting in Brasilia, Brazil from the 10th to the 14th of September has on its agenda a recommendation that RSQ reporting be used for digital modes below 30MHz.

RSQ stands for Readability, Strength and Quality, and was first proposed and endorsed at the Region 1 General Conference in 2005. It was also agreed at the IARU Region 3 Conference in Bangalore last year.

This in recognition that the traditional RST, Readability, Strength and Tone signal report that has been around since about 1934, is not suitable

for text modes.

RSQ is favoured because it can provide a more useful signal report for HF digital modes.
(Jim Linton VK3PC)

==========

NEWS FROM ARNEWSLINE

AUGUST 5

RESCUE RADIO: ITS "NEWS" TO THE BIG APPLE

The Big Apple and its Eastern suburbs will soon have a new emergency communications program. One which encourages the participation of all amateur radio operators to pass messages of any nature during a large-scale emergency. Amateur Radio Newsline's Evi Simons is in the Big Apple with more:

Called the Neighbourhood Emergency Watch or NEWS System, the program will allow any radio amateur in New York City and on Long Island to help friends and neighbours in time of disaster. This, by providing emergency communications when all other forms of messaging are unavailable.

According to the program administrators, during disasters, phone lines become overloaded, cell phones are rendered useless and most other public communication becomes nearly impossible to use. But with NEWS, Amateur Radio operators will be able to offer assistance by simply passing along messages to other hams who are able to get through to emergency services. This, using the hobby's long established network of Amateur Radio Emergency Service volunteers.

NEWS will also sponsor nets that will liaison with other emergency communications systems that might be concurrently with the NEWS operations. This means that NEWS will have the capability to participate in networks that A-R-E-S and other groups have established with first-responder groups.

Each borough, county and town will have a Local Operations Centre, to be developed as the NEWS network evolves. Combined with the ham resident in the Metro New York and Long Island areas, these Local Operations Centre will eventually tie into citywide and other logistical emergency nets to provide a venue and lines of communications to serve local needs.

For the Amateur Radio Newsline, I'm Evi Simons, in New York.

NEW KENWOOD DUAL BANDER A HIT WITH THE VISUALLY IMPAIRED

A newly released 2 meter and 70 centimetre dual band radio from Kenwood is getting rave reviews from the visually handicapped ham radio community. The transceiver in question is the Kenwood model TM-V71A. Blind and visually impaired amateurs love it because when

equipped with the optional VGS-1 voice chip unit, the radio announces even menu-level settings for true accessibility by audio alone. One of those most enthusiastic about this feature is Linda Reeder, N7HVF, of Salt Lake City, Utah:

--

N7HVF: "The 71A is the most blind user friendly radio I have ever see in the 22 years I have been in Amateur Radio."

--

N7HVF is so enthused about the new TM-V71A, that she not only bought one. She has also produced and recorded a 12 minute audio netcast that looks at the new radio and explains what its capable of doing. Heres a sample:

--

N7HVF: (Descriptive audio of how TM-V71A operates demonstrating voice readout.)

--

The TM-V71A is not just for the blind or visually impaired. The radios voice readout also functions as a safety enhancement that lets an operator tune the radio will operating mobile without ever having to take his or her eyes off the road.

But it is the visually handicapped that are the most vocal in singing its praises. You can hear Linda Reeders entire report on the blind friendly new Kenwood radio at the HandiHam website. A link directly to it is in this weeks printed, Amateur Radio Newsline report. Its in cyberspace at http://www.handiham.org/manuals/Kenwood/TMV71A/tmv71a.mp3

More about the TMV-71A is at the Kenwood website in PDF form at http://www.kenwoodusa.com/Dealers/Us1/flyers/TM-V71A.pdf (N7HVF)

OPERATIONAL NEWS - with VK7LUV SUSAN

CONTEST COLUMN - D A T E L I N E

AUGUST 11/12 Remembrance Day Contest (The RD) wia.org.au

6,5,4,3,2,1.....yes the countdown is on to the start of the 2007 RD contest.

At 07:45utc Saturday 11th August 2007 the majority of the broadcasters of this the weekly news service will broadcast the annual 15 minute Opening Address, interviews with former WWII service personnel, Roll Call, followed by a message from the R.S.L. and 1 minute silence.

THEN it is on for young and OLD, or should we say " the more experienced" rather than 'old'.

For those using Electronic logging check your software versions, you may like to request a Received and or Read reply.

Please ensure all ELECTRONIC LOGS are sent to rdlogs@wia.org.au

Snail mail? Then get your logs away quickly.

at www.wia.org.au in the RD contest section, are the links to download printable logs and other documents for your use.

Let us all pay homage to the fallen and most of all ENJOY the contest, remembering every point counts, and this year see if we can get another states name on the Trophy.

Heath VK3TWO/6, (is that vk3 2 6 ?? hihi) would like to tell everyone about the website that a couple have set up just for the RD contest in VK6.

It shows the particular frequencies that will be used and when they will be using them. They will be working out IN THE FIELD on all modes all bands from 160m to 70cm. maybe even 23cm. They will have at least 3 160m antennas two of which are all band antennas. All are welcome to visit and can even book them for a sked if desired.

VK6 will be a sought after contact so why not make things easier hey!?!

www.vkfieldmasters.com

At the perth hamfest we will be taking "bookings" for skeds. If anyone from other states (VK1-5) would like to make "bookings" and skeds, they can send an email from www.vkfieldmasters.com

AUGUST 26-27

ALARA CONTEST.

This ALARA contest is run over 36 hours to give everyone 2 bites at the 80m band.

For OMs only contacts with YLs count, while YLs can count ALL stations.

Club stations operated by YLs are certainly encouraged.

One highlight of the ALARA contest is that you may work the same station after a one hour interval on the same band. So it is worth while staying around
a tad longer for that extra contact for both yourself and the other station.

ALL DETAILS CAN BE FOUND ON PAGE 47 OF JULY'S AR MAGAZINE

AWARDS'

THE ALARA AWARD

Beautifully redesigned by VK3XBA Kathy, it's yours for contacting just 10 of our ALARA members, in 4 different call areas.

AND THOSE OF YOU LISTENING/READING THIS NATIONAL NEWS OVERSEAS, JUST 5 in 3.

Our first recipient was Pam VK4PTO, and you can see Pam with this new certificate on page 57 of the July Amateur Radio Magazine.

Now best of all, this award, open to any Amateur, is also available to those who may have achieved / received one of the original ALARA Award certificates.

Mal VK6LC the WIA Awards Manager has spoken at the West Australian Repeater Group and given an update on the WIA Awards System. Kylea VK6MRS has the details.

In the year 2000 there were 8 WIA Awards, now there are 23 plus 5 DX'er Certificates, and a few Award Managers Specials.

The talk was of particular interest to all the fairly new amateurs present.

Mal finished with 3 presentations
The first to the club, a framed A4 picture showing All the WIA Awards.

The second to Christine VK6ZLZ a framed A4 picture showing all the WIA Awards in miniature with a centre piece saying thanks for Designing and Maintaining the Awards Website 2003-2007.

and the Third to Robyn VK6XRE a framed A4 picture showing all the WIA Awards in miniature with a centre piece saying thanks for Hosting the Awards Website 2005-2007

Oh and Mal VK6LC will be at the Perth Hamfest to-day, with a display of all awards.

SPECIAL EVENTS, BEACON AND NET ADVICE

International Lighthouse and Lightship Weekend

This increasingly popular annual event occurs over the weekend of 18th / 19th of August.

Worldwide some 37 countries have been registered so far for a total of 212 lighthouses set for activation.

Australia has more than 30 listed in all mainland states. Perhaps the most interesting this year is the MV Cape Don, a purpose-built vessel to service navigational aids including manned lighthouses.

She was retired in the 1980s when lighthouses were automated, and now is being restored in Sydney Harbour at the old Coal Wharf in Waverton.

The Liverpool and District Amateur Radio Club VK2BTT will be putting this grand old lady of the sea on air.
(Jim Linton VK3PC)

The ever growing "F" Troop of the Maryborough Electronics & Radio Group in South-east Queensland have begun the "Fraser Coast "F" Troop Net " on Wednesday evenings on the frequency of 3615khz +/- QRM, commencing at 20:00 EST.

Ray Stockdale, President of "MERGE" is acting as Net Co-ordinator using firstly his callsign VK4TPT to open the net, but then QRP to 10W pep and

signing as VK4FQRP.

Stations of all classes are warmly welcome to join in but Ray asks "S" and "A" class stations to consider reducing their output to the 10W level to keep all on an even basis."

THE QNEWS WORK BENCH - the nuts and volts report -
(Measure twice - Cut once!)

Allan Bone, Chief Engineer of 2MW has 2 old AWA BTM-2 transmitters destined for the dump. but if anyone wants them, they are available for pickup from 2TM in Tamworth, and 2HD Newcastle.

The transmitters are very big and heavy ... approx 2 metres wide, 2 metres tall and 1 metre deep.

3 phase tube transmitters, rated at 2 kilowatts rf output - transmitters are in working condition, and in fairly original condition for their age

Enquiries to Allan Bone on 07 55 2 444 97 business hours.

EMERGING TECHNOLOGY - the kitchen of the future

The now common microwave oven could get a techno-cousin in the form of kitchen ovens that use the HF radio spectrum.

While RF induction heating is not new, it's now being looked at for food cooking and other industrial uses.

Internationally recognised British company C-Tech Innovation is developing ovens that use the frequencies 13.56 and 27.12 MHz which it claims, enables more effective cooking, including defrosting, and pre-heating processes for thermoplastic formation.

It claims to have achieved food defrosting up to 10 times faster than the imperfect result of microwaves, and cooking is twice as fast.

HF radiation is more easily screened the microwaves, C-Tech Innovation points out, but time will tell.
(Jim Linton VK3PC)

MEDIA WATCH

Who listens to radio?

Well to this WIA National News Service to date this WIA Year, of 13 broadcasts we see the leading state is VK2 with some 2300, followed by VK4 with 2,000

3rd is VK6, 1700
4th is VK5, 1600 (Interestingly VK5 still lead the way with greatest number to any one broadcast, the Adelaide 2 meter cast has close to 100 checkins each week).

VK7 achieved 1300 in 5th
VK3 brings up 700 in 6th
and VK1 and 8 each around the 125 call-backs in the 13 week period.

TOP 5 HAM VIDEOS ON YOUTUBE.COM

Antenna Stirs Up Controversy has become the number one most viewed ham radio video on YouTube dot com. Its actually a posting of a TV news report showing how the sight of ham radio antenna has angered neighbours in exclusive neighbourhood. As of this weeks news was being prepared, it has been viewed 45,780 times.

Coming in second this month is the music video "The Contest" performed by Andrew John Huddelston, OZ5E and the Ham Band. The 4 mt presentation also features a video montage of the famed OZ1ADL and OZ5E Contest Station with lots of famous guest operators. Its sitting with 43,639 views.

Dropping to third place is the ARRL sponsored production of Amateur Radio Today. Hosted by retired CBS newsman Walter Cronkite, this show tells the story of ham radio in emergency situations that include the 911 terror attack on New York City and the 2003 Colorado wildfires. Its currently at 33,361.

In number 4 position is the Tonight Show bit that pitted two ham radio operators using Morse code versus a text messaging champion and his assistant. As you might already know, the hams running Morse beat out the text messaging by a mile. That video has been looked at 30,781 times.

Rounding out the top five the Ham Band is back with their music video titled "Come And Join Us On The Airwaves." This show again features lead singer Andrew John Huddelston, OZ5E, this time in a tuxedo and top hat hanging off the top of a 120 foot high tower while singing the praises of Amateur Radio. Its currently at 29,155 views.

Moving well ahead, we discover here in Australia the BPL Hobart videos, thanks to Justin VK7TW come in with some 10,000 views.

Keep in mind that the ratings system on YouTube is very dynamic. This means AIT
changes all the time based on how many people stop by a given video to watch. (ARNewsLine)

AMSAT-VK UNOFFICIAL HF Net.
2nd Sunday each month.
November through March 0900 UTC 7.068 MHz
April through October 1000 UTC 3.685 MHz

October 4, 1957 saw the launch of the worlds first artificial earth-orbiting satellite, Sputnik I.

The editor of CQ Magazine would like Radio Amateurs' recollections of that historic event for inclusion in the October issue.

CQ Editor Rich Moseson, W2VU says:
The 50th anniversary of the launch of Sputnik is coming up in October, and we are currently working on our October issue. Many of you remember the launch well, and of course, hams were in the vanguard of listening for those beeps from above.
We'd like to collect a representative sampling of your first-hand recollections to weave into an article for our October issue. Plus, we'd like to hear if this experience had a significant impact on your choice of careers, etc. - in short, did listening for Sputnik change your life? If so, how?
Please respond as soon as possible by e-mail directly to a special mailbox we've set up at sputnik@cq-amateur-radio.com

Many thanks in advance and 73,
Rich W2VU

WW SPECIAL INTEREST GROUPS --- INTERNET --- THE HAMS DOMAIN

We have just learned from the latest FISTS club Downunder newsletter about an interesting Internet facility, W.O.T.A.

This is a live database of stations on the air that are connected to the service.

WOTA is used in addition to logging programs, it allows amateur radio operators world wide to "connect" to the server containing information about who is "on the air".

Amateurs using this software can post their Call, Frequency, Time, and other information to other amateurs worldwide.

WOTA can assist in making elusive contacts for awards.

Need a country? Use WOTA to determine if anyone in that country is operating, then go to that operators posted frequency and attempt a contact.

The WOTA web site is at
www.wotadb.org

WW SPECIAL INTEREST GROUPS --- Internet Linking of Repeaters

Good to see in the Wide Bay area of VK4 that the EchoLink node which had been blocking the use of the 146.5 FM national call frequency has

moved.

Remember, when you travel Australia and the area you are in does not have an IRLP/EchoLink supported repeater, scan the officially recolonised simplex frequencies set aside by the Band Plans in case of a simplex node.

These frequencies are between 145.325 and 145.400 MHz - and they were recommended because they don't clash with any existing activity.

WW SPECIAL INTEREST GROUPS --- RADIO AMATEUR OLD-TIMERS

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 5 AUGUST 2007

You are listening to ZS6SRL the official Radio Station of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is transmitted every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. To listen to a web stream or Echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links for details.

This, and previous bulletins, can be downloaded from the www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

This transmission is by Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, and 51,400 MHz as well as 438,825 and 1 297 MHz in the Pretoria area. (Other newsreaders please change to suit).

SILENT KEYS

It is with deep regret that we announce the passing away of Leo Alexander, ZS5WF, last week. Leo was a retired Minister and very active on the Wacral Net. To his family and friends our sincerest sympathies.

The key of Wally Perfect, ZS5WP, became silent on the 28th July. Our sincerest condolences to his spouse May, other relatives and friends.

(PAUSE)

In the news today:

SARL TO ISSUE RAE CERTIFICATES

SARL WEBSITE CHANGES - CHECK IT OUT

DID YOU LISTEN TO SPUTNIK 1?

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

SARL TO ISSUE RAE CERTIFICATES

Arrangements for the SARL to issue the RAE certificates have been finalised with ICASA. In future candidates who pass the Class A examination will be issued with an international HAREC certificate. This certificate allows operation in all CEPT countries and several

others outside Europe who are complying with the conditions of the HAREC examination.

Students who pass the introductory level examination (Class B examination) will be issued with a RAE certificate. The class B examination is not HAREC compliant and cannot be used for operation in other countries.

Radio Amateurs who in the past received a RAE certificate may apply to the SARL Head Office for a replacement HAREC compliant certificate. Applications must include a certified copy of a current Radio Amateur license and should be faxed to 088 011 675 2793. There is no charge for SARL members. Non SARL members should include payment of an administration fee of R100.

SARL WEBSITE CHANGES - CHECK IT OUT

As announced recently the SARL website will be undergoing some changes and we encourage you to check it out! On the members-only home pages you will find interesting articles that will be updated frequently so visit the members section frequently. Click on "Members Only" on the top right hand of the home page. You will be asked for your callsign and pin (personal identification number). The pin appears on the membership card which was mailed to members who have renewed their 2007/2008 membership.

It is important that the SARL has your correct email address in the data base so that if you make a mistake when entering the pin you will receive an automatic e-mail to remind you what the correct pin number is.

All address and email address changes should be sent to admin@sarl.org.za.

SARL@HOME

The first SARL@HOME activity will take place at the National Amateur Radio Centre on Saturday 15 September at 11:00. It will take the form of a coffee session to talk about what young radio amateurs expect to get from their hobby. The session is aimed at the under 25's and those who are over 25, but still young at heart.

SARL@HOME will be hosted by Rhynhard Louw, ZS6DXB. Participants will also have the opportunity to operate the equipment at the Reno Faber Memorial Amateur Radio Station. There will also be a demonstration of how to use Echolink. To allow for catering, drop a line to youth@sarl.org.za.

SARL ELMER SERVICE

Do you have a question about some technical, regulatory or operating aspect of Amateur Radio; send your question to elmer@sarl.org.za. Andrew Roos ZS6AA, SARL Technology Councillor will find the answer for you.

SARL SENIOR MEMBERSHIP FEES CORRECTION

Unfortunately in the bulletin of 15 July the membership fee for seniors was incorrectly stated as R147 per annum. The correct fee is R184 per annum after the 20% discount on the normal fee of R230. Our apologies if this error has caused any inconvenience or embarresment to any member.

DID YOU LISTEN TO SPUTNIK 1?

If you listened to Sputnik 1 way back in October 1957, we would like to hear your story!

History changed on October 4, 1957, when the Soviet Union successfully launched Sputnik I. The world's first artificial satellite was about the size of a basketball, weighed only 183 pounds, and took about 98 minutes to orbit the Earth on its elliptical path. That launch ushered in new political, military, technological, and scientific developments. While the Sputnik launch was a single event, it marked the start of the space age and the U.S.-U.S.S.R space race.

To celebrate spaceweek from 4 - 10 October the SARL, SA AMSAT and the SA Amateur Radio Development Trust are working together in a special programme to promote science and technology. If you heard the Sputnik signals way back in 1957 tell us what impact it had on you. Did it influence your career choice?

Drop us a line at saamsat@intekom.co.za, we would like to call you to do a brief interview for a special programme.

Read the full Sputnik story and hear the telemetry again in the SARL member section of www.sarl.org.za

AUGUST CLASS B RAE

The exam numbers and venue details for the class B exam to be written on the 23rd of August 2007 at 19:00 CAT is now available on the SARL web site. Lecturers and invigilators are requested to download the said information and inform their students accordingly.

RAE COURSE IN THE WESTERN CAPE

Prospective students for the October class A RAE who would like to attend a course in the Western Cape can contact Karel, ZS1KC, at telephone 021 976 5237 or on cell 083 955 7177. It is proposed that the course will commence on 7 August. Classes will be held once a week in the Oakdale Sport Club.

COMPETITION NEWS

This afternoon from 15:00 to 18:30 CAT you can participate in the annual SARL HF Phone contest with activity on certain segments of the 20, 40 and 80 metre bands. The exchange is a RS report and a serial number. The rules are available on the SARL web site at www.sarl.org.za, in the 2007 SARL Contest Manual and HF Happenings 260

and 261.

On Sunday 12 August the first SARL 40 Metre Mobile Contest will be on the air from 15:00 to 17:00 CAT. This is a fun activity to promote contacts between mobile stations and other radio amateurs in Southern African countries. Mobile means the operator must be in a vehicle with a mobile antenna fitted, the vehicle may be stationary. The rules are available in the 2007 Contest Manual.

Tomorrow, Monday 6 August, is the last day for sending log sheets for this competition which took place on Sunday 22 July. Participants can send their log sheets by e-mail to zs1bak@mailbox.co.za. Boland ARC is pleased to announce that the winner of this competition will receive an ARRL Antenna Handbook. This prize has been made available by Kobus Conradie ,ZS1DC.

CLUB NEWS

At the AGM's of clubs held recently members were elected to their respective management committees for the new terms of duty as follows:

For the Cape Town Amateur Radio Centre:- Chairman: Dave Reece, ZS1DFR; Vice Chairman: Shaun Overmeyer, ZS1RA; Secretary/Treasurer: Peter Henochsberg, ZS1PMH; Minutes Secretary: Evan Pedlar, ZS1EVP; Bulletins and Rosters: Tony McEwen, ZS1TM; Technical advisor: Noel Futter, ZS1FW; Event Coordinators: Paul Kennedy, ZR1PXK;

James Gardener, ZS1ROY.

For the West Rand Amateur Radio Club:- Chairman Stuart Baynes ZS6OUN; Vice Chairman Ron Eva ZS6RON; Secretary John Brock Newsletter; Treasurer Craig Woods ZS6CRW; Member Romeo Nardini ZS6ARQ;

Joop Hesp ZS6C;

Geoff ZS6GRL;

Phillip v Tonder ZS6PVT Repeater;

Willem Weideman ZS6WWJ.

For the Zululand Amateur Radio Club:- Chairman: John Kramer, ZS5J; Vice Chairman: Jan Erasmus, ZS5G; Treasurer: Willie Axford, ZS5WI; Secretary: Dawn Snyders, ZR5ME; Members: Jo Snyders, ZR5PO (News Editor);

Andrew Jansen, ZR5MH;

Warren Snyders, ZR5WOZ.

For the Midlands Amateur Radio Club Bert Cornell, ZS5MQ, Chairman and Clubhouse Manager; Wessel du Preez, ZS5BLY, Vice-chairman and HHN editor; Mike Boast, ZS5BGV, Secretary and Treasurer; Robin Seal, ZS5MRS, PRO and Media Liaison; Shaun Rudling, ZR5S, VHF/UHF and Digital matters (also our

webmaster); Mickey Esterhuysen, ZS5QB, Technical Adviser and Net Controller.

Thanks to the retiring committee members and strength to the incoming members for what lies ahead.

WEST RAND FLEA MARKET

The West Rand Amateur Radio Club is holding it's next flea market on 1 September 2007 at the club house in Ktoton Street, Weltevreden Park, Roodepoort at 12:00.

Everyone is very welcome. For more information contact Stuart at 082 573 3359.

PROPAGATION CONDITIONS

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at very low levels. ,The geomagnetic field is expected to be quiet in general while reaching minor storm levels on 8 August. The expected Effective Sun Spot number for the coming week will be less than 5.

20 m and 40 m will provide best opportunities for DX. There is a possibility of 20 m openings towards India from about 15:00 CAT. Contacts with Australia are going to be very challenging. From 17:00 there may be short 20 m openings towards Europe. For the early birds there is the possibility of short 80 m openings towards the East Coast of the USA at about 04:00. Otherwise contacts to the USA are going to be very challenging.

For the CW and digital enthusiasts it will also be worth monitoring 10 MHz.

Locally 40 m is going to be the band to be on during day time and 80 m after sunset. It is once again time to work towards your 80 m WAZS award in the evenings. Remember that this is only a prediction and that HF always has the capability to surprise you. You will never know what you are missing unless you switch your rig on, listen and also call CQ. Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

Today - 5 August - SARL HF Phone Contest; 6 August - Last day for handing in of logsheets for Boland ARC competition; 12 August - SARL 40 Metre Mobile Contest; 18 August - Radio Technology in Action day in Gauteng; 23 August - Class B RAE; 15 September - SARL@HOME 4 - 10 October - Special space programme; 6 October - SA AMSAT Space Conference; 18 October - Class A RAE.

SARL News invites clubs and individuals to submit news stories of interest to radio amateurs and shortwave listeners. Submit news stories if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to the programme Amateur Radio Mirror International, on the air every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 590 kHz. For the web stream and echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links. A repeat transmission can be heard Mondays at 21:00 CAT on 3 215 kHz. Sentech sponsor the ARMI transmissions on the non-amateur frequencies.

Today's South African Radio League news bulletin was compiled by Gustav,ZS6BWN, and transmitted by (your name and call sign)

Thank you for listening. 73

I believe that some have - but am not 100 percent sure. The PSK community was fairly loud about their plans to ID and complain. The interference has lessened as of late. I suspect just the threat of complaints helped a lot.

The technology and users ot it are not bad, but the implementation is.

<snip>

Well, perhaps I should rephrase that in every instance that I have dealt with SIG's, that has been the case. THat would be several dozen occasions.

1 GB2RS NEWS Sunday 5 August

The news headlines

* Gloucestershire County RAYNET assist in floods

* UK Licence Examination at the RSGB HF Convention

* Hamfest to be held in Dorset Gloucester County RAYNET was called upon for assistance last week during the floods. The service was activated by the County Council Emergency Planning Officer to assist in the evacuation of the county emergency centre on 25 July. All the RAYNET contingency equipment was stripped out of the radio room underneath Shire Hall in the city centre, and a temporary station relocated at the Tri-Service Control centre at Quedgeley, to the south of Gloucester.

The prime use of the station was to establish links to the district rest centres established around the county and to provide backup links to out-of-county sites where telephone systems would still be operational, should the Walham substation have failed.

Liaison was kept with other RAYNET Groups at Bath, Gwent and Bristol through Zone 7 Controller Chris, G8RXA. This ensured they were kept abreast of the situation and could be called in to assist if necessary. Thanks to the efforts of members working long hours on Sunday, Monday and Tuesday, voice and data communications links were set up to the Triservice Control Centre from Tewkesbury, Gloucester, Cheltenham, Cirencester and Stroud.

On Thursday, a callout was issued by the County Emergency Planning Officer for radio links to be set up between the Triservice Control and the five main bottled water distribution points for vulnerable people. RAYNET members responded to the request by message distribution and assisting the volunteer teams at the locations.

The RSGB is offering those wishing to obtain a UK Amateur Radio Licence the opportunity to complete one or more of the required examinations over the weekend of the HF Convention, 12 to 14 October.

Candidates must book their examinations prior to the event and must provide evidence they have completed the required practical assessments. Limited facilities to complete assessments at the HFC can be arranged. The contact for further information and for booking examinations is Susan Lloyd, email susan.lloyd@rsgb.org.uk, or by phone on 0870 904 7373.

The Flight Refuelling Amateur Radio Society is holding Hamfest 2007 on Sunday 12 August at the Cobham Sports and Social Club grounds at Merley, Dorset.

There will be live demonstrations of 1.3GHz ATV from the proposed Bournemouth area repeater GB3SQ. Members of the South Coast Repeater and Beacon Group will be on hand to explain the workings of local repeaters and the Bell Hill Microwave Beacon Complex.

The onsite model steam railway will be in operation for the children and there will be several demonstrations of Tesla coil systems. Plus of course there will be the usual trade stands and a large radio car boot sale section. For full details contact the Hamfest organiser Mike Sykes, M0MJS, at m0mjs@tiscali.co.uk.

2 AMSAT-UK beginners workshops again proved successful at their Annual Colloquium in Guildford. The workshops aim to show newcomers how to get started in the exciting world of amateur satellite communications. Many are amazed to discover that they can communicate through amateur satellites or speak to astronauts onboard the International Space Station using little more that a handheld dual-band FM transceiver. Now that all licensees have access to the Satellite Service there was a sharp increase in the numbers of Foundation and Intermediate licensees attending.

And now for the details of rallies and events for the coming week

[Note to newsreaders: please exercise your judgement on which of the 5 August events to read out, based on your service area and time of transmission.] On Sunday 5 August the Lincoln Short Wave Club Hamfest will take place at the Newark Show Ground, located at the junction of the A46 and A17. On Sunday 5 August the West Somerset ARC Rally takes place from 10am at Hare Park, Allerford, Minehead. On Sunday 5 August the Lorn Radio Amateur Rally takes place from 10am at Crianlarich Village Hall near the junction between the A85 and A82. On Friday 10 August the Cockenzie & Port Seton Amateur Radio Club 14th Annual `Junk' Night takes place from 18.30 at the Community Centre, Main Hall, South Seton Park, Port Seton, East Lothian EH32 0BQ. Details from Bob Glasgow, GM4UYZ, on 01875 811723, or on the internet at www.cpsarc.com. On Sunday 12 August the Flight Refuelling ARS Hamfest takes place from 10am at the Cobham Sports and Social Club Ground, Merley, Near Wimborne, Dorset BH21 1RJ. Talk-in will be provided on S22. Details from Mike, M0MJS, on 01202 883 479, or by email to hamfest@frars.org.uk, or on the internet at www.frars.org.uk. On Sunday 12 August the Kings Lynn Amateur Radio Club Rally takes place at Kings Lynn Caravan and Camping Park, PE33 OQR, on the A47 approximately 3 miles east of Kings Lynn. Details from Andy, G1KLP, on 07778 003687 or on the web at www.klarc.org.uk. More details of these and future events can be found on pages 88 and 89 of the August edition of RadCom. Now for the news of special events

To mark the 100th anniversary of scouting, special event station GB100J is active until 7 August. Operating from Hylands Park, Chelmsford, the

station is expected to be on air 24 hours per day on 80m through to 6m. Depending on the availability of an Internet connection, the station also hopes to be active on Echolink. More details at www.radioscouting.org.uk. The Dragon ARC, Anglesey, will be operating special event station GB250TT on 9 August to celebrate the 250th anniversary of the birth of engineer Thomas Telford. Operations from the Menai Suspension Bridge, will be on HF, 2 metres and ATV and will start on the afternoon of Wednesday 8 August and will run through to 10 August, if there are sufficient operators. Also, there will be amateur radio stations operating from some of the other sites where Thomas Telford worked including GB4TT at Montford, Shropshire and it is understood there will be several Swedish stations operating from the Go"ta Canal in Sweden.

3 Special event station GB2GSS will be on the air using HF and VHF on 15 August from the Gillingham and Shaftesbury Show. As in previous years the station will be operated by members of the Blackmore Amateur Radio Society. QSLs via the bureau please. A special event station GB1SL will be on the air from the Skerries Lighthouse for this years International Lighthouse and Lighthouse Weekend on 18 and 19 August. This will be the first activation from the Skerries, the Lighthouse situated in a group of Islands off the Anglesey coast in the Irish Sea. Operation on 80 and 40 metres CW and SSB, 20 metres SSB and 6 metres. QSL via bureau or via GW0VML. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources. Caudio, IN3DEI/ W1ADX, is operating holiday style as 9A/W1ADX from Dalmatian islands Dugi Otok, Molat, Pasman and Ugljan in the EU-170 IOTA group until 7 August. QSL via IN3DEI. Celebrating the centenary year of the scouting movement, Geoff, M5GAC, is operating as GB5BBS from the Isle of Arran (EU-123) until 8 August. He plans to be active on 80, 40, 20 and 15 metres. QSL via M5GAC, direct or bureau. Yogi, DB5YB, is active as LA/DB5YB from Stord Island (EU-055) until 9 August. He plans to operate holiday style on 10 to 20 metres SSB. QSL via home call, direct or bureau. Ann, WA1S, is in Sao Miguel (EU-003), Azores until 9 August and is active as CU2/WA1S. QSL via home call. Fabrizio, IK5WOB, is operating CW only as TK/IK5WOB from Algaiola, Corsica (EU-014) until 11 August. QSL via home call, direct or bureau. Activity is taking place from the 92nd Esperanto World Conference in Yokohama until 12 August. QSL via JA1YAR or JA1FXZ, bureau or direct. During the lighthouse weekend 18 and 19 August Bekir Kemal Ataman, TA2RX, will be making a dxpedition to Gelidonia lighthouse in Antalya, Turkey, to operate as TC4LHW. Now the contest news The RSGB 432MHz Low Power Contest takes place on 5 August between 0800 to 1200 on all modes. The exchange takes the form of RST, serial number, locator and postal district. The RSGB 144MHz Activity and Club Championship takes place on 7 August between 2000 to 2230 local time on all modes. The exchange takes the form of RST, serial number, locator and postal district. The Worked All Europe CW Contest takes place on 11 August between 0000 to 2359 on the 3.5 to 28MHz bands. The exchange takes the form of RST and serial number. Now the solar factual data for the period from 23 July to 29 July, compiled

by Neil Clarke, G0CAS Solar activity was very low with no solar flares taking place at all. The solar disc was spotless until the 28th when a small group appeared. Solar flux levels varied little day to day and averaged 69 units. The 90 day

4 solar flux average on the 29th was 74, that's the same level for the last 7 weeks. X-ray flux levels remained below the minimum A1 level everyday. Geomagnetic activity started at very quiet levels with an Ap of only 2 units on the 24th and the 25th. On the 29th due to a coronal hole activity increased to 14 units. The average was Ap 6 units. The ACE spacecraft saw solar wind speeds increase from 290 kilometres per second on the 26th to 640 by the 29th. Particle densities were low but increased to 46 particles per cubic centimetre on during the morning of the 29th. Bz varied between minus 1 and plus 2 nanoTeslas on the quiet days and between minus 8 and plus 12 on the 29th. Despite the low levels of geomagnetic activity HF conditions seemed mostly unexciting - until the increased activity for the IOTA contest suggested that good DX possibilities might previously have been going unexploited. Sporadic-E is now past its seasonal peak, but there were still openings on 28, 50 and 70MHz on several days. And finally the solar forecast. This week the active side of the Sun is expected to be looking our way. Saying that, solar activity should continue at mostly very low levels with only a small chance that activity could increase to low. However, solar flux levels are expected to be at their highest for this solar rotation. Solar flux levels should be around the mid to high 70's for most of the week. Geomagnetic activity is expected to be quiet today and tomorrow but then due to a coronal hole activity should increase. This disturbance could last till almost the weekend. MUFs during daylight hours at equal latitudes should be around 19MHz for the south and 16MHz for the north. The darkness hour lows are expected to be about 9MHz. Paths this week to India should have a maximum usable frequency with a 50 per cent success rate of about 23MHz. The optimum working frequency with a 90 per cent success rate will be around 18MHz. The best time to try this path will be between 0800 and 1600 hours UTC. Normally, August, heralds the end of the main summer season for sporadic E. Openings should still take place this week, however, a gradual decline will take place as the month progresses. And that's all for this week from the propagation team.

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Sunday 5 August Leiston Amateur Radio Club is having a fox hunt and BBQ at Blaxhall Village Hall. Contact Dave, G4HUP, on 01473 737 717, g4hup@btinternet.com.

On Sunday 5 August Surbiton Heritage Amateur Radio and Electronics Society is having an on the air day. Contact Tony, G7DGW, on g7dgw@shares.uk.net, or on the web at www.shares.uk.net.

On Monday 6 August Braintree and District Amateur Radio Society is having an operating evening and planning its camping weekend. Contact John, M5AJB, on 01787 460 947.

On Monday 6 August Burnham Beeches Radio Club is having a pub meeting. Contact G4XDU, on 01628625720.

On Monday 6 August Southdown Amateur Radio Society is having its annual BBQ at G6GVM's. Contact John, G3DQY, on 0124424319, or by email to vaughdqy@aol.com.

On Monday 6 August Surrey Radio Contact Club is having a members evening at Trinity School. Contact Ray, G4FFY, on 020 8644 7589.

On Tuesday 7 August Brede Steam Amateur Radio Society is operating from the bunker. Contact Steve, M0SSR, on 01424 720 815.

On Tuesday 7 August Chelmsford Amateur Radio Society is having its constructors competition. Contact Martyn, G1EFL, on 01245 469 008.

On Tuesday 7 August Horndean and District Amateur Radio Club is having a social evening. Contact Stuart, G0FYX, on 023 9247 2846, or on the web at www.hdarc.co.uk.

On Wednesday 8 August Aylesbury Vale Radio Society is working on the club project, on the air and having a discussion evening. Contact Roger, G3MEH, on 01442 826 651, or by email to roger@g3meh.com.

On Wednesday 8 August Chesham and District Amateur Radio Society is having a shack computer evening. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 8 August Dover Radio Club is having a portable evening on Farthing Common. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 8 August Fareham and District Amateur Radio Club is having a discussion by members on how they got into amateur radio and what it means to them. Contact Jim, M1JJN.

On Wednesday 8 August Harwich Amateur Radio Interest Group is having a members show and tell evening about a trip or holiday. Contact James, M0ZZO, on 01255 242 746.

On Wednesday 8 August Havering and District Amateur Radio Club is operating GB4HRC to celebrating over 40 years of the club's existence. Contact Dave, 2E0EBV, on 07956 594 514.

On Wednesday 8 August Norfolk Amateur Radio Club is having antenna erection practice with Rex, G0CLR. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

6 On Wednesday 8 August South Essex Amateur Radio Society is having an update on GPS by Dave, G4UVJ. Contact Dave, G4UVJ, on 01268 697 978, or by email to southessex.ARS@btinternet.com.

On Wednesday 8 August Worthing and District Amateur Radio Club is making its plans for Lighthouse weekend. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 9 August Echelford Amateur Radio Society is watching a DVD on amplifiers by Graham Dicker, VK5ZFZ. Contact John Osborne, G4GSC, on 01784 451898.

On Thursday 9 August Reading and District Amateur Radio Club is having an evening on the air and natter night hosted by Tom, G0VQR. Contact Pete, G8FRC, on 01189 695 697, or on the web at www.radarc.org.

On Thursday 9 August Southgate Amateur Radio Club is having a BBQ. Contact Erik, 2E0ECR, on 0208 444 3247.

On Friday 10 August Mid-Sussex Amateur Radio Society Radio is having an operating evening. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Sunday 12 August Brede Steam Amateur Radio Society is operating from the bunker. Contact Steve, M0SSR, on 01424 720 815.

On Sunday 12 August Harwich Amateur Radio Interest Group is having a lecture on solar propagation software by Carl Thomson, G3PEM. Contact James, M0ZZO, on 01255 242 746.

On Sunday 12 August King's Lynn Amateur Radio Club is having its radio rally. Contact Andy, G1KLP, on or on the web at www.klarc.org.uk.

On Sunday 12 August Southdown Amateur Radio Society is operating G1KAR at Beachy Head. Contact John, G3DQY, on 0124424319, or by email to vaughdqy@aol.com.

NEWS FOR THE SOUTH-WEST

On Wednesday 8 August South Bristol Amateur Radio Club is having an evening of software training on the club computer. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 8 August Thornbury and South Gloucestershire Amateur Radio Club is having a visit to the model flying club. Contact Tony, G0WMB, by email to tonytsgarc@beeb.net.

On Thursday 9 August Yeovil Amateur Radio Club is having an SSTV evening. Contact Gary, 2E0BFJ, by email to g.swain@tesco.net.

NEWS FOR THE MIDLANDS

On Sunday 5 August Lincoln Short-Wave Club is running the Lincoln Hamfest at Newark Showground. Contact John, G1TSL, on 01526 323 153.

On Monday 6 August Gloucester Amateur Radio and Electronics Society is visiting the airport. Contact Anne, 2E1GKY, on 01452 548478, daytime.

On Monday 6 August Stourbridge and District Amateur Radio Society is having an open shack night. Contact John, M1EJG, on 01562 700 513.

On Tuesday 7 August Derby and District Amateur Radio Society is having a junk sale. Contact Martin, G3SZJ, on 01332 556 875.

On Tuesday 7 August Loughborough and District Amateur Radio Club is moving in to its new meeting venue and having a welcome evening. Contact Chris, G1ETZ, on 01509 504 319.

7 On Tuesday 7 August Wythall Radio Club is taking part in the 2m Club Championship from the shack. Contact Chris, G0EYO, on 07710 412 819, or by email to g0eyo@blueyonder.co.uk, or on the web at www.wythallradioclub.co.uk.

On Wednesday 8 August Lincoln Short-Wave Club is having a debrief on the Hamfest. Contact John, G1TSL, on 01526 323 153.

On Wednesday 8 August Telford and District Amateur Radio Society is having a local area walking foxhunt. Contact Mike, G3JKX, on 01952 299 677, or by email to mjstreetg3jkx@blueyonder.co.uk.

On Thursday 9 August Salop Amateur Radio Society is having an introduction to RAYNET. Contact Glenda, G1YJB, on 01939 235 412.

On Friday 10 August Coventry Amateur Radio Society is having a committee meeting and update on the 75th anniversary dinner. Contact John, G8SEQ, on 02476 273 190, or by email to johng8seq@ntlworld.com.

On Friday 10 August Hucknall Rolls-Royce Amateur Radio Club is having a members BBQ evening. Details on the web at www.hrrarc.com.

On Saturday 11 August Wythall Radio Club is operating a special event station at Evesham Steam Fair. Contact Chris, G0EYO, on 07710 412 819, or by email to g0eyo@blueyonder.co.uk, or on the web at www.wythallradioclub.co.uk.

NEWS FOR THE NORTH OF ENGLAND

On Monday 6 August Sheffield Amateur Radio Club is having a portable evening and BBQ at Whitley Woods. Contact Trevor, M0TWS.

On Monday 6 August Thornton Cleveleys Amateur Radio Society Club is on the air. Contact Jack, G4BFH, by email to jack.duddington@btinternet.com.

On Tuesday 7 August Halifax and District Amateur Radio Society is having a technical evening at Rishworth School. Contact Brenda, 2E0YKS, by email to wrenuk10@yahoo.com.

On Tuesday 7 August Stockport Radio Society is having a presentation and demonstration on restoring old photographs by Christine Simcock, M1SIM. Contact David, M1ANT, on 0161 456 7832.

On Wednesday 8 August Great Lumley Amateur Radio and Electronics Society is on the air. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Friday 10 August South Manchester Radio and Computer Club is having a talk by G3UAU on "My Baltic Cruise". Contact Ron on 0161 969 3999.

On Friday 10 August Tynemouth Radio Club is having a talk on using multimeters. Contact Tony, G8YFA, by email to tonyregnart@blueyonder.co.uk.

On Saturday 11 August Hornsea Amateur Radio Club is operating GB2DSR at the Driffield Steam Rally, East Yorkshire. Contact Steve, G4GPY, on 01482 860 440, or by email to g4gpy@eddiesplace.karoo.co.uk.

NEWS FOR SCOTLAND

On Thursday 9 August Aberdeen Amateur Radio Society is having an HF fox hunt. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

On Friday 10 August Cockenzie and Port Seton Amateur Radio Club is having its 14th annual junk night. Contact Bob, GM4UYZ, on 01875 811 723.

Part (not all) of the allure of kits and homebrewing was "I can build it cheaper
than buying". The price of labor has gone down as a percentage of manufacturing
costs, so purchased-ready-built has gone down over the years.

That's certainly one big factor. Here are some
more:

The cost of new parts bought in large quantities
is much lower than the single-unit or small-quantity
cost.

The availability of a wide range of
surplus and used parts at prices far
below new has diminished.

Unless something exceptional is built, the
resale value of homebrew is usually but
a small fraction of the cost of all new parts.

None of this is really new, however.

Many years ago, I wondered what it
would cost to build a project out of
the old ARRL Handbook, circa 1960.
I had a 1959 Newark catalog for pricing
out the parts.

The project I chose was a simple 2 stage
transmitter of the type Novices would have
used in those days. Nominally 50 watts input,
plug-in coils, etc.

By the time I got done adding up all
of the individual parts prices,
the total was well over $50.

This was back when a Heath DX-20 kit
was only $36, and the EF Johnson
Viking Adventurer was $55.

These prices do not count tools, so
the difference is even greater because

homebrewing would require metalworking tools
that the kits did not.

OTOH, the little company called Elecraft has
sold over 8000 transceiver kits in recent years,
with minimal advertising.

However, it should be noted that their new K3
is available as either a no-soldering "PC-kit"
or factory assembled.

The first two production runs of the K3 are
already sold out.

Irish Radio Transmitters Society
Radio News Bulletin

Sunday August 5th 2007

IOTA Contest

The Islands On The Air contest was held last weekend. In this year's contest, two offshore Irish islands were heard, Inis O�rr and Rathlin. South Dublin Radio Club and friends were on Inis O�rr Island, County Galway, using the call sign EJ0GI, while the Kilmarnock and Loudon Amateur Radio Club, call sign GI3YS, were on Rathlin Island, off the coast of County Antrim. Numerous mainland stations were also active. Among the mainland stations, club call signs EI0W (Dundalk Amateur Radio Society), EI7M (East Cork Amateur Radio Group) and EI9E (Network Southern Area Radio Experimenters Club) were active. At least 20 other EI, GI and MI call signs were heard during the contest, making the Islands on the Air contest one of the more popular international contests in this country.

For Irish stations, 20 metres and the low bands were the key bands this year, although there was some 15-metre activity on both Saturday and Sunday. 10 metres appeared to be open to Ireland only for a brief period on Saturday. While the higher bands may have been disappointing, there was some very good DX on the lower bands, with many VK, ZL and JA stations logged on 40 metres. The results of this contest, which can be expected before the end of the year, are no doubt eagerly awaited.

CQIR

Great interest is being expressed worldwide in the Society's 75th Anniversary Contest CQIR, which will take place on the last weekend in September. The contest is a celebration of Ireland and the Irish, throughout the world and with 40 million people in the United States alone claiming Irish forefathers; we expect that CQIR will be one of the largest 'one off'

contests ever aired on the Amateur Bands. It is a 24-hour single operator contest with the emphasis on participation rather than winning and to this end every participant gains an entry ticket for a spectacular draw for every 75 QSO's made during the Contest.

The ticket drawn out of the EI/GI drum will win an all expenses paid long weekend in New York City for two people. ARRL have confirmed that this will include a visit to their national headquarters hosted by ARRL. Kinnitty Castle in Offaly will host the international winners for a week with flights for two from anywhere in the world. The prizes have been fully sponsored at no cost to the Society and this is really an excellent opportunity to celebrate the Society and its 75 years of service to Irish experimenters. We would encourage all Irish operators to be active during the Contest. So ring fence the last weekend of September in your diary, make an effort to have that new antenna up for the event and lets ensure a good show from the local Irish operators to support the international Irish who will no doubt come on the bands in their thousands for the contest. Full rules are on the IRTS website.

EI75IRTS

As part of the Society's Jubilee Celebrations, we have been allocated the call sign EI75IRTS for the year 2007. Please note that Individuals and club members of IRTS may apply to use the call sign EI75IRTS during the rest of 2007. Contact Finbarr Buckley EI1CS about this. The use of the call sign EI75IRTS is subject to a number of conditions and full information is available on the IRTS web site at www.irts.ie.

South Dublin Radio Club

South Dublin Radio Club is on holidays following a successful activation of Inish Oirr in the Aran Islands under the callsign EJ0GI during the Islands on the air contest. Weekly meetings will resume as usual at 8pm on Tuesday the 14th of August in the Ballyroan community Centre on the Marian road in Rathfarnam. Thirteen people took part in the Island activation, which was enjoyed by all.

The next SDR event is a lighthouse activation during Lighthouse on the Air on Saturday 18th and Sunday the 19th of August. They will be activating Saint Johns Point Lighthouse County Down. This is not a contest but

a fun event.

Marconi's Wireless Telegraph in Ireland,
"Alpha/Omega Tour"

In 1907, Guglielmo Marconi's dream of fixed point-to-point wireless telegraph stations linking North America and Europe became a reality. Derrygimla near Clifden, County Galway served as the site of his wireless station. Over the next 15 years, spark-induced blue flashes generated by the station's massive 20 kV generators sent tens of thousands of wireless messages across the Atlantic, linking to its North American counterpart at Glace Bay, Nova Scotia.

2007 marks the centennial of those first sparks generated from Marconi's historic Clifden station. To commemorate this significant event, as well as radio's first-ever commercial venture at Ballycastle-Rathlin, Hal W8HC announces a special amateur radio operation from both locations central to Marconi's fame and success as a pioneer in wireless technology. Ballycastle-Rathlin was his first wireless telegraph station and the Clifden station would be his last, ceasing operation in 1922.

On Saturday and Sunday, August the 4th and 5th. Hal will operate from Ballycastle as GI/W8HC/p. He will be also taking part in the annual Marconi Festival at Ballycastle with the Marconi Radio Group's MN"MRG special event station on Sunday the 5th of August. On Monday the 6th of August, he will ferry over to Rathlin Island (EU-122) and operate from East Lighthouse (ARLS designator NTI 011).

He will arrive in Clifden on Wednesday the 8th of August where he will operate as EI/W8HC/p at the Derrygimla site on Thursday and Friday the 9th and 10th of August. It is hoped that some operating time can also occur from nearby Letterfrack, site of an ancillary receive station built in 1912 to allow for full duplex operation of the transatlantic signals.

All QSOs will be confirmed via LOTW and special QSLs from each of these historic Marconi locations will be printed and sent via GlobalQSL www.globalqsl.com. In addition, a specially designed certificate will be issued to those stations making contact with both GI and EI operations from either Ballycastle or Rathlin and Derrygimla or Letterfrack. In keeping with the

historic connection, all QSOs from these locations will be CW only. Limited mobile phone operation will take place during transit in both GI and EI.

Field Days and Contests

The 2 metres counties contest will take place on the 26th of August. The SSB field day will take place over the first weekend (1st and 2nd) of September. Again the grounds of Garbally College, Ballinasloe, Co. Galway will be available, thanks to Niall EI4CF and once again the Shannon Basin Club will be hosting their now famous Barbeque. Of course, the big event will be CQIR over the last weekend, so plenty to look forward to.

Please note that the deadline for submission of logs for the VHF/UHF Field Day is the 7th of August.

Foyle and District ARC Rally

The Foyle and District Rally will take place on Sunday the 4th of November 2007 at the White Horse Hotel, Derry, 3 miles from Derry on the main Limavady Road. Doors open at midday. The club's web address for more information is www.mn0aku.org.uk.

Church Broadcasts

Recently we carried an item telling you that it has now been established that a church broadcast is being transmitted on 28.105 MHz FM in the Dublin area. Some further work is required to identify the Church concerned. Mass is transmitted at 0900, 1000 and 1100 local on Sundays and at 1000 on weekdays. Initial bearings would indicate that the transmissions are originating somewhere on the north side of Dublin.

It would help greatly if bearings on the station from areas such as Blanchardstown, Malahide and the north side generally could be provided, as these would help to further pin down the general area from which the transmission originates. The local Church notices can be of assistance in positively identifying the Church concerned. If you cannot identify the station and you have a beam antenna you could take a bearing on the peak signal from anywhere in the greater Dublin area which in conjunction with similar bearings taken by other stations could help in locating the source of the transmission. Stations located outside Dublin should listen on FM the lower end of the 28 MHz band generally

to see if any unauthorised activity is taking place in the band in their areas.

If you hear anything worth reporting you should send a report to Thos Caffrey EI2JD the IRTS Intruder Watch coordinator at QTHR or to &#65533;thoscaffrey at hotmail dot com&#65533; with a copy to Sean Nolan EI7CD at QTHR or to &#65533;ei7cd at gofree dot indigo dot ie&#65533;. The report should include date, time, frequency, signal strength, possible location of station if identified, beam heading in degrees from true north and any other relevant information. If the station is identified from an announcement of local events, details should be given. Should you hear anything, no action should be taken other than forwarding a report as requested.

It is in our own interests to identify any unauthorised activity so as to preserve the exclusive nature of the 28 MHz allocation. The matter has already been reported to ComReg who will act on the matter if we can provide appropriate information.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to &#65533;news at irts dot ie&#65533; for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday&#65533;s bulletin.

1398. Re: Whatever Happened to the Electronics Hobbyist?

I've never been a great constructor, due in part to the fact that I've never lived anywhere with sufficient space to have a decent workbench.

However, the one item I did build of which I am still intensely proud was a terminal unit for a good old mechanical teleprinter to use on RTTY, back in the days before computers ruined it ;-)

It took me a long time, but it was one of a kind. It had all sorts of bells & whistles that "standard" TU's didn't have and was built into a housing for a telex control unit to match the teleprinter.

Unfortunately, it got destroyed, along with the Creed 444 that it connected to, in a house fire in 1990 :-(

73 Ivor G6URP

1399. [DXNL] DX-MB 1531 (8.8.2007)

DX-MB 1531 - 8.8.2007
DX Mitteilungsblatt
DARC-Referat fuer DX und HF-Funksport
Editor: Helmut Schlaffer, DL7MAE

(e-mail: dxmb@dxhf.darc.de)
(http://www.darcdxhf.de)

BY - Volksrepublik China: Vom 10. bis 12.August wird ein groesseres Team von der Insel Ju Hua (AS-151) erwartet. BY1TT/2, BD1PTA/2, BA3CE/2 und andere OPs sind mit dabei.
Der QSL-Manager fuer saemtliche Teilnehmer ist BD1PTA.

DU - Philippinen: Hans,DL5SDF, haelt sich vom 10. bis 28.August auf Mindanao (DU9) auf. Eine Lizenzzusage liegt bereits vor, nicht jedoch das Rufzeichen. Hans benutzt Drahtantennen, funkt mit 100 Watt und ausschliesslich in CW. QSLs (Buero bevorzugt) sind an DL5SDF zu senden.

IS0 - Sardinien: Gleich zwei Aktivitaeten beginnen in dieser Woche auf Sardinien: Stefano,IM0/IK5XCT, wird noch bis 13.August die Insel Maddalena (EU-041, IIA OT-008) aktivieren. Buero-QSLs ueber ihn koennen auch per E-Mail oder bei http://www.qsl.net/ik5xct angefordert werden.

Vom 8.-20.August sind Gerry,IS0/IZ1DSH, und Giovanni,IS0/IK1WEG, von EU-024 in SSB und CW von 6-40m in der Luft. Abstecher zu den Inseln Spargi (IIA OT-021, EU-041) und Caprera (IIA OT-012, EU-041) sind auch geplant. QSLs an die Heimatrufzeichen, Buero ist ok.

KH2 - Guam: Mike,K3UOC, arbeitet und lebt mit seiner Familie seit etwa einem Jahr in Guam (OC-026). Mike, der dort als Lehrer beschaeftigt ist, hat die Moeglichkeit, von der Schul-Clubstation WH2D zu funken. Er ist zu 90% in CW zu finden und kuendigt Aktivitaet auf allen neun Kurzwellen-baendern an, wann immer es seine Zeit und die Bedingungen erlauben. Auch an allen groesseren Contesten will er sich beteiligen. Nach 6.000 QSOs im vergangenen Schuljahr, hofft er diesmal mit zum Ziel gesetzten 10.000 QSOs noch erfolgreicher zu sein. Dazu will Mike demnaechst eine Endstufe betreiben und neben der vorhandenen Cuschcraft R-7000 noch einen Hex-Beam aufstellen. Mike sitzt meist an Wochenenden an seinem Radio und kuemmert sich auch um die QSL-Karten, die direkt oder ueber das Buero an K3UOC geschickt werden sollen. Auf der Webseite der Schule findet man einen Artikel, den Mike ueber seine Amateurfunkaktivitaeten auf Guam geschrieben hat, sowie mancherlei andere interessante Infos:
www.stjohnsguam.com/main/?option=com_content&task=view&id=269&Itemid=124

KH3 - Johnston: Susan,W7KFI, war mit ihrer Yacht bereits wieder auf dem Weg nach Johnston, als Hurrikan Erik ihr einen Strich durch die Rechnung machte. Sie segelte wieder zurueck nach Honolulu und wird erst im November, nach der Hurrikan-Saison erneut einen Versuch unternehmen, nach KH3 zu segeln.

OH0 - Aland-Inseln/JW - Svalbard: Vom 7.-12.August weilt Juergen,OH0/DJ3KR, auf den Aland-Inseln und nimmt am 11./12.August auch am CW-Teil des WAEDC-Contestes teil. Anschliessend reist er weiter nach Svalbard, wo er als JW/DJ3KR vom 15.-26.August zu erreichen sein wird.
QSL-Karten gehen an sein Homecall.

ST - Sudan/6W - Senegal: Jovica,T98A (ex T98A), war zwei Jahre im Sudan taetig und loggte in dieser Zeit als ST0RM und ST2A ueber 40.660 QSOs, die Mehrzahl (35.012) davon in CW. Einige Fotos hat er auf seiner Homepage online gestellt: http://www.t93y.com/st2a
Sein Job bei der UNHCR (die UN-Fluechtlingsorganisation) verschlaegt ihn ab dem 1.September nach Dakar, in die senegalesische Hauptstadt. Er wird aber nicht nur im Senegal zu tun haben, sondern im gesamten westafrikanischen Raum. Man darf also auf Aktivitaet aus diversen Laendern in der Region durch T98A hoffen.
Sein QSL-Manager T93Y bestaetigt QSL-Karten stets sehr zuverlaessig.

XX9 - Macao: Hide,JM1LJS, plant eine neuerliche Aktivitaet als XX9TJS, voraussichtlich vom 10.August, 0900 UTC, bis 13.August, 1100 UTC.
Er macht CW und SSB von 10-80m und wuenscht QSLs direkt an JM1LJS.

Z3 - Mazedonien: Vierzehn Jahre lang war OM Chris mit seinem Call Z31GX in der Luft gewesen. Seit dem 1.August hat er mit Z35X ein neues Call.
DJ0LZ, der QSL-Manager beider Rufzeichen, bestaetigt leider nur direkt.

Vom 1.August bis zum Jahresende benutzt der Radioclub "Nikola Tesla" Z37M das Sonderrufzeichen Z360M. Grund hierfuer ist das 60-jaehrige Bestehen des Radioclubs.

4O - Montenegro: Emir,9A6AA, plant als 4O6AA von der Insel Sveti Nikola (EU-163, LH 1097) zwischen dem 13. und 19.August Betrieb zu machen.
QSL-Karten ï¿œleider nur direktï¿œ wuenscht Emir ueber sein Homecall.

9Q - Demokratische Republik Kongo: Nachdem 9Q1D zurueck in Schweden und 9Q1NT zurueck in Belgien ist, ist Georges,9Q1EK, momentan die einzige aktive und DXCC-anerkannte Station im Kongo, so sein QSL-Manager Osten,SM5DQC. Die 9Q1EL-Logs koennen auf http://www.logsearch.de abgefragt werden. Noch waehrend des Monats August kommt Phillipe,9Q1TB, wieder von seinem Heimaturlaub zurueck. SM5DQC ist auch der QSL-Manager von Philippe und er weist darauf hin, dass er nur auf direktem Wege QSL-Karten bestaetigt und dass er in Schweden mit dem EURO nichts anfangen kann, da dieser in Schweden nicht eingefuehrt wurde. Karten fuer 9Q1TB und 9Q1EK sollen an die folgende Adresse gesendet werden: SM5DQC, Osten Magnusson, Nyckelvagen 4, SE-59931 Odeshog, Schweden.

Pazifik: Toshi,JA8BMK, macht sich im September auf den Weg nach 3D2, T30, T31XX und evtl. noch T33ZZ und sucht dabei noch Mitstreiter, um die

Kosten niedriger halten zu koennen. Sollte jemand Interesse haben, kann
er sich mit ihm per e-mail (fuku-t20@amber.plala.or.jp) in Verbindung
setzen.Alle Rufzeichen wurden ihm bereits vor laengerer Zeit zugeteilt.
Spenden sind willkommen, mehr Einzelheiten erfahren Sie im DX-MB, kurz
bevor die DXpedition starten wird.

Frankreich, Sonderrufzeichen: Den 150.Geburtstag von Heinrich Rudolf Hertz
feiern franzoesische Amateurfunker mit der Sonderstation TM2HRH vom
6. bis 19.August. QSL-Karten gehen ueber das REF-Bureau an F6KTN.

Kanada, Sonderrufzeichen: Mitglieder des "Amateur Radio Club of Central
Newfoundland" benutzen noch bis 31.August das Call VO1GAM. Damit will
man an den 70.Jahrestag erinnern, an dem der erste kommerzielle Trans-
atlantikflug (5.Juli 1937) von Botwood (Neufundland) nach Foynes in
Irland stattgefunden hatte. Aktivitaet ist auf allen Baendern angekuen-
digt und QSL-Karten via Buero oder direkt sollen an den Manager VO1MX
gesendet werden.

Polen, Sonderrufzeichen: SN2NP ist vom 17.-19.August vom Danziger Leuchtturm
in CW/PSK31/RTTY/SSB in der Luft. QSL via SP2BIK, Buero oder direkt.

SP5VYI, SP5X, SP5IUK und SP5GRU sind noch bis 30.September OPs an der
Sonderstation 3Z90ZIM. Betrieben wird diese in Przasnysz, wo die oert-
lichen Pfadfinder ihr 90-jaehriges Gruendungsfest feiern.
QSL via SP5ZIM oder SP5X.

DXCC: QSL-Karten von J5UAR (Guinea-Bissau, Operation 2007) werden ab sofort
fuer das DXCC-Diplom anerkannt und koennen dem DXCC-Desk zur Pruefung
vorgelegt werden. Wurde die Karte frueher bereits zurueckgewiesen, soll
man den Sachverhalt per e-mail an dxcc@arrl.org der ARRL mitteilen.

LINKS: Aktuelle SOTA-Aktivitaeten (Berggipfel) finden Sie wie immer auf den
beiden Internetseiten http://sotawatch.sota.org.uk/spots.php sowie
http://sotawatch.sota.org.uk/activations.php

Auf http://dxinfo.ea3bhk.com/dxinforesult.php kann man ein Plugin
herunterladen, um im Firefox-Internetbrowser eine DX-Suchmaschine
einzubetten.

Aktuelle Conteste:

11./12.August: Telgrafie-Teil des "European DX Contest" (WAEDC).
Die Ausschreibungen finden Sie auf der Webseite http://www.darcdxhf.de
unter Conteste sowie mittels der Contesttermin-Tabelle in der
CQ DL 8/2007 auf Seite 591.

IOTA: Zusammengestellt von Fredy,DE0MST (e-Mayl: iota@dxhf.darc.de)

Insel Aktivitaeten:
AS-039, Bering Insel: Vlad,RV1CC, Yuri,RA0FU, Serge,UA1ANA, Oleg,UR3IFD,
Victor,RV2FW, Valery,UA0ZC, Serge,UA0ZAZ, Alex,UA0ZCC, und Elena,RV3ACA
funken vom 9. bis 14.August als RK1B/0. QSL via RV1CC.

Mehr dazu auf im Internet auf: http://www.rv3aca.ru/as039/ und
http://rdaward.org/mw.htm

EU-096, OH1, Lansi-Suomi Prov. Group: Jukka,OH3OJ, ist als OH3OJ/p vom
8.-10.8. von der Insel Kaurissalo QRV. QSL via HC.

NA-137, W1, ME State West Group: Eine Gruppe von US-OPs aktiviert als N1URA
am 11./12.8. die Insel Seguin (USI-neu). QSL direkt via N1URA.

SA-002, VP8, Falklandinseln: Mit dem Rufzeichen VP8LGT wird am 18./19.8. im
Rahmen des ILLWE 2007 der Leuchtturm Cape Pembroke auf East Falkland
aktiviert. QSL geht via VP8ON.

DXNL 1531 - Aug 8, 2007
DX Newsletter

a free and weekly service of
DARC Committee "DX and HF contesting"
(http://www.darcdxhf.de)

editor: Helmut Schlaffer, DL7MAE
(e-mail: dxnl@dxhf.darc.de)

translation by: Bob, DL7VOA
(e-mail: dl7voa@darc.de)

BY - CHINA, AS-151
A large team with BY1TT/2, BD1PTA/2, BA3CE/2 and other OPs is going
to activate Ju Hua Island (AS-151) from Aug 10-12.
The QSL manager for all participants will be BD1PTA.

DU - PHILIPPINES, OC-130
Hans,DL5SDF, will stay on Mindanao (DU9, OC-130) from Aug 10-28.
He already has the confirmation to get a license but does not know
the callsign yet. Hans works only in CW with 100 watts and wires.
QSLs (preferably via bureau) via DL5SDF.

IS0 - SARDINIA, EU-041
Two activities from Sardinia will commence this week:
Stefano,IM0/IK5XCT, is active from Maddalena Island (EU-041,IIA OT-008)
until Aug 13. Bureau QSLs can be requested via e-mail to him or at his
website: http://www.qsl.net/ik5xct

Gerry,IS0/IZ1DSH, und Giovanni,IS0/IK1WEG, will be QRV from EU-024 in
SSB/CW on 6-40m from Aug 8-20. They also plan some trips to the islands
Spargi (IIA OT-021, EU-041) and Caprera (IIA OT-012, EU-041).
QSLs via homecalls, bureau ok.

KH2 - GUAM, OC-026
Mike,K3UOC, is living with his family on Guam (OC-026) for about one
year now. Mike, who is working as a teacher, has the possibility to use
the equipment of the school's club station WH2D. He usually works about
90% in CW and promises operation on all nine HF bands whenever the time
and conditions permit. He intends to take part in all major contests.
After logging 6.000 QSOs during the last school year, he hopes to reach
10.000 QSOs this year. Mike plans to acquire an amplifier and also a
Hex beam to support the Cushcraft R-7000 he already has. Mike can be
found on the bands mostly during the weekends and takes care of the

QSL cards which should be sent via bureau or direct to K3UOC.
A few lines written by Mike about his amateur radio activities on Guam
can be found on the website of his school:
www.stjohnsguam.com/main/?option=com_content&task=view&id=269&Itemid=124

KH3 - JOHNSTON ATOLL, OC-023
Susan,W7KFI, was underway to Johnston (OC-023) with her yacht when
hurricane Erik threw a spanner in her plans. She sailed back to
Honolulu and will wait till November when the hurricane season is over.

OH0 - ALAND ISLANDS, EU-002 / JW - SVALBARD, EU-026
Juergen,OH0/DJ3KR, is QRV from the Aland Islands (EU-002) from Aug 7-12
and plans to take part in the WAEDC CW Contest on Aug 11/12 as well.
He will then travel to Svalbard (EU-026) from where he will show up
as JW/DJ3KR from Aug 15-26. All QSLs via his homecall.

ST - SUDAN / 6W - SENEGAL
Jovica,T98A (ex T98A), has been working in Sudan for two years now and
logged 40.660 QSOs as ST0RM and ST2A, most of them in CW (35.012 QSOs).
He published a few photos on his homepage: http://www.t93y.com/st2a
On Sep 1 his job for the UNHCR (UN High Commissioner for Refugees)
takes him to Dakar, the capital of Senegal. However he will not only
work in Senegal but in the whole West-African region so chances are
there might be some activities from this area by T98A.
His QSL manager T93Y confirms all QSLs very reliably.

XX9 - MACAO
Hide,JM1LJS, plans another activity as XX9TJS, most likely from
Aug 10, 0900 UTC, until Aug 13, 1100 UTC. Hide works in CW/SSB on
10-80m and requests QSLs direct via JM1LJS.

Z3 - MACEDONIA
Chris,Z31GX, was using his old call for 14 years now and got
his new callsign Z35X on Aug 1.
Unfortunately DJ0LZ, QSL manager of both calls, confirms only direct.

The radio club "Nikola Tesla" (Z37M) can use the special event callsign
Z360M between Aug 1 and the end of the year to mark the 60th birthday
of their club.

4O - MONTENEGRO
Emir,9A6AA, plans to become active as 4O6AA from the island
Sveti Nikola (EU-163, LH 1097) from Aug 13-19.
Unfortunately QSLs only direct via his homecall 9A6AA.

9Q - DEMOCRATIC REPUBLIC OF CONGO
After 9Q1NT is back in Belgium and 9Q1D returned to Sweden, the
last active station in Congo (which is approved for DXCC credit) is
Georges,9Q1EK, as stated by his QSL manager Osten,SM5DQC.
The 9Q1EL logs can be searched within at: http://www.logsearch.de
Philippe,9Q1TB, will return from his trip home during the month of
August. SM5DQC who is also the QSL manager of 9Q1TB writes that he

confirms QSL cards only direct and the EURO is useless for him in
Sweden because they still have their Swedish currency.
QSL cards for 9Q1TB and 9Q1EK should be sent to following address:
SM5DQC, Osten Magnusson, Nyckelvagen 4, SE-59931 Odeshog, Sweden.

PACIFIC TRIP
Toshi,JA8BMK, plans to activate 3D2, T30, T31XX and maybe also T33ZZ
during September or October and still looks for people to join him
to keep the costs down. If you are interested please contact him via
e-mail (fuku-t20@amber.plala.or.jp). All calls have been allocated to
him a long time ago. Donations are welcome, more information will be
published in the DX Newsletter as soon as the DXpedition starts.

FRANCE, SPECIAL EVENT STATION
The 150th birthday of Heinrich Rudolf Hertz is celebrated with the
French special event station TM2HRH from Aug 6-19. QSLs via F6KTN.

CANADA, SPECIAL EVENT STATION
Members of the "Amateur Radio Club of Central Newfoundland" are using
the special call VO1GAM until Aug 31. This marks the 70th anniversary
of the first commercial trans-atlantic flight (5 Jul 1937) between
Botwood (Newfoundland) and Foynes (Ireland). Activities take place on
all bands and the QSLs should be sent via bureau or direct to VO1MX.

POLAND, SPECIAL EVENT STATION
SN2NP will be active in CW/PSK31/RTTY/SSB from the lighthouse in Gdansk
from Aug 17-19. QSL via SP2BIK, via bureau or direct.

SP5VYI, SP5X, SP5IUK and SP5GRU are activating the special event
station 3Z90ZIM until Sep 30. QTH is Przasnysz where the local scouts
celebrate their 90th anniversary. QSL via SP5ZIM or SP5X.

DXCC: QSL cards of J5UAR (Guinea-Bissau, 2007) are accepted for DXCC credit
now. If you submitted your QSL earlier and got it rejected, please send
an explaining e-mail to dxcc@arrl.org

LINKS: EA3BHK has a Firefox plugin which adds a DX searching engine to your
internet browser at: http://dxinfo.ea3bhk.com/dxinforesult.php

UPCOMING CONTESTS

Aug 11/12: European DX Contest, CW (WAEDC)
The official rules have been changed and can be viewed at the
website of the DARC Committee for DX and HF Contesting at:
http://www.darc.de/referate/dx/fedcw.htm

IOTA collected by Fredy,DE0MST (e-mail: iota@dxhf.darc.de)

Island activities:

AS-039, Bering Island: Vlad,RV1CC, Yuri,RA0FU, Serge,UA1ANA, Oleg,UR3IFD,
Victor,RV2FW, Valery,UA0ZC, Serge,UA0ZAZ, Alex,UA0ZCC, and Elena,RV3ACA
will be active as RK1B/0 from Aug 9-14. QSL via RV1CC.
You can find more information online at: http://www.rv3aca.ru/as039 and
http://rdaward.org/mw.htm

EU-096, OH1, Lansi-Suomi Prov. Group: Jukka,OH3OJ, will be QRV as OH3OJ/p
from Kaurissalo Island from Aug 8-10. QSL via homecall.

NA-137, W1, ME State West Group: Some American operators will activate
Seguin Island (USI-new) as N1URA on Aug 11/12. QSL direct via N1URA.

SA-002, VP8/F, Falkland Islands: Cape Pembroke Lighthouse on East Falkland
will be activated by VP8LGT during the ILLW on Aug 18/19.QSL via VP8ON.

Amateur Radio Newsline(tm) Report 1565 - August 10, 2007

Amateur Radio Newsline report number 1565 with a
release date of Friday, August 10, 2007 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Hams are praised for their communications support
at California's Zaca wildfire, a ham is the
first teacher in space, Scouting celebrates its
100th anniversary with ham radio in space and the
R-S-T signal reporting system may soon be a thing
of ham radios analog past. Find out the details
on Amateur Radio Newsline(tm) report number 1565 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: PRAISE FOR ARES RESPONSE TO CALIFORNIA'S ZACA FIRE

Amateur Radio and particularly the Amateur Radio
Emergency Service units involved with
California's giant Zaca wildfire near have drawn
the praise of that anta Barbara County's fire
department. Speaking at an August 1st Town Hall
meeting of the fire-fighting Unified Command,
Fire Department Public Information Officer Eli
Eskow heaped praise on the hams who were out
there backing up his firefighting teams:

--

"There's one group I forgot to mention and thank
personally. The Amateur Radio Emergency Services
group has worked with us forever (applause)
forever!! And on this event, this fire I have
asked them many, many requests and
chores. They've jumped at every opportunity to
help us. They've carried mail. They have most
importantly thrown their bodies in front of the
public to stop them from going through closed
roads, putting themselves in danger. They've been
great. Anytime we've asked them anything, they
jump at any opportunity to help us..."

--

Some area 300 residents facing the possibility of
evacuation attended the meeting. Among those
present representing ham radio were Santa Barbara
District Emergency Coordinator Dennis Daniel,
KM6DF, and Will Tefft, KG6DHK, who serves as
Santa Barbara South County Emergency Coordinator.

Since that meeting the Zaca fire has
intensified. As this report is being written
flames are less than two miles from a road that
runs parallel to the Santa Ynez River. ARES
volunteers continue to bee active with communications support. (N6ZKJ)

**

RADIO POLICY: RSQ MAY REPLACE RST BELOW 30 MHz

A new signal reporting method for digital modes
will be considered at the International Amateur
Radio Union Region 2 Conference. This, at
a very busy meeting to be held in Brazil from
September 10th to the 14th. Bill Pasternak, WA6ITF, has more:

--

One of the agenda items is a recommendation that
a new RSQ reporting system. This, to be used for digital modes below 30
MHz.

RSQ stands for Readability, Strength and
Quality. It was first proposed and endorsed at
the Region 1 IARU General Conference back in
2005. From there it quickly gained popularity
among the worlds ham radio societies and
political leader. Because of this the RSQ
concept was also agreed to last year at the IARU
Region 3 Conference in Bangalore, India.

RSQ would replace the traditional RST reports
that hams have used since 1934. RST stands for
Readability, Strength and Tone but appears not
suitable for digitally generated signals. RSQ is
favored because it can provide a more useful
signal report for High Frequency digital modes.

For the Amateur Radio Newsline, I'm Bill
Pasternak, WA6ITF, in the studio in Los Angeles.

--

Even if Region 2 adopts the RSQ reporting system,
it won't fully replace RST in the near
future. That's because the majority of signals

on the air are still of the good old analog
variety and will be with us for some time. (WIA News)

**

RESTRUCTURING: SOUTH AFRICA RADIO LEAGUE TO ISSUE RAE CERTIFICATES

Amateur Radio restructuring continues in South
Africa. This with word that the South Africa
Radio League will now issue the nations Radio
Amateur Exam certificates following an agreement
having been finalized with that nations telecommunications regulator.

Candidates who pass the South African Class A
Amateur Examination will be issued an
international certificate. This document allows
operation in all CEPT countries and several
others outside Europe who are complying with the
conditions of the internationally accepted examination.

Those who pass the introductory level Class B
examination will be issued a Radio Amateur
Exam certificate only. The class B examination
is not compliant and the license issued for
passing it cannot be used for operation in other countries. (SARL)

**

THE BPL FIGHT: ARRL RETURNS TO COURT OVER BPL

The ARRL has gone back to court over BPL. This
as the League files its reply brief at the U-S
Court of Appeals for the District of Columbia Circuit.

The July 31st action follows the FCC's brief that
attempted to rebut the ARRL's challenge to the
FCC's Broadband over Power Line rules enacted in
late 2004 and affirmed by the agency in
2006. According to ARRL General Counsel Chris
Imlay, W3KD, the FCC's brief does not accurately
describe ARRL's arguments concerning harmful interference.

The ARRL, in its reply brief, accuses the FCC of,
engaging in misdirection and rebutting hyperbolic
arguments ARRL never made. It also charges the
FCC with refusing to address the precedents ARRL
cited and attempting to rewrite the Orders as if
they made factual rather than legal
determinations. The ARRL's brief also states
that this is a case about an unlicensed
operator's legal duty to cease harmful
interference once it arises and not about the
standard for authorizing unlicensed transmissions. (ARRL)

INTRUDER WATCH FOLLOW-UP: 10 METER RELIGIOUS BROADCASTER FOUND IN IRELAND

A follow-up to our recent story involving a religious broadcaster in the 10 meter ham band. The Irish Radio Transmitters Society reports that the culprit is a church the Dublin area. Initial bearings would indicate that the transmissions are originating somewhere on the north side of that city but further work is required to identify the which church it actually is. The I-R-T-S notes that services are transmitted 28.105 MHz FM at 9:00, 10:00 and 11:00 A.M. local Dublin time on Sundays and at 10:00 A.M. on weekdays. The Irish Radio Transmitters Society is Ireland's national Amateur Radio organization. (IRTS)

HAM RADIO IN SPACE: KD5VNP TO MAKE TEACHER IN SPACE DREAM COME TRUE

A ham radio operator and teacher is on her way to space to help in further construction of the International Space Station and to make the goal of a teacher in space a reality. Mission Specialist Barbara Morgan, KD5VNP, is part of the crew of Shuttle mission STS-118. This is an 11 day construction and re-supply mission of the orbiter Endeavour to the I-S-S.

Barbara Morgan is what is known as an Educator Astronaut. Almost two decades ago she was the back-up for Christa McAuliffe in the Teacher in Space Project. McAuliffe and the rest of the seven member crew on board the Challenger were killed on January 28, 1986 in a launch accident caused when a seal ruptured on the solid rocket motor and burned through the external fuel tank. Now, 22 years later, Morgan will complete the dream of an educator teaching from space when she gets the chance to talk with and answer questions

from schoolchildren on the ground via ham radio.

Morgan trained side by side with McAuliffe but
the Teacher in Space Project was put on hold
after the Challenger tragedy. Morgan on her own
initiative completed the tour of schools planned
for McAuliffe and became a full member of the
United States Astronaut Corps in 1998. In 2002,
she was chosen as the first educator to become a
Mission Specialist astronaut. She passed her
Amateur service exam and was licensed as KD5VNP in 2003. (ANS, NASA,
others)

HAM RADIO IN SPACE: LONG SILENT RS-15 HEARD AGAIN

The long silent RS-15 Amateur Radio satellite
heard again. PA3GUO says that he heard and
recorded the audio from RS 15 on 29.3156 MHz
using a Kenwood TS-2000 and a 20 meter
dipole. PA3GUO says that he thinks that this was
RS 15's Beacon 1. Here's what he heard:

--

Actual beacon audio. Hrear it in the MP3
downloadable version of this weeks newscast at www.arnewsline.org

--

RS is the Russian designation for
Radiosport. The RS-15 was launched on December,
26th 1994 from the Baikonur Cosmodrome in
Kazikstan. Its orbit gave good coverage and its 2
meter to 10 meter transponder permitted low power
DX working using very simple equipment. More is
on line at http://home.vianetworks.nl/users/hamoen/pa3guo/ (Southgate)

**

RESCUE RADIO: SEPTEMBER IS NATIONAL PREPAREDNESS MONTH

September is National Preparedness Month and the
ARRL says that Amateur Radio operators are
joining a wide variety of national, state and
local organizations, including the US Department
of Homeland Security. This, in educating the
public about preparing for emergencies.

The League says that when unexpected natural or
man-made emergencies occur, our greatest
individual defense is preparedness. Getting an
emergency supply kit, making an emergency plan,

and identifying preparedness and response resources within our communities are several things we can do to prepare ourselves.

This nationwide effort is to encourage individuals and families to take simple steps to prepare for emergencies in their homes, businesses and schools. For hams it means getting your Go Kit ready and making sure you are trained to properly communicate in case the worst actually happens. (ARRL, Southgate, others)

**

RECUE RADIO: HILTON HEAD ISLAND GORES HAM RADIO

South Carolina's Hilton Head Island is joining a growing number of communities in disaster preparedness. This, by installing amateur radio gear to use as a backup system if the multitude of other communications systems are knocked out by some form of disaster.

After being convinced of the need by local radio amateurs, about a year ago the town installed an antenna system that local hams could use in times of emergencies. Now Hilton Head Island has installed a city owned ham radio station at its emergency operations center and is purchasing two mobile units that can be used in cars. The county and local hospitals are also adopting the radio system as a backup.

Chief Tom Fieldstead of the Fire and Rescue Division says that the town normally uses an 800 MHz trunked radio system to communicate during emergencies. It can also use a statewide radio system, microwaves, fiber optics and telephones if needed.

Jay Harter, who is the town Emergency Management Coordinator and Deputy Fire Chief Randy Osterman recently completed a ham radio training class, passed the licensing exam and are awaiting their calls. As an added incentive to hams on Hilton Head Island, city officials say that they will deputize members of local amateur radio clubs who volunteer to assist. (SCMediaNews.com)

**

ENFORCEMENT: WHY WONT YOU CLEAN UP YOUR SIGNAL

Turning to enforcement news, the FCC has written to Robert A. DiMezza, W2GGI, of Delray Beach, Florida regarding a complaint received by the

Commission concerning the operation of DiMezza's Amateur station. The accusation alleges, among other things, poor signal quality and refusal by W2GGI to make corrections.

The FCC's July 13th letter to DiMezza gave him 20 days from the date of receipt of the letter to fully address the issues raised in the complaint. The FCC also told DiMezza that his license is due for renewal on October 15th. It says that the issues involved in the complaint against him must be resolved prior to any renewal. (FCC)

**

ENFORCEMENT: PROPOSED $4000 FOR CONTEST RULES VIOLATION

Hams are not the only ones hearing from the FCC' enforcement folks in recent days. The agency has issued a $4000 Notice of Apparent Liability for Monetary Forfeiture to Saga Communications of New England, L.L.C. licensee of Station WAQY -FM in Springfield, Massachusetts. The proposed fine comes as a result of the stations failure to fully and accurately disclose the material terms of the contest and conduct the contest substantially as announced or advertised. Bruce Tennent, K6PZW, reports:

--

The proposed fine is the result of a complaint from Robert Naginewicz alleging that Saga failed to conduct its contest involving the musical group Aerosmith, which was broadcast by the station during the June through July 2005 period. According to Naginewicz, on July 17, 2005, he won the contest's "Grand Prize Giveaway," the prizes for which included a free two-year lease on a 2005 Buick LaCrosse automobile, or its cash equivalent, from the co-sponsor, Bob Pion Pontiac. Also, the cars trunk was supposed to be loaded full of Aerosmith memorabilia.

Naginewicz alleges that although he was assured by the station's staff that all of his prizes would be delivered to him by July 22, 2005, he did not receive the monetary portion until August 18, 2005. Also, despite numerous queries made of the station's staff, as of December 31, 2005 he was still awaiting delivery of the memorabilia portion.

Following up on the Naginewicz complaint, the Enforcement Bureau by letter dated January 24, 2006, inquired of Saga concerning these

allegations. Saga responded on March 2, 2006. It contended that its one-month delay in delivering the monetary portion of the prize, although less than ideal, was "within the zone of reasonableness." It acknowledged, however, that its failure to fulfill the memorabilia portion until after Mr. Naginewicz had contacted the Commission, represents a station "problem" that it claims it has since addressed and resolved. Saga indicated that, because of its delay in fulfilling its promise to Mr. Naginewicz, it enhanced the award made to him by contributing additional prizes.

But the FCC says that under Section 73.1216 of its rules, a broadcast licensee must conduct station-sponsored contests "substantially as announced or advertised. Also that it must disclose fully and accurately the "material terms" of such contests. And the FCC says that it appears that Saga violated Section 73.1216 of the Commission's rules by failing to conduct the contest substantially as announced. Therefore the proposed $4000 fine.

For the Amateur Radio Newsline, I'm Bruce Tennent, K6PZW, in Los Angeles.

--

Saga was given the usual time to respond. (FCC)

**

RADIO LAW: METAL THEFT AFFECTS RADIO AND TELECOMMUNICATIOS

Wire and metal theft is growing nationwide and its impact is hitting the communications industry hard.

Whether it be copper radials, stainless steel beer kegs or even iron manhole covers, metal thieves continue in their quest to profit from valuable metals being sought by unscrupulous recyclers. In some instances items such as air-conditioning units, power cables, catalytic converters, light poles or aluminum bleacher seats have disappeared only to find their way to a recycling plant that pays cash and does not ask for proof the material is not stolen.

On several occasions this month, thieves dug up hundreds of feet of underground copper cable used to illuminate ball fields in suburban Maryland. This forced the organizers of a youth baseball tournament to reschedule a half-dozen

games. But hardest hot seem to be remote radio locations where its easy to cut away and run off with coax, hardline and even tower sections.

In some cases, thieves have put themselves in great danger by stealing live electrical wires from buildings. A 41-year-old man was electrocuted this month in a vacant building in Pasadena, California. A 47-year-old man was killed while stripping wire from a Washington D.C. school last year.

In all, about two dozen people have been killed across the country in the past 12 months while trying to steal metals. Some states and local governments are tightening ordinances to discourage the practice by holding recycling companies accountable. Even so, the thefts continue to satisfy their need for raw materials needed by some emerging nations around the world. (Published reports)

**

RADIO BUSINESS: CHIP MAKING DOWN IN 2006

If you are finding some integrated circuit chips hard to find, threes a reason. According to an industry group, the utilization rate of the world's chip manufacturing plants stayed below 90 percent for the second straight quarter of 2006. The usage rate was only 86.4 percent in the quarter bending December 30th. That was down from 88.5 percent in the July to September 2006 time period (Silicon Industry News)

RADIO CONFERENCES: NAB BROADCAST ENGINEERRING CONFFRRENCE - 2008

The 62nd National Association of Broadcasters Broadcast Engineering Conference to be held next April in Las Vegas, Nevada. is already calling for technical paper proposals. Topics to be considered include radio engineering; digital radio developments around the world; HD Radio implementation; audio and RF test measurement techniques; and automation systems.

The deadline for submitting proposals is Oct. 5th. The NAB will notify presenters if a proposal has been accepted by November. 9th. After acceptance, presenters have until January 18th 2008 to submit the completed paper, which will be published in the N-A-B Broadcast Engineering Conference Proceedings. More information and a link to the submission form is on line at www.nab.org/nabshow/forms/bec.asp) (NAB)

HAM RADIO IN SPACE: CELEBRATING THE WORLD SCOUT MOVEMENT FROM SPACE

The world scouting movement recently celebrated its 100th anniversary by vicariously going into space with the help of ham radio. This as ten scouts at this year's World Scout Jamboree in Chelmsford, England exchanged questions and answers with astronaut Clay Anderson, KD5PLA, on board the International Space Station. The contact took place on Saturday, August 4th, and KD5PLA was quick to respond to whatever was asked. Take a listen:

--

Eric: "Hi. I'm Eric from the Netherlands asking Brian's question. Can you see the sunrise from space? Over."

Anderson: "We can see the sunrise sixteen times a day. We go around the Earth every 90 minutes and we can see a dunrise and a sunset every 90. So, yes we can. Over."

--

In all, KD5PLA answered 20 questions prepared by the scouts. He confirmed he had been a 1st class scout himself and said he decided to become an astronaut when he was 8 years old and saw Apollo disappear behind the moon and emerge some 15 minutes later. He also talked about life on-orbit:

--

Shohe: "Hi. I'm Shohe from Japan asking Rio's question. How easy is it to get along with each other in a confined space. Over."

Anderson: "Actually, its pretty easy because this space station has the same volume as a three bedroom house. So we have a lot of room to move around. Over.

--

Communications for the event was handled by special ground station GB10J. It was operated by Howard Long, G6LVB, while Carlos Eavis, G0AKI, was at the mike and conducted contact. Paul Joosten, PA5UL established an Internet connection and fed the audio of the contact into Skype so that the signals could be relayed over EcholInk by Graham Lawton, G7EVY. The radio contact started at 21:12 UTC and the exchanges went on for 10 minutes with excellent conditions. And they even had time to say goodbye before KD5PLA flew out over the horizon

--

Eavis: "NA1SS, this is GB100J. Clay, Thank you
very much for that and I am sure the audience
would want to give you a huge round of applause. (Applause)

Anderson: "Thank you and my best to the 21st
World Scout Jamboree in Chelmsford, England. And
this is NA1SS signing out. Thank you very much.

(More applause)

--

G6LVB also provided live streaming video of the
event. A video file of the entire contact is
available for you to see at
http://www.youtube.com/watch?v=1swyCCTbP1w
(Audio supplied by Howard Long G6LVB. Story
material by Gaston Bertels - ARISS-Europe chairman)

THE FINAL FRONTIER: VIRGIN GALACTIC AND NASA PARTNER IN RESEARCH

NASA and Virgin Galactic have signed an agreement
to explore the possibility of working together to
develop new spacesuits, hybrid rocket motors and other space technology.

The pact will allow NASA and Virgin Galactic to
explore possible avenues of technology research
that would make use of NASA's Ames Research
Center facilities. Some of the possible
collaborations include developing protective heat
shields for spaceships and vehicles that can
travel at least five times the speed of sound.

Virgin Galactic, was founded by British
entrepreneur Richard Branson. It plans to
test-fly a vehicle being built by famed aerospace
designer Burt Rutan next year and operate it
commercially by 2009 (Science OnLine)

**

THE FINAL FRONTIER: CELEBRATING SPUTNIK 1 WITH CQ MAGAZINE

A well known ham radio magazine is planning to
commemorate the worlds first man made
satellite. Dorothy Bishop, VK2DB, has the details:

--

October 4, 1957 saw the launch of the worlds
first artificial earth-orbiting satellite, Sputnik I.

The editor of CQ Magazine would like Radio
Amateurs' recollections of that historic event

for inclusion in the October issue. Please
respond as soon as possible by e-mail directly to
a special mailbox they have set up at sputnik@cq-amateur-radio.com

I'm Dot, VK2DB, from ALARA.

--

Again that e-mail address is sputnik at
cq-amateur-radio dot com. Mark your e-mail to
the attention of Editor Rich Moseson, W2VU. (WIA News, CQ)

**

ON THE AIR: INBB TO SHUTTER ITS DELANO CA FACILITY IN OCTOBER

The United States International Broadcasting
Bureau will stop broadcasting from Delano,
California, at the end of October. This,
according to Radio World on-line that says the
decision was announced in an internal e-mail to employees on July 24th.

According to the on-line magazine the
announcement stated that the move is being made
as a result of the Broadcasting Board of
Governors' changing global mission to meet
current U.S. government broadcast requirements,
along with reduced budgets and changes in technology .

Located about 140 miles north of Los Angeles,
California, the Delano station relies entirely on
shortwave radio transmissions. This is a
broadcast format that is relatively expensive to
operate. Although shortwave was the focus of
international broadcasting for many decades, sit
has declined in importance as traditional
audiences have shifted to FM and Medium
Wave radio, television and the World-Wide-Web

The station began shortwave broadcasts to the
Pacific Theater of World War II in 1944. In
early days, it beamed transmissions directly to
local audiences and to retransmitting facilities
in Hawaii, Okinawa and the Philippines. Later
the station provided critical shortwave
broadcasts to Cuba, South America and Asia. For
now at least the International Broadcast Bureau
plans to retain transmitting facilities in North
Carolina, Flordia and the territory of the Northern Marianas. (ASWLC)

**

RADIO HAPPENINGS: JUST THE BREAR FACTS

Two public radio stations in Northern California may have been knocked off the air by a hungry bear. The Redding Record Searchlight reports that power was restored Tuesday, July 24th to the Jefferson Public Radio stations, which had gone silent two days earlier after what was throughout to be a wayward bear snapped the cable.

It originally was thought that the outage was caused by a microwave equipment failure or a severed power line on Mt. Bradley. But an engineer for the stations has concluded that the likely culprit was a bear that apparently had pulled apart a special connector while trying to get to a beehive under the line. The bear was nowhere in sight when repair workers arrived. The station Web site says the problem affected listeners in Shasta County and much of Siskiyou County. (RW)

**

WORLDBEAT - AUSTRALIA: RAMPAGE BRINGS DOWN CELL TOWERS

Temporary phone towers may be needed after tank rampage in Sydney, Australia. This after telecommunications provider Telstra says it may have to install temporary cell phone towers in Sydney's west to replace ones which were damaged when a man went on a rampage in a restored army personnel carrier.

According to the Wireless Institute of Australia News, the man led police on a 90-minute chase through a number of suburbs. Police are alleging that the 45-year-old destroyed six phone towers and damaged an electricity sub-station. He was eventually apprehended and charged with a range of offenses including malicious damage and predatory driving. The Magistrate recommended that the driver be held for medical and psychiatric treatment before his case goes to Local Court.

Telstra spokesman Jeremy Mitchell says repair crews were not able to gain immediate access to the towers as they were a "scene of crime". (WIA News)

**

DX

In DX, word that KC0W, will be moving to St. Helena Island in early September and is expected to be active as ZD7X. His activity will be on CW, SSB, RTTY and PSK. Look for his operations on 160 through 6 meters with special attention given

to 160, 80, 75 and 40 meters. ZD7X will also be active in most major contests. Tom has already announced that he will be on as a Single-Operator Low-Power entry in both the September CQ World Wide DX SSB Contest and the November CQ World Wide DX CW Contest. His QSL Manager is Wï¿½MM.

And ARRL DXCC Manager Bill Moore, NC1L, has announced that the 2007 J5UAR DXpedition to Guinea-Bissau has been approved for DXCC credit. Moore says that if you had cards rejected for this operation, please send an e-mail todxcc@arrl.org; and you will be placed on the list for update.

Lastly word that JA6GXK is active from Minami Torishima as JD1BMM. He has already been spotted using RTTY on 14.075 and CW on 14.050 MHz. QSLs via JA6GXK.

(Above from various DX news sources)

THAT FINAL ITEM: SOME WORDS OF THANKS

And finally this week, with some thank you's to those who help to keep these newscasts on the air, here's Amateur Radio Newsline's Support Fund Administrator, Andy Jarema, N6TCQ

--

Our catching up on thank-yous takes us back to June, 2006.

In that month we heard from the Raleigh, NC Amateur Radio Society, Sol Volen, N3UBY of Philadelphia, monthly contributors Joseph Bartzi, Jr., KC8DKF of Columbus, OH, William Walters, WA2IBM, and Scott Hensley of the Area Communications Team, also in San Jose. And our friends at the Pasadena, CA Radio Club, W6KA.

Via PayPal, Dale Tounge of Ft. Bliss, TX.

Thanks for your help. I'm Andy Jarema. N6TCQ.

--

Andy will be back with us in the near future with more than-you's to those who have contributed to the support fund. (ARNewsline(tm) Support Fund)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Don't forget. The presentation of this years Young Ham of the Year Award takes place this weekend, August 18th and 19th at the Huntsville Hamfest in Alabama. We hope to see you many of there.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

==> ARRL VEC Team Attends National VEC Conference

Representatives of 11 of the nation's 14 Volunteer Examiner Coordinators
(VECs) met July 27 in Gettysburg, Pennsylvania, for the 22nd annual
National Conference of Volunteer Examiner Coordinators (NCVEC)
conference. NCVEC Chairman Tom Fuszard, KB9PU, presided over the
gathering. This yearly gathering offers an opportunity for VECs to

discuss issues facing the volunteer examination program and to meet face-to-face with FCC staff members. The ARRL's delegation to the conference included ARRL VEC Manager Maria Somma, AB1FM; Assistant Manager Perry Green, WY1O, and Regulatory Information Branch Manager Dan Henderson, N1ND. Also on hand were five FCC staff members: Donna Scott, Sandy Eckenrode, Terry Fishel, Senior Program Analyst Bill Cross, W3TN, and Riley Hollingsworth, Special Counsel in the Enforcement Bureau. Cross and Hollingsworth addressed the conference.

Jim Wiley, KL7CC, chairman of the NCVEC Question Pool Committee, led a discussion on the QPC's plans for the upcoming year. The QPC is working on the new Amateur Extra class pool and syllabus that is scheduled to be released December 2007; it will become effective July 1, 2008. Wiley mentioned that the QPC does not expect any new pool releases in 2009.

Fred Maia, W5YI, spoke about a problem he found with information between the Universal Licensing System (ULS) and the Commission Registration System (CORES) computer systems not being exchanged. Amateurs, he said, are complying with Part 97 rules by keeping the ULS license database up to date, but this information does not find its way into the CORES database. Part 1 of the Rules, Section 1.8002(b)(2), which Maia said most amateurs are unfamiliar with, states that applicants must keep their CORES records current. Amateurs can supply CORES with up-to-date information via the CORES Web page <https://svartifoss2.fcc.gov/coresWeb/publicHome.do> or by filling out and submitting FCC Form 161 <http://wireless.fcc.gov/feesforms/forms.html>.

Maia proposed that the FCC update CORES automatically when the ULS is updated. ULS is maintained by the Wireless Telecommunications Bureau (WTB) and CORES is handled by the Office of Managing Director (OMD). The FCC's Bill Cross said these systems are two separate systems and that they are discussing a solution.

Cross also moderated the FCC portion of the meeting and took the opportunity to introduce the FCC personnel attending the conference. He reviewed recent Commission rule decisions that have affected VECs, including WTB 04-140 and 05-235 and remarked that the FCC is watching the data streams and upgrades. Cross noted that the ARRL Web site showed ARRL VEC Manager Maria Somma, AB1FM, buried in piles of work <http://www.arrl.org/news/stories/2007/02/28/101/?nc=1>.

Hollingsworth spoke next and opened his comments with a bit of lightheartedness. He said that when he spoke at the Dayton Hamvention earlier this year, he told people to "lighten up on the bands." Since Dayton, he's only had three complaints. "I didn't mean for everyone to take that so seriously!" he said.

He continued by saying that he is "very happy" there is a "slowdown" in Amateur Radio enforcement needs. The Commission's enforcement has gotten stronger over the years, and it will not be neglected, he said. He went on to point out that the Enforcement Bureau now has its own Web page

<http://www.fcc.gov/eb/AmateurActions/Welcome.html> that lists all Amateur Radio enforcement activities.

When it comes to VE sessions, Hollingsworth said, he's only had "two new complaints in two years" about exam sessions, "and those were fairly small involving only two or three applicants." He did, however, warn the VECs "to remain vigilant about detecting fraud now that the licensing structure is simpler."

There was a discussion at this year's conference concerning whether or not the NCVEC should have a standard Spanish language exam pool. Currently, multiple Spanish pool translations are being used in Puerto Rico. The ARRL VEC brought up the idea of "only one standard pool version that could be used by the Spanish community," and asked that the NCVEC "seek to establish and maintain one standard Spanish language question pool that conforms to be an exact translation of the current English language question pool for the purposes of being made available to the Spanish speaking public prior to its use for public study."

Due to the fact that there are differing Spanish pool translations currently in use, and none of them an "official" translation of the question pools, the ARRL VEC wanted one standard pool to be created. Somma pointed out that before the VEC program came into being, the FCC administered Spanish language license exams. "We believe in Puerto Rico, where Spanish is an official language, there should be only one standard translation," Somma said.

ARRL President Joel Harrison, W5ZN, in an e-mail, concurred: "FCC Amateur Radio exams have been available in Spanish since before the creation of the VEC program, back when the FCC administered all the exams. Remember that the FCC regulates Amateur Radio (and other radio services as well) in Puerto Rico where Spanish is an official language and only a minority of the citizens are fluent in English.

"The only current issue, and the purpose of ARRL's NCVEC motion, is whether there should be a single, standard version of the Spanish question pool (there currently isn't), or whether the longstanding practice of allowing any translation done by any VE team or VECs should be continued. We believe there should be one standard and only one translation."

In another e-mail, ARRL General Counsel Chris Imlay, W3KD, agreed: "This effort [for a standardized Spanish translation] is nothing other than a mechanism to insure the high degree of exam integrity that ARRL VEC has been the standard-bearer of for years. Any other position would be contrary to the best interests of the VEC program."

After much discussion, the majority of VECs present did not think they would be able to utilize the Spanish version, and felt with the current resources available, people can be tested in Spanish if need be. Furthermore, the opposition said, the NCVEC has neither the staff nor the resources to undertake and monitor these additional pools.

A vote followed the discussion on the ARRL VEC proposal and the motion did not carry. The NCVEC did not endorse one standard Spanish question pool translation and chose not to develop a unified statement about foreign language exams.

The NCVEC re-elected the current representatives to new terms. Tom Fuszard, KB9PU (MRAC VEC), was selected for a fifth term as chairman; Larry Pollock, NB5X (W5YI VEC), will continue as Vice Chairman. Michele Cimbala, WK3X (LARC VEC), will continue as secretary; Ray Adams, W4CPA (WCARS VEC), will remain as treasurer, and Fred Maia, W5YI (W5YI VEC), will remain as rules reporter. The four current Question Pool Committee members -- Perry Green, WY1O (ARRL VEC), Roland Anders, K3RA (LARC VEC), Larry Pollock, NB5X (W5YI VEC) and QPC Chairman Jim Wiley, KL7CC (Anchorage VEC), were reappointed as well.

The NCVEC set July 25, 2008 as a tentative date for the 2008 conference.

==> The 2007 ARRL National Convention Is Just About Here!

ARRL is tying the ribbons on its planning for the 2007 ARRL National Convention, held in conjunction with the Huntsville Hamfest. The convention and hamfest will be held August 18-19 at the Von Braun Center in Huntsville, Alabama. The event is preceded by the Global Amateur Radio Emergency Communications Conference -- GAREC-07 -- held in the adjacent Embassy Suites Hotel, August 16-17.

"The ARRL National Convention will be chock-full of activities and exhibits," said ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R. "The centerpiece of the convention will be ARRL EXPO -- an entire exhibit area showcasing many ARRL programs and services." A preview of what is planned for ARRL EXPO, as well as a downloadable exhibit and activities guide, can be found at the ARRL EXPO Web site <http://www.arrl.org/expo>.

Another convention activity is ARRL Passport -- the ultimate hamfest scavenger hunt. Available to the first 2500 visitors to ARRL EXPO, the Passport opens up the possibility to win one of two terrific all-mode mobile transceivers: the Icom IC-7000 and the Yaesu FT-857D. Passport holders qualify by collecting different ARRL Passport codes at participating exhibits and activities while they enjoy the convention. Turn in your completed entry form at ARRL EXPO by Sunday at 12 noon, and you could be a winner.

"The Huntsville Hamfest Committee has organized a fantastic slate of presentations and forums. More than a dozen mini-forums will be given on the ARRL Stage, located in ARRL's big exhibit area," Inderbitzen said. A provisional list of hamfest forums can be found at the Huntsville Hamfest's Web site <http://www.hamfest.org/forums02b.htm>. Presentations on the ARRL Stage will include an update on Broadband over Power Line (BPL) given by Ed Hare, W1RFI; suggestions for energizing young -- and potential -- hams, presented by ARRL Youth Contributing Editor and Georgia Assistant Section Manager/Youth Andrea Hartlage, KG4IUM; a "how-to" session on writing for QST, presented by ARRL News Editor S.

Khrystyne Keane, K1SFA; an introduction to ARRL Operating Awards and the ARRL QSL bureau with ARRL DXCC Manager Bill Moore, NC1L; tips for contesting with QST Contributing Editor and ARRL author Ward Silver, N0AX, and an overview of Amateur Radio on the International Space Station presented by Rob Suggs, KB5EZ, NASA Space Environments Team Lead from the Marshall Space Flight Center. A complete listing of ARRL Stage presentations can be found at the ARRL EXPO Web site <http://www.arrl.org/expo>.

==> 2007 ARRL Teachers Institutes Reach 45 Schools

Forty-eight teachers representing 45 schools from around the country attended the 2007 ARRL Teachers Institutes, held this summer in Rocklin, California, Spokane, Washington and at ARRL Headquarters in Newington. Each class of 12, ranging from pre-school teachers to college professors, got the opportunity to explore and experience firsthand wireless technology basics, how to teach basic electronics concepts integral to microcontrollers and robots, as well as how to bring space technology into the classroom. The four day course culminated with building and programming a robot.

Education and Technology Program Coordinator and Director of the ARRL Teachers Institute Mark Spencer, WA8SME, said, "We had a good range of students this year. We had a higher percentage of hams than we have seen in the past. These were slightly older teachers, ranging in all levels of experience. We even had a student teacher at one of the sessions, something I am really excited about."

Spencer said his four "instructional pillars" -- Science of radio, Space in the classroom, Microcontrollers and Robotics -- are "ever-present" during the Teachers Institute. "Each day is packed with lectures, hands-on activities and demonstrations, building, programming and a robotics competition. The first two days include instruction on how to teach wireless technology. Day three covers microcontrollers and the finale is how to teach basic robotics. The class materials are a mix of basic theory coupled with teaching strategies these instructors can use immediately when they return to the classroom."

A new feature in this year's Teachers Institute is Soldering 101. Spencer said including this basic skill was "extremely useful. We had both experienced hams and people new to technology. A lot of the experienced hams hadn't soldered in a while, so it was like a refresher course for them. The new people enjoyed learning a new skill."

Spencer said some people might have already known how to solder, but had never considered soldering in the classroom. "They came up to me, happy that they had learned the teaching skills that would enable them to bring soldering in the classroom. They said, 'I knew how to solder before I came here, but I never thought I could teach it to my students. Thank you for giving me the skills and showing me the way so I can teach this to my students in a way they can understand.'"

Another new feature this year was satellite contacts. Spencer chose AO-27 due to the timing of its pass. Spencer divided the class into two groups and took them outside for the pass. "The satellite comes over the horizon, and the participants announce their call sign and grid square and maybe exchange some short pleasantries. Once that's done, they go on to the next contact," Spencer said.

By using satellites, Spencer said, he shows the Teachers Institute participants that they can actually contact an orbiting satellite using inexpensive equipment. "The lessons involving satellites are valuable and focused. By using satellites, these teachers can go back to their classrooms and teach more than just the satellite. This lesson teaches the students how to get ready, how to prepare; this is something they can and will carry with them all their lives. Without advance preparation, it's really hard to make the satellite contact."

Of the 48 teachers at this year's Teachers Institutes, about 20 percent come from "Big Project" schools, Spencer said. "About another 25 percent of the non-Big Project schools go on to apply for grants and get involved in the Big Project. These schools then go on to apply for an Amateur Radio on the International Space Station (ARISS) program, but the Teachers Institutes show them that there is much more to it than just an ARISS contact."

While the emphasis of the course is not Amateur Radio and teachers need not be hams to attend the all-expenses-paid sessions, some do go ahead and take the Technician license exam. Seven have received their Technician license and two have upgraded to General this year alone. "About 80 percent of the non-ham teachers have gone on to get their Amateur Radio license. They get really 'jazzed up' about ham radio while they are here. Since the genesis of the Teachers Institute, each participant that has taken their Amateur Radio license exam has passed on their first attempt," Spencer said.

Spencer said the Teachers Institute curricula are constantly being tweaked. "Right now, we are at a maturing stage, doing the grunt work and sustaining the program. Next year we are looking at adding Amateur Radio Television and making an umbrella activity board that ties all four of the instructional pillars together. I am already looking at expanding the program for next year."

He has many long range plans in mind for the Teachers Institute. "In the next 10 years, I would love to see a Teachers Institute in each of the 15 ARRL Divisions. These instructors would work in conjunction with their state's science museum and run the Institute regionally through the museum. What a great way to bring science to kids," Spencer said.

==> ARRL COO Takes a Look at ARRL HQ's First Six Months of 2007

At the July ARRL Board of Directors meeting, ARRL Chief Operating Officer Harold Kramer, WJ1B, brought the Board up-to-date on the first six months of 2007 as it relates to ARRL Headquarters and staff. With the elimination of the Morse code testing requirement, a "transformation

occurred in Amateur Radio," he said. The ARRL, he said, was prepared for the changes the elimination brought forth: new licensees, license upgrades and a renewed interest in Amateur Radio overall.

The first six months of 2007 also saw some significant organizational changes at HQ, Kramer said. "The former Membership Services Department and the Field and Educational Services Department merged into one department, Membership and Volunteer Programs, under the leadership of Dave Patton, NN1N." A new Emergency Preparedness and Response Manager joined the staff, Dennis Dura, K2DCD. Debra Johnson, K1DMJ, heads up the newly created Educational Services Department.

"We have also made significant progress in both improving and integrating our Web services with our Customer Relations Management System," Kramer said. "A cross-departmental team has created all new, much improved membership application pages on the ARRL Web site. This team has also upgraded our credit card entry system so that it processes transactions in real time and added additional security to our credit card transactions. As a part of this process, we have enhanced our warehousing and shipping systems."

While Kramer went on to list accomplishments by each ARRL department, he stressed that the positive results seen at HQ were realized "by working as a team...[these successes] would not have happened if we had not all worked together. Thanks to everyone on staff for making these extra efforts."

Kramer pointed out that the ARRL Lab continues to work with amateurs concerning the various BPL systems, as well as participates on industry committees working on BPL. They have helped many members with RF interference problems, and have improved and expanded QST Product Review testing.

The newly formed Membership and Volunteer Programs Department oversaw the initiation of monthly teleconferences with Section Managers in their respective Divisions. The ARRL Club Affiliation process was simplified and the ARRL Club News electronic newsletter was launched and now has about 6000 subscribers.
The Publications Department released nine new or revised publications, including a new General Class License Manual, General Class Q&A, ARRL Antenna Book and the 2007/2008 Repeater Directory. QST saw an emphasis on emergency communications, as well as additional editorial content featuring advanced technology.

The Sales and Marketing Department reported an increase in membership in the first six months of the year. Insurance and banking opportunities were presented as optional benefits to the membership.

The ARRL Volunteer Examiner Coordinator Department implemented plans for the expected workload increase due to the elimination of the Morse code testing requirement. With a gain in the number of license exam sessions, ARRL Volunteer Examiner teams are responsible for administering 71

percent of the Amateur Radio exams.

The Web/Software Development Department reported that the ARRL Web site had more than 2.1 million visitors and 50 million page views during the first six months of 2007. They moved the Logbook of The World system to a new, upgraded server. They also created a new Web site for the ARRL Foundation.

==> Educator Astronaut Barbara Morgan, KD5VNP, Launches into Space

On Wednesday, August 8, the space shuttle Endeavour (STS-118) launched yet again on an 11-day mission into space, the "final frontier." One member of the seven-member crew, Mission Specialist Barbara Morgan, KD5VNP, said she let forth a loud "Woo-hoo!" during the launch. The astronauts assigned to the mission include a Canadian doctor, a chemist who knows sign language and is a former competitive sprinter and long jumper, as well as a commander whose identical twin brother is also a shuttle pilot.

Morgan is the mission's Educator Astronaut. She was selected for the astronaut corps 22 years after first being selected as Christa McAuliffe's backup in the Teacher in Space Project. McAuliffe and the rest of the seven-member crew on board the space shuttle Challenger (STS-51-L) perished on January 28, 1986, a mere 73 seconds after launch.

While in space, Morgan plans to answer questions from schoolchildren. She received her Amateur Radio license in March 2003.

Like all shuttle missions, STS-118 is about the future: putting the International Space Station (ISS) a step closer to completion and gathering experience that will help people return to the moon and go on to Mars. "The mission has lots of angles," Matt Abbott, lead shuttle flight director, said. "There's a little bit of assembly; there's some resupply; there's some repairs. And there are some high-visibility education and public affairs events. It's a little bit of everything."

"I'm really excited about going up and doing our jobs and doing them well," Morgan said. "I'm excited about experiencing the whole spaceflight, seeing Earth from space for the very first time and experiencing weightlessness and what that's all about. I am excited about seeing what it's like living and working onboard the International Space Station."

Morgan trained side by side with McAuliffe and witnessed the 1986 Challenger accident in which McAuliffe and her six fellow crew members died. The Teacher in Space Project was suspended then, but Morgan held on to her NASA ties. In the months following that tragedy, she went on the visits McAuliffe would have made, talking to children and teachers all over the country. When she was selected in 1998 to become a full-fledged astronaut, she jumped at the opportunity.

In reminiscing about McAuliffe, Morgan said, "Christa's legacy was open-ended, and is open-ended. Any teacher's legacy is open-ended. I

hope, and I know that people will be thinking about Christa and the Challenger crew and that's a good thing and they'll be thinking about many, many teachers and others who have worked very, very hard for 20 years to continue Christa's and the rest of the Challenger crew's work. I am just the next teacher of many to come, we've got three in training right now, and there will be more in the future, teachers who will fly as astronauts, so just, just one of a long step that will continue well into the future."

In 2002, Morgan was chosen as the first educator to become a mission specialist astronaut. The Educator Astronaut Project evolved from the Teacher in Space Project. Both aimed to engage and attract students to explore the excitement and wonder of spaceflight and to inspire and support educators. Morgan's primary duty is the same as it is for the entire crew - to accomplish the planned objectives of the station assembly mission, as well as taking part in several education-related activities. "The educator astronaut is also a fully trained astronaut who does the jobs, does the duties that an astronaut does. Astronauts and teachers learn and share; they explore; they discover and then they go learn and share some more. And that's what this is all about." - Some information from NASA.

More about Endeavor's mission can be found at the NASA Web site <http://www.nasa.gov/mission_pages/shuttle/shuttlemissions/sts118/index.html>.

==> ARRL/TAPR Conference Comes to Connecticut Next Month

Mark your calendars for September 28-30 for the 26th Annual ARRL and TAPR Digital Communications Conference in Hartford, Connecticut <http://www.tapr.org/dcc.html>. This conference is an international forum for radio amateurs to meet, publish their work and present new ideas and techniques. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications.

Topics include, but are not limited to: Software Defined Radio (SDR); digital voice; digital satellite communications; Global Position System (GPS); precision timing; Automatic Position Reporting System (APRS); short messaging (a mode of APRS); Digital Signal Processing (DSP); HF digital modes; Internet interoperability with Amateur Radio networks; spread spectrum; IEEE 802.11 and other Part 15 license-exempt systems adaptable for Amateur Radio; using TCP/IP networking over Amateur Radio; mesh and peer-to-peer wireless networking; emergency and Homeland Defense backup digital communications; using Linux in amateur radio; updates on AX.25, and other wireless networking protocols.

The three-day conference will include introductory and technical sessions on Friday and Saturday, a Friday evening social and a Saturday evening banquet. The ever-popular Sunday Seminar focuses on one topic and provides an in-depth four-hour presentation by an expert in the field. The Sunday Seminar speaker has yet to be announced.

According to TAPR Vice President Steve Bible, N7HPR, "the ARRL and TAPR Digital Communications Conference is for all levels of technical experience, not just for the expert. Not only is the conference technically stimulating, it is a weekend of fun for all who have more than a casual interest in any aspect of amateur digital electronics and communications. Introductory sessions are scheduled throughout the conference to introduce new technical topics for beginners and experts alike. For those amateurs who are more technically inclined, this is a must attend conference. Now more than ever, Amateur Radio needs this great meeting of the minds to demonstrate a continued need for our current frequency allocations by pushing forward and documenting our achievements. The ARRL and TAPR Digital Communications Conference is the best way to record our accomplishments and challenge each other to do more."

Each year at the Digital Communications Conference, a separate and lockable room is provided for people to bring and show off their latest projects. Tables and power will be provided. Bring your equipment and display for all to see, learn and ask questions about, as well as a small sign and flyer naming and describing your project.

Registration is open until September 1; after that date, late registrations will be accepted. The cost of the two-day Digital Communications Conference is $70; to attend only the Friday or Saturday session is $40. Lunch is available on Friday and Saturday for $15. The Sunday Seminar is priced separately at $25. The Saturday evening banquet is $35 and includes dinner, guest speaker, an awards ceremony and a prize drawing. Students under 17 are priced at 50 percent of the registration fees. Conference registration includes conference proceedings, sessions and meetings.

Conference presentations, meetings, and seminars will be held at the Doubletree Hotel Bradley International Airport in Windsor Locks, Connecticut <http://www.doubletree.com/en/dt/hotels/index.jhtml?ctyhocn=BDLETDT>. A block of rooms at a special rate of $79.00 has been reserved, and it is highly recommended that you book your room prior to arriving. This special rate is good until August 30, or until the block of rooms is all sold out. To book your room, call the hotel directly at (860)627-5171 and mention group code DCC when making reservations.

==>SOLAR UPDATE

Tad "I Wanna Soak Up the Sun(spots)" Cook, K7RA, this week reports: Average daily sunspot numbers were up a little, rising more than five points to 12.4. After a short period of no sunspots, we are back to seeing a spot or two every day. Expect these conditions to continue, possibly falling back to zero spots again around August 16-20. Today (August 10), expect some unsettled to active geomagnetic conditions due to a solar wind stream. Planetary A index predicted for August 10-16 is 25, 15, 5, 5, 5, 5 and 10. Geophysical Institute Prague predicts unsettled to active conditions August 10, quiet to unsettled August 11, quiet August 12-14, quiet to unsettled August 15 and unsettled August

16. Sunspot numbers for August 2 through 8 were 0, 11, 11, 11, 16, 13 and 25 with a mean of 12.4. The 10.7 cm flux was 69.4, 70.4, 69.4, 68.9, 70, 69 and 69, with a mean of 69.4. Estimated planetary A indices were 5, 4, 2, 2, 12, 23 and 6 with a mean of 7.7. Estimated mid-latitude A indices were 5, 4, 0, 2, 8, 23 and 5 with a mean of 6.7. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: This weekend, the WAE DX Contest (CW) and the Maryland-DC QSO Party are on the air August 11-12. The NAQCC Straight Key/Bug Sprint takes place August 15. Next week plays host to the ARRL 10 GHz and Up Contest on August 18-19. The NCCC Sprint (CW) is August 17 and 18. The ARCI Silent Key Memorial Sprint is August 18, while the SARTG WW RTTY Contest is August 18 and 19. The North American QSO Party (SSB), the Keyman's Club of Japan Contest and the Russian District Award Contest are August 18-19. The New Jersey QSO Party is August 18-19 and August 19-20. The Run for the Bacon QRP Contest is August 20. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education course registration: Registration remains open through Sunday August 19, for these on-line courses beginning on Friday September 7: Technician License Course (EC-010); Amateur Radio Emergency Communications, Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012), and Digital Electronics (EC-013). To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* New Chief for Air Force Mars: Allen Eiermann, K3LSR, has been named the new acting chief of Air Force MARS. Eiermann takes over for Don Poquette who recently retired form the Air Force. Eiermann holds a General class Amateur Radio license and is a former Navy/Marine Corps MARS member. "I am looking forward to serving the MARS community and will work closely with the Army and Navy-Marine Corps MARS Chiefs to bring the tri-service MARS programs closer to being just MARS. I fully support interoperability between the three services and the efforts to provide communications services to other federal agencies and civilian communities during times of need," Eiermann said.

* Nominations Sought for ARRL Section Managers: Nominations are currently being solicited for Section Managers in the following ARRL Sections: Eastern New York, Eastern Pennsylvania, Louisiana, North

Carolina, Pacific, San Diego, South Dakota and Virginia. To be valid, a petition must contain the signatures of five or more full ARRL members residing in the Section concerned. Photocopied signatures are not acceptable. Petition forms FSD-129 are available on request from ARRL Headquarters but are not required. Petitions must be received at Headquarters by 4 PM EST on December 7, 2007. If more than one member is nominated in a single Section, ballots will be mailed from Headquarters on or before January 2, 2008 to full members of record as of December 7, 2007. Returns will be counted February 19, 2008. Section Managers elected as a result of the above procedure will take office April 1, 2008. For more information, including a sample petition, please see the ARRL Web site <http://www.arrl.org/FandES/field/org/smterms.html#sample>.

* New Prefix in the Works for Bosnia and Herzegovina: The ITU has granted a request from the Ministry of Communications and Transport of Bosnia and Herzegovina (BiH) to replace T9A-T9Z with E7A-E7Z. According to IARU Secretary David Sumner, K1ZZ, "While it probably will take some time for the BiH administration to implement this change, it should put to an end the use of call signs outside the ITU-allocated call sign block by stations in parts of BiH." The new prefix will be implemented "probably later this year," Sumner said.

* ARRL Tours Continue through Summer: The ARRL Tour Program is in full swing this summer. According to ARRL Receptionist Penny Harts, N1NAG, more than 200 people have toured ARRL Headquarters and W1AW this summer, and since the Volunteer Tour Guide program was instituted last August, more than 500 visitors have seen the ARRL up close and personal. Tours are given by Sales and Marketing Coordinator Jackie Cornell, or by the volunteer tour guides Bob Allison, WB1GCM, and Roy Johnson, N1IKM. Tours highlight W1AW, the ARRL Lab, the Outgoing QSL Service and a brief visit to each of the various departments. Visitors may operate W1AW weekdays between the hours of 10 AM-12 pm and 1-3:45 PM; please bring along a copy of your license. For more information on ARRL HQ tours, please contact Jackie Cornell <jcornell@arrl.org>.

* 100th Anniversary of Scouting Celebrated with ARISS Contact: On Saturday, August 4, an Amateur Radio on the International Space Station (ARISS) contact took place between scouts attending the 21st World Scout Jamboree in Chelmsford, England and Clay Anderson, KD5PLA, aboard the ISS. Ten scouts were able to ask two questions each of the astronaut using the special event station call sign GB100J. Approximately 40,000 scouts from 200 countries attended the Jamboree. Audio was broadcast on the Jamboree FM radio station and was webcast on the radio station's Web site. The audio was also fed into the EchoLink JK1ZRW (277 208) server and received 50 connections from stations in 12 countries, including 6 repeaters nodes. Video and audio may be found on this site <http://www.g6lvb.com/GB100JISS.wmv>.

* No ARRL Audio News Next Week: There will be no ARRL Audio News next week Friday, August 17. Please adjust your calendars and programming

accordingly. The ARRL Audio News will return on Friday, August 24.

* Let Us Know What You Think: What's your favorite part of The ARRL Letter? What kind of stories would you like to see in the Letter? Would you prefer the Letter in an HTML format? This is your Letter and your chance to let your voice be heard. Please send your suggestions to ARRL News Editor S. Khrystyne Keane, K1SFA, <k1sfa@arrl.org>, with the subject line "ARRL Letter Suggestions." All messages will be read and discussed, and we look forward to implementing positive suggestions into the ARRL Letter.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.)

Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

1403. WIANEWS for week commencing AUGUST 12 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-08-11 11:04:57 UTC
From: nationalnews@wia.org.au
Message-ID: <200708111000.l7BA06Y13707@panix2.panix.com>
Source record: 4008
Cross-posted to: rec.radio.amateur.moderated,aus.radio.amateur.misc,rec.radio.info

This is WIANEWS for week commencing AUGUST 12 2007

News is on as usual this weekend on RF and HF, stations that do not intend to carry the service Sunday would have advised their Listeners during last weekends call-back sessions. However you can hear us if your outlet is "contesting" instead, by visiting http://www.wiaq.com/ftp/wianews.mp3

Saturday 0800UTC the RD contest started, opening this years event was Brigadier Doug Formby, President of the Queensland RSL.

Lets listen to a portion of that address.

"For those of us who are no longer young men, it is hard to believe that world war 2 ended more than 60 years ago nor, for that matter, that the history of your Remembrance Day Contest itself extends unbroken over more than 50 years.

Australian servicemen performed in all theatres of that war, most closely in the Pacific, where the war finally ended in mid-August 1945.

I think the thing that few younger people realize these days is how young most of our servicemen really were. So many of us were just kids.

And Kids they were, let us hope that in the years to come so many of our Kids will never again be facing the adversity our forefathers endured, but I feel confident today s youth, if heaven forbid, it is necessary will again show our Aussie Courage and answer the call."

HAMS ACROSS AUSTRALIA.

BOYS LIGHT UP

LIGHTHOUSE MESSAGES

The Liverpool and District Amateur Radio Club VK2BTT will be putting the retired MV Cape Don, a purpose-built vessel to service navigational aids including manned lighthouses to air Next weekend, Lighthouse Weekend

Brian VK5BC and Richard VK5UK will be activating the Corny Point Lighthouse, Southern Yorke Peninsula over the International Lighthouse Weekend the 18th & 19th August. They will be using the Callsign VK5CPL.

Two lighthouses in Western Australia will be active.
VK6CNL Cape Naturaliste and VK6CLL Cape Leeuwin Lighthouses in the south west of the state.
If you are interested and in the Margaret River area feel free to go along to the Lighthouses and see the teams in operation. Whale watching is also possible from the coast at the lighthouses.

WICEN in Tassie will visit Cape Bruny for the weekend, they depart Kettering on the 7.45am ferry, and remind those in the south more day visitors are welcome.

WIA PRESIDENT MICHAEL OWEN VK3KI:-

"I would like to tell you about the new Advisory Committees.

The WIA Constitution that was adopted when the WIA moved from a federal structure to a single national body provided for Advisory Committees from each of the areas previously covered by the Divisions, and whose task was to advise the WIA Board in respect of more local matters.

The first members of each Advisory Committee were the members of the relevant Divisional Council who wished to be members. The Constitution said that after three years new Advisory Committees were to be formed, with the details to be determined by the WIA Board.

The process to create new Advisory Committees has now almost finished.

The Constitution provides that each Advisory Committee would have one member nominated by the WIA Board and the Board has adopted rules that provide that three further members are to be elected. If there were just enough nominations to fill the vacancies, then those nominating were elected, and if there was a shortfall, then the Board made appointments to fill the vacancies.

The Board also has power to define the areas of each Advisory Committee, and has created the Northern Territory as a new and separate area for an Advisory Committee, and (after consulting with the Canberra Region Amateur Radio Club, previously he ACT Division), included the ACT as part of the New South Wales area, with a special provision to allow (but not compel) one member of the New South Wales ACT Advisory committee to come from the ACT.

The Board has appointed its nominees to each Advisory Committee, nominations for election have been called, in two states the number of nominations

matched the vacancies, the Board then appointed two people whose nominations were rejected on technical grounds, then where there were still vacancies, consulted with those already appointed and took their advice, and finally have made the last appointments to fill each Advisory Committee.

The names of each members of each Advisory Committee can be found on the WIA Website, under a release issued on Friday.

http://www.wia.org.au

The new members of the Advisory Committees do not actually take their position until 1 October, but in the mean time each Advisory Committee has been asked to identify their chairperson, work out how they are going to function and to work out the contact addresses and numbers for their committee. Also, in some areas a transition has already started from the old committee to the new, for example in Queensland where meetings are planned in October and so both the old and the new are involved.

Finally, let me say this.

How the new Advisory Committees function will very much depends on them. The Board sees the Advisory Committees as a local representation of the WIA, there not only to advise the Board but also to actively promote and advance the WIA.

I thank each and every one of you who have either agreed to participate or who have volunteered to participate in working for the WIA this way."

Get your personalised WIA email address today..

The WIA though it's email server allows you to establish
"yourcallsign@wia.org.au"
wia.org.au> with all
emails sent to this address automatically forwarded to either your home
or work email account..

This provides YOU with ONE consistent email address. And should you ever change ISP, then having a WIA address means your friends and colleague will still be able to email you without the need for individually providing them with your new address. All YOU need to do is to simply advise us of your new address, through form on our website and we do the rest. It couldn't be easier !! A further benefit of having a WIA address, is in receiving informative Amateur Radio news as it breaks, sent directly to YOUR inbox..

Obtaining your WIA email address is really quite easy, simply visit our website www.wia.org.au
click on member services, select email address, and fill out the application form.

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6FXYL

The ARRL Board of Directors have named several ARRL award recipients.

Included are the 2006 Herb S. Brier Instructor of the Year Award, the 2006 Hiram Percy Maxim Award

The recipient of the 2006 Instructor of the Year Award is Dr William P. Birmingham, KC8WBD, of Grove City, Pennsylvania. Over a period of many years, Dr Birmingham has demonstrated his commitment to teaching Amateur Radio in the classroom, as well as promoting Amateur Radio outside the classroom. Herb S. Brier, W9AD, long-time CQ Novice Editor, represented the spirit of effective, caring Amateur Radio instruction. The ARRL, in conjunction with the Lake County (IN) Amateur Radio Club, sponsors this award in his memory to recognize the very best in volunteer Amateur Radio instruction and recruitment.

The recipient of the 2006 Maxim Award is Greg S. Davis, N3ZL, of Florence, South Carolina. This award, given annually to a licensed radio amateur under the age of 21, takes into account the nominee's most exemplary nature of accomplishments and contributions to both the community of Amateur Radio and the local community. Davis, first licensed at 14, upgraded to Amateur Extra class before he turned 16. While his first love is rag chewing, he likes to DX, contest and operate all digital modes and SSTV. Davis is interested in and active in emergency communications. As part of his Eagle Scout project, he was responsible for planning, assembling and installing emergency communications antennas at Red Cross emergency evacuation centres.

DISCUSSION POINT

BRICKS IN THE MAIL

The old adage is that there are always two sides to a story. Well that certainly applies to an almost legendary ongoing stoush on the internet.

This concerns the sending of a box of house bricks and other rubbish, to a radio amateur who collected it from his post office, paying cash on delivery.

There was an expectation that the box would contain radio equipment.

Not restraining his emotions one bit, the irate receiver of the box of heavy and somewhat expensive rubbish took to his keyboard to attack the sender.

Counter claims were then made by the apparent sender of the box who tried to put some kind of justification on what had occurred.

It all apparently stems from a dissatisfaction over an earlier matter on a popular "for sale" and "wanted" advertising website.

Angry words like "integrity", "rip-off", "honesty" and "greed" are being used in these public exchanges between the two.

A small blessing however is they live some 2,000 kilometres apart and may never meet.

Nonetheless those observing the internet battle remain either bemused or bored with the whole affair.

Neither side seemingly wants to give-up. It's all about personal pride, reputation and emotions continue running high over a very important issue ' not.

I'm Jim Linton VK3PC and you're listening to VK1WIA.

SILENT KEYS

The following tribute for Tom Moffat is from Brian VK7RR via VK7News

Tom was born in the United States of America. His father had contact with Australia as he was involved with the design of the navigation equipment for the Jindivik program in the 50's so it is no wonder that Tom ended up out here. Tom obtained electronic qualifications with the Bell Telephone Company for whom he worked until the wanderlust hit him.

Tom passed away August 2 2007

He initially worked in Victoria, as Chief of Staff for GTV-9, moving to Tasmania with his wife Gael, in the early 70's, whereupon he became the Motorola sales and service agent for Tasmania.

Tom was involved with the first amateur television broadcast of the weekly news, the first mobile television broadcast in the southern hemisphere, amateur or commercial and of course, the first VK7RHT.

Tom soon became one of the best known names in Australian amateur circles through his monthly columns in various magazines, an interest which became an occupation over the past ten years or so. Who will forget Moffat's Madhouse and his monocle? Tom's optometrist made it for him as he refused to wear reading glasses.

Tom was a highly intelligent person who had an instinct for new technologies and took to computers like a duck to water. I wonder how many people built his weather satellite decoder over the years? He sold them in kit form and many yachties and amateurs were soon checking their own weather, long before sound cards and DSP, hit the scene.

He also built an experimental robot known as the Tasman Turtle as I remember it.

Tom died peacefully on Tuesday evening, leaving Gael, his former wife, who continued to care for him as much as he would let her, two daughters, Jenny and Fiona, a son Steven and three grandchildren.

Farewell old friend.

TAIT TEAM MOURNS GREAT KIWI EXPORT ICON

Christchurch, New Zealand

Staff at Christchurch radio communications company, Tait Electronics Limited, are mourning the loss of their Founder and Chairman Sir Angus Tait. Angus died August 7.

Michael Chick, Managing Director, said the country, company and worldwide radio industry was poorer for his passing. "He was an immensely determined yet compassionate man, a great innovator and mentor for so many. He was humble and curious; never seeking the limelight but never shy of making his voice heard if it would help business and education in New Zealand."

The Tait Foundation has donated millions of dollars to a variety of causes; most recently in the Canterbury University's Wireless Research Centre.

He was the Chairman and, at 88, he had been coming into work most days.

In 1948 Sir Angus formed his first company, A.M. Tait Ltd, on the back of mobile radio sales to two taxi companies. A.M. Tait Ltd (the "M" stood for McMillan) developed the AM T4 radio, which contributed much of the company's success. Without any sort of business plan the company's staff swelled to 100 people by the mid-1960s, when A.M. Tait Ltd even delved into making televisions!

Always a radio enthusiast (call sign ZL 3NL) Angus kept up to date with the latest technologies. Until the end at 88, Sir Angus drove into work in his characteristic red Alpha Romeo. Rather than a parking space, he pretty much parked right by the front door. After all, it was his name on the office sign. (originally forwarded by john stevens vk4afs)

INTERNATIONAL NEWS

Morse Code Study in Pennsylvania:

The ARRL Letter reports a psychology professor at the University of Pittsburgh is conducting a study involving short-term memory and how it correlates to Morse code.

Julie Fiez, the study's principal investigator, said she got the idea of using Morse code in her studies from a family member who is an Amateur Radio operator.

She said she liked the idea of using CW in her experiments to see how people process audio tones. "Our interest is in verbal working memory," she said, "which is the ability to keep 'on-line' for a short time, information you can access later."

Part 1 of the experiment is an assessment of the participant's Morse proficiency.

First, participants will be asked to accurately copy sentences as they are presented in at three different rates (16, 19, and 25 words per minute). Then they will be asked to listen to the entire Morse sentence and recall the sentence from memory.

Part two asks participants to recall lists of letters from memory. The letters will either be in English or in Morse.

Participants will either hear the letters through headphones or see them on a computer screen. The study will look for differences in memory performance between Morse lists and English lists.

==========

NEWS FROM ARNEWSLINE

ON THE AIR: WAR ACTIVATED IN CROSSBAND COMMUNICATIONS TEST

A three letter special event callsign with no numeric indicator. That's the story of the callsign W-A-R as it was used in last May 12th in the 58th running of the Crossband Communications Test sponsored by the Army Military Affiliate Radio System.

The historic W-A-R callsign was originally the property of the old United States War Department as it was known in those days. This year the W-A-R call was rolled out to be used in the cross band ham radio test station operating at the Pentagon. This was very significant to the members of the Pentagon Amateur Radio Club as the W-A-R call has been in exile at Fort Detrick, Maryland for many years.

The complete story about the W-A-R commemorative call and this years Crossband Communications Test is in the article titled Amateur Radio at the Pentagon by Bill Sexton, N1IN. It begins on Page 29 of the August Worldradio Magazine. (Worldradio)

RSGB NEWS G4NJH

Gloucestershire County RAYNET assist in floods

Gloucester County RAYNET was called upon for assistance during the floods.

The service was activated by the County Council Emergency Planning Officer to assist in the evacuation of the county emergency centre on 25th July. All the RAYNET contingency equipment was stripped out of the radio room underneath Shire Hall in the city centre, and a temporary station relocated at the Triservice Control Centre at Quedgeley, to the south of Gloucester.

The prime functions of the station were to establish links to the district rest centres set up around the county and to provide backup links to out-of-county sites where telephone systems would still be operational, should the Walham substation have failed.

Liaison was kept with other RAYNET Groups at Bath, Gwent and Bristol through Zone 7 Controller Chris, G8RXA. This ensured they were kept abreast of the situation and could be called in to assist if necessary. Thanks to the efforts of members working long hours on Sunday, Monday and Tuesday, voice and data communications links were set up to the Triservice Control Centre from Tewkesbury, Gloucester, Cheltenham, Cirencester and Stroud.

On Thursday, a callout was issued by the County Emergency Planning Officer for radio links to be set up between the Triservice Control and the five main bottled water distribution points for vulnerable people. RAYNET members responded to the request by

message distribution and assisting the volunteer teams at the locations.

WEIRD N WONDERFUL

These from the latest FISTS club downunder newsletter.

John Kirk VK4TJ / VE6XT #9080 says it was not uncommon during the early WW2 era for Canadian radio operators to amuse themselves on long, boring training flights by bootlegging un-issued American ham calls from the adjoining states, complete with a credible cover QTH, handle and rig line-up.

It was after all away these ex hams, whose gear had, like Australians, been confiscated "for the duration" to "get up on the air, whilst "IN the air".

In the brag sessions that invariably ensued in the flight crew's mess hall after a long flight, after a few suitable beverages, they would regale each other with tales of the great QSOs they had enjoyed.

You can guess the conclusion – invariably, the QSO was in fact two bored Canadian radio ops, both bootlegging US calls, talking to each other.

QSL via the buro?

I think not!

(Reference:- Conversation with the late Doug Burrill, VE3CDC, ret. Signals Officer)

Now to "Gerry"... no not THAT JERRY but Gerry # 10139 in Philadelphia.

He tells how his friend George K3MWM (now SK) told him that when he was in the US Army he was ordered to take down his Ham Antenna from the barracks.

So he "drew" a 10-meter dipole on the wall with an electrographic pencil (conductive lead, which used to be required on machine-gradable answer sheets , may not be available any longer).

K3MWM put two screws in the wall contacting the two legs at the feed point.

Then he painted over the dipole and the screws.

Finally He'd connect his feed line to the screws with alligator clips.

He said he made contacts with it, including DX contacts!!

Gerry finished up the FISTS item with "I always wondered - was it an antenna? - Or a PICTURE of an antenna?

(IBM and other equipment used electrographic pencils to mark punch cards and test cards)

OPERATIONAL NEWS - CONTEST COLUMN - D A T E L I N E

AUGUST 11/12 Remembrance Day Contest (The RD) wia.org.au

Please ensure all ELECTRONIC LOGS are sent to rdlogs@wia.org.au

Snail mail? Then get your logs away quickly.

at www.wia.org.au in the RD contest section, are the links to download printable logs and other documents for your use.

Let us all pay homage to the fallen and most of all ENJOY the contest, remembering every point counts, and this year see if we can get another states name on the Trophy.
(peter vk4od)

AUGUST 26-27

ALARA CONTEST.

This ALARA contest is run over 36 hours to give everyone 2 bites at the 80m band.

For OMs only contacts with YLs count, while YLs can count ALL stations.

Club stations operated by YLs are certainly encouraged.

One highlight of the ALARA contest is that you may work the same station after a one hour interval on the same band. So it is worth while staying around a tad longer for that extra contact for both yourself and the other station.

ALL DETAILS CAN BE FOUND ON PAGE 47 OF JULY'S AR MAGAZINE

CONTEST RESULTS

160 Phone Contest

The propagation conditions were perfect on 160M. - There was no QRN at any stage, and the ZL signals were loud for the entire Contest. There was no customary rise in the first hour, or decline at the finish. Maybe this is why the last hour produced the most contacts for many when, usually, some would be tucked up in bed.

Trevor Buckeridge (ZL1FF) won and collected the Trophy and certificates for 1st 160M Phone, and the Night Owl's "Bucket Mouth Award.

(You might recall that Trevor, a relative new-comer to ham radio and contesting, also won the 80M Phone Contest), - so that will be twice that the Contest Manager Bruce Renn has had to spend $28 on postage. - No light-weight Trophies in the VK/ trans-Tasman !

The team from Frankston and Mornington Peninsular ARC (VK3FRC multi-op), were equal 2nd with Luke Steele (VK3HJ).

Only 30 pts separated VK4WIL, VK2MA, VK2ATZ and VK2AWX (all multi-operator Club stations), in 3rd 4th, 5th and 6th positions respectively.

Mike Dower (VK2ENG) won the certificate for 1st 160M QRP Phone.

This was 160M at its best. Even Contest Manager (VK3JWZ), with a pretty ordinary antenna, was receiving replies from ZL's that he could hardly hear!

All good stuff

DXpedition Approved for DXCC Credit:

The ARRL DXCC desk reports that the 2007 DXpedition to Burundi, 9U0X, has
been approved for DXCC credit.

ARRL DXCC Manager Bill Moore, NC1L, said, "If you had cards rejected for
this operation, please send an e-mail
arrl.org> and you will be
placed on the list for update."

THE QNEWS WORK BENCH - the nuts and volts report -
(Measure twice - Cut once!)

All radio amateurs are aware of the potential for interference to radio, TV
and other communication services, causes of it and cures.

Often a plain language or very basic explanation is required for the public
including our neighbours to reach an understanding of what is occurring and
why.

This is important because the presence of an amateur radio station can give
rise to a perception that it is causing interference, when in reality it
could be any number of other resource of interfering radiating.

An excellent resource is the Radio Spectrum Management of New Zealand
website which addresses all general types of interference with text,
television reception screen shots, and a video and an MP3 audio file.

The material is right up to date and describes the effects of interference
on both analogue and digital broadcasting services.

So whether you're a radio amateur experiencing an interference problem, or
just needing to learn more about it, visit the Radio Spectrum Management
website, google it or use the URL that is included in the text edition of
this broadcast.

REWIND - A LOOK BACK IN HISTORY
(Will McGhie VK6UU is WIA National Historian)

Twiddling during the War!

Our final short story today is sourced from the Australian War Memorial website which contains some fascinating stories about Australian's involvement in war and the following story is about a WREN who was involved in radio interception of German signals in England.

Elizabeth Agar - now Marshall - was visiting England when World War II broke out. She decided her duty lay in war service and joined the Women's Royal Naval Service (Wren) in July 1940 where she was trained to intercept German naval signals.

Her home was in Melbourne but she kept in constant touch with her parents through her detailed letters although she was unable to give much information on the work she was doing.

After an intensive two-week training course at Greenwich Naval College, her first posting was to Portland Bill, a remote wireless receiving station on the Dorset coast. There she was involved in intercepting messages sent by German motor torpedo and gun boats which were attacking Allied convoys.

At Greenwich, she trained to be a 'Special Duties (linguist)' operators," Elizabeth wrote in an article prepared in 1994 for the Portland Naval Base 50th anniversary of the D-Day embarkation.

"We all had a good knowledge of colloquial German and our instruction included learning naval expressions (few of us knew them in English, let alone German), learning to receive and record messages in spoken German (including in German phonetic code) and learning both to think and write fast."

"We also learnt how to work our operational wireless sets so we could intercept and identify messages from our particular targets German motor torpedo or motor gun boats.

When enemy signals were detected there was a burst of hectic activity.

"The speech was sometimes clear but often frustratingly faint and fragmented," Elizabeth recalled. "And those atmospherics! How our ears ached."

Elizabeth said that the really tiring aspect of the watches was the never-ending need for conscientiousness.

"We had, after all, to find the German signals; they did not just come out of a receiver, set on a particular frequency.

"We had to 'twiddle' as we called it that is search the wave band up and down endlessly."

The Wrens were promoted by virtue of their special duties category to Petty Officers but after seven months at Portland Bill, Elizabeth was sent to Kingsgate near Broadstairs in Kent, then to Torquay to open a new station and lastly to Sheringham in Norfolk where she was promoted to Second Officer.

In December 1942 she "married the boss" and at the beginning of 1944 left the service just four months before the birth of twin sons.

The full text of this fascinating article can be found on the email and internet edition of this broadcast.

THE FINAL FINAL.

WALKS

Jeff VK4XJJ is still going strong on his walk across Australia.

But he still wants to hear from YOU, and it is these calls in particular that keep him going!!

Sunday 5th August in Mt.Isa, a morning disappointment with not many turning up for the fitness walk. After 2 laps Jeff decided to save his walking for the road.

Good hospitality and amazement at the size and splendour of the Irish Club.

Monday 6th left Mt. Isa at noon and walked 11 Km. Many vehicles and 4 stopped to chat. Very winding road and pleasant walking.

Tuesday 7th walked 29 Km, again very pleasant walking. 60 Km west of Cloncurry. Many vehicles and 5 stopped.

Wednesday 8th walked 36 Km. A new daily walk record! Camped under a bridge with a caravan nearby and joining them for a sausage sizzle.
Temperature ranges since Sunday ranging 1 to 29 degrees. 44 Km wet of Cloncurry.

Roughly 400 Km to go to finish the walk.

Jeff asks via WIA News listeners in Qld for some contacts from operators in Cloncurry, Normanton and Karumba. Also any information about their clubs and a possible visit.

Regards,

Bill Johnson VK2FWGJ

Every Day, from 5:30pm Eastern on 40 meters, 7045 put out a call to VK4XJJ

SARL RTA - THE AMATEUR RADIO EVENT OF THE YEAR

The SARL Radio Technology in Action programme finally comes to Gauteng after a successful series presented in KwaZulu-Natal, Eastern Cape,

Western Cape and the Free State. The day will be held at the National Amateur Radio Centre on Saturday 18 August with registration starting at 08:00 and an action packed programme throughout the day. The programme details can be found on the SARL web pages at www.sarl.org.za, click on RTA. If you would like to receive the programme in your mail box or by fax, send an email to armi@sarl.org.za with your email address or a fax number. If you have no access to email, fax the request to 088 011 675 2793.

The SARL Radio Technology in Action programme features presentations and demonstrations of interest to persons who have a passion for radio and technology and are of great interest to the general public. Bring a family member or a friend along and introduce him or her to the magic of amateur radio and the technology that drives it. The registration fee is a low R20, which includes a free entry into the attendance prize draw. Students and learners enter free of charge and take part in a special draw for a number of wireless microphone kits.

The Sentech cafeteria will be open from early morning till the end of the programme for refreshments and light meals.

Do not miss the Amateur Radio Day of the Year - this Saturday 18 August 2007. Directions to the NARC can be found on the SARL web at www.sarl.org.za. There will be a talk-in station on 145,700.

SARL@HOME DATE REVISED

The date advertised for the first SARL@HOME event in last week's SARL News had to be revised because of a double booking. The Sandton Amateur Radio Club will be holding their AGM at the NARC on 15 September. The SARL@HOME event will now be held on 1 September 2007 at 11 am.

Join Rhynardt Louw for a coffee session to talk about what young people expect to get out of Amateur Radio. Learn about Echolink and how to expand your computer into an amateur radio station. There will also be an opportunity to use the Reno Faber ZS6OF memorial amateur radio station at the NARC. Radio Amateurs in other parts of the country are invited to call ZS6SRL on 7 080 kHz and or 14 340 kHz depending on propagation conditions.

Check he SARL Youth pages on www.sarl.org.za, more details will be posted as they become available.

DID YOU LISTEN TO SPUTNIK 1?

If you listened to Sputnik 1 way back in October 1957, we would like to hear your story! We carried this item in last week's SARL News. So far two listeners have responded with their story. There must be many more listeners who heard Sputnik 1. Man's first satellite was launched on October 4, 1957. It was about the size of a basketball, weighed only 183 pounds, and took about 98 minutes to orbit the Earth on its elliptical path.

To celebrate space week from 4 - 10 October the SARL, SA AMSAT and the SA Amateur Radio Development Trust are working together in a special programme to promote science and technology. If you heard the Sputnik signals way back in 1957 tell us what impact it had on you. Did it influence your career choice?

Drop us a line at saamsat@intekom.co.za, we would like to call you to do a brief interview for a special programme.

Read the full Sputnik story and hear the telemetry again in the SARL member section of www.sarl.org.za

INTERNATIONAL LIGHTHOUSE WEEKEND TWO SPECIAL STATIONS

71 Signal Unit

Three members from 71 Signal Unit will be operating the unit's callsign ZS71SIG as a special event station during the International Light House Weekend.

ZS1H,F Pierre, ZS1FH, Frikkie, and ZU1E, Ernie, will be operating from the military training grounds outside Touws River over the period 18 to 19 August 2007. Freq. bands to be used are 160 m, 80 m, 40 m, 30 m, 20 m and 15 m.

BOLAND ARC

The Boland Amateur Radio Club will be taking part in the International Light House weekend from 17 to 19 August. The callsign ZS1BAL/L will be used from the L'Agulhas light house. This is the most southerly light house in Afrika. There will be concentrated on local 80 m and 40 m phone contacts and on digital contacts on the DX bands.

SARL VHF/UHF CONTEST LOGS

The contest logs for the March 2007 SARL VHF/UHF Contest cannot be found and it is requested that stations who submitted logs for this contest, please re-submit the logs to the SARL VHF Manager, Piet Badenhorst, ZS6PJB. The closing date for these logs is Friday 24 August 2007. Logs can be mailed to Piet Badenhorst, ZS6PJB, Box 4452, Whiteriver, 1240 or by e-mail to zs6pjb@gmail.com.

SOUTHERN AFRICAN DX SURVEY

Twenty submissions were used to calculate the Most Wanted DXCC Entities for Southern Africa. It had been hoped that the response would have been better, but maybe next time.

The Most Wanted entity on Phone is Kermadec Island, ZL8, followed by Desecheo Island, KP5, Cocos Island, TI9, Niue, ZK2, and Tokelau Island, ZK3, in second place.

The Most Wanted spot on CW is shared by 3 entities, namely Yemen, 7O, American Samoa, KH8, and North Korea, P5, followed by three more in second place, St Paul Island, CY9, Austral Islands, FO/A and Mount Athos, SV/A.

Thank you to all those who submitted a survey. The complete listing can be obtained by sending a request to zs4bs@netactive.co.za

RAE COURSE IN KEMPTON PARK

The Kempton Park Amateur Radio Technical society has started the RAE course on the 11th of August for the upcomming Class A exam. For more information visit their website at www.kats.za.net or contact Hannes, ZS6LW, on 073 180 3506.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at very low levels. The geomagnetic field is expected to be quiet in general while reaching active levels on 16 and 17 August. The expected Effective Sun Spot number for the coming week will be less than 5.

20 m and 40 m will provide best opportunities for DX. There is a possibility of 20 m openings towards India from about 15:00 CAT. Contacts with Australia are going to be very challenging. From 16:00 there may be short 20 m openings towards Europe. For the early birds there is the possibility of short 80 m openings towards the East Coast of the USA at about 04:00. Otherwise contacts to the USA are going to be very challenging.

For the CW and digital enthusiasts it will also be worth monitoring 10 MHz.

Locally conditions on 40 m is going to be good for the mobile contest this afternoon.

It is once again time to work towards your 80 m WAZS award in the evenings. Remember that this is only a prediction and that HF always has the capability to surprise you. You will never know what you are missing unless you switch your rig on, listen and also call CQ.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

Today 12 August - SARL 40 Metre Mobile Contest; 17 - 19 August - International Light House weekend; 18 August - Radio Technology in Action day in Gauteng; 23 August - Class B RAE; 1 September - SARL@HOME; 4 - 10 October - Special space programme; 6 October - SA AMSAT Space Conference; 18 October - Class A RAE.

SARL News invites clubs and individuals to submit news stories of interest to radio amateurs and shortwave listeners. Submit news stories if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to the programme Amateur Radio Mirror International, on the air every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 590

kHz. For the web stream and echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links. A repeat transmission can be heard Mondays at 21:00 CAT on 3 215 kHz. Sentech sponsor the ARMI transmissions on the non-amateur frequencies.

Today's South African Radio League news bulletin was compiled by Gustav,ZS6BWN, and transmitted by (your name and call sign)

Thank you for listening. 73

/EX

1 GB2RS NEWS Sunday 12 August

The news headlines

* Scout station GB100J talks to astronauts

* OFCOM publishes proposals for 10GHz

* HF Convention approaches On the evening of Saturday 4 August, ten Scouts spoke to astronaut Clayton Anderson aboard the International Space Station. The Scouts operated as GB100J from the World Scout Jamboree camp near Chelmsford. The ISS link was facilitated by Carlos Eavis, G0AKI, and Howard Long, G6LVB. The Scouts asked Clayton, KD5PLA, diverse questions including what happens to your tears when you cry in space.

Running from 27 July to 8 August, the Jamboree attracted over 40,000 Scouts, venturers, leaders and staff. More than 500 packed the tent where the contact took place. Hundreds more listened to the proceedings from outside.

OFCOM have recently published proposals with relevance to the 3cm band. The proposals concern the award and auction of spectrum at 10GHz to 40GHz. One range of frequencies under consideration coincides with the 3cm Amateur Satellite Service allocation. Details are on the Ofcom web site and specific links can be found in the News section of the RSGB web site.

A reminder about the RSGB HF Convention on 12 to 14 October. This year's convention is at a new venue, Wyboston Lakes, in Bedfordshire. As usual there is a full lecture programme and the chance to meet the world's top HF operators and DXers. Full details of the convention are at www.rsgb.org/hfc. Listeners may like to know that the Early Bird booking discount offer ends on Tuesday 14 August.

The Eastbourne and Wealden RAYNET Group is setting out to find fresh faces to sign up. It has one of the busiest event calendars in the country and an active engineering committee. The committee investigates various operating modes and automatic position reporting systems.

The group itself has been established for many years. Licensed new members are preferred although SWL's are also needed to assist in logging and other duties. Age is no barrier to membership.

If you live in East Sussex or the Kent and West Sussex borders and would like to join, make contact by email to

dick.jeffries@raynet-uk.net or telephone to 01323 845418.

On 26 August, 1500 riders are expected to be cycling from Seahouses to Prior's Haven at Tynemouth for the Chris Lucas Trust in aid of Children's Cancer. East Durham RAYNET is the control group for the event, with assistance provided by North West Durham, South West Durham, Sunderland and Northumberland RAYNET groups. The Group request additional assistance for this event. Anyone available to help can contact the Deputy Controller Mr Owen Smith on 0191 569 3484 or 07906 965787 with their details and availability for the event. The organisers have a website for the event at www.chrislucastrust.com.

Foyle and District Amateur Radio Club recently travelled to St Angelo airport in Enniskillen to run a station during for the jet world masters model aircraft competition. The club was there for the final two days

2 of the event. Propagation conditions were disappointing, but a good number of contacts were made, mainly on 20m and 40m bands. There were model aircraft contestants from 33 countries and 115 contestants at the competition, which was won by the German team.

And now for the details of rallies and events for the coming week

[Note to newsreaders: please exercise your judgement on which of the 12 August events to read out, based on your service area and time of transmission. No events have been notified to us for the coming week.] On Sunday 12 August the Flight Refuelling ARS Hamfest takes place from 1000 at the Cobham Sports and Social Club Ground, Merley, Near Wimborne, Dorset BH21 1RJ. Talk-in will be provided on S22. On Sunday 12 August the Kings Lynn Amateur Radio Club Rally takes place at Kings Lynn Caravan and Camping Park on the A47 approximately 3 miles east of Kings Lynn. Details on the web at www.klarc.org.uk. More details of these and future events can be found on pages 88 and 89 of the August edition of RadCom. Now for the news of special events

Special event station GB2GSS will be on the air using HF and VHF on 15 August from the Gillingham and Shaftesbury Show. As in previous years the station will be operated by members of the Blackmore Amateur Radio Society. QSLs via the bureau. Special event station GB2GSS will be on the air using HF and VHF on 15 August from the Gillingham and Shaftesbury Show. As in previous years the station is operated by members of the Blackmore Amateur Radio Society. QSLs via the bureau. Special event GM1BKF will be operating as GM1BKF/M until 17 August from Lochaber, Gleneagles and the Cairngorm local areas on 2 metres only. A special event station GB1SL will be on the air from the Skerries Lighthouse for this years International Lighthouse and Lighthouse Weekend on 18 and 19 August. This will be the first activation from the Skerries, the Lighthouse situated in a group of Islands off the Anglesey coast in the Irish Sea. Operation on 80 and 40 metres CW and SSB, 20 metres SSB and 6 metres. QSL via bureau or via GW0VML. Special event station GB4SML will be on the air on 18 and 19 August. Borders

Rievers Amateur Radio Society will be activating from Saint Mary's Lighthouse Tynemouth Tyne Wear. Operation will be on the HF, VHF and UHF bands and they will be allocating 15 to 20 minute periods for M3s and QRP stations only to call in. All visitors are welcome further information can be accessed via the web site at www.bras.co.uk. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

Nick, UE1SNA, RA1QQ, Alexey, RA1QY and Dmitriy, RN3GM, plan to operate as homecall/1 from several Russian islands in the EU-162 IOTA group until 14 August. QSL via home calls. When operating from a lighthouse, they will be using UE1RLH/1. QSL via RA1QY.

Marco, IK1ACX, reports he will operating from Pag Island (EU-170) until 18 August. Special station TM2HRH will be active until 19 August to celebrate the 150th anniversary of the birth of Heinrich Rudolf Hertz. QS via bureau to F6KTN.

3 Fabio, IW1DFU, will be active as IA5/IW1DFU from Elba Island (EU-028, IIA LI-001) on 12 to 31 August. He expects to operate mainly CW on 20 and 30 metres, with some SSB activity on 20 and 40 metres, running 100 watts into vertical and/or dipole antennas. QSL via home call, direct or bureau. Marco, IZ6ASI, will participate in the International Lighthouse Lightship Weekend 18 to 19 August as IZ6ASI/p from the lighthouse at Senigallia, ARLHS ITA-181, WAIL MA-004. Expect activity on 10, 15, 20, 40 and 80 metres SSB. During the lighthouse weekend 18 and 19 August Bekir Kemal Ataman, TA2RX, will be making a dxpedition to Gelidonia lighthouse in Antalya, Turkey, to operate as TC4LHW. David, F1JXQ, will be active as FG/F1JXQ from Guadeloupe (NA-102) until 20 August. He operates SSB and is likely to be found on 10 to 6 metres and 2m between 10 and 16 UTC. QSL direct to home call. Now the contest news The SARTG RTTY takes place on 18 and 19 August at various times on RTTY mode, on the 3.5 to 28MHz bands. The exchange takes the form of RST and serial number. The RSGB 432MHz activity evening takes place on 14 August between 2200 to 2230 local on all modes. The exchange takes the form of RST, serial number, locator and postal district. The RSGB 70MHz Trophy Contest takes place on 19 August between 0900 to 1500 on all modes. The exchange takes the form of RST, serial number, locator and postal district. Now the solar factual data for the period from 30 July to 5 August, compiled by Neil Clarke, G0CAS

The solar disc was spotless until a single spot rotated into view on the 3rd. Solar activity was very low. Solar flux levels varied between 68 and 70 units and the average was 69 units. The 90 day solar flux average had remained at 74 units for the last 8 weeks, however, this week it declined by two units to 72. X-ray flux levels remained below the minimum A1 level everyday. Geomagnetic activity started at unsettled levels due to a coronal hole, the Ap on the 1st was 17 units. Activity then declined to quiet levels. On the 4th and the 5th the Ap was only 2 units. The average was Ap 7 units. The ACE spacecraft saw solar wind speeds peak at 660 kilometres per second on the 1st but then

declined to 290 by the 5th. Particle densities remained below 10 Particles per cubic centimetre throughout the period. Bz varied between minus 7 and plus 8 nanoTeslas on the 1st and between minus and plus 2 nanoTeslas on the quiet days. HF conditions have been unexciting, as often happens at this time of year, though 14MHz at times sparked into life, particularly on north-south paths. The band is still staying open until late evening. Sporadic-E is tailing off, but occurred daily at 28MHz and, less often, on 70 and 50MHz. The new OZ 40MHz beacon was heard several times. And finally the solar forecast. This week the quiet side of the Sun is expected to be looking our way. The Sun could become spotless during the week. Solar activity should be very low. Solar flux levels are expected to be between the mid to high 60's. Geomagnetic activity should start at quiet levels, however, around midweek a recurring coronal hole is expected to increase activity. This particular coronal hole as already lasted 6 solar rotations, with the

4 hole changing shape and size each rotation. Back at the end of April the disturbance lasted 4 days with the most disturbed day having an Ap of 26 units. On the last rotation, it only lasted 2 days with an Ap index of 12 units on both days. Quieter conditions are expected to return by the weekend. One solar rotation lasts approximately 28 days, as seen from Earth. MUFs during daylight hours at equal latitudes should be around 17MHz for the south and 14MHz for the north. The darkness hour lows should be about 9MHz. Paths this week to South Africa should have a maximum usable frequency with a 50 per cent success rate of about 22MHz. The optimum working frequency with a 90 per cent success rate will be around 18MHz. The best time to try this path will be between 0800 and 1700 hours UTC. Sporadic-E should take place on some days, particularly on 28MHz and to a lesser extent on 50MHz and above. And that's all for this week from the propagation team.

5 Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies can be found on the RSGB website, including e-mail addresses

and website links where known.

[Note to newsreaders: Please read the local news items appropriate to the service area of your

transmission.]

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Sunday 12 August Brede Steam Amateur Radio Society is operating from the bunker. Contact Steve, M0SSR, on 01424 720 815.

On Sunday 12 August Harwich Amateur Radio Interest Group is having a lecture on solar propagation software by Carl Thomson, G3PEM. Contact James, M0ZZO, on 01255 242 746.

On Sunday 12 August King's Lynn Amateur Radio Club is having its rally. Contact Andy, G1KLP, on or on the web at www.klarc.org.uk.

On Sunday 12 August Southdown Amateur Radio Society is operating G1KAR at Beachy Head. Contact John, G3DQY, on 01424,424,319, or by email to vaughdqy@aol.com.

On Monday 13 August Basingstoke Amateur Radio Club is having a club meeting. Contact Frank, M0AEU, by email to barc@2lo.info.

On Monday 13 August Coulsdon Amateur Transmitting Society is having a BBQ hosted by G4RWW. Contact Andy, G8JAC, on g8jac@btinternet.com.

On Wednesday 15 August Chesham and District Amateur Radio Society is having a discussion night. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 15 August Dover Radio Club is having a school holiday BBQ at Kearsney Abbey. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 15 August Fareham and District Amateur Radio Club is doing its initial planning for JOTA. Contact Jim, M1JJN.

On Wednesday 15 August Havering and District Amateur Radio Club is having a talk on everything you ever needed to know about repeaters. Contact Dave, 2E0EBV, on 07956 594 514.

On Wednesday 15 August Norfolk Amateur Radio Club is having its antenna erection challenge with Rex, G0CLR. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Wednesday 15 August Southdown Amateur Radio Society Operating at Halisham. Contact John, G3DQY, on 01424,424,319, or by email to vaughdqy@aol.com.

On Wednesday 15 August Worthing and District Amateur Radio Club is having a BBQ evening. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 16 August Horsham Amateur Radio Club is having a social evening at The Cricketers' Arms, Wisborough Green. Contact or on the web at www.harc.org.uk.

On Thursday 16 August Sutton and Cheam Radio Society is having a talk on the history of Decca by Peter Skinner, G7MLJ. Contact John, G0BWV, on 020 8644 9945, or by email to info@scrs.org.uk.

6 On Friday 17 August Mid-Sussex Amateur Radio Society is having a radio night and table top sale. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 17 August Torbay Amateur Radio Society is preparing for its rally. Contact Dave, G6FSP, by email to g6fsp@tars.org.uk.

On Friday 17 August Wey Valley Amateur Radio Group is having a club night and putting G6XN on the air. Details are on the web at www.weyvalleyarg.org.uk.

On Saturday 18 August Andover Amateur Radio Club is running its foundation licence course. Contact G0HKC on 01980 594 892.

On Saturday 18 August Dover Radio Club is taking part in International Lighthouse and Lightship weekend, operating GB2SFL at South Foreland Lighthouse. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Saturday 18 August Harwich Amateur Radio Interest Group activating a special event station for the Harwich Low Light as part of lighthouses weekend. Contact James, M0ZZO, on 01255 242 746.

On Saturday 18 August Mid-Sussex Amateur Radio Society is taking part in lighthouses on the air. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Saturday 18 August Norfolk Amateur Radio Club is taking part in lighthouses on the air weekend at Happisburgh. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Saturday 18 August Southdown Amateur Radio Society is operating GB2BTL at Belle Toute Lighthouse. Contact John, G3DQY, on 01424,424,319, or by email to vaughdqy@aol.com.

On Sunday 19 August Basingstoke Amateur Radio Club is having a foxhunt. Contact Frank, M0AEU, by email to barc@2lo.info.

On Sunday 19 August Brede Steam Amateur Radio Society is operating from the bunker. Contact Steve, M0SSR, on 01424 720 815.

NEWS FOR THE SOUTH-WEST

On Monday 13 August Cornish Radio Amateur Club is having a computer section meeting. Contact Ian on 01872 561 058.

On Wednesday 15 August South Bristol Amateur Radio Club is having its summer darts match. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 15 August Thornbury and South Gloucestershire Amateur Radio Club is on the air. Contact Tony, G0WMB, by email to tonytsgarc@beeb.net.

On Thursday 16 August Yeovil Amateur Radio Club is having a Discussion on construction led by G6LLP. Contact Gary, 2E0BFJ by email to g.swain@tesco.net.

NEWS FOR THE MIDLANDS

On Monday 13 August Gloucester Amateur Radio and Electronics Society is having a walk and picnic at Newnham. Contact Anne, 2E1GKY, on 01452 548478, daytime.

On Monday 13 August Stourbridge and District Amateur Radio Society is having an open shack night. Contact John, M1EJG, on 01562 700 513.

7 On Tuesday 14 August Eagle Radio Group is having a talk by Olga Olshvang on the City of Yekateringburg in Russia. Contact Terry, G0SWS,

on 07979 733 640.

On Tuesday 14 August Loughborough and District Amateur Radio Club is having a talk on the history of television by Barry, G8YGT. Contact Chris, G1ETZ, on 01509 504 319.

On Wednesday 15 August Lincoln Short-Wave Club is having a news and views evening. Contact John, G1TSL, on 01526 323 153.

On Wednesday 15 August Telford and District Amateur Radio Society is having a local area walking DF hunt on 2 metres. Contact Mike, G3JKX, on 01952 299 677, or by email to mjstreetg3jkx@blueyonder.co.uk.

On Thursday 16 August Salop Amateur Radio Society is having its summer social. Contact Glenda, G1YJB, on 01939 235 412.

On Friday 17 August Coventry Amateur Radio Society is having a 2m DF and portable night. Contact John, G8SEQ, on 02476 273 190, or by email to johng8seq@ntlworld.com.

On Friday 17 August Hucknall Rolls-Royce Amateur Radio Club is having a 2m VHF mobile fox hunt. Details on the web at www.hrrarc.com.

On Saturday 18 August Worcester Radio Amateurs Association is having a family day at Blackrock car park. Request details by email to info@wraa.co.uk.

NEWS FOR THE NORTH OF ENGLAND

On Monday 13 August Sheffield Amateur Radio Club is having an open table meeting. Contact Trevor, M0TWS.

On Monday 13 August Thornton Cleveleys Amateur Radio Society is having a computer CW night with Ted, G3WBB. Contact Jack, G4BFH, by email to jack.duddington@btinternet.com.

On Tuesday 14 August Halifax and District Amateur Radio Society is having a technical evening and natter night at Rishworth. Contact Brenda, 2E0YKS, by email to wrenuk10@yahoo.com.

On Tuesday 14 August Pontefract District Amateur Radio Society is having a talk on erecting and using your doublet with a portable station. Contact Colin, G0NQE, on 01977 677 006, info@pontefractradioclub.org.

On Tuesday 14 August Wakefield and District Amateur Radio Society is having a construction evening with the shack manager Dave, G6SSF. Contact Dave, G4CLI, on 07748 221 855, or by email to g4cli@hotmail.co.uk.

On Wednesday 15 August Great Lumley Amateur Radio and Electronics Society is on the air. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Friday 17 August South Manchester Radio and Computer Club is having a talk on satellite working by G3ZDM and G4EDM. Contact Ron, on 0161 969 3999.

On Friday 17 August Tynemouth Radio Club is having an operating and Morse night. Contact Tony, G8YFA, by email to tonyregnart@blueyonder.co.uk.

NEWS FOR SCOTLAND

On Thursday 16 August Aberdeen Amateur Radio Society is having a talk on printed circuits by Tony, GM4HTU. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

8 On Saturday 18 August Aberdeen Amateur Radio Society is taking part in the International Lighthouse and Lightship weekend by operating GB3GNL at Girdleness Lighthouse. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

On Saturday 18 August Cockenzie and Port Seton Amateur Radio Club is taking part in the Lighthouse Weekend from Barns Ness, operating GB2LBN. Contact Bob, GM4UYZ, on 01875 811 723.

On Saturday 18 August Moray Firth Amateur Radio Society is taking part in the Lighthouse Weekend. Contact Jim, MM0SMD, on 01340 820 134.

NEWS FOR WALES

On Saturday 18 August Swansea Amateur Radio Society is taking part in International Lighthouse and Lightship weekend from the Helwick light vessel, Swansea marina. Contact Roger, GW4HSH, on 01792 404422.

NEWS FOR NORTHERN IRELAND

No news items have been received for Northern Ireland this week. And that's the end of this week's GB2RS news broadcast,

prepared by the Radio Society of Great Britain.

Notice from ComReg

ComReg would like to advise all Experimenters that there is currently a delay in the issue of Experimenter Renewals. During this delay, unless previously expressly indicated, no experimenter whose fee has been submitted is restricted from operating within normal licence conditions.

Church Broadcasts

For some weeks now we have been carrying an item about broadcasts of Mass from a Church in the north Dublin area on 28.105 MHz FM. We asked stations to listen out for these transmissions on weekdays at 1000 hrs and on Sundays at 0900, 1000, 1100 and 1200 local time to try to identify the Church concerned. We also asked that stations in the Dublin area take bearings on the transmissions to try to at least identify the general area from which the transmissions originate. The response to these requests has been, to say the least, disappointing. Are we not concerned about who uses our Exclusive frequency allocations? We should be as every other radio service is, and takes very seriously any encroachment on their frequencies. We would appeal again to stations in the Dublin area to put a little effort into identifying the source of the transmissions so that details can be forwarded to ComReg. We are getting international reports on these transmissions and we have an obligation to do something about them.

We have now also received reports of transmission of Mass on 28.285 MHz. We do not have any idea yet where this transmission is originating. We would ask stations countrywide to listen on 28.285 MHz FM at the appropriate times in their areas so that this station can also be identified If you hear anything worth reporting you should send a report to Thos Caffrey

EI2JD the IRTS Intruder Watch coordinator at QTHR or to

�thoscaffrey at hotmail dot com� with a copy to Sean
Nolan EI7CD at QTHR or to �ei7cd at gofree dot indigo
dot ie�.

The report should include date, time, frequency, signal strength, possible location of station if identified, beam heading in degrees from true north and any other relevant information. If the station is identified from an announcement of local events, details should be given. Should you hear anything, no action should be taken other than forwarding a report as requested.

A Note of Caution for Amateurs Purchasing Equipment in the UK

Information has been passed to us concerning what appears to be a fraudulent operation involving the sale of Radio Equipment and which has been conducted through a series of small ads in recent editions of genuine Radio Magazines. The equipment is being sold using an address in Oxford and another in the Isle of Wright and is generally described as a �Silent Key� or �Per pro� sale. Payment may be requested direct to an �Executor� as opposed to the actual person advertising and this scam has already cost one of our more trusting Members in excess of 1500 Euro to date.

Members should therefore be aware of this racket and anyone who already suffered loss or who should come into contact with these people are asked to contact Andy EI4ERB @ QTHR or Mobile 086 2752669.

EI0MAR

Recently, a five-band Cobweb antenna was erected at EI0MAR (Howth Martello Radio Group). The Group thanks Jack (EI7HX) for his kind donation of the antenna. Previously, a vertical antenna had to be raised and lowered each time the station was activated. The Cobweb is now permanently installed and allows instant operation of the station by eliminating the hassle associated with the temporary vertical antenna. A permanent 40-metre dipole was also erected recently and now EI0MAR can be QRV on all bands from 40 to 10. At a pinch, even 80 metres can be squeezed in with the LDG Z-100 automatic ATU, as a recent QSO with Tom EI1CW in Carlow confirmed. EI0MAR is located in the vintage radio museum in Howth and is open every day from 11 until 4 until the end of October and at

weekends from November until the end of April. EI0MAR is QRV most Sundays between 11 and 3. The Group's web site can be found by entering EI0MAR into an Internet search engine.

CQIR

Great interest is being expressed worldwide in the Society's 75th Anniversary Contest CQIR, which will take place on the last weekend in September. The contest is a celebration of Ireland and the Irish, throughout the world and with 40 million people in the United States alone claiming Irish forefathers; we expect that CQIR will be one of the largest 'one off' contests ever aired on the Amateur Bands. It is a 24-hour single operator contest with the emphasis on participation rather than winning and to this end every participant gains an entry ticket for a spectacular draw for every 75 QSO's made during the Contest.

The ticket drawn out of the EI/GI drum will win an all expenses paid long weekend in New York City for two people. ARRL have confirmed that this will include a visit to their national headquarters hosted by ARRL. Kinnitty Castle in Offaly will host the international winners for a week with flights for two from anywhere in the world. The prizes have been fully sponsored at no cost to the Society and this is really an excellent opportunity to celebrate the Society and its 75 years of service to Irish experimenters. We would encourage all Irish operators to be active during the Contest. So ring fence the last weekend of September in your diary, make an effort to have that new antenna up for the event and lets ensure a good show from the local Irish operators to support the international Irish who will no doubt come on the bands in their thousands for the contest. Full rules are on the IRTS website.

ILLW

The International Lighthouse/Lightship Weekend will take place from 0001 UTC on the 18th of August to 2359 UTC on the 19th of August. A list of entrants and application from are available on illw.net. This event is not a contest and each station's operators decide how they will operate their station regards modes and bands. Participants are not committed to being on the air during the entire period. There are no restrictions on aerials or power.

The activity does not have to take place inside the tower itself. Field day type set-up at the lighthouse or other building nearby is OK. Complete guidelines are available at illw.net.

South Dublin Radio Club

Weekly meetings of South Dublin Radio Club will resume as usual at 8 p.m. on Tuesday the 14th of August in the Ballyroan community Centre on the Marian road in Rathfarnam. The next SDR event is a lighthouse activation during Lighthouse on the Air on Saturday the 18th and Sunday the 19th of August. They will be activating Saint Johns Point Lighthouse in County Down.

Field Days and Contests

The 2 metres counties contest will take place on the 26th of August. The SSB field day will take place over the first weekend (1st and 2nd) of September. Again the grounds of Garbally College, Ballinasloe, Co. Galway will be available, thanks to Niall EI4CF and once again the Shannon Basin Club will be hosting their now famous Barbeque. Of course, the big event will be CQIR over the last weekend, so plenty to look forward to.

Upcoming Rallies

Cork Radio Club Rally will take place on Sunday the 23rd of September in the Blarney Park Hotel. For information contact Con on 021-427136.

The Waterford Rally will take place on Sunday the 21st of October in the Woodlands Hotel, Waterford. For more information visit www.searg.com.

The Foyle and District Rally will take place on Sunday the 4th of November 2007 at the White Horse Hotel, Derry. For more information visit www.mn0aku.org.uk.

The Mayo Radio Rally will take place on Sunday the 18th of November in the Belmount Hotel, Knock, Co. Mayo. For more information contact Padraic Baynes, EI9JA @ QTHR.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to ﷺnews at irts dot ieﷺ for automatic forwarding to both the radio and printed news

services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday's bulletin.

1407. Re: Whatever Happened to the Electronics Hobbyist?

I believe that there are still significant numbers of builders out
there. I'm one of them, and I know quite a few others.

Paul's link to the story that speaks to the issue is a very good read,
even if I'm not in total agreement, simply because as a person who is
hooked on creating things, I always wondered why more people weren't
into the activity.

There probably will never be a lot of us though, and as our buying
patterns shift to the internet instead of local parts stores, we become
a bit more obscure.

There's nothing like assembling and operating on a piece of equipment
that you build yourself. If you did the actual design, it's an even
bigger treat - taking nothing away from building from a kit though. It's
all good.

Just in the last couple years, I've built:

VHF/UHF J-Pole antenna
1/4 wave VHF Ground plane
2 OCF Dipoles
General purpose dipoles and band specific dipoles.
40-15 meter magloop antenna

UHF yagis (in progress)
Parabolic GHz antenna (in progress)
Digital interface boxes for soundcard modes and computer control of rigs.
Radio direction finders.(in progress)
custom mic/headsets
Shack interfaces

Transceivers have indeed become pretty complex, and are now a niche
market for builders - but they are still out there.

DXNL 1532 - Aug 15, 2007
DX Newsletter

a free and weekly service of
DARC Committee "DX and HF contesting"
(http://www.darcdxhf.de)

editor: Helmut Schlaffer, DL7MAE
(e-mail: dxnl@dxhf.darc.de)

translation by: Bob, DL7VOA
(e-mail: dl7voa@darc.de)

A6 - UNITED ARAB EMIRATES
Don,N1DG, is staying in the Emirates from Aug 15-18 and is QRV as A61AD
mainly in RTTY and in CW. QSLs unfortunately only direct or via LotW.

EA8 - CANARY ISLANDS, AF-004
Hans,EA8/ON6ZK, is hitting the airwaves from Teneriffa (AF-004) with
only 25 watts mostly in SSB on 20m/17m from Aug 15-22.
QSL via bureau preferred to ON6ZK.

FG - GUADELOUPE, NA-102
David,F1JXQ, showed up as TO1USB (instead of FG/F1JXQ like announced
in DXNL 1530) on 14.195 MHz from Guadeloupe (NA-102). QSL via F1JXQ.

KH4 - MIDWAY ATOLL, OC-030
The Midway atoll is one of the most wanted DXCC entities (as seen from
Europe). Its scarcity value increased over the past few years after
Midway has been closed to the public in January 2002. Carolyn Bohan,
the regional head of the "National Wildlife Refuge Pacific Region
(US Fish and Wildlife Service)" gave her blessing to a visitor plan,
which could come into effect in November 2007 or January 2008. This
plan explicitly includes amateur radio activities but restrictions may
apply to the antennas. They must be designed in a way not to harm any
birds on Midway.

OJ0 - MARKET REEF, EU-053
OH0RJ, OH2BH, OH2PM, SM0W and SM6U intended to land on Market Reef on
Aug 11 and planned to show up as OJ0B (QSL via OH2BH) with two stations
the same day. OJ0B is working in CW/SSB until Aug 16.

They will be replaced by OH2HAN, OH2MZB and OH2LU as OJ0MI (via OH2HAN)
who will be active mainly in RTTY. During the upcoming International
Lighthouse Weekend (Aug 18/19) OJ0MI can be found between 14.250 and
14.260 MHz. They announced to be QRV on following frequencies:

CW: 25 kHz from the lower band edge
SSB: 3.790, 7.040, 14.190, 18.140, 21.290 MHz
They will use brand new FT-2000 radios and SteppIR antennas. If you are collecting stamps you may want to request your QSL card enclosed with 7 EUR (or 10 US$) from the QSL manager and get a special stamp from Market Reef. Reports and several pictures from the earlier DXpedition OJ0B (2005) can be found at http://www.kolumbus.fi/oh2bn/pagemarket.htm

OX - GREENLAND, NA-243
Johan,OX/PA3EXX/p, will activate the new IOTA island Rathbone (NA-243) from Aug 19-23. QSLs will be confirmed after his return direct or via bureau to PA3EXX.

SV9 - CRETE, EU-015
Ghis,SV9/ON5NT, is going to spend his holidays on Crete (EU-015) from Aug 16-23. QSLs via his homecall.

V5 - NAMIBIA
Alfons,DJ8VC, will stay in Namibia from Aug 23 until Sep 8 and plans to become QRV as V5/DJ8VC working in CW/SSB on 10-160m. On Sep 1/2 he will join other OMs from Namibia as V55V/p in the IARU Region 1 SSB Fieldday Contest. He is using the shack of Martin,V51W, and can has the choice between wires, a rhombic and several yagi antennas. He also plans to take part in the WAE SSB Contest at the end of his operation (Sep 8/9). QSL cards for V5/DJ8VC and V55V/p (only for THIS Fieldday) will be confirmed by Alfons after his return home.

VP9 - BERMUDA ISLANDS, NA-005
Seppo,VP9/OH1VR, announced to become QRV from Bermuda (NA-005) mainly in CW from Aug 19-21. QSLs via homecall.

7O - YEMEN
Chris Lorek,G4HCL, has the written permission to work under supervision signing 7O/G4HCL on all bands during his business trip from Aug 13-15. You should listen on 14.170 and 14.260 MHz and it is very likely that most of the operation will take place only in SSB on 20m. Chris already notes that the papers he has may not be good enough for an approval by the DXCC Desk.
QSLs only direct via G4HCL, PO Box 400, Eastleigh SO53 4ZF, England.

9X - RUANDA
Peter Stabusch,DL8YA (ex 5Z4SP and 9H1FV), writes that official amateur radio licenses are issued again in Ruanda since July 12. He was lucky enough to get his former callsign 9X5SP which he got allocated before back in April 1967. Peter is working for the "Deutsche Welle" in Kigali and helps to build up the "Rwanda Amateur Radio Union" (RARU). He is using an Atlas 210X with a dipole for 20m. QSLs for 9X5SP via DL8YR.

HUNGARY, SPECIAL EVENT STATION
The 5th International Congress for the New Evangelisation which will take place in Budapest on Sep 15-22. The special event call HG5MISSION is activated until Sep 30. QSL via bureau.

NEW PREFIXES FOR BOSNIA-HERCEGOVINA, E7
The ITU has allocated the prefix block E7A-E7Z to Bosnia-Hercegovina,
but changing all the callsigns may last until the end of the year.
Jahresende dauern, bis der Wechsel aller Rufzeichen abgeschlossen ist.

PUBLISHING LOGS AND LOSING DXCC CREDIT...
The magazine "CQ" published all logs of the last CQWW DX Contests at:
http://www.cqww.com/cwlogs.htm and http://www.cqww.com/ssblogs.htm
In the future DXers have to be aware that it is possible to lose DXCC
credit for QSOs made during those contests. Rule 5 in section III of
the DXCC rules writes that publishing logs "...creates a question as to
the integrity of the claimed QSOs ... and may be considered sufficient
reason to deny ARRL award credit for contacts with any station for
which such presentations have been made." Falk,DK7YY, who is a field-
checker of the ARRL sent a query to the DXCC Desk and the DXCC manager
Bill Moore,NC1L, answered that he cannot make any statement questioning
this rule. With other words: If a DXpedition submits its CQWW log, it
can be assumed that its DXCC approval is denied as well. Country and
band chasers will cease their contest participation and may focus on
chasing the DX before and after the contest weekends!

SILENT KEY: Dick Wolf,N6FF (ex KL7H), passed away on Aug 1 at the age of 68.
He took part in many DXpeditions, was a passionate lowband DXer and
QSL manager of many DX stations. Most of these logs have been uploaded
to the LoTW. See also the homepage: http://www.n6ff.net

LINKS: Current SOTA activities (mountain summits) are announced at:
http://sotawatch.sota.org.uk/activations.php or
http://sotawatch.sota.org.uk/spots.php

UPCOMING CONTESTS

Aug 18/19: SARTG RTTY Contest and Keymen's Club of Japan Contest

IOTA collected by Fredy,DE0MST (e-mail: iota@dxhf.darc.de)

Island activities:
EU-017, ID9, Eolie (Lipari) Islands: Mauro,ID9/IK3SCB, will be active from
Lipari Island (ME-001) from Aug 18-24. QSL via homecall.

EU-055, LA, Fjordane/Hordaland/Rogaland: Henk,LA/PA3FMC, and Ruud,LA/PE1BTV,
will activate Utvaer Island from Aug 16-23. Check also:
http://la2007.dxpedition.nl

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
promoting or defending unlawful activities, etc. Crossposts of regular
discussion articles between rec.radio.amateur.moderated and other
```

discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness,
suitability and/or readiness of any individual (or members of any group)
to be an amateur radio operator are unacceptable in this newsgroup. If
an individual chooses to post asking for advice on when or whether to
obtain an amateur radio license, or to participate in any type of lawful
activity in the Amateur Radio Service, respondents should be careful to
address their comments only to the original poster and not explicitly
generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur
radio licenses, or certain members of national amateur radio societies
(e.g., American Radio Relay League, Radio Amateurs of Canada, Radio
Society of Great Britain, Wireless Institute of Australia, etc.), to be
more or less worthy than others, are not permitted. Posts that politely
encourage individuals to join their local amateur radio society, or to
upgrade to higher classes of amateur radio license in order to enjoy
greater operating privileges, are permitted, however. Posts that
contain reasoned, civil, and fact-based discussion of the activities and
internal politics of national amateur radio societies are also
permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on
rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created
for this purpose, and should be used instead. All such articles will be
rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or
other public relations campaigns will not be permitted. Relatively
unbiased announcements or reviews of new amateur radio-related products
or services may be permitted at the discretion of the moderators. Such
posters are asked to disclose their financial or professional interest,
if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true."

"That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/about/whatis/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

(Adapted, with permission, from the misc.kids.moderated Posting Guidelines.)

==> Hurricane Dean Slams Caribbean Islands

The VoIP Hurricane Net activated Friday morning, August 17, at 2 AM EDT/0600 UTC in response to Hurricane Dean's impact on St Lucia, Dominica, Martinique and other surrounding Caribbean islands. Reports of damage along with wind estimates and measurements were relayed to WX4NHC, the National Hurricane Center in Miami, Florida.

"We've received reports of wind damage. The most significant damage reports include the roof blown off of a children's hospital in Castries, St Lucia, two homes with roofs blown off and a banana plantation flattened in St Vincent. We've also had a few homes with steel roofs blown off in Trafallgua, Dominica, and a measured wind gust out of the East-Northeast of 68 knots at the Canefield Airport in Dominica," said Rob Macedo, KD1CY, Director of Operations for the VoIP Hurricane Net.

Clem James, J73CI, and Joseph Russell, J73RJ, on the island of Dominica and Julien Deider, 9Z4FZ, on the island of Trinidad have been extremely helpful in relaying reports from the affected area. They are obtaining these reports through the 75 Meter Caribbean Weather Net and through local repeater systems where operable and relaying them via EchoLink and IRLP. "We owe them a huge gratitude. They have a lot going on in their local areas yet they are relaying any information they can get to us for the benefit of the National Hurricane Center and the mission to help save lives," Macedo said.

Julio Ripoll, WD4R, Assistant WX4NHC Coordinator, manning the Amateur Radio station at the National Hurricane Center in Miami, Florida reported that the Meteorological Office in Martinique had a measured wind gust of 88 MPH before Hurricane Center forecasters lost the phone connection to the Martinique weather office. "We need any stations that have relays into Martinique by HF or any other means to get in touch with someone there and relay reports of meteorological data and damage to the Hurricane Center," Ripoll said.

Cell phone service was knocked out to portions of the western and southern parts of Dominica as reported by Joe, J73RJ. Power and phone outages were also reported in St Lucia.

Hurricane Dean will move away from the Caribbean islands and potentially affect Jamaica and other parts of the Western Caribbean Islands. The VoIP Hurricane Net and WX4NHC secured operations at Noon EDT as Dean moved away from the islands.

"We expect to reactivate WX4NHC some time Sunday Morning for Dean as it approaches Jamaica though things could change," said Ripoll. The VoIP Hurricane Net is also preparing activation plans for Sunday. -- Thanks to Rob Macedo, KD1CY

The Hurricane Watch Net has temporarily secured operations following 6 hours of net operations for Hurricane Dean on 14.325 MHz. According to Net Manager Dave Lefavour, W7GOX, the net will resume at 2200 UTC on Saturday, August 18, and remain on the air until the band closes as the storm heads closer to Jamaica. On Sunday, the net will commence at 1200 UTC.

"We provided storm information to the affected area in the Windward Islands and passed local weather conditions and initial damage reports from the area to the National Hurricane Center in Miami as Dean moved through the islands," Lefavour reported.

"We appreciate the excellent cooperation of all amateurs in remaining clear of the frequency and allowing us to communicate with those stations in the path of Dean."

As of 1500 UTC, Friday, a hurricane warning remained in affect for Martinique, Dominica and Guadeloupe, and a tropical storm warning remained in effect for the US Virgin Islands and Puerto Rico and a number of islands in the Lesser Antilles.

A tropical storm warning and a hurricane watch has also been issued for Haiti form the Haiti/Dominican Republic border to Port-Au-Prince. A hurricane watch means that hurricane conditions are possible within the watch area and within 36 hours.

Hurricane Dean was located near 14.6 North, 62.6 West and it was moving toward the west at 18 knots with maximum sustained winds at 90 knots with gusts to 110 knots.

==> Hawaii Hams Heed the Call of Hurricane Flossie

The VoIP Hurricane Net activated as Hurricane Flossie approached Hawaii August 14. Flossie was at one time a Category 2 hurricane that passed 75-100 miles offshore of the Big Island of Hawaii. On Tuesday, while Flossie weakened and was downgraded to a tropical storm, tropical storm-force winds spread over Hawaii around mid-morning local time (1700-1900 UTC). If Flossie had deviated to the north, Hawaii would have been at risk for hurricane force conditions, with a change of as little as 50 miles north or south making a huge impact to the Big Island. The other islands in Hawaii were not seriously impacted.

The VoIP Hurricane Net assisted with obtaining reports from Hawaii SKYWARN and RACES and fed it back to National Hurricane Center Coordinator Julio Ripoll, WD4R, and his team at the National Hurricane Center in Miami, Florida. The VoIP Hurricane Net uses the EchoLink Conference WX-TALK Node 7203/IRLP Reflector 9219 for its operations.

Connie McCurdy, NH7IE (using NWS Honolulu call sign KH6SW), acted as Net Control for an informal SKYWARN Net that became more formal on Tuesday as Flossie approached. "The Big Island has declared a State of Emergency, all schools are closed and many roads have been closed. The Coast Guard has ordered small vessels to return to harbor on the Big Island and large ships over 200 tons to leave. We did have an earthquake near the volcanoes, but no damage. Everything will be closed up tomorrow; folks are hunkered down to ride out the storm. Also, nine people from FEMA were sent over and arrived today just in case things turn out bad for the Big Island," she said.

She said an alert was sent out to Honolulu that high winds and rain were expected on the Big Island. "We are advised to get supplies and stand by to be called out to shelters if needed. A net will be set up on our local repeater 146.880," she said.

ARRL Emergency Preparedness and Response Manager and Assistant Director of the VoIP Hurricane Net Dennis Dura, K2DCD, said on Tuesday: "We are

monitoring the activity of the VoIP Hurricane Net and the activities of ARES and RACES is Hawaii. At this time, no assistance is needed, but we will be prepared to assist the Amateur Radio community and the government of Hawaii with any communication needs."

A 5.3 earthquake also rocked the Big Island Monday evening at 7:38 local time (0038 UTC Tuesday morning) centered about 25 miles south of Hilo, according to a preliminary report from the US Geological Survey. There were no reports of injuries, structural damage or a tsunami, although the quake did cause a small landslide, according to Tom Brown, a spokesman for Hawaii County Civil Defense.

Island of Hawaii Mayor Harry Kim issued a state of emergency Monday afternoon for the volcanic island's population of 160,000. "We're taking this all very seriously," said Janet Snyder, Kim's press secretary.

The VoIP Hurricane Net activates when a hurricane affects a land area that has EchoLink and/or IRLP nodes in the affected area, and a request to activate comes from local area served agencies such as an EOC, NWS Forecast Office/SKYWARN program or the National Hurricane Center Amateur Coordinators in Miami. You may listen to VoIP Hurricane Net on one of the listen-only IRLP reflectors, which are New England IRLP Reflector 9129 and Australia IRLP Reflector 9508. The listen only EchoLink Conference is VKEMCOMM node 270177.

For more information on the VoIP Hurricane Net, visit the VoIP Hurricane Net Web page <http://www.voipwx.net/>. -- Some information from Rob Macedo, KD1CY

==> September QST Hits the Streets

If you haven't received the September issue of QST, just wait a bit, because it's on its way! QST, the official journal of the ARRL, is the members-only magazine featuring all the latest Amateur Radio news and technology.

The September issue is our first-ever Emergency Communications issue. Learn how the ARRL is promoting effective, coordinated responses to emergencies. Look for an exciting article on D-STAR, a new way to transmit digital voice and data at VHF and UHF. Have you ever wondered just how emergency communications began? Read about its rich and varied history in September QST. Learn how the Military Affiliate Radio System (MARS) is now integrated into one unit that emphasizes digital communication.

The ARRL Diamond Terrace is just about complete. Check out the progress that has been made to this new must-see feature of ARRL Headquarters and learn how you can become a lasting part of this great legacy.

On the technical side, the September issue offers articles on how to get a maximum gain portable HF Yagi antenna and a remote power controller. Be sure to read about a way to pack power to bring with you for emergencies. Learn about a way of determining resonant frequency of a

tuned circuit. QST Product Review Editor Mark Wilson, K1RO, reviews the Tokyo Hy-Power HL-1.5KFX linear amplifier, ARRL Lab Test Engineer Mike Tracy, KC1SX, reviews the Gamma Research HPS-1a switching power supply and Rich Arland, W3OSS, reviews the Hendricks QRP Kits FireFly transceiver.

If you're looking for upcoming operating events, don't miss Jamboree on the Air and the 2007 Simulated Emergency Test, both of which are covered in the September issue.

As in each and every QST, you will find a wide variety of articles and columns for all hams, covering DXing, vintage gear and cutting edge technology, public service, special events, as well as a schedule of upcoming hamfests, conventions and contests.

==> ARISS Contact with Arnold Palmer Hospital for Children

For 11 kids at Arnold Palmer Hospital for Children in Orlando, Florida, July 17, 2007 was quite a memorable day. These children had the unique opportunity of questioning astronaut Clay Anderson, KD5PLA, onboard the International Space Station (ISS) via ham radio as it made a 9 minute 30 second pass over the United States.

This Amateur Radio on the International Space Station (ARISS) contact was made possible due to the initial efforts of John Rothert, KC4IYO. After applying for the contact, John became ill and was unable to continue helping. Through the sponsorship of the Lake Monroe Amateur Radio Society and combined efforts of Northern Florida Section Public Information Coordinator Mike Welch, KF4HFC; Bob Pollack, KF4IMF; Lou McFadin, W5DID; the Child Life Department of Arnold Palmer Hospital and many other supporters, the event went off without a hitch.

Just prior to the ISS pass, the Child Life personnel established phone contact with Will Marchant, KC6ROL, and Graham Lawton, G7EVY. These hams helped prepare everyone for the contact and coordinated the telebridge connection between the hospital and the ISS via W6SRJ, the host ground station located at Santa Rosa Junior College in Santa Rosa, California.

At approximately 2:28 PM, Bill Hillendahl, the operator at W6SRJ, began calling, "NA1SS, NA1SS, this is W6SRJ." Soon, applause erupted from the hospital conference room as a voice over the speaker answered, "NA1SS, over!" This began a lively 9 minute question-and-answer session between eager children and Anderson. By the end of the pass, the children had asked 33 questions, possibly setting a record for any ARISS contact.

"We're very excited about ARISS bringing their program to our patients as it will be a fun activity that will lift their spirits," said Sheri Mosely, child life manager for the hospital. "Talking with an astronaut is definitely a once in a lifetime opportunity and one we hope they'll never forget."

Once the contact was finished, local media from three television stations, one newspaper and one radio station began interviewing the

children and hospital personnel, adding greatly to the excitement of the day. This was truly a successful ARISS contact that will not be soon forgotten by the children at Arnold Palmer Hospital.

Arnold Palmer Hospital for Children, supported by the Arnold Palmer Medical Center Foundation, is a 158-bed facility dedicated exclusively to the needs of children. It offers comprehensive, specialized programs and services for children including acute care, adolescent medicine, a Congenital Heart Institute in partnership with Miami Children's Hospital, pediatric intensive care, emergency medicine, nephrology, neurology and trauma services. -- Some information from David Jordan, AA4KN

==> Canadian Special Event Planned for September

A demonstration of cooperation in emergency communications preparedness between Canadian radio amateurs and those in the United States is planned for September 29-30 with a special event station VO1ARES <http://www.rac.ca/fieldorg/aresjointevent.htm>. It will be located at the Marconi memorial station on historic Signal Hill, St John's, Newfoundland, where reception of the first transatlantic wireless transmission occurred in 1901. Sponsored by Foreign Affairs and International Trade Canada (DFAIT) and Radio Amateurs of Canada (RAC), the facilities are provided by Parks Canada and coordinated by the Society of Newfoundland Radio Amateurs (SONRA).

The objectives of the special event are threefold: To highlight the capabilities of Amateur Radio in providing emergency communications in times of crisis, to illustrate the cooperation between Canada and the United States on emergency preparedness within the context of the Security and Prosperity Partnership signed by the President of the United States and the Prime Minister of Canada in 2005, and to create a database of communications "first responders" that the Government of Canada could contact for emergency communications assistance in times of crisis.

Radio amateurs from across Canada and the US are being invited to participate in this first-time official activity, with opening festivities scheduled September 29 from 1430-1730 UTC. In particular, ARES units in both countries are encouraged to take part and to "talk up" the value of Amateur Radio as a community resource. Officials from the Canadian government have been invited, and ARRL Joel Harrison, W5ZN, has confirmed his intention to attend. Operations will feature virtually all transmission modes on most HF bands over the two-day period. Times and frequencies are yet to be determined.

A commemorative QSL card will be issued. QSLs may be sent direct to VO1ARES via VE9GLF, G. L. Friars, 35 Upper Quaco Rd, Baxters Corner, NB E25 2S2, Canada. All replies from VO1ARES will be via the bureau. Those wishing a direct reply, including Short Wave Listeners, must include an envelope and sufficient postage. Within Canada, please send a self-addressed stamped envelope. If outside of Canada, please include

sufficient International Reply Coupons (IRCs) to cover the cost of a letter from Canada to your country. This is imperative in order to receive a card directly; otherwise it will go via the bureau.

Listen for VO1ARES both before and after the special event. The call sign will be active September 27-October 1.

Upcoming issues of RAC's The Canadian Amateur (TCA) magazine and the RAC Web site <http://www.rac.ca/> contain further details of the event. -- Information provided by Bob Cooke, VE3BDB

==> Upcoming Special Events

Several upcoming Special Event operations were inadvertently left out of the September 2007 QST "Special Events" column. They appear below, as well as on the Special Events Web page <http://www.arrl.org/contests/spev.html>.

Aug 15-Aug 26, 0000 UTC-0400 UTC, Columbus, Ohio. John D. Kraus Memorial Amateur Radio Club, W8JK/WOW. 30th anniversary of the "WOW Signal." 7.045 14.045 7.200 14.250. QSL: Bruce Lerner, KC8VEB, 734 Suntree Dr, Westerville, OH 43081 <http://www.w8jk.org>.

Aug 17-Aug 19, 0000 UTC-2359 UTC, Cheboygan, Michigan. Oakland County ARPSC, K8S. Celebration of International Lighthouse/Lightship Weekend. 7.270 14.270 21.270 28.370. Certificate: Gary Sklar, 7296 Green Farm Rd, West Bloomfield, MI 48322. The event will be held in cooperation with Great Lakes Lighthouse Keepers Association, local Michigan Branch, Mackinaw City, Michigan <k8ikw@aol.com>.

Aug 17-Sep 13, 1700 UTC-1700 UTC, Illinois River, Illinois. USS LST325 Radio Club, WW2LST. USS LST325 Summer Cruise Up Through the Illinois Heartland. 14.300 14.040 7.040 3.540. QSL: USS LST325 Memorial Ship, 840 LST Dr, Evansville, IN 47713 <http://www.lstmemorial.org>.

Aug 27-Sep 1, 1600 UTC-2359 UTC, Woodstock, Connecticut. Eastern Connecticut Amateur Radio Association, K1MUJ. 50th anniversary of the founding of Eastern Connecticut ARA. 3.825 7.175 14.125 21.215. QSL: ECARA, PO Box 63, Dayville, CT 06241 <http://www.qsl.net/K1MUJ>.

Aug 28-Aug 29, 1400 UTC-0659 UTC, Sacramento, California. Amateur Radio Emergency Communication Volunteers, N6S. California State Fair. 146.195 147.555 14.250 7.250. QSL: Patrick Schamun, N6ARO, 8237 Tiki Ln, Sacramento, CA 95828 <n6arophrs@lanset.com>.

==>SOLAR UPDATE

Tad "We Had Joy, We Had Fun, We Had Seasons in the Sun(spot)" Cook, K7RA, this week reports from the road in Hillsborough County, New Hampshire, that solar activity continues low. The sun is currently spotless, but sunspots may return around August 20. This week's average daily sunspot numbers were down about a point from last week's, from 12.4 to 11.3.

Expect quiet geomagnetic conditions over the next week, according to a forecast from the US Air Force, which predicts planetary A index for August 17-23 of 8, 5, 10, 5, 5, 10 and 8. But Geophysical Institute Prague has quite a different prediction for August 18. They predict quiet conditions for August 17, unsettled to active on August 18, unsettled August 19, quiet August 20-21, unsettled August 22, and quiet to unsettled August 23.

Sunspot numbers for August 9 through 15 were 14, 14, 13, 11, 13, 14 and 0 with a mean of 11.3. 10.7 cm flux was 67.4, 67.5, 67.6, 68.1, 67.7, 68.5, and 67.6, with a mean of 67.8. Estimated planetary A indices were 4, 13, 12, 6, 3, 6 and 8 with a mean of 7.4. Estimated mid-latitude A indices were 2, 10, 7, 5, 2, 3 and 6, with a mean of 5.

For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: This weekend, the ARRL 10 GHz and Up Contest is on August 18-19. The NCCC Sprint (CW) is August 17 and 18. The ARCI Silent Key Memorial Sprint is August 18, while the SARTG WW RTTY Contest is August 18 and 19. The North American QSO Party (SSB), the Keyman's Club of Japan Contest and the Russian District Award Contest are August 18-19. The New Jersey QSO Party is August 18-19 and August 19-20. The Run for the Bacon QRP Contest is August 20. Next week, look for the CCC Sprint (CW) on August 24. The ALARA Contest, the Hawaii QSO Party, the SCC RTTY Championship, the YO DX HF Contest and the Ohio QSO Party are all on August 25-26. The SKCC Weekend Sprint and the SARL HF CW Contest are both August 26. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more information.

* ARRL Certification and Continuing Education course registration: Registration remains open through Sunday August 19, for these on-line courses beginning on Friday, September 7: Technician License Course (EC-010); Amateur Radio Emergency Communications, Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012), and Digital Electronics (EC-013). To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Field Day Logs Received are Posted: All 2007 Field Day logs have been received and posted to the Claimed Scores page on the ARRL Web site <http://www.arrl.org/contests/claimed/>. They reflect all applications sent from the b4h Web applet, as well as those received via the US postal service and usable electronic submissions sent via regular e-mail

(non-Web applet submissions). According to Field Day Manager Dan Henderson, N1ND, "In some cases we did not receive sufficient information, and those entries are not allowed to be used at this time. A follow-up e-mail was sent to those concerned that included a blank summary sheet and a request to please complete the form and resubmit. In cases where we have not heard back from those requests, the entries are currently not on the list and can't be included until complete information is received back by the ARRL." Those with missing entries, who have questions or who find errors in their listing should contact Henderson via e-mail <n1nd@arrl.org> or by phone at 860-594-0236 after Tuesday, August 28 when he returns from vacation. If you call before that date, Henderson asks that you "please leave a message and please be patient. I will work with you to resolve any problems."

* First Chinese ARISS Contact Scheduled: ARRL ARISS Program Manager Rosalie White, K1STO, reports that the first-ever Amateur Radio on the International Space Station (ARISS) contact between China and the International Space Station (ISS) will take place August 26. American astronaut Clay Anderson, KD5PLA, will chat with students at the Nanjing No. 3 High School in Nanjing, Jiangsu in the People's Republic of China. The radio coordinator is Michael Chen, BD5RV. The school has been around for more than 100 years and has 3000 students in 64 senior and junior grade classes on three campuses. The school is well known for its Amateur Radio club and its 6-time-national-winner women's volleyball team. The Amateur Radio club has completed more than 20,000 QSOs with other stations from all over the world. There have been a total of 308 school-to-ISS contacts to date.

* Jim DeLoach, WU0I, wins July QST Cover Plaque Award: The winner of the QST Cover Plaque Award for July is Jim DeLoach, WU0I, for his article "Balloon-Lifted Full-Wave Loop Antennas." Congratulations, Jim! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/qstvote.html>. Cast a ballot for your favorite article in the August issue by Friday, August 31.

* BPL Industry Representative Appointed to ARRL EMC Committee: ARRL President Joel Harrison, W5ZN, has appointed Brent Zitting, KB4SL, of Huntsville, Alabama, to serve on ARRL's ElectroMagnetic Compatibility (EMC) Committee. Zitting, a 25-year ARRL member, is employed by IBEC, a BPL manufacturer and integrator located in Huntsville, Alabama. The EMC Committee, chaired by Roanoke Division Director Dennis Bodson, W4PWF, consists of representatives from various industries that are interested in helping ARRL effectively and appropriately work with industry on interference issues. ARRL Laboratory Manager Ed Hare, W1RFI, said he is pleased to see Zitting serve on the committee. "Brent has carried his ham radio experience to the BPL industry, quietly working behind the scenes to help it better understand Amateur Radio. Having his industry occupy a seat at our table is a positive step that will improve communication significantly." Zitting said he is enthusiastic about

serving as a member of the committee. "I look forward to helping the ARRL on this committee. BPL technology has made great progress in its ability to mitigate interference, which is good news for hams. I want to help the ARRL more fully understand the BPL industry so that both can be 'good neighbors.' I am pleased to be part of the solution."

* International Lighthouse/Lightship Weekend 2007: More than 380 lighthouses in more than 48 countries -- from Argentina to Wales -- will be on the air for 2007 International Lighthouse/Lightship Weekend (ILLW) organized by the Ayr Amateur Radio Group, Scotland. The event, held for the ninth year in a row, takes place Saturday, August 18 0001 UTC-Sunday, August 19 2359 UTC. While not a contest, the ILLW is more of a QSO Party and Amateur Radio demonstration. The ILLW aims to raise public awareness of lighthouses and lightships and the need for their preservation and restoration, promote Amateur Radio and foster international goodwill. Stations at more than 40 US lights are expected to be on the air for the event, and several stations will identify with special event call signs. Participating lighthouse/lightship stations do not have to be inside the structure or on the vessel itself; a Field Day-type setup at or adjacent to the light is sufficient. More information about the event, including a registration form, is available on the ILLW Web site <http://illw.net/2007_list.htm>.

* No ARRL Audio News This Week: There will be no ARRL Audio News Friday, August 17. Please adjust your calendars and programming accordingly. The ARRL Audio News will return next week on Friday, August 24.

* Let Us Know What You Think: What's your favorite part of The ARRL Letter? What kind of stories would you like to see in the Letter? Would you prefer the Letter in an HTML format? This is your Letter and your chance to let your voice be heard. Please send your suggestions to ARRL News Editor S. Khrystyne Keane, K1SFA, at k1sfa@arrl.org, with the subject line "ARRL Letter Suggestions." All messages will be read and discussed, and we look forward to implementing positive suggestions into the ARRL Letter.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

1411. WIANEWS for week commencing AUGUST 19 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-08-18 15:02:16 UTC
From: nationalnews@wia.org.au
Message-ID: <200708181000.l7IA09M07112@panix2.panix.com>
Source record: 4016
Cross-posted to: rec.radio.amateur.moderated,aus.radio.amateur.misc,rec.radio.info

This is WIANEWS for week commencing AUGUST 19 2007

NATIONAL NEWS

Michael Owen VK3KI WIA President:-

"Today I am making a number of important announcements.

A QSL Service at no cost is one of the benefits of WIA membership.

The WIA Board has made a number of important changes to the WIA QSL Service.

The changes will take effect from 1 December. Full details may be found on the WIA website.

All outwards cards must be sent to the Outwards Bureau, conducted on behalf of the WIA by Westlakes.

WIA Members should send their cards sorted in DX CC country order direct to the Outwards Bureau addressed to:

P.O. Box 3073
Teralba
NSW 2284

Affiliated clubs may collect cards on behalf of their WIA members and forward them in reasonable sized batches to the Outwards QSL Bureau.

The Outwards Bureau will confirm the WIA membership.

After 1 December, if a WIA member makes an arrangement with the local QSL Manager for their cards to be sent to them annually, then WIA will meet the cost of forwarding any cards received for that WIA member.

WIA members who are members of an affiliated club may instead through their club request that their cards be sent to them at their club.

Inward QSL Managers will retain non-members cards for at least one year before disposing of them, and will make available cards for collection by or on behalf of non-members in a manner convenient to the Manager

The WIA Board has also made changes to the rules for the WIA Awards, so enthusiastically run for us by WIA Awards Manager, Malcolm Johnson VK6LC.

As from 1 September new fees for awards will apply.

WIA Members will be entitled to one certificate and two Award up-dates per membership year at no charge.

The fees for further certificates and award updates for members, non members and overseas applicants have been increased and may be found on the WIA website.

After 1 December WIA awards will only be available to person resident in Australia who are WIA members. This follows the pattern set by many overseas societies.

Of course, WIA membership will not be required for applicants for WIA Awards resident outside Australia.

The application and verification rules have also been rewritten and now make it clear that applications that are not in order may be returned for correction.

Again, full information can be found on the WIA website.

The National Technical Advisory Committee, NTAC, is responsible for advising the WIA Board on technical matters, band plans and coordinating frequency assignments for repeaters, links and beacons. The National Repeater and Beacon Coordinator, a member of NTAC, provides "Letters of Coordination" as required by ACMA before licensing repeaters and beacons.

In consultation with Chairman John Martin VK3KWA a new procedure has been adopted for processing applications for repeater and beacon licences.
In short, the applications are to be lodged with the WIA national office, which will have the responsibility for ensuring that the correct experts are involved and for tracking the progress of the application.

Again information may be found on the WIA website.

A final note of a different kind.

I am very please that now 24 people have applied for qualification and registration as Learning Facilitators, which may be done on line.

I do ask that those of you who are planning to qualify to please get your application in to the WIA office as soon as possible, to help us to meet the 1 December deadline.

The application form is on the WIA website, and if you feel that there is a question you can't answer, then don't worry, don't answer it and if we need further information we shall contact you."

It's here again. Yes it's the Goolwa Lunch Bunch Sunday August 26th.
Meet at 12.00 for lunch at 12.30 at the Goolwa Hotel. After lunch it's back
to the home of Cecily and Gary VK5ZK for afternoon tea and the usual good
fellowship.

Also coming up is the Radio Amateur's Old Timers Club of South Australia's
luncheon to be held on Thursday October 25th at the Marion Hotel, Marion
Road, Mitchell Park. Meet at 12.00 for lunch at 12.30pm. Don't forget your
senior's card.

If using public transport use bus M44 to stop 24.
RSVP before October 22nd to one of the following committee members.
President Jim McLachlan VK5NB at 82942992
Secretary Ray Deane VK5RK at 82715401 or
Assistant Secretary Ron Coat VK5RV at 82966681
Thanks to Ray Deane for that item.

VK6
web service http://www.vk6.net/newswest-index.html

Two lighthouses in Western Australia will be active this weekend for the
International Lighthouse/Lightship Weekend. Operators will be working from
the Cape Naturaliste and Cape Leeuwin Lighthouses in the south west of the
state. Special call signs have been allocated, VK6CNL for Cape Naturaliste
and VK6CLL for Cape Leeuwin. Operation will be on the classic five HF bands
of 80, 40, 20, 15 and 10m although the sunspot cycle being what it is

operation will probably be limited to 40 and 20m. The stations will be on the air from 0800 local time on Saturday until late on Sunday

If you are interested and in the Margaret River area feel free to come along to the Lighthouses and see the teams in operation. Nigel VK6KHD along with XYL Jane VK6FJPD and Bernard VK6FBRB will be at Cape Naturaliste and Wally VK6YS with Bruce VK6CX will be at Cape Leeuwin. If you have not been to the lighthouses before it is worth the visit as there are well organized tours including a climb to the top of the lights for a magnificent if windy view. Whale watching is also possible from the coast at the lighthouses.

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6FXYL

EDUCATION MEETS FUN IN NORTH QUEENSLAND

The North Queensland Amateur Radio Convention happens in Townsville September 21 to 23 and is promising to be bigger and better than ever.

Exhibitors including Navcom Electronics supported by Icom Australia and Vertex Standard Australia, TET Emtron Antennas, RDXG Jewellery, KVK Antenna Books, Wireless Institute of Australia plus technical lectures from Professor Mal Heron and Don Dinnie VK4ZCQ.

The prestigious Ken Robertson VK4KT Memorial Award is sure to go to someone most deserving in the field of VHF-UHF experimentation and education.

As folk travel from around Australia, please let the T.A.R.C. know if you'll be in town September 21-23 and register for the Convention by next Friday.

Registration Form send a message to the TARC email address
vk4wit@wia.org.au

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or training in Amateur Radio go to wia.org.au and check out the club pages.

VICTORIA

Amateur Radio Victoria has announced that enrolments are now open for its Foundation Licence training and assessments weekend of September the 15th and 16th to be held at Box Hill North.
Inquiries to Barry Robinson VK3JBR 0419 808 323 or email
arv@amateurradio.com.au

QUEENSLAND

A FOUNDATION LICENSE COURSE IS TO BE HELD BY THE BAYSIDE
DISTRICT AMATEUR RADIO SOCIETY INC AT IT'S CLUB MEETING ROOM
FOR THREE CONSECUTIVE SUNDAYS 9 till noon COMMENCING ON THE 26 TH AUGUST.
IT INCLUDES ALL THE COURSE INFORMATION AND PAPERWORK.
THE LOCATION IS AT THE ALEXANDRA HILLS HIGH SCHOOL CORNER OF
FINUCANE ROAD AND WINDEMERE ROAD, THE ENTRANCE IS FROM WINDEMERE ROAD.
PARKING IS OPPOSITE IN THE PARKING AREA.

SECRETARY DARRELL ON 3207 1118.
THE COST OF THE COURSE IS $35.00

HAM COLLEGE IN VK6

Do you live in or know someone in the Collie/Bunbury Region who wants to do their Foundation Course/exam -

Ham College is coming to you.....We are looking for people who are available on a weekend next month (September) to do a Foundation course and subsequent exam. If you are interested then please contact VK6MRS as soon as possible number is 0412 704 226.

In the Perth metropolitan area the next Foundation course is scheduled for 15th & 16th September - get your name in early to avoid disappointment. Number again is 0412 704 226.

To view future scheduled exams and associated information on courses for Ham College in VK6 please visit the western Australian Repeater Group site on www.warg.org.au and select the Getting your Amateur Licence link.

INTERNATIONAL NEWS

Chinese Peoples Daily have reported that students in Nanjing will have the opportunity to directly ask the US astronauts in the international space station questions through amateur radio.

After two years of waiting, the ARISS Program (Amateur Radio on the International Space Station program) has entered the final stage of preparation and students of Nanjing No.3 Middle School are almost ready to talk directly to the astronauts in the international space station.

Wang Long, teacher in charge of the amateur radio activities in Nanjing No.3 Middle School told the NEWSPAPERS reporter that according to the latest notice from National Aeronautics and Space Administration (NASA), NASA has put this activity into its agenda and decided that the ARISS Program will be between August 24 and 26. On the occasion, student representatives of Nanjing No.3 Middle School will have a 10-minute talk with the US astronauts son Clayton will use the amateur radio device in the International Space Station to talk to students in Nanjing.

Wang Long said that the Station is expected pass over Nanjing at around 18:00 on August 26. Whether the communication activities will be held as scheduled is directly dependent on the performance of Shuttle "Endeavour" that was launched on August 8.

SMILE YOUR ON CANDID CAMERA

YourDay Video Technologies will be working with a UK theme park. When visitors enter Alton Towers, they will be given an RFID-enabled wristband.

By wearing the band throughout the day, they will be identified and videoed by cameras on every ride. These personalised video clips will be stored and later that day, visitors will be able to pick up a personalised DVD containing 30 minutes of footage, including full-motion video footage of the day.

(I just hope the system isn't extended to the pubs and clubs of a Friday Night!)

==========

NEWS FROM ARNEWSLINE

PRAISE FOR ARES RESPONSE TO CALIFORNIA'S ZACA FIRE

Amateur Radio and particularly the Amateur Radio Emergency Service units involved with California's giant Zaca wildfire near have drawn the praise of that anta Barbara County's fire department. Speaking at an August 1st Town Hall meeting of the fire-fighting Unified Command, Fire Department Public Information Officer Eli Eskow heaped praise on the hams who were out there backing up his fire fighting teams:

"There's one group I forgot to mention and thank personally. The Amateur Radio Emergency Services group has worked with us forever (applause) forever!! And on this event, this fire I have asked them many, many requests and chores. They've jumped at every opportunity to help us. They've carried mail. They have most importantly thrown their bodies in front of the public to stop them from going through closed roads, putting themselves in danger. They've been great. Anytime we've asked them anything, they jump at any opportunity to help us..."

KD5VNP TO MAKE TEACHER IN SPACE DREAM COME TRUE

A ham radio operator and teacher is on her way to space to help in further construction of the International Space Station and to make the goal of a teacher in space a reality. Mission Specialist Barbara Morgan, KD5VNP, is part of the crew of Shuttle mission STS-118. This is an 11 day construction and re-supply mission of the orbiter Endeavour to the I-S-S.

Barbara Morgan is what is known as an Educator Astronaut. Almost two decades ago she was the back-up for Christa McAuliffe in the Teacher in Space Project. McAuliffe and the rest of the seven member crew on board the Challenger were killed on January 28, 1986 in a launch accident caused when a seal ruptured on the solid rocket motor and burned through the external fuel tank. Now, 22 years later, Morgan will complete the dream of an educator teaching from space when she gets the chance to talk with and answer questions from schoolchildren on the ground via ham radio.

OPERATIONAL NEWS -

CONTEST COLUMN - D A T E L I N E

AUGUST 11/12 Remembrance Day Contest (The RD) wia.org.au

Please ensure all ELECTRONIC LOGS are sent to rdlogs@wia.org.au

Peter Harding VK4OD reports:- "Good morning all, particularly all those that took the time and patience to honour those fallen warriors from WW11, by participating in the 2007 RD contest, however your part is not complete until you get your logs away.

As I pen this report the 2007 RD Contest has been run and won by Someone!, this we will find out soon.

We have received 116 Emailed and 15 Postal Logs as of Wed night,

I understand that one of the Computerised logging programs has a minor glitch, that is no worries here, as I will pick up the anomaly as I go through the logs.

Please get your logs in as soon as possible before the cut-off date,

Under RD 2007 Rules

Para 17b In all cases, logs must be received by last mail on Monday 10 Sept. 07. Late entries will not be eligible."

AUGUST 26-27

ALARA CONTEST.

This ALARA contest is run over 36 hours to give everyone 2 bites at the 80m band.

For OMs only contacts with YLs count, while YLs can count ALL stations.

Club stations operated by YLs are certainly encouraged.

One highlight of the ALARA contest is that you may work the same station after a one hour interval on the same band. So it is worth while staying around
a tad longer for that extra contact for both yourself and the other station.

ALL DETAILS CAN BE FOUND ON PAGE 47 OF JULY'S AR MAGAZINE

7th World HST Championship will be held in Belgrade Serbia September 19-23rd.
www.hst2007.org

SEPTEMBER 22

The Second running of the Westlakes Cup is coming up on Saturday 22nd September commencing at 8.30 Eastern Australian Standard Time (10.30 Z).

Boat Anchor Sprints:
October (13).

Local ZL time: 2000 to 2100 hrs

Section 1: Old radios - all valves - i.e. ZC1, 19 set, Heathkits, any home brew set, but must have all valves.

Section 2: Any Hybrid transceiver (must have valve finals i.e. FT200, FTDX400/401, Drake, FT 101s, etc..

Amplitude Modulated signals only.

The overall winner shall be the entrant having the highest points score which will be published in the following New Zealand "Break-in".
(Jamie Pye ZL2NN, Editor NZART's InfoLine)

NOVEMBER 17/18 VK Spring VHF-UHF Field Day

CONTEST STORIES

Report on VK/ trans-Tasman 160M CW Contest: held 21st July -

The 2007 CW Contest was won by Greg Smith (ZL3IX) from Christchurch.

Allan Mason (VK2GR) from Sydney was 2nd, with Tony Burt (VK3TZ)
>From Melbourne, 3rd.

QRN made operating rather difficult and, unfortunately, the participation dropped off, compared to last year.

Only 27 VK's and 7 ZL's participated, and just less than half submitted logs.

It looks as though CW operators are diminishing, as Contest Manager Bruce Renn expected, now that CW is no longer an examination requirement.

Reducing the Contest duration this year, from 6 to 5 hours, didn't seem to help. It will be further reduced to 4 hours, next year, and if numbers continue to drop, the 160M CW Contest will be discontinued.

THE QNEWS WORK BENCH - the nuts and volts report -
(Measure twice - Cut once!)

Trevor Baylis, creator of the first wind-up radio, and the amazing electric shoe, has introduced the first wind-up MP3 player.

Available at the end of August, the Eco Media Player seems like an attention-deficit camper's dream come true.

The wind-up media player has a 1.8-inch colour screen and a lean 2GB of memory that can be expanded using an SD memory card.

Like a media junkie's Swiss Army knife, the Eco Media player features an MP3 player, a video player, an FM radio, and a flashlight, voice recorder, photo viewer, mobile phone charger, and an e-book viewer.

It also can be used as a portable storage drive in a PC.

MEDIA WATCH

SATRS the Singapore Ham Society has just had some 30 minutes on A LOCAL Singapore Radio Station.. take a listen to a short excerpt.

(hear it on www.wiaq.com.au/ftp/wianews.mp3) ((7 meg file)

NOW ROBERT BROOMHEAD - VK3KRB.

WW SPECIAL INTEREST GROUP --- MILITARY

Nick VK4YT on AM again with Warbirds Radio.

Mike VK4MIK advises that Nick VK4YT and helpers will be operating at the WARBIRDS display at Mareeba today Sunday August 19th, using restored military aircraft equipment on 3590 and 7070kHz AM from 10AM (0001UTC).

Last time he utilized the AM mode he ended up with stations calling him from all over which was terrific as he will be putting on a public display.

So, not only do you have to keep an ear out for the Grassy Hill Light crew near Cooktown on-air for the International Lighthouse Lightship Weekend but you also need to get the word around and help Nick get busy !!

WW SPECIAL INTEREST GROUPS --- RESCUE RADIO

EMERGENCY FREQUENCIES REGION ONE
21.360 - 18.160 - 14.300 - 7.060 - 3.760 MHz.

A report in the Canadian publication, The Edmonton Journal, has reported on how Environment Canada enlists the help of amateur radio operators around the province to keep an eye on the sky.

Fifty ham radio operators from the Edmonton area have taken a five-hour course on the basics of meteorology and what to look for in cloud formations.

Another 50 from central and southern Alberta took the same training, all of it intended to avoid false reporting of would-be major storms.

Now, whenever Environment Canada issues a severe weather watch, it alerts the network of amateur radio volunteers. Volunteers then contact other members of the ham radio network, asking them to report signs of approaching severe weather, including lightning, hail or funnel clouds etc.

That eyeball-to-radio system represents a final stage of Alberta's tornado-warning system.

WW SPECIAL INTEREST GROUPS --- VHF AND ABOVE

The UK 6 meter group are reporting how this month is the 50th anniversary of a World Record QSO between Clarrie VK5KL and Eugene W7ACS/KH6 which took place on 26 August 1947.

VK5KL Clarrie made the contact while he was living in Darwin. VK5 callsigns then were used for South Australia PLUS the Northern Territory.

Clarrie VK5KL, now lives in the Adelaide suburb of Enfield, where he is said to be still active on six metres.

Working in the Civil Aviation area, he was able to get a QANTAS pilot to bring hard to source, in Australia, components for his 6 meter rig from the UK.

During that 46-47 winter when W7ACS/KH6 was active on 50 MHz, he did also achieve for some very brief exchanges with VK4HR of Brisbane, however even though the pair heard one or the other, it was not a two way.

Clarrie VK5KL was fortunate to have been the first Aussie to make a two-way contact with Hawaii.
(UKSMG)

BB's DIARY ROOM - THE FUTURE, IN AMATEUR RADIO

2008

Sept 13 Alarameet 2008 will be held in Ulverstone Tasmania on Saturday 13th and Sunday 14th September 2008. Susan VK7LUV for details.

2009
International Telecommunication Union's Telecom World 2009.

14th IARU R3 Conference Christchurch 12 - 16 October, 2009.

SOCIAL SCENE

SEPTEMBER 8
SUNSHINE COAST HAMFEST at Woombye School of Arts Hall.

SEPTEMBER 9 Shepparton and District Amateur Radio Club Hamfest
St. Augustine's Hall Orr St.

SEPTEMBER 21-23
North Queensland Amateur Radio Convention
Happening in twin cities of Thuringowa and Townsville.

OCTOBER 6
Gold Coast Amateur Radio Society Annual Hamfest at Albert Waterways Hall.

JANUARY 20 2008

The Mid North Coast Amateur Radio Group invite all amateurs to attend the 2008 Mid North Coast Radio Expo to be held in Coffs Harbour on Sunday 20th January.

The Expo is held at the St Johns Church Hall, Mc Lean Street, Coffs Harbour. Gary VK2ZKT is the Radio Expo Coordinator on 02 66 55 2 990 or visit the Groups comprehensive web site at www.mncarg.org

THE FINAL FINAL

WALKS

Jeff VK4XJJ is still going strong on his walk across Australia.

But he still wants to hear from YOU, and it is these calls in particular that keep him going!!

Amateurs are welcome to contact Jeff VK4XJJ on 7.045 MHz after 1730 EST. Ten minutes prior is for housekeeping, position, health, weather, temperature, walked distance, number of vehicles passed and how many stopped, etc.

About Tuesday 28th he should be in Normanton and have access to email. His walk ends at Karumba about Monday, 3rd September.

Then after a few days I will drive him on the return trip to thank those who donated and were kind to Jeff on his journey. I am in Stockton, Newcastle, north of Sydney and will drive 2,630 kilometres and 3 days to meet him.

Jeff's is walking "unsupported", alone and carrying a 28Kg backpack. His main communication is amateur radio. He is a member of the Wireless Institute of Australia who have been very helpful and present a Sunday News segment of Jeff's walk.

Some motorists stop to say hello and then produce a cup of tea and offer fruit. He started carrying 8 litres (8Kg) of water but dropped down to 2 litres as the motorists often offer water. Some creeks have water and this also replenishes his supply.

We had two years school in Nevada and Ohio 1951 to 1953. I (brother Bill) recently re-visited Boulder City for a 50th school reunion.

Jeff's website has a lot of information, we are after public awareness for DeafBlind and DeafBlind (NSW) Inc. in particular.
Our daughter was deafblind and Jeff has dedicated his walk to the group and friends she loved.

Regards, Bill Johnson VK2FWGJ

for Jeff Johnson VK4XJJ Walking for DeafBlind awareness

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 20 AUGUST 2007

You are listening to ZS6SRL the official Radio Station of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is transmitted every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. To listen to a web stream or Echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links for details.

This, and previous bulletins, can be downloaded from the www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

This transmission is by Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, and 51,400 MHz as well as 438,825 and 1 297 MHz in the Pretoria area. (Other newsreaders please change to suit).

In the news today:

RADIO AMATEURS ONLY NEED A HAREC CERTIFICATE WHEN VISITING OVERSEAS

INTECNET ON 26 AUGUST TO LOOK AT SARL AWARDS

SA AMSAT SPACE SYMPOSIUM NOW ON THE WEB

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

RADIO AMATEURS ONLY NEED A HAREC CERTIFICATE WHEN VISITING OVERSEAS

As announced two weeks ago, Amateurs who have passed the May class A examination will automatically receive a HAREC certificate as part of the Examination fee. There has however been a delay in sending out certificates due to a major printer breakdown. Please do not call the NARC, the certificates for October 2006 and May 2007 will be mailed as soon as the new printer has been installed and some of the other backed-up printing has been dealt with.

Amateurs who have the old RAE certificate do not have to ask for a new HAREC certificate unless they are travelling overseas. To apply for a replacement certificate you are required to send a copy of the current amateur radio license plus an admin fee of R50 to the SARL. The fee may be paid electronically. Proof of an electronic or bank transfer must accompany the application.

As the issuing of HAREC certificates was outsourced by ICASA to the SARL, the R50 admin fee applies to both members and non members. This replaces the previous procedure and comes into immediate effect.

INTECNET ON 26 AUGUST TO LOOK AT SARL AWARDS

WAZS, other awards and QSL-ing will come under the spotlight during the next Intecnet on 26 August 2007. The guest speaker will be SARL Awards Manager, Tjerk Lammers, ZS6P. INTECNET will be on the air on Sunday 26 August at 20:00 immediately after the President's Net.

SA AMSAT SPACE SYMPOSIUM NOW ON THE WEB

The SA AMSAT Space Symposium programme is now available on the web at www.amsat.org.za. The symposium is part of Space Week 2007 and the celebration of the launch of Sputnik 1 in 1957. It will be held at the NARC and the Sentech Conference Centre on 6 October 2007. There is a substantial discount for delegates who register early. To get regular updates on the symposium send an email to saamsat@intekom.co.za.

TAKE YOU HANDHELD TO WORK DAY

Friday 5 October is the 'SARL take your hand-held transceiver to work day'. The objective of the day is to create awareness of Amateur Radio amongst your colleagues and customers during lunch and tea breaks or at any other available time during that day.

The SARL will make posters available that you can print and display as well as approaching media to print news stories.

Clubs are invited to promote the day locally. Please send the SARL the names of the editors of local newspaper and community radio stations so that a media data base can be created to distribute information to local media. Look at your local papers and send the information to armi@sarl.org.za with media in the subject heading.

RAE

Please be advised that the next Class B exam will be held on the 23rd August 2007. The results of this exam will be published on the SARL web page on about 4th September 2007.

All clubs and Training centres are advised that the closing date for registration for the October Class A & B exams will be the 20th September 2007. The examination date will be 18th October 2007.

SARL MEMBERSHIP FEE DEPOSITS

A friendly request from the SARL treasurer is that members who py for their membership renewals by direct deposit in the SARL bank account is that they ensure that the reference on the SARL's bank statement will indicate clearly who made the deposit. Your call sign should preferable be used as reference. Alternatively the deposit slip may be faxed to the office at 088 011 675 2793. Without this information your membership status may be shown incorrectly when the data base of the

SARL is updated.

CONTEST NEWS

The results of the Durban ARC Mid-winter 80 metre sprint have been released. Jan, ZS4JAN, took first place with 90 points, followed by Dennis, ZS4BS, with 78 points and John, ZS5JF, with 74 points.

The provisional results of the Boland 40 Metre Contest have been issued. Theunis, ZS2EC, took first place with 97 points, second was Raoul, ZS1REC, with 85 points and Jan, ZS4JAN ,in third place with 74 points.

Brad, ZS5BG, achieved the highest score in Div 5 and Ruaan, ZS6RMS, achieved the highest score in Div 6. No log sheets were received from Div 3. The highest score from a neighbouring country was achieved by Jack, V51KC, who also achieved overall fourth place in the contest. 21 log sheets were received.

The overall winner receives a 2007 ARRL Antenna Handbook (issue 21) which was donated by Kobus, ZS1DC, a Boland ARC member. Certificates will be posted soon.

The Boland ARC thanks all participants of the contest.

Vidi, ZS1EL, has received a certificate from the ARRL for 6th place in the world in the 2006 ARRL 10 m contest, mixed mode, high power.

Barry, ZS2EZ has received a plaque from CQ Magazine for the Africa winner of the 2007 CQ WW WPX RTTY Contest. Barry operated as Single Operator, All Band, High Power.

Southern African stations did well during the 2006 CQ WW DX Phone Contest. In the Multi Two category, ZS9X made 6,9 million points and 3DA0WW made 4,9 million points. In the Multi Single category, ZS5ZZ made 238,854 points. In the Single operator category, V51W made 2,9 million points. Other participants in this category are ZS5NK, ZS1EL, ZS6BRZ and ZS1JY.

CLUB NEWS

MIDLANDS AMATEUR RADIO CLUB WILL ADVERTISE AMATEUR RADIO

The MIDLANDS AMATEUR RADIO CLUB, in conjunction with HAMNET, will be operating a radio station at the UNDERBERG FARMERS ASSOCIATION ANNUAL SHOW on Saturday, 1st September 2007 and Sunday morning, 2nd September 2007.

They will be operating under the call sign of the Midlands Amateur Radio Club ZS5PMB on the 40 m band and the 2 m Underberg repeater.

Please keep a look out for this station on those days and participate. It is a wonderful opportunity to promote Ham radio.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at very low levels. The geomagnetic field is expected to be quiet in general while reaching active levels on 25 August. The expected Effective Sun Spot number for the coming week will be less than 5.

20 m and 40 m will provide best opportunities for DX. There is a possibility of 20 m openings towards India from about 15:00 CAT. There may be weak 20 m openings to Australia from about 08:00. From 16:00 there may be 20 m openings towards Europe. For the early birds there is the possibility of weak 80 m openings towards the East Coast of the USA at about 04:00. Otherwise contacts to the USA are going to be very challenging.

For the CW and digital enthusiasts it will also be worth monitoring 10 MHz.

Locally conditions on 40 m is going to be good for today's Lighthouses-on-the-Air event.

It is once again time to work towards your 80 m WAZS award in the evenings. Remember that this is only a prediction and that HF always has the capability to surprise you. You will never know what you are missing unless you switch your rig on, listen and also call CQ.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

17 - 19 August - International Light House weekend; 23 August - Class B RAE; 1 September - SARL@HOME; 1 September - West Rand ARC Flea market; 1 - 2 September - Midlands Amateur Radio Club, ZS5PMB, operational at Underberg Farmers Association Annual Show; 20 September - Closing date for registering for October RAE; 4 - 10 October - Special space programme; 6 October - SA AMSAT Space Conference; 18 October - Class A RAE.

SARL News invites clubs and individuals to submit news stories of interest to radio amateurs and shortwave listeners. Submit news stories if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to the programme Amateur Radio Mirror International, on the air every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 590 kHz. For the web stream and echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links. A repeat transmission can be heard Mondays at 21:00 CAT on 3 215 kHz. Sentech sponsor the ARMI transmissions on the non-amateur frequencies.

Today's South African Radio League news bulletin was compiled by Gustav,ZS6BWN, and transmitted by (your name and call sign)

Thank you for listening. 73

I typically toss most mailings received from the ARRL. They're either pleas for donations for this or that or a solicitation to purchase equipment insurance. A couple of days ago, I received a solicitation from the League for car insurance through MetLife. I was about to toss it when I remembered that my insurance was up for renewal in a few days.

I telephoned MetLife today and was surprised that the company's quote for car insurance using the ARRL group discount, saved me over $300 per year on car insurance.

Chalk one up for the ARRL.

I don't mind the idea that someone will be walking on bricks engraved with the call of a silent key. I mind the idea that the League will take a 35 cent brick, engrave it and charge someone a couple of hundred bucks to place it someplace where the donor will likely never have a chance to enjoy his pricey purchase. Since Mary Hobart (K1 More Money Honey) came aboard, the ARRL has been all about raising money through a number of elitist schemes.

I have some bricks and I just put up another tower. I think I'll buy a little sand, use my Dremel tool and engrave the callsigns of silent keys whom I remember fondly. I can place the bricks around the concrete tower base and look at 'em any time I choose.

Hmm... if you add a brick for every memorable station you worked (DX,
ragchew, etc), you'll eventually have a large patio! ;^)

What's the difference between that and the "John Smith Memorial
Chapel" or the "Bessie Jones Dining Room" at any other institution?
Personally, I don't want to be remembered by the "Phil Kane Toilet
Seat" but doing those brick things are a legit fundraising technique
nowadays, no different from selling dedications and memorial plaques
in the name of donors at many schools and congregations.

You're on to something. If I put the call of each station I worked
during the years I operated from Africa, I could brick the whole acre
and never have to mow again!

Dave:

I am not a fan of many things the ARRL does, but I really don't see the
objection to this scheme. It is not like the ARRL is fooling anyone.

Very little, though I can pray at John's and eat at Bessie's. The best
I can do with the Diamond Terrace is hike to Newington and walk on the
bricks--or have someone send me a photo.

> Personally, I don't want to be remembered by the "Phil Kane Toilet

Sure, Phil. "Legit" it is. There's a historic railway baggage building
here and the local historical society is selling the same bricks you get
for the Diamond Terrace, only they're fifty bucks each and I can see 'em
anytime I want.

> ...no different from selling dedications and memorial plaques

I'm holding out for my name on the Men's Room at the Madonna Inn between
San Francisco and L.A. on the 101.

"The Wilmington & Western Railroad, owned and operated by Historic Red Clay Valley, Incorporated (HRCV), has recently installed a "brick paver" platform at Greenbank Station. This platform provides our passengers with solid footing when boarding and alighting from trains, and it connects Greenbank Station with the Red Clay Valley Visitor's Center, located in the former Yorklyn Station.

You can purchase an engraved paver to publicly show your support for the Wilmington & Western. 100 percent of the purchase price goes to the Railroad, and every cent is tax-deductible. Each engraved paver is limited to three, 15-space lines, at a cost of $100."

2 metre Counties Contest

The 2 metres counties contest will take place on Sunday the 26th of August from 2 until 4 p.m. local time. This is a good opportunity for clubs and individuals to be active on VHF, even if you re not competitive this can be an enjoyable two hours so lets hope that we get a good turnout in the contest this year. Details and rules are available on the IRTS web site at www.irts.ie.

HF SSB Field Day

The IRTS SSB field day will take place over the first weekend (1st and 2nd) of September from 13:00 UTC on Saturday to 13:00 UTC on the Sunday. Again the grounds of Garbally College, Ballinasloe, Co. Galway will be available, thanks to Niall EI4CF and once again the Shannon Basin Club will be hosting their now famous Barbeque.

This is a multi-operator contest for portable stations and provides an opportunity for clubs and groups to practice their portable operating and station set-up skills. The Paddy Daly Microphone is awarded to the station with the highest checked score in the open section and the IRTS HF Shield is awarded to the station with the highest checked score in the restricted section. Details and rules are available on the IRTS web site.

CQIR Ireland Calling Contest

The Society's 75th Anniversary Contest CQIR will take place on the last weekend in September from 12:00 UTC on Saturday the 29th to 12:00 UTC on Sunday the 30th. There is great interest world wide being expressed in

this contest which is a celebration of Ireland and the Irish, throughout the world and with 40 million people in the United States alone claiming Irish forefathers; we expect that CQIR will be one of the largest 'one off' contests ever aired on the Amateur Bands. It is a 24-hour single operator contest with the emphasis on participation rather than winning and to this end every participant gains an entry ticket for a spectacular draw for every 75 QSO's made during the Contest.

The ticket drawn out of the EI/GI drum will win an all expenses paid long weekend in New York City for two people. ARRL have confirmed that this will include a visit to their national headquarters hosted by ARRL. Kinnitty Castle in Offaly will host the international winners for a week with flights for two from anywhere in the world. The prizes have been fully sponsored at no cost to the Society and this is really an excellent opportunity to celebrate the Society and its 75 years of service to Irish experimenters. We would encourage all Irish operators to be active during the Contest. So ring fence the last weekend of September in your diary, make an effort to have that new antenna up for the event and lets ensure a good show from the local Irish operators to support the international Irish who will no doubt come on the bands in their thousands for the contest. Full rules are on the IRTS website.

Notice from ComReg

ComReg would like to advise all Experimenters that there is currently a delay in the issue of Experimenter Renewals. During this delay, unless previously expressly indicated, no experimenter whose fee has been submitted is restricted from operating within normal licence conditions.

EI0MAR

During the past week, Tom O'Donnell (EI4Z) paid a visit to EI0MAR at the vintage radio museum in Howth. Tom is 93 years old and still hale and hearty as he proved by walking up the steep pathway to the Martello Tower housing the museum. Tom was accompanied by his son Philip who was a radio officer himself from 1968 until 1980 and operated with the call sign EI3DA maritime mobile.

Philip claims that his father is Ireland's oldest living radio experimenter. Is there anybody out there

who knows if this claim can be challenged?

EI0MAR will be celebrating the IRTS's 75th birthday by using the call sign EI75IRTS on Sunday 26th of August and on the first two Sundays in September. CW will be the main mode of operation although some CQ calls will also be made on SSB as well. If conditions are favourable, the 7 MHz band will be the main focus, to allow as many EIs as possible to work the special call sign. The station may also be QRV on the Saturdays of the same weekends. EI0MAR is QRV most Sundays between 11 and 3. Telephone and email contact details for EI0MAR are available on the museum website which is www.qsl.net/ei5em/museum.html. A link on the museum web page will take you to EI0MAR's own web site.

Church Broadcasts

For some weeks we have been carrying an item about broadcasts of Mass from a Church in the north Dublin area on 28.105 MHz FM. Stations are reminded to listen out for these transmissions on weekdays at 1000 hrs and on Sundays at 0900, 1000, 1100 and 1200 local time to try to identify the Church concerned. Stations in the Dublin area are asked to take bearings on the transmissions or try to identify the general area from which the transmissions originate. We would appeal again to stations in the Dublin area to put a little effort into identifying the source of the transmissions so that details can be forwarded to ComReg. We are getting international reports on these transmissions and we have an obligation to do something about them.

We have also received reports of transmission of Mass on 28.285 MHz. We do not have any idea yet where this transmission is originating. We would ask stations countrywide to listen on 28.285 MHz FM at the appropriate times in their areas so that this station can also be identified. If you hear anything worth reporting you should send a report to Thos Caffrey EI2JD the IRTS Intruder Watch coordinator at QTHR or to ﷺthoscaffrey at hotmail dot comﷺ with a copy to Sean Nolan EI7CD at QTHR or to ﷺei7cd at gofree dot indigo dot ieﷺ. The report should include date, time, frequency, signal strength, possible location of station if identified, beam heading in degrees from true north and any other relevant information. If the station is identified from an announcement of local events, details should be given. Should you hear anything, no action should be taken other than

forwarding a report as requested.

South Eastern Amateur Radio Group

The next general meeting of South Eastern Amateur Radio Group will take place on Monday the 27th of August at 8.00 p.m. in the Roanmore Centre. All are welcome!

For up to date information, visit the groups' web site on www.searg.com.

Upcoming Rallies

Cork Radio Club Rally will take place on Sunday the 23rd of September in the Blarney Park Hotel. For information contact Con on 021-427136.

The Waterford Rally will take place on Sunday the 21st of October in the Woodlands Hotel, Waterford. For more information visit www.searg.com.

The Foyle and District Rally will take place on Sunday the 4th of November 2007 at the White Horse Hotel, Derry. For more information visit www.mn0aku.org.uk.

The Mayo Radio Rally will take place on Sunday the 18th of November in the Belmount Hotel, Knock, Co. Mayo. For more information contact Padraic Baynes, EI9JA @ QTHR.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to 'news at irts dot ie' for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday's bulletin.

Just check your statement next time carefully. I have had State Farm
for over 20+ years. AIG said they could save me and sure enough Saved
me over 300 dollars for the 6months on 2 cars and my motorcycle. But
at renewal time it was 300 MORE than what I got at State Farm. Called
AIG and they said it was just a normal rate raise. State Farm at
least took me back like I never left.

SO be careful about these low price lead ins. Also check your coverage.

RADIO REGULATIONS: UK REGULATOR PROPOSES SELLINHG HAM BAND

Is U-K telecommunications regulator OFCOM getting ready to try to auction off a ham band? Jeramy Boot, G-4-N-J-H, is in Nottingham, England is here with more:

--

U-K telecommunications regulator has published proposals with relevance to the 3cm band. The proposals concern the award and auction of spectrum between 10 GHz and 40 GHz..

One range of frequencies under consideration coincides with the 3cm Amateur Satellite Service allocation.

I'm Jeramy Boot, G4NJH, and you are listening to the amateur radiop Newsline.

--

Details of the pending auction are on the Ofcom web site. Specific links to it can be found in the News section of the RSGB web site. The latter is in cyberspace at www.rsgb.org. (GB2RS)

**

RESCUE RADIO: FULLY INTEROPERABLE DIGITAL RADIO SYSTEM TO BE DEPLOYED BY NATIONAL GUARD

Back in the United States, the National Guard is getting a new fully interoperable digital voice and data communications system. Bruce Tennant, K6PZW, has the details:

--

The new satellite cased communications system will be developed and deployed by DataPath of Duluth, Georgia. DataPath will work with Applied Global Technologies to create communications multiple interoperable networks. These systems will permit federal, state and military first responders establish command and control capabilities at the site of a man-made or natural disaster within hours, anywhere in the United States.

According to a report from Radio World, DataPath, which builds satellite and wireless communications networks has won the $16.7 million contract from the Communications-Electronics Command in Fort Monmouth, New Jersey. The system it is developing will use its satellite communications base units to deliver high bandwidth to voice-over-IP telephones, video teleconferencing systems and to interoperable handheld radios for deployed National Guard teams and other first responders. It will also establish a nationwide Joint Incident Site Communications Capability for the Army National Guard. The contract also calls dor DataPath to provide a complete portable communications suite that will be transportable by use of a C-130 aircraft or other means for rapid deployment.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

DataPath says that it will deliver 32 systems based on a portable, fly-away satellite communications terminal. It has also developed a customized version by incorporating a 1.2-meter fly-away antenna in the package. (RW)

**

RESCUE RADIO: HAMWATCH AND THE NATIONAL NIGHT OUT

The mayor of South El Monte, California, has praised ham radio operators who assist her city and the nation in time of need and she did so in a most unusual way. On the air. Take a listen:

--

Mayor Figueroa: "To all of you Hamwatch operators, thank you for helping all of your cities. National Night Out - remember to say no to crime, leave yiur lights on and thank you for doing a great job. God bless you and god bless America."

--

That's Mayor Blanca Figueroa and the story of how she got to thank the ham community for its involvement is actually a story unto itself. One that kind of involves us here at Newsline. At least peripherally.

On Tuesday August 7th, communities across the nation participated in the "National Night Out." This is an opportunity for communities to to promote activities aimed at increasing security with programs such as Neighborhood Watch, Community Emergency Response Teams and of coarse Amateur Radio.

One such event was held in the City of South El Monte, a suburb of Los Angeles. That's where members of the Temple Station Hamwatch Group were present to display radio equipment and answer questions related to Ham Radio.

As part of the demonstration Deputy Hector Figueroa, KE6VRL, used a portable station to transmit what the group calls the "Amateur Radio Newsline - Check-In Net" at its regularly scheduled time on the local N6USO repeater. As the net was winding down, Mayor Figueroa requested a moment at the microphone. And as you heard, she used it to thank the members of Hamwatch and the Amateur Radio community for their ongoing efforts to communities all across the United States. (KE6VRL)

HAPPY HAM TIMES: MFJ ENTERPRIZES WANTS TO CELEBRATE #35 WITH YOU

And Martin Jue, K5FLU, wants to treat you to lunch, but there is a catch. Lunch will be served only on Friday and Saturday, September 7th and 8th at Martin's MFJ Enterprises factory in Starkville, Mississippi. This, as a part of the 35th anniversary of the founding of the company that bears his initials in its name.

K5FLU says that he started MFJ in October of 1972 in a small hotel room in downtown Starkville. His first product was a C-W filter kit that sold for under $10. Today M-F-J has grown into a diverse corporation that owns five separate companies with over 2500 products. And Martin Jue says that all this happened because you believed in him and the gear he manufactures.

As a way of saying thanks, K5FLU has set aside September 7th and 8th for a celebration with all of his ham radio friends that can make it to Starkville. In addition to the free lunch there will also be a special event station, license exams, factory tours and those all important door prizes.

M-F-J Enterprises is located at 300 Industrial Park Road in Starkville, Mississippi. Starkville is about 120 miles due West of Birmingham Alabama or 150 miles South East of Memphis, Tennessee. More information on this 35th anniversary event is on-line at www.mfjenterprises.com. To which we will add a "Happy 35th" and at least 35 more. (MFJ)

**

Break 1

With you 52 weeks a year. This week coming to you from Auckland, New Zealand, we are the Amateur Radio Newsline, heard on bulletin stations

around the world including the Rocky Mtn Radio League repeaters serving Denver and Bloomfield Colorado in the United States.

RADIO RIPOFF: IRTS WANS OF AD SCAM

Ireland's national ham radio society, the Irish Radio Transmitters Society is warning about a fraudulent operation involving the sale of amateur radio equipment. One which is being conducted through a series of small ads in recent editions of genuine radio magazines.

The equipment is being sold using an address in Oxford, England and another in the Isle of Wright. The source of the gear is supposed to be that of a deceased ham. Payment may be requested direct to an `Executor' as opposed to the actual person advertising. The Irish Radio Transmitters Society says that this scam has already cost one of its members in excess of 1,500 Euros to date. (IRTS)

**

ENFORCEMENT: FCC CITES TWO CALIFORNIA TIS STATIONS

The FCC appears to be cracking down on abuse of Traveler's Information Stations, CGC Communicator reports. The CGC Communicator reports that the newsletter notes that the FCC has given the state of California 20 days to respond to its July notice of violation. This, concerning one of those low-power AM systems in Los Angeles under the call WPHJ962.

According to the FCC, a commission agent found that the station was airing only a continuous loop saying: "This is Caltrans highway advisory radio WPHJ 962 broadcasting. This is a test message."

In its citation, the FCC pointed out that Travelers Information Stations must air only noncommercial voice information pertaining to traffic and road conditions, traffic hazard and travel advisories, directions, availability of lodging, rest stops and service stations and descriptions of local points of interest.

A separate notice but similar went to the City of Santa Monica, California. In this case a Travelers Information Service system was retransmitting a National Weather Service station. (CGC)

**

ENFORCEMENT: BEHRINGER FINED $1,000,000 FOR UNAUTHORIZED GEAR SALES
Electronics supplier Behringer USA, Inc. has been dinged with a proposed one million dollar fine by the FCC. This, for marketing 50 models of unauthorized radio frequency equipment in the United States without prior consent from the regulatory agency.
The gear in question is described as digital audio music devices. This says the FCC was a willful and repeated violation of Section 302(b) of

the Communications Act of 1934, and Section 2.803(a) of the Commission's Rules. (FCC)
**

RESCUE RADIO: ALABAMA GETS ALERT FM

The Alabama Broadcasters Association in association Global Security Systems has announced that five radio stations in that state are among the first there to deploy a digital alarm and messaging system called Alert FM.

Alert FM uses RDS technology to send targeted alerts that are delivered by satellite to FM broadcast transmitters and user end Alert FM receivers. Information can also be displayed on mobile devices, such as PDA's, cell phones and other receivers equipped to decode RDS.

As an a incentive, broadcasters that participate in the Alert FM program will get the RDS technology at no cost to them. They will also receive the ability to transmit non-emergency mesages, including song titles and artists, call letters, slogans or other information to their listeners.

Global Security Systems says its use of the FM infrastructure provides overlapping coverage, ensuring distribution over a large footprint. It believes the system ultimately will be able to reach millions of households in the state with a single message in seconds. More on the Alert FM system is on line at http://www.alertfm.com (GSS)

**

RESCUE RADIO: ON LINE WEATHER TRAINING COURSE FROM STORM-PREP.COM

If you want to learn how to interpret real-time weather data to recognize and learn how to prepare for the variety of weather hazards a new on-line training course offered by Storm-Prep may be what you need.

Storm-Prep is a new public education initiative that offers a self-study course titled "Anticipating, Recognizing, and Preparing For Deadly Weather". The course demonstrates how to use the Internet to access and interpret radar imagery, satellite imagery, and other taxpayer-funded weather data, and even sky clues. It also shows how to recognize the potential for, or the imminent threat of, deadly weather.

More information about Storm-Prep and the course is on-line at www.storm-prep.com (Via press release)

**

RADIO THEFT: GROUND SYSTEM TAKEN FROM CALIFORNIA STATION

The copper wire thefts at rafio facilities continue. Broadcast engineer Bill Ruck, writing in the CGC Communicator writes that he

recently received a call about transmitter problems at KDYA A.M. KDYA operates on 1190 kHz in Vallejo, California. Ruck says that when he arrived the transmitter looked okay but was seeing high reflected power. So he walked out to the tower to look for problems there. What he found was the entire the ground system was gone. The copper wire used for it had been stolen. Ruck says that he is now in the process of replacing it using barbed wire. (CGC)

**

NAMES IN THE NEWS: K3LSR NEW HEAD OF AIR FORCE MARS

Some names in the news. First from the ARRL comes word that Allen Eiermann, K3LSR, has been named the new acting chief of Air Force MARS. Eiermann holds a General class Amateur Radio license and is a former Navy and Marine Corps MARS member. He replaces Don Poquette who recently retired form the Air Force. (ARRL)

**

THE SOCIAL SCENE: ARRL GREAT LAKES CONVENTION IN OHIO SEPT 22

The ARRL Great Lakes Division Convention is being held on Saturday, September 22nd at the Sheraton Independence Hotel in Independence, Ohio. Among the seminar sessions will be Bob Heil K9EID and Chip Margelli K7JA hosting a Heil Sound Workshop. Other seminar sessions will feature such well known radio amateurs as Bob Allphin K4UEE, Bernie McClenny W3UR, Don Karvonen K8MFO and John Papay K8YSE. The featured banquet speaker is Joel Harrison W5ZN, President of the ARRL. Following the banquet a Wouff Hong ceremony will be held. More about this event is on-line at www.2007gldc.org (e-mail)

**

NAMES IN THE NEWS: HANDIHAMS CELEBRATE YEAR 40

And the Handiham 40th anniversary special event takes place August 25th through the 28th. Plans call for the call W0EQO to be operational from 1400 to 0200 U-T-C each day using SSB on 7.240 and 14.340 MHz, and C-W on 7.040 and 14.140 MHz. It should be noted that 14.140 is also a gathering spot for many Canadian Morse enthusiasts so the two groups will be co-sharing the frequency. More information including the QSL route is on line At www.handiham.org (Handi Hams)

**

THE SOCIAL SCENE: SCADS PICNIC IN SOCAL AUGUST 18

And this for shortwave listeners and monitor radio hobbyists. While a bit short notice, word that the Southern California Area DX'ers will hold its annual picnic on August 18th. The venue is the Point Vincente Interpretive Center in Rancho Palos Verdes, California. Festivities will start around 7am for set-ups and will end about 4pm local Pacific Coast time. Those planning to attend are urged to bring along a

battery operated receiver and portable antenna for some listening fun. (SCADS)

**

THE SOCIAL SCENE: WIN A FREE TRIP BY CELEBRATING THE IRTS AT 75

You might call this one work Ireland and win a free trip. This with word that the Irish Radio Transmitters Society's 75th Anniversary Contest called CQ I R, will take place on the last weekend in September.

CQ I R is being billed as a 24-hour single operator contest with the emphasis on participation rather than winning and to this end every participant gains an entry ticket for a spectacular draw for every 75 QSO's made during the Contest. Hams from outside of Ireland and England will be eligible to win a weeks vacation at Ireland's Kinnitty Castle in Offaly. The holder of a ticket drawn from the drum devoted to Ireland and England will win a week long weekend in New York City for two people that will include a side trip to visit ARRL headquarters in Connecticut.

The contest is being promoted as a celebration of Ireland and the Irish, throughout the world. The prizes have been fully sponsored at no cost to the Irish Radio Transmitters Society. Full rules are on the IRTS website. Its in cyberspace at www.irts.ie (Southgate, IRTS)

**

BREAK 2

The news never stops and neither do we. This week from below the Southern Cross, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RADIO SAFETY: MAJORITY OF DRIVERS SAY TEXTING UNSAFE
Nine out of 10 adults drivers in the United States believe that operating a motor vehicle while sending or receiving text messages is dangerous and should be against the law. Bill Pasternak, WA6ITF, reports:
--
The determination is the result of a new survey conducted by polling over 2,000 adults between June 28 and July 3rd in research conducted by Harris Interactive for hands free mobile messaging service Pinger Incorporated.
According to the results, 91 percent of adults surveyed thought that drivers sending text messages or e-mails are as dangerous as those who have had a couple of drinks before getting behind the wheel. However, the survey also found that 66 percent of adults who drive a car and

have read text messages or e-mails while driving. 57 percent of the same people said they have sent text messages or e-mails while behind the wheel.
But that's not all. The survey found that 64 percent of adults who admitted to sending text messages while driving were between the ages of 18 and 34. Only 6 percent were 55 or older. And less we forget: Men and women were found to be of equal numbers in regard to sending text messages while driving.
Well, I won't and I'm Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.
--
Six states including New York, California and Florida are considering legislation that would ban texting while driving. Washington state banned texting while driving in May. (ScienceOnLine)

**

EMERGING TECHNOLOGY: A GOOD SCIENCE EDUCATION HELPS

Researchers say students who had more math courses in high school did better in all types of science once they got to college. On the other hand, while high school courses in biology, chemistry or physics improved college performance in each of the individual sciences, taking a high school course in one science didn't result in better college performance in the others.

One of the study authors says the most important thing for high school science teachers is to make sure there's lots of math in whatever science course they teach. The head of the National Science Teachers Association said while the "correlation with math makes sense" it's not the necessarily the same as a cause and effect.

The research, which is being reported in the journal Science, was supported by the National Science Foundation. (NSF)

**

HAM RADIO IN SPACE: A CALL FOR PAPERS

A third call for papers to be presented at the 2007 AMSAT Space Symposium and Annual Meeting has been announced. The emphasis for this year is an educational outreach to middle and high school students. In particular, papers on Students & Education, ARISS, AO-51, Phase 3 E, Eagle and other satellite-related topics are being solicited.

September 1st is the deadline for submitting electronic versions of papers for inclusion in the printed symposium proceedings. They go to Dan Schultz by e-mail to n8fgy at amsat dot org. The symposium itself is slated to be held October 25th to the 28th in Pittsburgh, Pennsylvania. (ANS)

**

RADIO IN SPACE: BRAZIL RESUMES SPACE PROGRAM

Brazil has taken its first steps in reviving its space program. In late July that nations aerospace agency launched one of its VSB-30 atmospheric sounding rockets. According to Brazilian officials the flight lasted about 20 minute with the experimental capsule plashing down on target in the South Atlantic. Brazil says that its goal is to develop the technology to launch heavy payload satellites into Earth orbit. (Space)

**

WORLDBEAT - AUSTRALIA: VK INTRODUCED DAB+

Australia is one of the latest nations to adopt the new DAB Plus system for digital audio broadcasting. Marilyn Syme, VK3DMS, reports from Victoria state:

--

Australian radio broadcasters recently switched on the first test transmissions of digital radio using DAB+ in Sydney, New South Wales.

The digital radio test is carrying a mix of talk and music, including pop and jazz, to allow the industry to test the sound quality of a variety of content at various bit rates.

A demonstration DAB+ receiver was developed for the test, as DAB+ receivers are not yet commercially available. A number of manufacturers have indicated they will have DAB+ products ready for overseas retail sale before Christmas. All commercial, SBS and ABC outlets in the capital cities are expected to avail themselves of Digital Conversion.

This is Marilyn, VK3DMS.

--

Australia has also joined a new DAB+ taskforce set up by the Asia-Pacific Broadcasting Union. Warner has been appointed chair of the task force, also represented are Brunei, Singapore and New Zealand. The taskforce plans to survey of regional broadcasters to ascertain their plans for digital radio, as well as to encourage nations to adopt DAB+. (WIA News)

**

ON THE AIR: A STRANGE OPERATING EVENT

Italy's 4th annual Strange Radio Event will take place between 0600 UTC on October 19th and 2200 UTC on the 21st. Many Italian stations will be using many special S-R-T suffix callsigns such as IS0SRT, II1SRT and IR8SRT and the Strange Radio Team is hoping to hear many other S-R-T suffix callsigns from other countries.

Strange Radio Team plaques will be awarded for this event and certificates will be available for those holding QSOs various S-R-T special callsigns.

The mode for this event is SSB only. More can be found on-line at www.strangeradioteam.com (SRT Release)

**

DX

In DX, word that the Greater Norwalk Amatuer Radio Club will be sponsoring a DXpedition from August 18th to the 19th. This, to activate Sheffield Island Lighthouse for International Lighthouse Weekend. Operation will use the callsign N1EV and will begin 1600 UTC on the 18th and end at around 1800 UTC on the 19th. Activity will be on 80 through 10 meters using SSB/CW/FSK in or around the IOTA calling frequencies. Plans are to run at least 2 stations for the entire event. QSL direct to N1EV.

And while a bit down the road yet, word that KK9A, will be active as P40A from Aruba during the CQ World Wide DX SSB Contest. That's planned for October 27th and 28th and he plans to operate as a single-operator all-band entry. QSL this one via WD9DZV.

And a first ever qualification and activation of Pelican Island takes place August 25th from 1400 to 2400 UTC. Look for W5P on or near 14.260 MHz, 7.260 MHz using various modes. Pelican Island is designated as United States Island TX050 located on Eagle Mountain Lake. QSL as directed on the air

Lastly, Don Field, G3XTT, reports that the long awaited 3B7C DXpedition to St. Brandon Island will take place between September 7th ad the 24th. Planners G3NUG and G3BJ have now confirmed the various logistical arrangements for their September operation. The island has also been visited to make a detailed site survey. And some good news for 6 meter enthusiasts. Even though magic band operations are not normally allowed from Mauritius and its outlying the DXpedition ha been able to gain a short-term permit for three fixed frequencies in the 50 MHz band. C-W will be on 50.090 and 50.102 and SSB on 50.145 MHz. More information is on-line at www.3b7c.com/

**

THAT FINAL ITEM: BRICKS IN THE MAIL

And finally this wee, there an old adage that there are always two sides to a story. Well that certainly applies to an almost legendary ongoing ham radio slug fest on the internet. Here's Jim Linton, VK3PC:

--

This concerns the sending of a box of house bricks and other rubbish, to a radio amateur who collected it from his post office, paying cash on delivery.

There was an expectation that the box would contain radio equipment. Not restraining his emotions one bit, the irate receiver of the box of

heavy and somewhat expensive rubbish took to his keyboard to attack the sender.

Counter claims were then made by the apparent sender of the box who tried to put some kind of justification on what had occurred.

It all apparently stems from a dissatisfaction over an earlier matter on a popular `for sale' and `wanted' advertising website.

Angry words like `integrity', `rip-off', `honesty' and `greed' are being used in these public exchanges between the two.

A small blessing however is they live some 2,000 kilometers apart and may never meet. Nonetheless those observing the internet battle remain either bemused or bored with the whole affair.

Neither side seemingly wants to give-up. It's all about personal pride, reputation and emotions continue running high over a very important issue - not.

I'm Jim Linton VK3PC and you're listening to the Amateur Radio Newsline.

--

All we can say to this is better that these kind of disagreements be fought in cyberspace than on the air. (WIA News)

1425. Any new guesses ?

Newsgroup: rec.radio.amateur.moderated
Date: 2007-08-20 11:17:13 UTC
From: Dee Flint <deeflint01@comcast.net>
Message-ID: <Mv2dnRJ02Y2x5VTbnZ2dnUVZ_qiinZ2d@comcast.com>
Source record: 4030

Any one want to add a guess on ARS numbers change since the code was dropped?

1) Predict amount of change in ARS numbers between the IMPLEMENTATION date of the R&O for elimination of code testing and one year from that
> date.
2) Calculation of the number of licenses will be done by N2EY under the same principals that he uses now to calculate the number of licenses.
3) You must select whole numbers for your percentage.
4) You may select positive or negative percentages.
5) You may select a range but that range may not exceed a total of 4%. Note that your average will be used to determine who is closest. If the actual change is outside the range of everyone's guesses then the person whose limit is closest will be the winner.
6) You must submit your guess no later than six months after the IMPLEMENTATION date of the R&O.

Anyone else? Note if your guess doesn't show up on the list within a week, it may mean that my ISP is blocking it or that you are on my blocked senders list. You may still participate but you will have to have your guess submitted by someone who is not blocked.

Guesses submitted:

N8UZE: 1% less to 1% more
N2EY: 1% more to 2% more
KH6HZ: 1% less to 0% change
N3KIP: 2% more to 6% more
KH6O: 6% more to 10% more
KK6J: 12% more to 14% more
KC2HMZ: 5% more
K8BSG: 2% to 3% more <--- Added 02/18/06

Dee, N8UZE

In the money raising game, it becomes difficult to come up with good ideas to raise that cash. Membership fees are one way. But when extra is needed, new ideas are needed. Sometimes a group will offer "lifetime" memberships. These can generate a bit more spending money. Those are a good deal for someone who became a lifetime member a long time ago, (what did a lifetime membership cost in 1970?) but that money is long gone.

So the engraved brick thing is one of the ways that ARRL and others use to keep things interesting. I've seen it on other places such as fishing piers like the one in Flagler beach Florida, where the pier gets knocked down by a hurricane every ten years or so. So they have a "buy a plank" effort. You "buy" one, and your name gets routed into the plank for all to see. The pier is rebuilt, and everyone is happy. You can even buy a bench or pier shelter.

The nice thing is that even those who do not buy a plank or other item are welcome to use the pier.

It is a revenue generating technique that is becoming increasingly popular. We have a restored theater in town that raised funds this way. There are some sports venues in the area that have donors plaques posted in their facility - including bronze, silver, and gold donor plaques obviously based on how much money was donated.

While I can understand that some might consider it a vanity thing, I also know that without those donors, there probably wouldn't be a facility or theater for people to use.

> least took me back like I never left.

I had a similar experience in going from State Farm to AIG. The trouble was, State Farm kept increasing my rates too. AIG raised my rates three years back after a commercial truck backed into my car while it was parked on the street. When I called to challenge the increase, I was told that West Virginia state law *permits* them to increase rates even if the insured is not at fault. The truck driver's insurance paid for repairs to my vehicle.

West Virginia insurance rates are awful, by the way, mostly because of the number of law suits and the number of deer.

> SO be careful about these low price lead ins. Also check your coverage.

My coverage is identical to what I had with State Farm and AIG. This is not a "lead in" price, it is a discount offered to ARRL members. Metlife/ARRL even knocks 50 bucks off my deductible every year that I go without a claim.

This ARRL/Metlife deal seems to be the real thing.

I can see where they're going with it, but I agree with Dave - if I were to donate money in this way, I'd rather like to be able to see it from time to time.

Here in the UK I live very close to the National Motorcycle Museum where they have all manner of old British bikes going right back to around 1902. They invite funding in exactly this way, with the names of people who donate going up on a wall. I live close enough to visit and see it whenever I want, but others don't.

DXNL 1533 - Aug 22, 2007
DX Newsletter

a free and weekly service of
DARC Committee "DX and HF contesting"
(http://www.darcdxhf.de)

editor: Helmut Schlaffer, DL7MAE
(e-mail: dxnl@dxhf.darc.de)

translation by: Bob, DL7VOA
(e-mail: dl7voa@darc.de)

IS0 - SARDINIA, EU-024
Flaviano,IS0/I2MOV, is staying in his house in Dolianova about 20km north of the island's capital Cagliari since Jun 27. Dolianova is the birthplace of his XYL and Flaviano will stay there until November. He is using an IC-706 MKII G, a vertical for 7/10/14/18/21/24/28 MHz and a homebrew dipole for 6m. Flaviano prefers CW operation and requests QSLs via bureau to his homecall. Due to bad condx he only logged some 500 QSOs with 95 countries yet.

TI9 - COCOS ISLAND, NA-012
The DXpedition scheduled for February 2008 is still seeking members to join the team, especially experienced CW operators. Until now only four HAMs confirmed their participation: TI7WGI, DH8WR, DL2AWG and EA1DR. Right now they still try to figure out whether they take part in the WPX RTTY Contest or the ARRL CW Contest (opinions can be mailed to DH8WR@dh8wr.de). Since they can stay there for only ten days (including the way back and forth) only one serious contest participation can be planned during this time.
Further information can be obtained from: http://www.ti9.eu.com

3D2 - FIJI
3D2MT is the callsign of Tomas,LY1F, which he plans to activate between Aug 28 and Sep 4. Tomas promises to show up mainly in CW on 80-10m with emphasis put on 80/40/30m and a participation in the All Asian Contest. Since Tomas is working in Australia at the moment all direct QSLs should be sent to: VK2CCC, Dr. Tomas Magyla, 7 Churchill Avenue, Wahroonga NSW-2076, Australia. If you send your QSLs via the LY bureau or his address in Lithuania a longer processing time must be included.

7O - YEMEN
After conducting a business trip to the Yemen Chris Lorek,G4HCL, is back in England now. Like announced in DXNL 1532 he became active as

7O/G4HCL working in SSB on 20m. His license was issued by Walid Hamed, the "communications manager" of Sana'a International Airport, and not by the official telecommunications authority of the country. This license granted permission to operate the airport's HF station on the amateur radio bands. Chris already contacted the DXCC manager Bill Moore,NC1L, concerning the DXCC credit of this operation.

SWEDEN, SPECIAL EVENT STATION
The 2007 "Scandinavian Young Ladies Radio Amateurs" (SYLRA) meeting takes place in Oestersund, in the north of Sweden, from Aug 23-26,2007. The special event station 8S3SYL will be operated during the hamfest. The QSL manager SM3CVM prefers QSLs via the bureau.
The ladies will also visit the station SI9AM in Morokulia on Aug 24, these QSLs should be sent via SM3CVM. More information can be found at: http://www.sylra.se/_sgg/m1_1.htm

SPAIN, SPECIAL EVENT STATION
Members of the "El Grupo RASE DX" are celebrating the 100th anniversary of the Spanish major league soccer team "Real Betis Balompie" (also known as Betis Sevilla) with an activity from Sep 3-16. The DX club members will use the prefixes AM, AN and AO and activate the special event station EG7CRB in CW/SSB/digital on HF/VHF. A special award is issued as well, more information about award and the radio activities can be downloaded from: http://www.rasedx.com

TI8II QRT DUE TO LIGHTNING
Carlos,TI8II, is momentarily QRT because his equipment has been damaged by a lightning including an ICOM 756pro 2, his computer, printer, scanner, rotor, antenna tuner and an Ameritron amplifier (3 KW).
He has backed-up his log recently and lost only his last 15 QSOs.
Xavier,EA3BHK, offered his help to Carlos. If you have any donations you can make please send an e-mail to: ti8ii_cont@ea3bhk.com

WORLD RUGBY ASSOCIATION CHAMPIONSHIP AWARD
The Rugby World Championships will be carried out in Great Britain and France this year. Many special event stations will be put on the air and a special award can be obtained during that event. TM0RWC, TM1RWC, TM2RWC, TM3RWC, TM4RWC, TM5RWC, TM6RWC, TM7RWC, TM8RWC and TM9RWC will be QRV during several days in September and/or October. The awards manager is Jean-Claude, F5IL. The award rules and an operating schedule can be found at: http://arala.44.free.fr/cmr.php

LINKS: Current SOTA activities (mountain summits) are announced at:
http://sotawatch.sota.org.uk/activations.php or
http://sotawatch.sota.org.uk/spots.php

K4UJ is building a DX reference WIKI with information about all DXCC entities at: http://dxreference.com
---
"The Arctic Challenge" is called the new awards program of the "French Polar Team". For the rules check out: http://f6kdf.ath.cx/f5nod

UPCOMING CONTESTS

Aug 25/26: SCC RTTY Championship
Aug 25/26: YO DX HF Contest
The rules for the 2007 YO DX HF Contest can be downloaded from:
http://www.radioamator.ro/contest/us/yodxhf2007rules.html
The 2006 results can be found on this website as well at:
http://www.radioamator.ro/contest/us/yodxhf2006/dx-results.pdf
Specialty: A special award free of charge will be issued to everybody
who works ten members of the "YO DX Club" during the contest. A member
list is online at: http://www.radioamator.ro/yodxclub/membri.php

IOTA collected by Fredy,DE0MST (e-mail: iota@dxhf.darc.de)

Island activities:
AS-138, BY5, Fujian Prov. Group: Vanga,BD7KLO/BY5, will be active from
Pingtan Island (aka Haitan) from Aug 23-26. QSL via BD7KLO.

EU-016, 9A, Dalmatia South Group: Giuseppe,9A/IK5WWA, plans to become QRV
from Solta (CI-126) from Aug 25 until Sep 1. He also intends to put
other islands on the air during this time. QSLs via IK5WWA.

EU-017, ID9, Eolie (Lipari): Fabio,ID9/IK8HJC, plans to hit the airwaves
from Vulcano Island (ME-018) between Aug 25 and Sep 1. QSL via IK8HJC.

EU-078, EA3, Gerona Province Group: Ten Spanish OPs will activate the island
Meda Grande (E-001) signing EG3MED on Aug 25/26. QSLs via EA3GM.

EU-125, OZ, Jylland West Group: Ric,OZ/DL2VFR, is going to work mostly in CW
from Roemoe Island between Aug 26 and Sep 1. QSL via DL2VFR.

EU-127, DL, Schleswig-Holstein S.W. Group: Marcel,DJ5MS/p, will be QRV from
Helgoland-Duene (SSB only, 100 watts) from Aug 27-29. QSL via DJ5MS.

EU-156, F, Basse-Normandie Reg. Group: The Granville ARC plans to activate
the rock Tombelaine Island as F5KAQ/p from Aug 24-26. QSL via F5RJM.

EU-172, OZ, Jylland East & Fyn Group: Stefan,OZ/DF8HS, announced to be QRV
in SSB/RTTY/PSK31 on all bands from Aug 26 until Sep 8. QSL via DF8HS.

EU-176, SM3, Gavleborg County Group: Some Swedish OPs are going to activate
Grimskaer Island in CW/SSB on 80-10m signing SD3N and SG3U from
Aug 24-26. QSL via bureau or direct.

SA-051, YV,Las Aves de Sotavento: The island is situated within a restricted
military area and the organizers hope to get the help of the Venezolan
navy to activate YW5AS with several OPs in SSB/CW/digital modes from
Aug 27-31 or even a little longer.

I wonder whether anyone has sued the truck driver successfully for the
portion of increase in rates that was because of the collision, under
the "but for" rule (wouldn't have been increased that amount but for
the collision).

The motel is easy to spot. It is pink and stone and looks like
something designed by a demented Playboy Bunny. Go down the stairs at
the right side of the main lobby. One of the Men's room fixtures must
be seen to be believed!

That's something that my non-litigious mind would never have put together, Phil. The poor schmo had enough problems that day. As he opened the door of his truck to find out what he'd hit, he took the side mirror off a passing car.

Give a 5-dollar bill to a Legionaire, and they'll present you with a 3-cent
paper poppy. It's a "token" of your donation, just like the 35-cent brick.

Actually, the Legionaire will just say thanks. A VFW member will give
you a poppy--even for a dime or a quarter.

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate
articles, it was decided to create the group as a moderated newsgroup.
```

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to

rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill

to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rri/index.html

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.

The site from which we moderate this newsgroup, "Public Access Internet
and Unix, NYC" (Panix), is directly connected to the Internet, and

articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions
rec.radio.shortwave International broadcasting on the 'HF' bands

rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org>

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

The money isn't "long gone". Conventional practice for nonprofits is to invest
'life member' funds in a trust and withdraw based on an actuarial model.

There ya go! Assuming that you joined at this time that year, your membership has cost $4.72 per year, and can only get smaller! Not a bad deal at all. My thoughts are that while that money was probably pretty handy for them in 1971, it was just one time money, and then a sort of deficit thereafter.

Those monies have been invested over the years and have become a
helluva wad.

Around $815 at 5 percent annual interest. In itself not too bad, but
they didn't just invest all that money. Some percentage had to go toward
operating expenses.

My impression was that they invested the money and lived off the
interest without touching the principal.

Since 802.11b/g have several channels in our shared 2390-2450MHz band, can a ham set up a "super WIFI" node using QRO?

I'm not proposing to do so, but the concept seems viable, so long as the node does not use encryption.

This whole subject is rather controversial... there's been a lot of
discussion of it.

I believe that the general consensus is that you *can* do what you are
proposing, as long as you are careful to stay consistently within one
set of rules. That is, if you're using your ham Part 97 privileges,
you must:

- ID properly (using your callsign as the ESSID is the usual method),
and

- Stay strictly within the usage rules (i.e. no encryption, no
transmissions in which you have any sort of pecuniary interest), and

- Stay within the frequencies, power limits, and other technical
boundaries of Part 97. There are only one or two WiFi channel
numbers which you can use, without having the signal contain
significant energy which is either outside of the ham allocation
entirely, or falls into weak-signal parts of the 2.4-gig ham band
that are reserved for specialized uses according to the current
bandplan.

- Limit access to your system to other hams. Some people do this with
MAC-address restrictions. Others feel that using WEP encryption
is an acceptable way to do this (some claim that since the motive
is access control rather than obscuring-the-content, it doesn't
strictly violate the FCC regs against encryption; others
feel that it's OK if the actual WEP key is published somewhere).

QRO is something that you need to be careful about. Make sure that
you review the FCC Part 97 regs concerning spread-spectrum
transmissions. If you go above a certain power level, you are
required to have automatic power control implemented on the
transmitter, to keep the power down to the minimum which will deliver
a specified signal-to-noise ratio at the receiver.

I believe that the ARRL has proposed that the FCC eliminate this
particular restriction, but that hasn't actually happened yet.

And, of course, you may need to be concerned about the reactions of other (Part 15) WiFi users, who may come after you with torches and axes when they find that your QRO signal is preventing their laptops from getting to any access point more than 5' away. Of course, they'll be in the wrong, legally, but that's only a small part of the equation :-)

That question has come up every so often in the last 10 years, and the
answer is YES providing that all the ham rules - use of a channel
within the ham band, proper ID every ten minutes, control operator,
etc - are followed.

Hey Phil, I think you are correct, but you could maybe clarify this for me.

On the audit from a couple years ago, I read the following:

Quote:

"The by-laws of the league provide for life membership in the league for
25 times the term membership annual dues rate. Dues are deferred and
recognized as income over the estimated life expectancy of the
respective life members (approximately 34 years). Investment earnings on
allocated life member investments are deferred and are recognized as
dues at an amount representative of the estimated cost to the league for
providing services to the life members."

End quote

If I read this correctly (and you would know an awful lot better than
me, so correct at will)

The life member pays their money (25X current dues)

The interest from the investment is considered the members dues.

The principle money is recognized as earnings over a period of 34 years.

Or does that mean that the principle is released after 34 years?

Where I might have a little confusion is that if the principle of the
lifetime memberships is always off limit is that they should be in the
"permanantly restricted" category.

Although you may wish to check with your ISP that they allow this. Many ISP's here in the UK specifically prohibit sharing of the connection by anyone outside the household, as the distinction between a private service and a public one can become blurred, whether or not a fee is charged.

You may also wish to take into account the possibility that if anyone uses *your* wireless connection to do something illegal like fraud or looking at pornography, *you* may be held responsible.

Life Membership works out well for the League and can be a great bargain for the member. I'm 58 and I became a Life Member almost thirty years ago. I paid 25 times the 1978 dues. Dues have risen a number of times over the decades and are currently more than four times what I paid for Life Membership.

The downside is that my QST doesn't come in either a paper wrapper or a plastic envelope any more. QST content has been stripped away over the years. I need to pay extra for QEX for the good technical articles, station activities and the bulk of contest results are only on the web. I can always pay extra and become a member of the Diamond Circle and [tongue-in-cheek mode on] have a League Official drive to my home and deliver my QST on the day of printing.

1453. GB2RS NEWS Sunday 19 August 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-08-23 23:45:16 UTC
From: Newsdesk@rsgb.org.uk
Message-ID: <200708232039.l7NKdT202831@panix1.panix.com>
Source record: 3958
Cross-posted to: rec.radio.amateur.moderated,uk.radio.amateur,rec.radio.info

1 GB2RS NEWS Sunday 19 August

The news headlines

* Ultra Wide Band becomes legal in UK

* New 6m GB2RS service

* Beware fraudulent adverts On Monday 13 August Ofcom made it legal to use approved ultra wide band equipment without a licence. Ultra wide band technology allows very fast wireless data transfer over short distances. It works by using very large chunks of spectrum at once. Approved equipment will operate between 3.1GHz and 10.6GHz. During consultations the RSGB expressed concerns that there may be mutual interference with several amateur microwave bands. Supporters of the technology say that the ultra wide band transmissions are of such low spectral density that interference to other services is unlikely. The full text of the statement can be found on the Ofcom web site.

A new GB2RS news reading will be starting up later this month on 6m in West Yorkshire. Readings will be on 51.53MHz FM in the Dewsbury and Wakefield areas. The two newsreaders appointed are Dave, G4CLI, and Robin, G1MHU. They will be reading the news each Sunday at 1100 local time. Listeners are invited to listen out for them and to call in after the news reading with reception reports.

Listeners are urged to be cautious when responding to printed advertisements for radio equipment. A fraudster has recently been advertising items from addresses in Oxford and the Isle of Wight. The items are generally described as 'silent key' or 'per pro' sales. Would-be purchasers have sent money and not received goods. The RSGB understands that police in Hampshire, Oxfordshire and the Irish Republic are currently investigating.

The Irish Radio Transmitters Society says is getting close to tracing the 10m religious broadcasts reported recently on GB2RS. The location has been narrowed down to somewhere on the northern side of the city of Dublin. Further work is still required to locate the actual transmitter. Transmissions have been noted on 28.105MHz FM at 10am local time on weekdays. Additional transmissions occur at 9am and 11am on Sundays.

A series of amateur radio licence courses will be starting shortly in Bath. Steve Hartley, G0FUW, and Mike Coombs, G3VTO, commence classes on 20 September. Classes run from 7 to 9pm every Thursday. The series begins with the Foundation level exam in November, Intermediate in

February and the Advanced exam in July. Courses are open to anyone. There is no obligation to progress through all three levels one after the other. For more information contact Steve Hartley on 01225 464394, weekday evenings, or by email to g0fuw@tiscali.co.uk.

The results of the RSGB 80m Club Championship 2007 have now been published on www.contesting.co.uk. The Bristol Contest Group took first place.

2 A reminder to any listeners wishing to operate HF in Greece under reciprocal arrangements. Greek regulations still require amateurs to prove proficiency in Morse before being permitted to operate below 30MHz. Further information can be found on the internet at www.raag.org/licensing_en.html.

Now a message from the Isle of Man Amateur Radio Society. In the light of the current Foot and Mouth Disease problems, precautionary restrictions on rambling have been put in place on the Isle of Man. This means that it is currently not possible to access or activate any summits for the Summits On The Air programme. For more information please contact John, GD0NFN, by email to iomars@manx.net.

And now for the details of rallies and events for the coming week

[Note to newsreaders: no events have been notified to us for August 19th.] On Sunday 26 August the Torbay ARS Communications Fair takes place from 10am at Newton Abbot Racecourse in Devon. Details from G4FCN, on 01803 812117 or by email to rally@tars.org.uk. On Sunday 26 August the Milton Keynes ARS Rally takes place from 10am at Holne Chase School, Buckingham Rd, Bletchley. Details from Mike, G3LFR, on 07973 264473, or by email to rally@mkars.org.uk. More details of these and future events can be found on pages 88 and 89 of the August edition of RadCom. Now for the news of special events A special event station GB1SL will be on the air from the Skerries Lighthouse until 19 August. The Lighthouse is situated in a group of Islands off the Anglesey coast in the Irish Sea. Operation is on 80 and 40 metres CW and SSB, 20 metres SSB and 6 metres. QSL via bureau or via GW0VML. Special event station GB4SML will be on the air until 19 August. Borders Rievers Amateur Radio Society will be activating from Saint Mary's Lighthouse Tynemouth Tyne Wear. Operation will be on the HF, VHF and UHF bands and they will be allocating 15 to 20 minute periods for M3s and QRP stations only to call in. All visitors are welcome. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

Chae, HL5YI, will be active from Sorok Island (AS-060) for a few days starting on 19 August. He plans to operate on 40, 20, 17, 15 and 10 meters CW, SSB and RTTY. QSL via home call, direct or bureau. Johan, PA3EXX, confirms he will be active from Rathbone Island (NA-243) as OX/PA3EXX/p between 19 to 23 August. QSL via home call, direct or bureau. David, F1JXQ, will be active as FG/F1JXQ from Guadeloupe (NA-102) until 20 August. He operates SSB and is likely to be found on

10 to 6 metres and 2m between 10 and 16 UTC. QSL direct to home call. Hans, ON6ZK, will be active as EA8/ON6ZK from Tenerife, Canary Islands (AF-004) until 22 August. He expects to operate mainly on 20 and 17 metres SSB with 25 watts. QSL via home call, bureau preferred. Mauro, IK3SCB, reports he plans to be active as IK3SCB/ID9 from Lipari Island (EU-017, IIA ME-001) until 24 August. QSL via bureau.

3 Ghis, ON5NT, reports he will be active holiday style as SV9/ON5NT from Crete until 23 August. QSL via home call. Gianni, IZ7FLP, will operate SSB as SV8/IZ7FLP from Zakynthos (EU-052) until 25 August. QSL via home call. Roland, HB9FMD, will be active as OX/HB9FMD from Ilulissat, Greenland until 27 August. He plans to operate mainly CW on the WARC bands. QSL via home call. Now the contest news The SARTG RTTY takes place until 19 August at various times on RTTY mode, on the 3.5 to 28MHz bands. The exchange takes the form of RST and serial number. The RSGB 70MHz Trophy Contest takes place on 19 August between 0900 and 1500 on all modes. The exchange takes the form of RST, serial number, locator and postal district. The RSGB 1.3GHz to 2.3GHz activity evening takes place on 21 August between 2000 to 2230 hours on all modes. The exchange takes the form of RST, serial number and locator. The YO DX Contest takes place from 1200 on 25 August until 1200 on 26 August, on CW and SSB on the 3.5 to 28MHz bands. The exchange takes the form of RST and serial number. Now the solar factual data for the period from 6 August to 12 August, compiled by Neil Clarke, G0CAS On the 6th, solar activity was low when several small C class solar flares took place, otherwise, solar activity was very low with no solar flares taking place. No effects were detected from the C class flares. Solar flux levels declined slightly from 70 units on the 6th to 67. The average was 68 units. The 90 day solar flux average on the 12th was 72 units, that's the same level as last week. X-ray flux levels remained below the minimum A1 level. Two effects from recurring coronal holes took place. The first was on the 7th with an Ap index of 23 units. The second occurred on the 10th and the 11th with an Ap of 13 and 12 units respectively. The average was Ap 11 units. The ACE spacecraft saw solar wind speeds increase from 290 kilometres per second on the 6th to 730 by the next day. Speeds gradually declined but on the arrival of the second coronal hole disturbance increased to 590 kilometres per second. Particle densities increased to 28 particles per cubic centimetre on the 6th and to 25 particles per cubic centimetre on thee 10th. Bz varied between minus 14 and plus 11 nanoTeslas during the disturbances and between minus and plus 3 nanoTeslas on the quiet days. HF propagation has mostly been rather flat, although there was again good 14MHz propagation to the Pacific for early risers. Sporadic-E continued daily on 28 and 50MHz, and there were also occasional openings on 70MHz. VHF aurora was reported early on the 7th and during the afternoon and evening of the 10th but only at high latitudes. And finally the solar forecast. This week the quiet side of the Sun will be rotating out of view. However, solar activity should still continue at very low levels. Solar flux levels are expected to show a slight rise during the coming week and by next weekend should be in the low 70's.

Geomagnetic activity is expected to be mostly quiet with just a slight

4 chance that activity could increase slightly towards next weekend. MUFs during daylight hours at equal latitudes should be around 18MHz for the south and 15MHz for the north. The darkness hour lows are expected to be about 10MHz. Paths this week to Japan should have a maximum usable frequency with a 50 per cent success rate of around 18MHz. The optimum working frequency with a 90 per cent success rate will be about 14MHz. The best time to try this path will be between 0900 and 1400 hours UTC. Sporadic-E is still expected to take place as we move towards the end of the summer season. Openings on 144MHz are not expected now.

And that's all for this week from the propagation team.

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Sunday 19 August Basingstoke Amateur Radio Club is having a foxhunt. Contact Frank, M0AEU, by email to barc@2lo.info.

On Sunday 19 August Brede Steam Amateur Radio Society is operating from the bunker. Contact Steve, M0SSR, on 01424 720 815.

On Monday 20 August Burnham Beeches Radio Club is having a talk on switched mode power supplies. Contact G4XDU, on 01628625720.

On Monday 20 August Basingstoke Amateur Radio Club is having a club night. Contact Frank, M0AEU, by email to barc@2lo.info.

On Monday 20 August Braintree and District Amateur Radio Society is having an evening of scarecrow making and weekend planning. Contact John, M5AJB, on 01787 460 947.

On Monday 20 August Surrey Radio Contact Club is having a fix-it, advice, chin wag, and move-it-on evening. Contact Ray, G4FFY, on 020 8644 7589.

On Wednesday 22 August Chesham and District Amateur Radio Society is on the air. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 22 August Dover Radio Club is having a visit to the workshop at Smye Rumsby Ltd. Contact Brian, G4SAU, by email to

g4sau@DARC.org.uk.

On Wednesday 22 August Fareham and District Amateur Radio Club is having a bank holiday quiz. Contact Jim, M1JJN.

On Wednesday 22 August Havering and District Amateur Radio Club is having an informal evening and BBQ. Contact Dave, 2E0EBV, on 07956 594 514.

On Wednesday 22 August Newbury and District Amateur Radio Society is having an auction. Contact Richard, G3ZGC, on 01635 46241, richard.jolliffe@vodafone.com.

On Wednesday 22 August Norfolk Amateur Radio Club is having an informal evening. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Thursday 23 August Echelford Amateur Radio Society is having a bring and buy sale, natter night and SSB field day discussion. Contact John Osborne, G4GSC, on 01784 451898.

On Friday 24 August Mid-Sussex Amateur Radio Society is having a fox hunt. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 24 August Torbay Amateur Radio Society is having a visit by RSGB President Angus Annan, MM1CCR. Contact Dave, G6FSP, by email to g6fsp@tars.org.uk.

6 On Sunday 26 August Radio Society of Harrow is operating G3EFX/P at the Harrow In Leaf horticultural show and fun weekend. Contact Linda, G7RJL, on 020 8386 8586, or on the web at www.g3efx.org.uk or Chris 01895 621 310.

On Sunday 26 August Southdown Amateur Radio Society is operating G1KAR at Beachy Head. Contact John, G3DQY, on 01424,424,319, or by email to vaughdqy@aol.com.

On Sunday 26 August Torbay Amateur Radio Society is having its rally at the Newton Abbot Race Course. RSGB President Angus Annan, MM1CCR, will be attending. Contact Dave, G6FSP, by email to g6fsp@tars.org.uk.

NEWS FOR THE SOUTH-WEST

On Monday 20 August Appledore and District Amateur Radio Club is having a BBQ. Contact Beryl, G1SVP. On Wednesday 22 August South Bristol Amateur Radio Club is on the air. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 22 August Thornbury and South Gloucestershire Amateur Radio Club is having a video night. Contact Tony, G0WMB, by email to tonytsgarc@beeb.net.

On Thursday 23 August Yeovil Amateur Radio Club is having a talk on microwaves by G4DCH. Contact Gary, 2E0BFJ (g.swain@tesco.net).

On Friday 24 August Cornish Radio Amateur Club is operating a special event station for the Volkswagen Jamboree at Stithians Showground. Contact Ian, 01872 561 058.

NEWS FOR THE MIDLANDS

Waters and Stanton plc have asked the RSGB to inform listeners that their Matlock branch open day will be on Saturday 15 September and not on the 30th as advertised in the September RadCom.

On Monday 20 August Stourbridge and District Amateur Radio Society is having an open shack night. Contact John, M1EJG, on 01562 700 513.

On Tuesday 21 August Derby and District Amateur Radio Society is having a video show. Contact Martin, G3SZJ, on 01332 556 875.

On Tuesday 21 August Loughborough and District Amateur Radio Club is having its 6th DF, on 160m. Contact Chris, G1ETZ, on 01509 504 319.

On Wednesday 22 August Telford and District Amateur Radio Society is having an antenna support competition at Telford Town Park. Contact Mike, G3JKX, on 01952 299 677, or by email to mjstreetg3jkx@blueyonder.co.uk.

On Thursday 23 August Salop Amateur Radio Society is having an 'ask the Committee' natter night. Contact Glenda, G1YJB, on 01939 235 412.

On Friday 24 August Coventry Amateur Radio Society is having a construction night on the club project. Contact John, G8SEQ, on 02476 273 190, or by email to johng8seq@ntlworld.com.

On Friday 24 August Hucknall Rolls-Royce Amateur Radio Club is having a members forum evening. Details on the web at www.hrrarc.com.

Some members of our club have been discussing this very thing. Some
say it is just plain illegal.

On the other hand, I am not at all sure.

1.It is not illegal to put a wirelss router on my Cable modem.

2. If there is a bad spot in my yard, I can say install a better
antenna on the router. (if indeed those commercial units do anything.

3. If I have a big yard, or say if I had a farm and wanted to get some internet access from one of my outbuildings, is it okay if I put a little yagi setup, esp if I am a Ham?

4. Now if I am wanting internet access at a mountaintop station that doesn't have access otherwise, is it illegal to do the same thing as in step 3?

My rationale is that I have paid for the service. As long as I am not doing anything that was illegal at the cable drop already, such as providing other people service, I am not doing anything that a wireless router does. I'm only giving it an antenna with a bit more punch.

note: I'm not a lawyer, so take this all with a grain of salt.

Probably the best thing to do is to call your ISP and carefully and properly frame the question.

One thing to be aware of: the FCC requires that Part 15 radios and
their antennas be certificated as a complete system.

If you substitute a different antenna (other than one which the
radio's manufacturer has actually tested and certificated with the
radio), then the original certification of the Part 15 equipment is
voided, and it becomes (technically) illegal to use the radio to
transmit until you have it re-tested for compliance at a properly
equipped test facility.

This means that, if one wants to pick nits, most people who install
higher-gain aftermarket antennas on their 802.11 access points /
routers / cards may very well be operating illegally. I've only ever
heard of one case of a company fined for doing this (and they were
also operating with an illegally-high-powered amplifier)... I doubt
it's an issue that's on the FCC's radar, unless somebody files a
formal complaint about a specific situation.

These Part 15 rules don't apply if you're using the system within your
ham Part 97 privileges... but you then have to honor _all_ of the
rules for Part 97 use. You can't pick and choose (e.g. put on a
high-gain antenna and an amplifier under Part 97, and then use the
system on Part-15-only frequencies with encryption turned on and for
running a business). If you want to stay fully legal, you have to do
it one way or the other... within Part 15, or within Part 97.

> My rationale is that I have paid for the service. As long as I am
>not doing anything that was illegal at the cable drop already, such as
>providing other people service, I am not doing anything that a wireless
>router does. I'm only giving it an antenna with a bit more punch.

Unfortunately, modifications to the antenna itself are probably
outside of what Part 15 allows, unless you use an antenna that the
AP's manufacturer has actually certificated with that particular AP.

Sticking a passive reflector being the antenna, for a few dB of gain,
might not count as a modification to the actual antenna, and might
thus be legal.

The issue of whether it's OK to allow other people to use your home
wireless network, on a cable or DSL line, would be a contractual issue
between you and your ISP... I don't think it's an FCC issue at all.

As has been pointed out, the better antenna probably won't comply with Part
15. Now, you can use your Part 97 privileges to extend your LAN, but once
you allow Internet content to travel that Part 97 circuit, how do you
prevent commercial content? Obscene content? Sounds like you are allowing a
non-licensed operator, e.g., Google, to use your circuit. Even if you have
some wonderful, magical firewall, it seems as if it might be difficult to
explain away the "pecuniary interest" clause, since you are essentially
extending a paid-for service.

IANAL, but it sounds like shaky ground to me. Of course, you could take
that attitude that the probability of an enforcement action is close to
zero, and you could be right. But I, personally, wouldn't try it.

I've found the QST article dealing with this. Its called

IEEE 802.11 Experiments in Virginia's Shenandoah Valley, on page 35 of
the July 2005 QST. I would be surprised if QST allowed these amateurs to
write up their illegal activities.

QST has some links encouraging this activity also

http://www.arrl.org/tis/info/HTML/high-speed-digital/emergency-communications.html

It was written form an EC perspective, but the purpose is pretty clear.

I'll save further comment until I've read the issue.

About 15 years ago I was involved in an industry group called the Bay
Area Wireless Communications Alliance, made up of engineers and
manufacturers' marketing people in "Silicon Valley".

At the time the WiFi specs were just starting to be formulated, and
the consensus was that the digital spread-spectrum encoding would take
care of all interference problems. When I piped up and mentioned that
(QRO) ham radio will cause shutdown, all the digital types poo-pooed
the suggestion, while the three hams in the group just nodded their
heads in agreement.

Can they spell "Front End Overload" ? <ggg>

==> DEAN DOWNGRADED TO TROPICAL DEPRESSION, HURRICANE WATCH NET
DEACTIVATED

The remnants of Hurricane Dean, now Tropical Depression Dean, have
dissipated over Mexico and the heavy rain threat has diminished. The
Hurricane Watch Net (HWN) secured activation for Dean on Wednesday
afternoon at 1915 UTC after commencing operations last Friday. Despite
experiencing very poor propagation and noisy conditions on 20 meters,
```

the net managed to provide the latest storm advisories from the National Hurricane Center (NHC) to amateurs and listeners in Dean's path.

As the storm powered through the Windward Islands, scraped Jamaica, threatened the Cayman Islands, Haiti, the Dominican Republic and finally crossed into Mexico, HWN was in frequent contact with the affected areas to collect real-time weather data from local hams, passing it to the NHC forecasters and informing the affected areas about what to expect next via official bulletins.

On Tuesday, Dean made landfall near Costa Maya or Majahual at 0830 UTC as a potentially catastrophic Category 5 hurricane. Earlier in the week, the storm slammed Jamaica as the eye passed within 50 miles of the South Coast of Jamaica as a Category 4 hurricane. The VoIP Hurricane Net solicited reports from any stations in the affected area or any stations that have contact with the affected area.

"We received numerous reports of estimated winds over 100 MPH in Corozal, Belize, with roofs off homes, power, electricity and phone service out in many areas. Similar damage was reported in Chetmual, Mexico from a relay from Connie, NH7IE, from a friend who lives in Chetmual, Mexico," said Rob Macedo, KD1CY, Director of Operations of the VoIP Hurricane Net.

WX4NHC Assistant National Hurricane Center Amateur Radio Station Coordinator, Julio Ripoll, WD4R, worked to get reports via the VoIP Hurricane Net and liaison was established with Spanish speaking Mexican stations on the XE2MCC EchoLink conference node: 255469. Ripoll received reports directly from that conference via Spanish, and Francisco Diaz-Gonzalez, NP3OD, from the VoIP Hurricane Net Control team, is monitoring that conference for reports. "We've received reports of trees down, power outages from the Telum and Campeche, Mexico, area as relayed via the XE2MCC conference and from other amateurs," Macedo said.

A report of 16 fishermen being stranded in the Middle Keys on Jamaica was confirmed by Julien Dedier, 9Z4FZ,from Trinidad, by making contact with the Trinidad Coast Guard who then verified the report with the Jamaican Coast Guard. All 16 fishermen took shelter in a Coast Guard building on the keys and were safe. Dedier relayed numerous other damage, storm surge and wind estimate reports from Jamaica to the net. "Thanks for the update on the fishermen and were glad to know they are safe," said Ripoll.

Ray Weber, KA1JJM, from Western Massachusetts SKYWARN, and Dave Taylor, KI4YIK, from Rock Hill, South Carolina, both were instrumental in relaying measured wind data reports. Ray had a contact in Lionel Town, Jamaica, who was a mariner, and Dave had a contact with a missionary in Jamaica that had wind instrumentation that clocked sustained wind speeds. "This is an example of gathering disaster intelligence information by all means possible which is a huge role for our net. If we don't have direct contact with the affected area, getting stations that can relay from other sources from both within the Amateur community

and from other contacts that Amateurs may have in the area can be of great help," Macedo said.

Between the *WX-TALK*/IRLP 9219 reflector system and the listen-only conferences, there were more than 150 connections from EchoLink PC users, as well as EchoLink and IRLP links and repeaters where people that were interested in Dean's impact on Jamaica monitored. This included relief agencies that monitored, such as the Salvation Army and the Southern Baptist Relief organization.

The Hurricane Watch Net activates on 14.325 MHz when a hurricane is forecast within 300 miles of landfall. - Information provided by HWN Manager Dave Lefavour, W7GOX, and Director of Operations of the VoIP Hurricane Net Rob Macedo, KD1CY

==> ARRL DIRECTOR ELECTIONS IN NOVEMBER

ARRL Chief Executive Officer and Board Secretary David Sumner, K1ZZ, announced that the Ethics and Elections Committee of the ARRL Board of Directors has completed its review of the candidates' eligibility and has found all of them to be eligible. Ballots will be counted at ARRL HQ on November 16. The Divisions holding elections this year are Pacific, Rocky Mountain, Southeastern, Southwestern and West Gulf.

In the Pacific Division, Bob Vallio, W6RGG, of Castro Valley, California, was named Director for another three year term; Vallio was running unopposed. The rules state that if a candidate is running unopposed, he or she shall be declared the winner without balloting. Vallio has been Pacific Division Director since February 2003, when he assumed the position upon the death of Jim Maxwell, W6CF. For Vice Director in the Pacific Division, incumbent Andy Oppel, N6AJO, of Alameda, California will face Rob Brownstein, K6RB, of Santa Cruz, California.

Current Rocky Mountain Vice Director Division Brian Mileshosky, N5ZGT, of Albuquerque, New Mexico, is running for Director against Jeff Ryan, K0RM, of Westminster, Colorado. Current Director Warren G. "Rev" Morton, WS7W, of Casper, Wyoming, is not seeking re-election. Vice Director candidates for the Rocky Mountain Division are Dwayne Allen, WY7FD, of Devil's Tower, Wyoming, and Chris Howard, W0EP, of Fort Collins, Colorado.

Due to the retirement of ARRL Southeastern Division Director Frank Butler, W4RH, of Fort Walton Beach, Florida, after 50 years of elected service to the ARRL, the Southeastern Division Director's seat is open. Candidates are Sherri Brower, W4STB, of Vero Beach, Florida; Rudy Hubbard, WA4PUP, of Milton, Florida; Greg Sarratt, W4OZK, of Harvest, Alabama, and Carl Zelich, AA4MI, of Chuluota, Florida. Candidates for Vice Director of the Southeastern Division are incumbent Sandy Donahue, W4RU, of Dothan, Alabama, and Jeff Beals, WA4AW, of Loxahatchee, Florida.

Current ARRL Southwestern Division Director Dick Norton, N6AA, of Topanga, California, will face challenger Carl Gardenias, WU6D, of Perris, California. Current Vice Director for the Southwestern Division Edward J. "Ned" Stearns, AA7A, of Scottsdale, Arizona, is not seeking re-election; four candidates have stepped forward to seek that position: Tom Fagan, WB7NXH, of Tucson, Arizona; Joseph Madas, AE6JM, of Banning, California; Tuck Miller, NZ6T, of National City, California, and Marty Woll, N6VI, of Chatsworth, California.

Current ARRL West Gulf Division Director Coy Day, N5OK, of Oklahoma City, Oklahoma, will face Ed McGinley, W5ETM, of Fort Worth, Texas, for that position. Incumbent Vice Director for the West Gulf Division, Dr David Woolweaver, K5RAV, of Harlingen, Texas, will face John Teer, AK5Z, also of Harlingen.

Ballots will be sent to all full members of the League in that Division who are of good standing as of September 10, 2007 (you must be a licensed radio amateur to be a full member). The ballots will be mailed not later than October 1, 2007 and, to be valid, must be received at ARRL HQ by noon Eastern Time on Friday, November 16, 2007.

Absentee ballots are available to those ARRL full members licensed by the FCC but temporarily residing outside of the US. Members overseas who arrange to be listed as full members in an appropriate Division prior to September 10, 2007, will be able to vote this year where elections are being held. Even within the US, full members temporarily living outside the ARRL Division they consider home may have voting privileges by notifying the ARRL Secretary prior to September 10, 2007, giving their current QST address and the reason another Division is considered home.

==> THE 2007 ARRL NATIONAL CONVENTION -- GONE, BUT DEFINITELY NOT FORGOTTEN

The 2007 ARRL National Convention, held August 18-19 in conjunction with the Huntsville Hamfest, lived up to its promise to be 'chock-full of activities and exhibits.' The centerpiece of the Convention was ARRL EXPO -- an entire exhibit area showcasing many ARRL programs and services. According to Charlie Emerson, N4OKL, vice president of the Huntsville Hamfest Association, more than 5000 people enjoyed the National Convention and hamfest.

ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R, led the team that organized ARRL's exhibit and convention activities. "The Huntsville Hamfest Committee rolled out the red carpet for ARRL members and friends. We were delighted to sign up more than 150 new and renewing members throughout the event. But the greatest measure of this event's success was in the relationship-building that took place throughout these days. GAREC, the Huntsville Hamfest and the ARRL National Convention brought together the very best of our Amateur Radio Service."

Just prior to the hamfest, the 2007 Global Amateur Radio Emergency Communications Conference (GAREC-07), sponsored by the IARU, was Thursday and Friday, August 16-17. GAREC-07 registrants participated in

emergency communications-themed presentations, discussions and demonstrations.

ARRL staff and volunteers ran booths and tables at the Convention, showcasing the services and programs offered by the League. Representatives from various ARRL departments were in attendance, including the ARRL Lab, Public Relations, Publications, DXCC and Awards, and the ARRL VEC. The big ARRL Bookstore offered hundreds of books and other ARRL publications and merchandise, as well.

ARRL Officers and Directors were on hand, too, including President Joel Harrison, W5ZN and CEO David Sumner, K1ZZ, as well as Vice Presidents Rick Roderick, K5UR, and Rod Stafford, W6ROD. Representatives from the IARU, including President Larry Price, W4RA, and Vice President Tim Ellam, VE6SH, made the trek to Alabama, as well.

ARRL Headquarters staff and Field Organization leaders gave more than a dozen short mini-forums on the ARRL Stage during the Convention in ARRL's big exhibit area. Presentations on the ARRL Stage included an update on Broadband over Power Lines (BPL) given by Ed Hare, W1RFI; suggestions for energizing young -- and potential -- hams, presented by ARRL Youth Contributing Editor and Georgia Assistant Section Manager/Youth Andrea Hartlage, KG4IUM; a "how-to" session on writing for QST, presented by ARRL News Editor S. Khrystyne Keane, K1SFA; an introduction to ARRL Operating Awards and the ARRL QSL bureau with ARRL DXCC Manager Bill Moore, NC1L; tips for contesting with QST Contributing Editor and ARRL author Ward Silver, N0AX, and an overview of Amateur Radio on the International Space Station (ARISS) presented by Rob Suggs, KB5EZ, NASA Space Environments Team Lead from the Marshall Space Flight Center.

ARRL staff presented forums at the hamfest, as well as on the ARRL Stage. ARRL President Joel Harrison, W5ZN, moderated the ARRL Membership Forum. ARRL Education Services Manager Debra Johnson, K1DMJ, led the ARRL Education Forums which included an overview of the ARRL's new Education Services Department. She also covered topics on the new ARRL mission statement on education, new licensing materials, enrichment courses and an update on ARRL outreach activities through the Education and Technology Program and Amateur Radio on the International Space Station (ARISS).

ARRL Membership Manager Katie Breen, W1KRB, took visitors on a virtual ARRL Headquarters tour, sharing stories of ARRL special event activities aimed at encouraging on-air activity among new and newly active hams, including real-time Web blogs and videos, Hello-Live! and the W1AW HF Open House. ARRL Media and Public Relations Manager Allen Pitts, W1AGP, talked about ARES and the media, and discussed ways to help public service activities capture the attention of the media. ARRL DXCC Manager Bill Moore, NC1L, and ARRL Web and Software Development Manager Jon Bloom, KE3Z, presented ARRL's Logbook of the World (LoTW) and the DXCC award program.

More than 8000 copies of the 2007 Public Relations brochure, "Getting the Message Through" were distributed at the Convention, as well as 200 copies of the revamped "Hello!" brochure, according to Pitts.

Another activity offered at the Convention this year was the ARRL Passport. While this activity was a smaller version of the one offered at the Dayton Hamvention, it provided the same excitement and thrill as its counterpart. Billed as the ultimate Convention scavenger hunt, those taking part this year searched the ARRL EXPO area and attended ARRL Forums to acquire special Passport codes that, once entered in the Passport, qualified the hunters to win one of two prizes. Out of nearly 500 entries, Richard Pavalonis, KE5ORR, of Santa Fe, Texas, won an Icom IC-7000 HF/VHF/UHF all-mode mobile transceiver, and Tim Shipman of Owensboro, Kentucky, son of Walter, KI4OHY, will have fun with the Yaesu FT-8577D HF/VHF/UHF all-mode mobile transceiver. Congratulations to the winners and thanks to all who participated.

For those who couldn't make it to Huntsville, Keane and Bloom together contributed to a Convention Weblog <http://www.arrl.org/blog/Huntsville%202007> that posted news and happenings direct from the ARRL EXPO area (and beyond!).

One of the busiest places at the ARRL EXPO was the Youth Lounge. Young people, ranging from ages of about 7 to 17 were all over the Convention and hamfest, exploring all that Amateur Radio has to offer. There were many foxhunts throughout the two days, as well as scavenger hunts, a ham radio quiz show, crafts, prizes and more.

Other hamfest forums covered contesting, emergency communications such as D-STAR, public service, education and many technical issues.

After the hamfest closed on Saturday, the ARRL Alabama Section held a reception for retiring ARRL Southeastern Director Frank Butler, W4RH. Butler is retiring after more than 50 years of elected service to the ARRL. He began his elected service as Section Communications Manager for the Western Florida Section. Butler plans to stay involved with the ARRL, attending the IARU Region 2 Committee Meeting in Brasilia, Brazil as a member of the ARRL delegation next month, and the ARRL Executive Committee Meeting in October, before his term ends January1, 2008.

Emerson said that Convention and hamfest attendance reached unprecedented levels. "The hamfest is getting into the 'unreal' category. We have reports of people coming in from everywhere." Both official hotels, the Embassy Suites (connected to the all air-conditioned Von Braun Center, site of the Convention and Hamfest) and the Holiday Inn (across the street) sold out before the hamfest.

When asked where the next ARRL National Convention would be held, Inderbitzen said, "We're glad to help evaluate National Convention applications, but the ultimate decision is made by the elected officials of the ARRL Board of Directors. In the meantime, we hope that all of our members can someday enjoy attending an ARRL National Convention."

==> GAREC-07 CELEBRATES EMERGENCY COMMUNICATIONS IN HUNTSVILLE

The third event of its kind, and the first ever held in the United States, the Global Amateur Radio Emergency Communications Conference (GAREC-07) took place August 16-17 in Huntsville, Alabama, just prior to the 2007 ARRL National Convention and Huntsville Hamfest.

Almost 100 people from all over the world came to Huntsville, making this truly a global event. GAREC's prevailing theme, how to apply advanced technologies to emergency communications, was echoed throughout the two-day event. From presentations to discussion groups to emergency vehicle displays to information about the latest in hardware, GAREC attendees had a sampling of just about everything pertaining to the Emergency Communications arena.

According to IARU International Coordinator for Emergency Communications Hans Zimmermann, F5VKP/HB9AQS, "Compared to the first two GAREC conferences [held in Tampere, Finland], the number of international participants was considerably lower. Region 1 [Europe, Africa, the Middle East], was represented by Ireland, France, Bulgaria, Finland, The Netherlands and South Africa. Region 2 [the Americas] had representatives from Brazil, Canada, the United States and Trinidad and Tobago. Region 3 [Asia and Oceania] submitted a detailed report, but sent their regrets due to a collision of dates with a major regional event."

ARRL Alabama Section Manager Greg Sarratt, W4OZK, said many large and essential organizations that work with Emergency Communications sent representatives to GAREC. "We saw representatives from the IARU, ARRL, Army MARS, American Red Cross, Southern Baptist Disaster Relief, Department of Homeland Security, The Salvation Army, industry and others." Sarratt said that organizations weren't the only attendees. "Many Section Emergency Coordinators (SEC), District Emergency Coordinators (DEC) and Emergency Coordinators (EC) from the ARRL field organization attended GAREC."

In addition to those ARRL volunteers and Southeastern Division Director Frank Butler, W4RH, CEO David Sumner, K1ZZ; Chief Technology Officer Paul Rinaldo, W4RI; Media and Public Relations Manager Allen Pitts, W1AGP, and Emergency Preparedness and Response Manager Dennis Dura, K2DCD, attended GAREC on behalf of the ARRL.

Both Pitts and Dura gave presentations. Pitts spoke about the need for a Public Information Officer (PIO) to be in the Joint Information Center (JIC) at any ARES deployment. "We lose far too many good stories because no one is in the right place speaking to media at the time of the incident. With a 24 hour news cycle, even a few hours later is too little too late. This idea was well received, and while many of the region's groups have recently added this to their action plans, approximately a dozen other groups stated that they will be adding this component to their activities. This information was also well received by some of the international representatives who asked for copies of our PR materials and permission to translate and modify them for use in their home countries," Pitts said.

Dura talked about using VoIP, EchoLink and IRLP for establishing and maintaining communications during hurricanes. The session discussed the methods of combining RF links to the Internet to establish a cohesive network. The VoIP Hurricane Net is another tool that Amateur Radio operators, the National Weather Service, the National Hurricane Center and emergency managers use to gather detailed information on local conditions.

Other presentations included the use of new technologies and modes in Emergency Communications, such as ALE, EchoLink/IRLP, D-STAR, Winlink 2000 and TSSG, an advanced system being developed in Ireland.

Outside of the conference venue, various Emergency Communications agencies brought their vehicles. Sarratt said, "An impressive fleet of emergency communications vehicles added a perfect hands-on hardware feel to GAREC. The vehicles were on display and tour for visitors to learn about serious mobile communications." These vehicles, hosted by Alabama Homeland Security, Alabama Baptist Disaster Relief, American Red Cross, The Salvation Army and the Tennessee Emergency Communications Association, were very popular, drawing large crowds. "Luckily, no emergencies occurred to take the vehicles away from us this weekend," Sarratt said.

While GAREC is not a decision-making body, its ideas and proposals will be submitted to the IARU to be included for discussion at their next Administrative Council meeting, scheduled for June 2008. These ideas may also be discussed at each of the three IARU Regions' upcoming meetings.

The conference made the recommendation to introduce the call sign suffix "/D." This suffix would be used by those in the Amateur Radio Service who handle traffic related to emergency and disaster situations. According to Pitts, this recommendation, made by Willem Visch, PG9W, would let anyone listening immediately know there was emergency traffic and lessen the chances of someone unintentionally breaking in on an emergency net.

Another recommendation included the extension of "EmComm Party on-the-Air." These are Emergency Communications exercises already in place in Region 1. Seppo Sisatto, OH1VR, Region 1 representative, proposed holding two annual international drills, lasting only 4 hours, beginning November 11. This, he said, recognizes that major calamities can and do cross international borders, and hams need to practice for such eventualities.

GAREC suggested that the IARU initiate studies in cooperation with its Member Societies and with specialized emergency communication groups. These studies would focus on the development and possible introduction of standard codes for use in international emergency communications, as well as on the need for the development of a list of standard resource types.

The conference announced its support of the IARU's Administrative Council decision to collect information from all Member Societies about

the status of implementation and application of the revisions to Article 25 of the ITU Radio Regulations (RR) resulting from WRC-03. The part of Article 25 concerning Emergency Communications says, "Amateur stations may be used for transmitting international communications on behalf of third parties only in case of emergencies or disaster relief. An administration may determine the applicability of this provision to amateur stations under its jurisdiction" (RR 25.3), and "Administrations are encouraged to take the necessary steps to allow amateur stations to prepare for and meet communication needs in support of disaster relief" (RR 25.9A).

GAREC appealed to all of the IARU Member Societies, as well as specialized emergency communications groups, encouraging the accession to and ratification of the Tampere Convention on the Provision of Telecommunication Resources for Disaster Mitigation and Response Operations <http://www.itu.int/ITU-D/emergencytelecoms/doc/tampere/S-CONF-ICET-2001-PDF-M07.pdf> by their respective national authorities. The US has not yet ratified this document, but word was received during GAREC that Ireland announced their accession to Tampere. There are currently 37 countries that have adopted Tampere.

The conference also appealed to the IARU to "further encourage the development and the application of new modes and technologies in emergency communications," and to support the development of training aids. This includes the handbook on emergency communications, initiated by the 2005 and 2006 GAREC conferences, "and the development of a handout to inform the public, in particular during major conferences such as the forthcoming WRC-07 <http://www.itu.int/ITU-R/index.asp?category=conferences&link=wrc-07&lang=en>, as already decided by the IARU Administrative Council in 2005." GAREC also asked the IARU to "continue its support to the continuation and further development of the GAREC concept and process."

GAREC also asked Amateur Radio contest organizers to include a provision in their rules that contest participants avoid frequencies in the immediate vicinity of the Center of Activity frequencies (as proposed at GAREC-05); these frequencies are 14.300, 18.160 and 21.360 MHz. According to Pitts, "This would minimize interference to weak or distant stations which may be passing emergency traffic, but not heard in the contest din." Region 2, of which the US is a part, has not adopted the Center of Activity frequencies, but they will be discussed at the Region 2 meeting in Brazil next month.

Zimmermann said, "With the conference in Region 2, GAREC has established itself in a major event in the field of Emergency Communications. What started in Region 1 as an independent event, has in 2006 found wider attention due to its combination with the International Conference on Emergency Communications (ICEC-06) and now with the ARRL National Convention in 2007. It is, however, only thanks to the hosts of these conferences, that they can fulfill the purpose set out from the

beginning.

"Only the actual implementation and application of the recommendations made by GAREC can be the ultimate criteria for the success of these conferences, as a tool for the further development of the role of the Amateur Radio Service in the provision of emergency communications. The appreciation expressed by numerous participants following each one of the so far three events, and the increasing interest demonstrated by the number of participants must be taken as an obligation to work even harder on the subject, rather than being considered a cause for satisfaction with what has been achieved. The statement of GAREC-07 shows that much remains to be done. In addition to new proposals, it reiterates some still pending issues raised in 2005 and 2006."

Sumner said GAREC stressed interoperability. "In explaining how they are applying specific advanced technologies to emergency communications, speaker after speaker identified interoperability with other technologies and networks as a key objective. It was a joy to share the GAREC experience with nearly 100 dedicated, committed Amateur Radio volunteers who were as intent on cooperating as on explaining and advocating their favorite technologies. This spirit of cooperation and the recognition of the need to preserve our interoperability bode well for the future of Amateur Radio emergency communications, and for our ability to continue to serve our local, national and global communities."

Sarratt agreed. "This was truly a successful conference. The knowledge gained on technology, networking, organizations and hardware exceeded our expectations. This knowledge and the relationships developed will pay many dividends during disaster relief efforts."

Tying it all together was a call that came in right as GAREC was closing. Beepers went off, text messages were received, radios echoed throughout the hall as the National Weather Service and SKYWARN issued an alert to North Alabama due to high winds and oncoming storms. Pitts said, "The alert and call for ham radio helped underscore the dedication and need for those volunteers better than any final speech could have done. It was like, 'The party's over - we go back to work!'"

==> ARES TEAMS ACTIVATED FOR NORTHWEST OHIO NEAR-RECORD FLOODING

Heavy rains over the past week began taking their toll on Northwest Ohio communities as near record flood levels peaked on Wednesday. Ohio Amateur Radio Emergency Service District 1 was especially hard-hit in the Hancock and Seneca County areas, and a command post at the Seneca County Emergency Operations Center was activated.

The city of Findlay experienced catastrophic flooding; according to Karl Erbland, K8ARL, District Emergency Coordinator for ARRL Ohio Section - District 1, this is the worst flooding in the area since 1913. Hancock County ARES Emergency Coordinator Bill Davis, N8PTJ, activated Hancock Emergency Radio Services ARES to provide support to numerous agencies,

including the Hancock County Emergency Management Agency, area fire departments, American Red Cross, the Sheriff and health district departments. Two shelters were set up, with the largest taking around 250 displaced persons.

The flooding affected every area of the city. The Blanchard River's almost-100-year-old record of 18.5 feet was nearly broken by a crest reading of 18.46 feet on Wednesday afternoon.

The Hancock County hams even had to be resourceful for their own services. A few days before the major flooding began, lightning struck the Findlay Radio Club repeater site during another severe storm. Radio communication during the flood was conducted on a simplex frequency, with additional support through their 440 MHz repeater.

Reports of cell phone failures and some problems with the state's 800 MHz digital system set the stage for Amateur Radio networks help to relieve some of these shortcomings. At an information meeting held on Thursday, EMA Director Garry Valentine, N8GIL, noted that agencies should learn to count on the Amateur Radio operators in emergencies to provide communication support, and that Amateur Radio has many capabilities for communicating. "Our amateurs are always there to assist," Davis said. "We can count on them in times like these."

Communications activities included the following: relayed from Emergency Operations Center to fire departments; facilitated delivery of food and water to Jenera, Ohio residents; assisted in the rescue of two elderly ladies and two people in wheelchairs; kept County Sheriff aware of road closures; tracked rescue operations for the Red Cross; tracked displaced persons being transported to Red Cross shelter; on standby for Water Command Center and City Command Operations; relayed Health and Welfare traffic; provided telephone service to some without home phone service; relayed between Seneca County and Hancock County EMA directors, and relayed between District Emergency Coordinator and Hancock County Emergency Coordinator.

Amateurs in Seneca County were put on standby Tuesday, August 21 when word came that the Ruffing Family Care Center (south of Tiffin, Ohio) might be in danger from the rising Sandusky River, which runs near the center's property. County Emergency Coordinator Mike Klaiss, KC8BUJ, and EMA Director Dan Stahl, KC8PBU, held an on-the-air meeting with ARES officers and the McCutchenville, Ohio fire chief to review the reports and predictions from the National Weather Service in Cleveland. ARES officers remained ready through the evening and Wednesday morning. Seneca County activated the Emergency Operations Center around 7 AM on Wednesday as the Sandusky River continued to rise and affect additional areas in the county.

Seneca County EMA Director Dan Stahl said: "Hams play a big part in the emergency operations plan and in the communications center at the EOC. We intend to use all the amateurs in Seneca County during disasters like these. They provide a trained and reliable pool of communicators capable

of assisting us."

Thursday brought a little relief from the rising waters but then came the rising temperatures and humidity levels. Disaster assessment was a hot job as temperatures rose to 91 degrees and similar levels of humidity. "There is a lot more to do across the entire affected area," said Erbland. "Our communities are extremely blessed to have such dedicated Amateur Radio operators. Our emphasis on ARRL communications training and the different FEMA courses such as Incident Command System and National Incident Management System is paying off. We're standing by for any needed communications as our communities recover."

ARRL Ohio Section Emergency Coordinator Frank Piper, KI8GW, said, "I am extremely proud of how well the Amateur Radio operators in Hancock, Seneca and all other counties affected by the weather this past week in the Ohio Section. This is why we plan and test our communication skills and equipment on a regular basis." -- Information provided by Karl Erbland, K8ARL, District Emergency Coordinator for ARRL Ohio Section - District 1; Bob Copas, K8OIL, Hancock County Liaison/Net Control Operator, and Bill Davis, N8PTJ, Hancock County ARES Emergency Coordinator

==> FCC ENFORCEMENT ACTIONS

On August 23, the FCC's Enforcement Bureau released new Amateur Radio enforcement actions. Norman Ball, KE6VWN, of Sunland, California, and Richard Martin, KE6RJI, of Maywood, California, both received Warning Notices informing them that the FCC had received written complaints concerning the K6GE repeater and cited their "failure to follow rules set forth by the licensee/control operators of the repeater system for its users." They were told that they had been told to refrain from using this repeater system, "but have apparently ignored both verbal and written requests" to do so. Both Ball and Martin were informed by the FCC that if they use the repeater again after receiving their letters from the FCC, "[the FCC] will initiate enforcement action against your license, which may include revocation, monetary forfeiture (fine) or a modification proceeding to restrict the frequencies on which you may operate." The FCC warned Ball and Martin that fines "normally range from $7500 to $10,000."

Mark F. Hubeny, N9ZHW, of Kaukauna, Wisconsin, received notification from the FCC informing him that he never responded to their Warning Notice concerning the operation of his amateur station on non-amateur frequencies sent June 1 of this year. He was told he had 20 days to respond. The letter said, "Failure to respond appropriately to this letter of inquiry may constitute a violation of the Communications Act and our rules. We will afford you an additional 20 days from the date of this letter to respond."

Romeo C. Valdez, K6RMY, of San Jose, California, received notice from the FCC about a complaint filed against the operation of his station. "The complaint alleges that you are operating an unidentified repeater

on 147.735 MHz," the letter said. Valdez was directed to "review and fully address the complaint within 20 days of receipt of this letter. Failure to respond to this letter would be a separate violation of the Commission's rules."

Smith Trucking, Inc, of Smithfield, Pennsylvania, was cited by the FCC for "operating radio equipment without a license on the frequency 28. 535 MHz and causing interference to licensed stations in the Ten Meter Amateur Band. The drivers were observed operating unlicensed in April and May 2007 on Route 19 between the Fairmont, West Virginia area and the Haywood power plant near Shinnston, West Virginia." The FCC admonished Smith Trucking to "[p]lease advise your drivers that operation of radio transmitting equipment without a license is a violation of Section 301 of the Communications Act of 1934...and subject them to a fine or imprisonment, as well as in seizure of any non-certified radio transmitting equipment."

James T. Ogden, N7KPU, of Prescott Valley, Arizona, was advised by the FCC of a complaint from "the licensee of a coordinated repeater system, with supporting documentation, alleging that your N7KPU repeater is operating without coordination on 447.350/442.350 MHz and causing harmful interference. The complaint indicates that you have been contacted numerous times about this problem but have declined to address it." The FCC requested information from Ogden concerning the coordination, if any, of his repeater, and asked that he forward any complaints he might have received. The FCC also wants Ogden to describe in detail how his repeater is configured, "including all sites, IRLP links and addresses, using diagrams where necessary. Detail any changes in location since the coordination, if any, was issued." Ogden was informed that any information he provided will be used to determine what, if any, action the FCC might take in this matter.

The FCC issued an Order of Dismissal and Termination against Jack R. Sharples of Florida concerning the matter of his application for a new Amateur Radio license. In May, in a Hearing Designation Order, the FCC called Sharples "a convicted felon and registered sexual predator," and said "Sharples's felony conviction for at least one sexual-related offense involving children raises material and substantial questions as to whether he possesses the requisite character qualifications to be a Commission licensee. Although Sharples's felony adjudications occurred more than seven years ago, the nature of the criminal misconduct, and the fact that the Amateur Radio Service is particularly attractive to children, call into serious question whether he should be permitted to obtain an Amateur Radio authorization." Sharples had 20 days since the release of the HDO to file a written appearance; on June 19, "he submitted to the Presiding Judge a document in which he set forth reasons for filing an [Amateur Radio license] Application, notwithstanding his felony convictions [and] the document was received as a good faith Notice of Appearance. "Sharples, in a telephone call with the FCC requested more time to consider whether he would continue to prosecute his Application. The request was granted without

objection." On June 27, Sharples sent a fax to the Presiding Judge withdrawing his application for an Amateur Radio license. The FCC's request to dismiss the application with prejudice and terminate the preceding was granted, as was Sharples's application for an Amateur Radio license, also with prejudice, on August 1.

On March 8, 2007, David O. Castle, WA9KJI, of Evansville, Indiana, was first notified by the FCC to "refrain from using the repeater system operating on 146.79/146.19 and 147.15/147.75 MHz," stemming from a complaint by the trustee of the Tri-State Amateur Radio Society, W9OG. In May, 2007, the FCC notified Castle that it was designating his license renewal application for hearing in the wake of alleged misconduct extending back several years and continuing at least until earlier this year. In its Hearing Designation Order from May, the Commission said, "Since 1998, Castle has been warned repeatedly to refrain from intentionally interfering with radio communications; broadcasting without communicating with any particular station; causing interference on amateur repeaters; using amateur repeaters without authorization, and using indecent, slanderous or harassing language. We find that Castle's continuing course of conduct raises questions as to whether he possesses the requisite character qualifications to remain a Commission licensee." Castle was given 20 days to respond to the HDO, but according to the Memorandum Opinion and Order released August 20, 2007, "to date [August 1, 2007], no written appearance has been filed by, or on behalf of, Mr Castle. In addition, a prehearing conference was held on August 13, 2007, in the Commission's Washington, DC offices. No one attended or entered an appearance on behalf of Mr. Castle."

The Commission, however, did receive a number of communications by or on behalf of Castle, one requesting that the contents of the HDO be sent to him "'in an audible form (cassette or cd)"' because he has "'limited eye sight.'" The MO&O said Castle told the FCC "Travel will not be possible due to health and finances. Representation by an attorney is not in my budget." The FCC complied with Castle's request and sent him a disc containing audio files of all the documents released in his proceeding to date. Castle's daughter, Donna J. Dill, sent the Presiding Judge a fax on June 18 stating, among other things, that her father "'is not able to travel or hire an attorney...He tells me that he has sent his statement and this is all he is able to do as his eye sight is limited and health poor."

It was concluded through Castle's and Dills' submissions to the FCC that Castle did not intend to appear as directed, and "even assuming that these documents can somehow be construed as 'pleadings,' as defined in Section 1.204 of the Commission's Rules, they are procedurally deficient and may not, therefore, be considered." As such, it was ordered that Castle's application to renew his Amateur Radio license be dismissed with prejudice.

==>SOLAR UPDATE

Tad "I Wanna Be the One to Walk in the Sun(spot)" Cook, K7RA, this week reports: Conditions were quiet this week, with no geomagnetic disturbances and most days had zero sunspots. For the past two days, August 22-23, the sunspot number was 11 and 12, indicative of a single sunspot group. Slightly unsettled conditions are expected this weekend, with a planetary A index from August 24-30 expected at 8, 15, 15, 12, 8, 8 and 5. Sunspot activity is expected to remain low, as lone sunspot 969 moves across the sun. Geophysical Institute Prague predicts quiet conditions for August 24; unsettled August 25; quiet to unsettled August 26; quiet August 27; unsettled August 28, and quiet again August 29-30. Sunspot numbers for August 16 through 22 were 0, 0, 0, 0, 0, 11 and 12 with a mean of 3.3. The 10.7 cm flux was 67.3, 67.6, 67.9, 67.8, 69.1, 69.3 and 70, with a mean of 68.4. Estimated planetary A indices were 7, 5, 4, 3, 2, 4 and 4 with a mean of 4.1. Estimated mid-latitude A indices were 6, 2, 1, 2, 2, 3 and 2 with a mean of 2.6. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the Radio: This weekend, the CCC Sprint (CW) on August 24. The ALARA Contest, the Hawaii QSO Party, the SCC RTTY Championship, the YO DX HF Contest and the Ohio QSO Party are all on August 25-26. The SKCC Weekend Sprint and the SARL HF CW Contest are both August 26. Next week, look for the NCCC Sprint (CW) on August 31. The Russian RTTY WW Contest and the Wake-Up! QRP Sprint are on September 1. On September 1-2, check out the All Asian DX Contest (Phone), RSGB Field Day (SSB) and IARU Region 1 Field Day (SSB). The DARC 10 Meter Digital Contest is September 2, while the MI QRP Labor Day CW Sprint is September 3-4 and the ARS Spartan Sprint is September 4. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education course Registration: Registration remains open through Sunday September 9, 2007, for these online courses beginning on Friday September 21: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Section Manager Elections Results Announced: In the only contested Section Manager race this summer, Bill Hillendahl, KH6GJV, was re-elected as the ARRL San Francisco Section Manager. He received 237 votes and his opponent, Warren "TR" Reese, WB6TMY, received 134 votes. Election ballots were counted last week at ARRL Headquarters.

Hillendahl, of Santa Rosa, California, begins his third two-year term of office on October 1, 2007. The following incumbent ARRL Section Managers did not face opposition and were declared elected for their next terms of office beginning October 1, 2007: Jeff Ryan, K0RM, Colorado; Mark Tharp, KB7HDX, Eastern Washington; Susan Swiderski, AF4FO, Georgia; Phineas Icenbice, W6BF, Los Angeles; Ray Taylor, N5NAV, South Texas; Ann Rinehart, KA8ZGY, West Virginia. Jim Pace, K7CEX, of Centralia, Washington, will become the Western Washington Section Manager on October 1. Pace will take over the reins from Ed Bruette, N7NVP, who decided not to run for a third term of office. Pace has moved up through the section leadership ranks by previously serving as District Emergency Coordinator, Section Emergency Coordinator and presently as an Assistant Section Manager. Ron Murdock, W6KJ, who already had been declared elected as the new Sacramento Valley Section Manager as of October 1, began his term a little early on July 2. Murdock was appointed to fill in for Casey McPartland, W7IB, who stepped down because of a planned upcoming move out of the section.

* Malaysia to Send Astronaut to ISS: According to ARRL ARISS Program Manager Rosalie White, K1STO, earlier this month Malaysia announced that two Malaysian doctors have become new hams; one will be chosen to travel to the International Space Station under the Malaysian National Angkasawan Programme with Russia. Dr Sheikh Muszaphar Shukor, 9W2MUS, and Captain Dr Faiz Khaleed, 9W2FIZ, will make QSOs with students via ARISS. The two doctors regularly publicize ham radio and ARISS on their blog <http://www.angkasawan.com.my/blog/index.php?itemid=21>. For more information on the Amateur Radio on the International Space Station project, check out their Web page <http://www.rac.ca/ariss/oindex.htm>.

* Communications Museum Comes Back to Life: A generous individual who wishes to remain anonymous donated $40,000 to the Vintage Radio and Communications Museum of Connecticut, enabling the museum to pay off their debt to the town of Windsor, Connecticut. The donation comes as the museum plans to reopen this summer for the first time in more than seven years. Since that time, the museum has acquired a 20,000 square foot building in Windsor, and volunteers have been hard at work restoring the building for public use. The town of Windsor extended the museum at $35,000 loan that helped them pay insurance and other expenses while the group worked to ready its new location. A $100,000 state grant paid for major building upgrades, allowing the museum to plan for an August opening. The Vintage Radio and Communications Museum of Connecticut is dedicated to the preservation of old-time communications equipment and to educating the public. The museum displays radios, televisions, motion picture and telephone equipment, as well as vintage advertising and memorabilia. Audio, video and paper libraries, along with an extensive collection of schematics, are also available for research. For more information, visit their Web site <http://www.vrcmct.org>.

* Online Course Developer Needed: As a result of the success of the ARRL Education Services' online Technician licensing course, and due to

increasing demand for General Class licensing instruction, ARRL is looking for an experienced on-line course developer to create a General Class licensing instruction course on a contract basis. ARRL's current learning management platform is WebMentor. If you are interested in applying for this position, please send an e-mail <coursedev@arrl.org> describing your interest and experience. Please provide a daytime phone number in your e-mail.

* QST Wants You!: Have you ever thought of writing an article for QST? The official journal of ARRL, the national association for Amateur Radio, QST is always on the lookout for articles that explore all the possibilities of ham radio. We are looking for stories and articles that present a project or idea that is useful and engaging to most hams. The story you have had brewing in your head for months might be perfect for QST or the ARRLWeb. For the Web, we're looking for short (1500 words maximum), general-interest articles that tell a particularly interesting story. At least one photo to accompany the story is mandatory. Send your submissions to QST Managing Editor Joel Kleinman, N1BKE <qst@arrl.org>.

* Let Us Know What You Think: What's your favorite part of The ARRL Letter? What kind of stories would you like to see in the Letter? Would you prefer the Letter in an HTML format? This is your Letter and your chance to let your voice be heard. Please send your suggestions to ARRL News Editor S. Khrystyne Keane, K1SFA, at k1sfa@arrl.org, with the subject line "ARRL Letter Suggestions." All messages will be read and discussed, and we look forward to implementing positive suggestions into the ARRL Letter.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA,

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

#chuckle#

I'm sure the smell of Magic Blue Smoke leaking out of the front-end,
and the whimpering sound of badly-abused demodulators, will stimulate
their spelling ability no end :-)

It doesn't count as a modification of the antenna, unless it's a
"periscope" antenna ("fly-swatter") used for Part 101 microwave
stations, and then it's proscribed because the side lobes exceed those
permissible for antennas in those services.

>The issue of whether it's OK to allow other people to use your home

Cross-posted to: rec.radio.amateur.moderated,aus.radio.amateur.misc,rec.radio.info

This is WIANEWS for week commencing AUGUST 26 2007

NATIONAL NEWS

We start with news from Peter VK4OD who as contest manager of this years RD contest says logs are being received with errors!

"Good morning listeners, it has been particularly pleasing to receive all those logs this week, to date we have a total of 230 Electronic and postal logs, to those that have not yet sent in your log, however your part is not complete until you get your logs away.

Some of the logs received have revealed some errors, however, I contact those senders before declaring the winner's

Please get your logs in as soon as possible before the cut-off date,

Under RD 2007 Rules
Para 17b In all cases, logs must be received by last mail on Monday 10th September, 2007. Late entries will not be eligible.

Back to you graham."

Well from the RD weekend to the ILLW Weekend.

Last weekends International Lighthouse and Lightship weekend saw folk from Amateur Radio Victoria activate the Lighthouse and Time Ball Tower at Point Gellibrand near Williamstown with the call sign VK3WI.

A barbeque fed hungry operators at lunch time and a kettle and coffee kept the well fed operators awake when conditions on the air deteriorated.

VK3WI worked all bands and the whole place was buzzing with activity.

Jim VK3PC kept a watchful eye on the proceedings including guiding visiting operators to have a go at the main station. Apparently VK3WI had around 400 contacts and more than 23 lighthouses during the weekend.

Throughout the weekend, locals gathered to have a look and ask questions and were handed the now familiar "Calling CQ" brochures. The weather held out but was very cold. Other than that, it was an action packed ILLW weekend and a very good time was had by all. Well done all.

AMATEUR RADIO - HOME OF THE GOOD GUYS

And a NEW home for the 'good guys' of the C.G.A.R.C.

The Central Goldfields Amateur Radio Club has new club rooms in the old TAFE building at 59-63 Victoria Street North, on the corner of Station Street, Maryborough.

The club meets there on the first Friday of the month at 8pm in a room rented from the St John Ambulance Depot.

The CGARC is a very friendly and active club responsible for a considerable number of new Foundation Licensees getting on air.

Amateur Radio Victoria say inquiries can be made by contacting the club president Peter Rafferty VK3CC telephone 5460 4387 or for more details just goggle its webpage.

(http://gcarc.amateurradio.com.au/)

We spoke of "Good Guys".. none so "good' as silent key Chris Jones....

SFX:- Recording of Chris Jones talking on air

Yes that was the voice of Chris Jones Jones VK2ZDD - silent key.

Yesterday Saturday the 25th of August was the 12 month anniversary since Chris became silent key. Chris was an amazing person, his passion and enthusiasm for the Wireless Institute of Australia, the Foundation Licence, Amateur Radio, in fact everybody's health and well being in general was just simply amazing. Chris has so many friends and mates and we still do still miss him.

Someone else who was very close to Chris was Steve Leatheam VK2BGL.

"It has been just on a year now since we all lost our very good friend Chris Jones VK2ZDD. I was with Chris when he passed away on Friday morning August 25 last year. It was extremely sudden and was a great shock to all of his friends around the world.

So what has happened in the last year to all of us who were close to Chris? Well first and foremost, his best mate, Max his much loved Labrador I am pleased to report is fit and well in the care of Anne, Chris's sister and her family. He has lost a lot of his excess weight and at the age of 8 is a very active pooch spending lots of time enjoying weekends on their friend's farm down in the Southern Highlands. And he still does not bark.

Chris's house in Menai has been sold and is now no longer in the family. We all have treasured memories of the great parties and get togethers in his home.

Our EchoIRLP node IRLP 6222 EchoLink VK2BGL-L is still very active and has been relocated to Engadine with a VHF getaway as good if not slightly better than the old location in Chris's home at Menai.
Its frequency 146.550 is still populated with many of Chris's old friends and is one of the most active VHF simplex channels in Sydney.

The Papua New Guinea village library fund at last count was just nudging $10000 but there has been a delay on building the premises by the government.

The money is to be given to Paul and the village elders to purchase the books when the building is further advanced.

And myself? who had Chris as a good friend since 1966 and lived and worked with him for the last few years of his life? Well I have retired back to my old home town of Kiama on the South Coast where I spent the first 17 years of my life.

Would you call that a Sea change or Back to My Roots?

73 from Steve VK2BGL".

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6FXYL

The Wireless Institute of Australia's Foundation Licence Manual is a full colour manual consisting of 95 pages of information for those studying, or those who would just like a reference book for Foundation Licence Operators.

The manual contains the all relevant information you will need to know to successfully complete a training course to obtain our foundation licence.

It also contains a wealth of information a Foundation Licence operator will need. Items like Band Plans, Electrical Safety information, operating procedures such as the Q code, how to contact you local radio club, the WIA and much more.

For more information on obtaining the foundation licence manual please visit wia.org.au
(Alan VK4YAR)

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or training in Amateur Radio go to wia.org.au and check out the club pages.

Participating clubs keep this site up to date and post the latest information for all to see.

Next Foundation Licence course, and Standard / Advanced assessments .....

VICTORIA

Helping Foundation Licensees to upgrade

Amateur Radio Victoria has a few vacancies in its latest Standard Licence Bridging Course to be held in September.

The course has been designed by Kevin Luxford VK3DAP to be delivered once a week on a week-day night over four weeks plus all day Saturday.

If you hold a Foundation Licence and want to enrol in this bridging course to be held in Melbourne please contact Barry Robinson VK3JBR on 0419 808 323 or email arv@amateurradio.com.au

Amateur Radio Victoria has announced that enrolments are now open for its Foundation Licence training and assessments weekend of September the 15th and 16th to be held at Box Hill North.

Inquiries to Barry Robinson VK3JBR 0419 808 323 or email arv@amateurradio.com.au

HAM COLLEGE Calls for Western Australia to get off the Couch

Come on get off the couch - fulfil that new years resolution and get your Ham licence.

Do you live in or know someone in the Collie/Bunbury Region who wants to do their Foundation Course/exam -

Ham College is coming to you......next month (September) - get your name on the list to do your Foundation course and subsequent exam. Come on - give me a call - you can do it in 1 weekend.

My number is 0412 704 226.

In the Perth metropolitan area the next Foundation course is scheduled for 15th & 16th September - get your name in early to avoid disappointment.

Want to upgrade that F call then - yep you guessed it - contact me a call and I will place you on the list for the next available course or exam session.

TASMANIA

Radio and Electronics Association of Southern Tasmania

For more information or enrol please contact Reg Emmett VK7KK by emailing regemm@ozemail.com.au or calling 0417 391 607

And remember Foundation Licence Manuals and CD's are available for purchase at McCann's Model World in Elizabeth St. Hobart at $20.

A quick reminder about "Intro to the Standard Licence" sessions on a Saturday afternoons from 1:00 to 4:00pm in the Domain clubrooms.

These sessions are an introduction to the standard licences and attempt to de-mystify the upgrading process.
(Ken VK7DY/Reg, VK7KK)

REAST Education & Assessments

http://reast.asn.au/events.php#TrainingCourses

We have now confirmed arrangements for the first REAST Standard Licence Training Courses.

Starting date is not yet confirmed as we are keen to have a few more starters.

The course will run for approximately 12 weeks on a Friday night from 7 to 10pm.

There will be a variety of presenters from REAST as the course
progresses.

There are still some places available but be quick.

Cost is $75 which covers the training CD, handouts, tea coffee, etc.

Application forms can be found on the REAST website

HAMS ACROSS AUSTRALIA.

VK3
web service:- http://www.amateurradio.com.au/news/

>From next Sunday, the 2nd of September, a number of changes are happening to
this VK3BWI networked broadcast. With details here's Ross Pittard VK3FCE.

"Following a review by Amateur Radio Victoria of its putting to air of the
WIA weekly broadcast a number of changes will happen.

The main ones are that from the first broadcast in September it will go to air
half an hour earlier at 10.30am and a 40 metre call back re-introduced.

Amateur Radio Victoria has spent more than $3500 to upgrade its VK3BWI
HF transmission facilities with new feeders, multiple antennas, a new
80 metre transmitter and a frequency change for 40 metres to 7158 kilohertz.

The 40 metre call back, when it begins on the 2nd of September, will
particularly welcome reports from Foundation Licensees and the broadcast's
interstate listeners.

Regular listeners may have noticed a change to the 2-metre call-back through
the VK3RMM repeater.

The new format is a "check-in" by callsign only session, followed by the
F-Troop Net Controller who conducts a call back for anyone wishing to make a
comment or has a question.

These changes and much more, all in support of the WIA's weekly broadcast.

I'm Ross Pittard VK3FCE and you're listening to VK1WIA."

Thanks Ross, let us look at VK3 Broadcasts,

David Ryan VK3LOZ of the EMDRC says their "Two Bob Show" is on the way.

Bob Tate & Bob Duckworth have offered to provide some training to other club members on the use of CRO's. The training will cover the many uses of the CRO with particular attention as to the connection of the test device to communication equipment.
To start the training off they will give a presentation at the Friday Coffee shop September 21. This will be followed by a hands on practical day at the East Burwood Club rooms on Saturday 22.
The club welcomes members and visitors to attend between 10.00 & 17.00 with a BYO BBQ at lunch time

The Shepparton and District Amateur Radio Club Annual Hamfest will be held on the 9th of September at the regular venue, " The St. Augustine's Hall" in Orr St. Shepparton.
Doors will be opening to the public at 10am and for traders at 7.30am.
If you would like to book a table you can still contact Daryl, vk3kl@netspace.net.au
For the Shepparton and District Amateur Radio Club, this is VK3KAL.

WIA Presidents Lunch Brisbane

The Queensland Club President's lunch is on again this year.
The lunch will be held at 12:00 in Brisbane, on Saturday 13th October.
The venue is yet to be finalised.

WIA President Michael Owen and WIA Director Ewan McLeod
will be present, as well as WIA Secretary Ken Fuller.
This is your opportunity to hear the WIA President and get
the latest WIA information. This will also be the first function
for the new Queensland Advisory Committee.

We would like to invite one attendee per club to the lunch.
This will ensure that we have a good coverage of radio clubs
in Queensland. Please consider sending a club member to
attend the lunch, and talk to and hear from
Michael Owen and Ewan McLeod.

Further details of the venue will be coming.
Please advise attendees to me qac@wia.org.au
or Ken Fuller vk4kf@wia.org.au

Regards, Don Wilschefski VK4BY Chairman Queensland Advisory Committee

INTERNATIONAL NEWS

>From Maine to Oregon, from Florida to Finland, more than 5,000 ham radio
operators gathered in downtown Huntsville last weekend to browse the latest
in radio electronics, learn about trends in the field and, for many, finally
meeting face to face.

This year's event drew more participants than normal. About 4,000 operators
typically attend the annual Huntsville Hamfest, said Charlie Emerson,
vice president of the Huntsville Hamfest Association.

This year the national convention of the ARRL drew an extra 1,000 operators
and vendors to the Von Braun Centre's South Hall.

And a small delegation of almost 100 more operators were there for a Global
Amateur Radio Emergency Communication Conference. "They made their U.S. debut
in Huntsville, Alabama," Emerson said.

While amateur radio is a hobby for many, the Federal Communications
Commission set aside the radio frequencies above the AM broadcast band for
use in emergencies.

Ham operators must be licensed by the FCC. Many wore their call letters on
caps or badges so they could meet one another for the first time during the
three-day event.

==========
NEWS FROM ARNEWSLINE

HAMWATCH AND THE NATIONAL NIGHT OUT

The mayor of South El Monte, California, has praised ham radio
operators who assist her city and the nation in time of need and she
did so in a most unusual way. On the air. Take a listen:

--

Mayor Figueroa: "To all of you Hamwatch operators, thank you for
helping all of your cities. National Night Out - remember to say no to
crime, leave your lights on and thank you for doing a great job. God
bless you and god bless America."

--

That's Mayor Blanca Figueroa and the story of how she got to thank the ham community for its involvement is actually a story unto itself. One that kind of involves us here at Newsline. At least peripherally.

On Tuesday August 7th, communities across the nation participated in the "National Night Out." This is an opportunity for communities to promote activities aimed at increasing security with programs such as Neighbourhood Watch, Community Emergency Response Teams and of course Amateur Radio.

One such event was held in the City of South El Monte, a suburb of Los Angeles. That's where members of the Temple Station Hamwatch Group were present to display radio equipment and answer questions related to Ham Radio.

As part of the demonstration Deputy Hector Figueroa, KE6VRL, used a portable station to transmit what the group calls the "Amateur Radio Newsline - Check-In Net" at its regularly scheduled time on the local N6USO repeater. As the net was winding down, Mayor Figueroa requested a moment at the microphone. And as you heard, she used it to thank the members of Hamwatch and the Amateur Radio community for their ongoing efforts to communities all across the United States. (KE6VRL)

==========

RSGB NEWS G4NJH

Monday 13 August Ofcom made it legal to use approved ultra wide band equipment without a licence. Ultra wide band technology allows very fast wireless data transfer over short distances.

It works by using very large chunks of spectrum at once. Approved equipment will operate between 3.1GHz and 10.6GHz. During consultations the RSGB expressed concerns that there may be mutual interference with several amateur microwave bands.

Supporters of the technology say that the ultra wide band transmissions are of such low spectral density that interference to other services is unlikely.

The full text of the statement can be found on the Ofcom web site.

The Irish Radio Transmitters Society says is getting close to tracing the 10m religious broadcasts reported recently on GB2RS. The location has been narrowed down to somewhere on the northern side of the city of Dublin.

Further work is still required to locate the actual transmitter.

Transmissions have been noted on 28.105MHz FM at 10am local time on weekdays. Additional transmissions occur at 9am and 11am on Sundays.

OPERATIONAL NEWS -

CONTEST COLUMN - D A T E L I N E

AUGUST 26-27

ALARA CONTEST.

This ALARA contest is run over 36 hours to give everyone 2 bites at the 80m band.

For OMs only contacts with YLs count, while YLs can count ALL stations.

Club stations operated by YLs are certainly encouraged.

One highlight of the ALARA contest is that you may work the same station after a one hour interval on the same band. So it is worth while staying around
a tad longer for that extra contact for both yourself and the other station.

ALL DETAILS CAN BE FOUND ON PAGE 47 OF JULY'S AR MAGAZINE

7th World HST Championship will be held in Belgrade Serbia September 19-23rd.
www.hst2007.org

SEPTEMBER 22

The Second running of the Westlakes Cup is coming up on Saturday 22nd September commencing at 8.30 Eastern Australian Standard Time (10.30 Z).

Boat Anchor Sprints:
October (13).
Local ZL time: 2000 to 2100 hrs

Section 1: Old radios - all valves - i.e. ZC1, 19 set, Heathkits, any home brew set, but must have all valves.

Section 2: Any Hybrid transceiver (must have valve finals i.e. FT200, FTDX400/401, Drake, FT 101s, etc..

Amplitude Modulated signals only.

The overall winner shall be the entrant having the highest points score which will be published in the following New Zealand "Break-in".
(Jamie Pye ZL2NN, Editor NZART's InfoLine)

NOVEMBER 17/18 VK Spring VHF-UHF Field Day

MEDIA WATCH

ABC LOCAL RADIO in Kalgoolie have interviewed Kalgoorlie amateur radio operator Lewis Pannell as part of the ABC's science week.

The news article provides some interesting background information on our hobby and shares amongst other things, that Lewis had communicated with NASA astronaut Andy Thomas during a space mission.

It's great to see Amateur Radio being promoted in such a positive way and the show also reported on Mr Pannell's recent attendance at a VK6 Ham Fest WHICH SAW enthusiasts travelling from across that state to talk all things amateur radio.

It is like a Trekkies for amateur radio enthusiasts. There were 350 people who travelled from Kalgoorlie, Kellerberrin and Perth to a ham fest According to Mr Pannell, radio equipment can range from $500 to thousands of dollars.

But, speaking on ABC Mr Pannell says the highlight for him as a radio ham was speaking Astronaut Andy during a space mission.

Another Kalgoorlie amateur radio operator, Des Martin, says the hobby of amateur radio is growing.

"In the last couple of years in Australia the number of hams has increased by at least 1000 probably 1500 and with the new regulations, it is a lot easier to get started. You don't have to know Morse code anymore, which did put a few people off," he said.

hours to October 21st at 24:00 hours YOUR local time.

An official start will be given by the World Scout Bureau
radio station in Geneva, Switzerland on October 19th at
21:00 h UTC with a transmission in the 20 and 80 meter
bands and on EchoLink.

WW SPECIAL INTEREST GROUPS --- RESCUE RADIO

EMERGENCY FREQUENCIES REGION ONE
21.360 - 18.160 - 14.300 - 7.060 - 3.760 MHz.

WICEN group seeking ex submarine service radios - periscopes welcome too.

http://tas.wicen.org.au/

The show went ahead, not quite as planned by the Southern Tasmanian
Endurance Riders in the Wielangta forest south of Hobart, with WICEN
providing safety checkpoints. First it was fallen trees resulting
from the earlier fires that caused problems for the course setters.
Then the rains washed out the tracks they did find. Endurance ride
rules require 90% of the course to be accessible by vehicle in case
horses become lame and have to be floated out. It might have been
possible to literally float them out, but the requirement is for the
wheeled variety of horse conveyance.

So - last minute changes were necessary, resulting in deployment
changes for the WICEN teams. Steve VK7FSRC came to the rescue with a
text message to Bruce VK7MBD that he was being called on R5 from
Wielangta - No mobile phone coverage in that neck of the woods but R5
was making it. That call meant that Bruce and Scott VK7FREK had to
crawl out of bed earlier than planned and get to their new job
location some two hours earlier on Saturday morning.

The rest of the crew had arrived on Friday in pouring rain to set up
base and survey the new checkpoint locations. Waders were appropriate
footwear and four wheel drive almost essential - and that was just to
drive across the flat paddocks at base camp. Every footstep caused a
sideways fountain of muddy water - and a big clean up job later.

Fortunately, Peter VK7TPE took his caravan which provided some dining and socialising shelter for the wet but still happy campers.

The job went well with missing riders found, farriers called to replace lost shoes and floats to bring home the stragglers. 80MHz was used for voice, leaving 2 metres available for APRS tracking and a trial of the MEX packet tracking system. MEX was developed by WICEN South Australia for car rally tracking and scoring. The slower paced horse ride gave us a good opportunity to try it. All went well, but resource requirements might pose a problem for larger scale use and computer power supplies presented a 2m interference problem.

A great social and enjoyable weekend made all the more rewarding given the climatic challenges. The other amphibians were VK7s Chris FCDW, Garry JGD, John ZZ, Roger ARN, Scott HSE and Stu NXX.

Another demonstration of Amateur Radio in action providing a professional quality public service.

BB's DIARY ROOM - THE FUTURE, IN AMATEUR RADIO

2008

Sept 13 Alarameet 2008 will be held in Ulverstone Tasmania on Saturday 13th and Sunday 14th September 2008. Susan VK7LUV for details.

THE FINAL FINAL

WALKS

Jeff VK4XJJ is still going strong on his walk across Australia.

But he still wants to hear from YOU, and it is these calls in particular that keep him going!!

Thursday, 23rd August, 2007.

Jeff is now 125 Kms south of Normanton.

Tuesday and Wednesday were record breaking walk days. 37Kms on Tuesday and 37.5 Kms on Wednesday.

Roger in Gympie VK4BNQ continues to provide a first class relay service for the group. Still on 7.045 MHz at 1730 EST.

Temperature for the past two weeks has ranged from 1 to 32 degrees C.

No walking on Friday 17th when camped 50Kms south of the Bourk & Wills Roadhouse as it rained most of the day and very cool.

VK4SWE (Lyn) on Sweers Island has kindly offered a nights accommodation. Lyn has also offered Jeff the use of her station to conduct his nightly sked from the "real" gulf . Could be a busy night! Sweers Island lies off shore from Karumba.

Brother Bill will try to reach Jeff after Normanton by car and walk a "little" of the way. Bill will take a 100 watt linear amplifier for Jeff, to assist with better communication on the way back. A tuned (approx. 10

metre), three piece aluminium tube vertical dipole will be set up on the wagon each night. It is an experiment and is Bill's antenna from Stockton. Should be an improvement away from the city noise!

Jeff continues to thank WIA and Editor Graham with their support and the wonderful amateurs who have taken time to communicate with Jeff.

Regards,

Bill Johnson VK2FWGJ

for Jeff Johnson VK4XJJ Walking for DeafBlind awareness

Web design & relay station Roger Stierli VK4BNQ

Yes, I don't see any encouragement to use the capability to extend Internet
service. Now, more narrowly defined Internet service, something like
WinLink for example, might well be a neat use of this capability.

..

exactly... Allow no Gateway to the internet... Only allow access to your station..

In my case.. WiFi user (HAMONLY) can access my BPQ/FBB Packet Station then link to the world via Packet (isolated protedcted acess) over the internet... But only to other Packet BBS's... No way to get Google or sexpit.com type web content... Winlink access would also be available.. But again NO INETNERT... Protect your self its not worth it if you screw up..

If I have a Ham Realted site I wish to make available to my wifi clients... They are hosted on my own server, and no way to get to inet.. Inet can get to my sites.. But visitor coming in on Ham Only Wifi cannot get to internet...

If you are simply trying to extend your range and want every tom dick and harry to have internet access... Keep Ham radio out of it... And use Part 15 Rules and live with what you have a Sudo ISP..

Ptherwide Ham Radio is cool and legal.. Just use common sense.. And do not allow Internet Access via your WiFi...

Again all this is ok.. If you like risks.. But best thing to do is not link to internet... A lot can be done without giving DIRECT access to the internet via your wifi link.. ie Packet, Locally Hosted websites, under your control. and packet winlink etc... At much higher power and with all kinds of homemade omni and directional antennas mounted as high as 200 feet... Just again leave the ISP out of it as long as theyc an only access yoru Station.. And only others on the internet via your Packet or Winlink stations you are ok...

As long as they do not violate Part 97 rules...

Forget part 15.. They will not apply to a licensed Amateur Radio op... But do think of your neighbors.... Even though you can run high power and outdoor antennas.. They may not like you interfering with their Gambling and or porn website viewing if you squash their signal..

1 GB2RS NEWS Sunday 26 August

The news headlines

* Ofcom to scrap Frequency Assignment Panel and Site Clearance Working Group

* Radio Communications Voluntary Service National Coordinator steps down

* Bumper participation in Lighthouses weekend

Ofcom has announced that it intends to end the National Frequency Assignment Panel (NFAP) frequency coordination and the Working Group on Radio Site Clearance (WGRSC) processes.

When applying to use radio spectrum in the UK, applicants are currently required to complete NFAP frequency co-ordination and WGRSC site clearance processes. These are operated by Ofcom on behalf of the Cabinet Office. Ofcom intends to end these processes on 31 August 2007. >From an Amateur Service aspect this should mean that the current process for repeater and similar applications in amateur primary bands should be reduced by some weeks. However, Ofcom will continue to carry out coordination on bands such as 70cm and 23cm in which the Amateur Service is a secondary user.

More than 380 lighthouses in over 48 countries were on the air for the 2007 International Lighthouse and Lightship Weekend on 18 and 19 August. The event, now in its ninth year, is organised by the Ayr Amateur Radio Group. The weekend was more of a QSO party and amateur radio demonstration than a contest. Its aim was to raise public awareness of lighthouses and lightships, to promote amateur radio and foster international goodwill.

Dr Robin Bellerby, GM3ZYE has stood down from the position of Radio Communications Voluntary Service National Co-Ordinator. This role encompasses providing radio communications support of local community events and RAYNET. Until further notice any queries in this area should be directed to the Amateur Radio Department at the RSGB.

On 12 August, Murray Niman, G6JYB, of the Chelmsford Amateur Radio Society (CARS) presented two Smith Chart calculators to Trish Robinson of the Sandford Mill Museum. Smith Charts enable plotting of real and imaginary impedance for designing matching circuits - a process that is usually performed by computers now rather than by hand. The chart was developed by, and named after, Philip H Smith in 1938.

For more information on CARS and the amateur radio courses it offers contact Clive, G1EUC, on 01245-224577 or e-mail training 2007@g0mwt.org.uk.

The Glengormley Electronics Amateur Radio Society, GEARS - GN0XYZ, once again put MI6X on the air from Ballycarry for the IOTA contest.

This year they smashed their contact tally for 2006 by logging nearly 900 QSO's and 152 IOTA references in just over 18 hours of operation. A number of English amateurs who took part last year returned again this year to enjoy the famous 'Craic' before and after the event.

Over the past few years GEARS has become involved in the RSGB's IOTA contest operating from both Northern Ireland and the Irish Republic. In the last two years though they have stayed on home soil using their contest call of MI6X IOTA reference EU-115 from a community centre in the village of Ballycarry Co. Antrim.

2 The Spalding and District Amateur Radio Society has revamped and changed the title of the Tulipland award. It will now be known as the South Holland award. The club call signs G1DSP and G4DSP are both regularly on HF and VHF so please look for the call signs on the clusters. G4OO is used for special club events. For details on how to be eligible for the South Holland Award check the website www.sdars.org.uk or e-mail secretary@sdars.org.uk.

And now for the details of rallies and events for the coming week

[Note to newsreaders: Please use your judgement on which of the August 26th items to read out.] On Sunday 26 August the Torbay ARS Communications Fair takes place from 10am at Newton Abbot Racecourse in Devon. The show will be attended by RSGB President Angus Annan. Details from G4FCN, on 01803 812117 or by email to rally@tars.org.uk. On Sunday 26 August the Milton Keynes ARS Rally takes place from 10am at Holne Chase School, Buckingham Rd, Bletchley. Details from Mike, G3LFR, on 07973 264473, or by email to rally@mkars.org.uk.

On Monday 27 August Huntingdonshire Amateur Radio Society is having its Bank Holiday Monday Rally at St Neots Community College, Barford Road, St Neots, Cambridgeshire. Contact David, G7DIU, on 01480

431 333, or on the web at www.hunts-hams.co.uk. On Saturday 1 September the Rugby Amateur Transmitting Society Rally takes place at Stanford Hall,

Lutterworth. Details from T Humphries on 01455 552519, or on the web at www.rugbyats.co.uk. On Sunday 2 September the Andover Radio Amateur Club Autumn Boot Sale takes place at Wildhern village hall, SP11 0JE. Details from Terry, G8ALR, on 01980 629346. On Sunday 2 September the Newhaven Fort Amateur Radio Group Rally takes place from 10.30 at Newhaven Fort, Newhaven. Details from Eddie, G0ECW, on 01273 300772, or by email to eddie@zamboodle.demon.co.uk. More details of these and future events can be found on pages 88 and 89 of the September edition of RadCom. Now for the news of special events The Radio Society of

Harrow is running G3EFX/P at the Harrow in Leaf Show. Activity takes place on 26 and 27 August. Visitors to the station are welcome. There will also be activity from GB2DHH. Please check details on the club web site, www.g3efx.org.uk, before travelling. The Orkney Wireless Museum will be active as GB2OWM from 31 August to 5 September. Celebrating the 17th Orkney International Science Festival, the station will be at the Museum's premises at Kiln Corner, Kirkwall. Probable operating periods will be weekdays and Sunday afternoons between 1430 and 1630 and Saturday morning between 1000 and 1230pm. Activity will be primarily on HF SSB. For more information contract Bill, GM3IBU, QTHR or e-mail gm3ibu@orpheusmail.co.uk And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

Roland, HB9FMD, will be active as OX/HB9FMD from Ilulissat, Greenland until 27 August. He plans to operate mainly CW on the WARC bands. QSL via home call.

3 Jack, RW3QC, Valery, RZ6AU, Yuri, RU6UR and Alexander, RA6UF, will be active as UE6UFO from the Kharabalinsky district (RDA AO-16) and a few inland islands until 27 August. They plan to operate SSB and CW on 40, 20 and 15 metres. All of the QSOs will be confirmed automatically via the bureau. Glyn, GW0ANA, will be cruising the Outer Hebrides (EU-010) until 28 August. He will be there on holiday with friends and amateur radio activity will be secondary. He hopes to activate St. Kilda (EU-059). His call will be GM0ANA/p and he will operate SSB using an inverted V with battery power from a solar panel. QSL via home call. The Association of Radio amateurs of Venezuela and the Grupo DX Caracas will be active as YW5AS from Las Aves Islands (SA-051) on 27 to 31 August. They will operate SSB, CW and digital modes on the HF bands, plus VHF FM. QSL via DL3AMA. Giovanni, IZ2DPX and Flavio, IW2NEF, will be active as HB0/IZ2DPX and HB0/IW2NEF from Malbun, Liechtenstein on 1 to 3 September. They will be QRV on HF as well as 2 metres and possibly 70 MHz. QSL direct or via the bureau. W1AI reports he will be active as VP5/W1AI from Providenciales (NA-002), Turks and Caicos Islands on 1 to 8 September. He plans to operate CW and SSB on 160 to 6 metres. QSL via home call. Brad Crave, VK2LR, Raffy Shammay, VK2RF, M0GDY, Jim Ayling, VK2JA, Ras Shammay, VK2FROS, Eddy Hanham, VK2VEH, Grant Hinchcliffe, VK2TU. Are all operating in the UK from 2 September. They will be operating with VHF/UHF and HF in holiday mode. Now the contest news The RSGB 50MHz Activity Contest takes place on 28 August between 2200 to 2230 local on all modes. The exchange takes the form of RST, serial number and locator. The RSGB SSB Field Day takes place between 1300 on 1 September to 1300 on 2 September on the 3.5 to 28MHz bands. The exchange takes the form of RST and serial number. The RSGB 144MHz Trophy contest takes place between 1400 on 1 September to 1400 on 2 September on all modes. The exchange takes the form of RST, serial number and locator. Now the solar factual data for the period from 13 August to 19 August, compiled by Neil Clarke, G0CAS Solar activity was very low. The solar disc became spotless from the 15th. From mid evening on the 17th for a 30 hour period several small B class and numerous minor A class solar flares occurred, suggesting that a sunspot

group was about to rotate into view. However this has not yet happened. The last flare took place around midnight on the 18th. An explanation into levels of solar activity and strengths of solar flares can be found in the propagation section within the RSGB yearbook or at www.wikipedia.org and type solar flare in the search box. Solar flux levels averaged 68 units and varied little day to day. The 90 day solar flux average on the 19th was 71, that's one unit down on last week. X-ray flux levels remained below the minimum A1 level everyday. Geomagnetic was quiet. As forecast last week a small coronal hole disturbance took place on the 15th and the 16th. The `hole' had decreased in size to such an extent that the Ap index was only 8 units on the 15th and 7 the next day. The average was Ap 5 units. The ACE spacecraft saw solar wind

4 speeds increase to 490 kilometres per second on the 15th. Particle densities increased to 46 particles per cubic centimetre also on the 15th. Bz varied between minus and plus 6 nanoTeslas. The pattern of HF propagation differed little from the last couple of weeks, though the appearance of midevening propagation to Hawaii on 14MHz was a useful reminder that interesting contacts can sometimes be made on an apparently flat band. Sporadic E was reported on most days on 28MHz, though less frequently on 50 and 70MHz. And the new GB3RAL 40MHz beacon, testing on low power, was heard in Germany, Hungary, Sweden and Portugal, as well as in parts of the UK by tropo. It was also heard in Portugal on 70MHz. And finally the solar forecast. This week solar activity is expected to continue at very low levels, however, there is a slight chance that activity could increase to low on some days. Solar flux levels could be in the 70's for most of the week. Geomagnetic activity is expected to be quiet right up to next weekend when a recurring coronal hole disturbance is expected to commence. MUFs during daylight hours at equal latitudes should be about 19MHz for the south and 16MHz for the north. The darkness hour lows should be around 9MHz. Paths this week to the East coast of North America should have a maximum usable frequency with a 50 per cent success rate of about 18MHz. The optimum working frequency with a 90 per cent success rate should be around 14MHz. The best time to try this path will be 1300 and 2100 hours UTC. Sporadic E could take place on some days.

And that's all for this week from the propagation team.

5 Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies can be found on the RSGB website, including e-mail addresses

and website links where known.

[Note to newsreaders: Please read the local news items appropriate to the service area of your

transmission.]

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Sunday 26 August the Radio Society of Harrow is operating G3EFX/P at the Harrow In Leaf horticultural show and fun weekend. Contact Linda, G7RJL, on 020 8386 8586, or on the web at www.g3efx.org.uk or Chris 01895 621 310.

On Sunday 26 August Southdown Amateur Radio Society is operating G1KAR at Beachy Head. Contact John, G3DQY, on 01424,424,319, or by email to vaughdqy@aol.com.

On Sunday 26 August Torbay Amateur Radio Society is holding its rally at the Newton Abbot Race Course with RSGB President Angus Annan, MM1CCR, attending the event. Contact Dave, G6FSP, by email to g6fsp@tars.org.uk.

On Monday 27 August Huntingdonshire Amateur Radio Society is having its Bank Holiday Monday Rally at St Neots Community College, Barford Road, St Neots, Cambridgeshire.. Contact David, G7DIU, on 01480 431 333, or on the web at www.hunts-hams.co.uk.

On Tuesday 28 August Horndean and District Amateur Radio Club is having a talk by historian Madeleine Selby on 'Wickham - past and present'. Contact Stuart, G0FYX, on 023 9247 2846, or on the web at www.hdarc.co.uk.

On Wednesday 29 August Chesham and District Amateur Radio Society is planning for HF Field Day. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 29 August Dover Radio Club is having its school holiday net on GB3KS. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 29 August Fareham and District Amateur Radio Club is having its junk sale. Contact Jim, M1JJN.

On Wednesday 29 August Havering and District Amateur Radio Club is operating GB4HRC to celebrate over 40 years of the club. Contact Dave, 2E0EBV, on 07956 594 514.

On Wednesday 29 August Worthing and District Amateur Radio Club is planning for SSB Field Day. Contact Roy, G4GPX, on 01903 753 893.

On Friday 31 August Mid-Sussex Amateur Radio Society is having a radio night. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 31 August Wimbledon and District Amateur Radio Society is having a summer camp feedback discussion, led by Eric, G0KRT. Contact Jim, M0CON, on 020 8874 7456.

On Saturday 1 September Chesham and District Amateur Radio Society is taking part in the HF Field Day. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

6 On Saturday 1 September Mid-Sussex Amateur Radio Society is taking part in the HF Field Day. Contact Sue, G6YPY, on 01273 845 103, or by

email to sue@figgerit.co.uk.

On Saturday 1 September Norfolk Amateur Radio Club is taking part in the SSB Contest with Police Gala Day on the Sunday. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Sunday 2 September Loughton and Epping Forest Amateur Radio Society is operating GB2EFF (Epping Forest Festival). Contact Marc, G0TOC, on 020 8502 1645, or by email to info@lefars.org.uk.

NEWS FOR THE SOUTH-WEST

On Wednesday 29 August South Bristol Amateur Radio Club is having session 6 of its Project OSS. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 29 August Thornbury and South Gloucestershire Amateur Radio Club is on the air. Contact Tony, G0WMB, by email to tonytsgarc@beeb.net.

On Thursday 30 August Yeovil Amateur Radio Club is having a committee meeting and putting the club station on the air. Contact Gary, 2E0BFJ (g.swain@tesco.net).

On Friday 31 August Guernsey Amateur Radio Society is having a talk by GU0UJC on an easy to build 2m antenna. Contact Phil, GU0SUP.

NEWS FOR THE MIDLANDS

On Monday 27 August Gloucester Amateur Radio And Electronics Society is operating from the Escarpment. Contact Anne, 2E1GKY, on 01452 548478, daytime.

On Monday 27 August Lincoln Short-Wave Club is putting GB2CWP on the air at East Kirkby. Contact John, G1TSL, on 01526 323 153.

On Monday 27 August Stourbridge and District Amateur Radio Society is having an open shack night. Contact John, M1EJG, on 01562 700 513.

On Tuesday 28 August Derby and District Amateur Radio Society is on the air. Contact Martin, G3SZJ, on 01332 556 875.

On Tuesday 28 August Wythall Radio Club is having a talk by Chris, G1VDP, on the Worked All Britain Awards. Contact Chris, G0EYO, on 07710 412 819, or by email to g0eyo@blueyonder.co.uk, or on the web at www.wythallradioclub.co.uk.

On Wednesday 29 August Lincoln Short-Wave Club is having a video night. Contact John, G1TSL, on 01526 323 153.

On Wednesday 29 August Telford and District Amateur Radio Society is having a talk on weather satellite reception by G8UGL. Contact Mike, G3JKX, on 01952 299 677, or by email to mjstreetg3jkx@blueyonder.co.uk.

On Thursday 30 August Salop Amateur Radio Society is having an equipment sale. Contact Glenda, G1YJB, on 01939 235 412.

On Friday 31 August Coventry Amateur Radio Society is having a video night. Contact John, G8SEQ, on 02476 273 190, or by email to johng8seq@ntlworld.com.

7 On Friday 31 August Hucknall Rolls-Royce Amateur Radio Club is having an internal quiz night. Details on the web at www.hrrarc.com.

On Friday 31 August Loughborough and District Amateur Radio Club is on the air. Contact Chris, G1ETZ, on 01509 504 319.

On Saturday 1 September Hucknall Rolls-Royce Amateur Radio Club is taking part in the RSGB SSB HF Field Day at Crich, Derbyshire. Details on the web at www.hrrarc.com.

On Saturday 1 September Wythall Radio Club is taking part in the HF SSB NFD. Contact Chris, G0EYO, on 07710 412 819, or by email to g0eyo@blueyonder.co.uk, or on the web at www.wythallradioclub.co.uk.

NEWS FOR THE NORTH OF ENGLAND

On Monday 27 August Sheffield Amateur Radio Club is having a VHF operating evening. Contact Trevor, M0TWS.

On Monday 27 August South Manchester Radio and Computer Club is having its monthly technical forum. Contact Ron, on 0161 969 3999.

On Tuesday 28 August Halifax and District Amateur Radio Society is on the air at Rishworth with GX2UG. Contact Brenda, 2E0YKS, by email to wrenuk10@yahoo.com.

On Tuesday 28 August Wakefield and District Amateur Radio Society is preparing for the weekend's IARU Field Day with the contest manager Ken, 2E0SSQ. Contact Dave, G4CLI, on 07748 221 855, or by email to g4cli@hotmail.co.uk.

On Wednesday 29 August Great Lumley Amateur Radio and Electronics Society is on the air. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Friday 31 August South Manchester Radio and Computer Club is having a natter night BBQ. Contact Ron, on 0161 969 3999.

On Friday 31 August Tynemouth Radio Club is having a Morse and operating night. Contact Tony, G8YFA, by email to tonyregnart@blueyonder.co.uk.

On Friday 31 August Wakefield and District Amateur Radio Society is having a summer camp feedback session led by Eric, G0KRT. Contact Dave, G4CLI, on 07748 221 855, or by email to g4cli@hotmail.co.uk.

On Saturday 1 September Sheffield Amateur Radio Club is taking part in the SSB Field Day Contest. Contact Trevor, M0TWS.

NEWS FOR SCOTLAND

On Thursday 30 August Aberdeen Amateur Radio Society is on the air and having Morse practice. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

On Friday 31 August Banff and Buchan Amateur Radio Club is having an evening of technical topics. Contact geraldbrt@aol.com.

On Saturday 1 September Aberdeen Amateur Radio Society is taking part in the RSGB SSB Field Day 2007 as GM3BSQ/P at Walker Park. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

8 On Saturday 1 September Dundee Amateur Radio Club is taking part in SSB Field Day. Contact Martin, MM0DUN, on mm0dun@dundee-amateur-radio.co.uk, or on the web at www.dundee-amateur-radio.co.uk.

On Saturday 1 September West of Scotland Amateur Radio Society Club is taking part in SSB NFD. Details on the web at www.wosars.org.

On Sunday 2 September Dundee Amateur Radio Club is taking part in SSB Field Day. Contact Martin, MM0DUN, on mm0dun@dundee-amayeur-radio.co.uk, or on the web at www.dundee-amateur-radio.co.uk.

NEWS FOR WALES

On Saturday 1 September Swansea Amateur Radio Society is participating in the RSGB SSB Field Day. Contact Roger, GW4HSH, on 01792 404422.

NEWS FOR NORTHERN IRELAND

No news items have been received for Northern Ireland this week. And that's the end of this week's GB2RS news broadcast,

prepared by the Radio Society of Great Britain.

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 26 AUGUST 2007

You are listening to ZS6SRL the official Radio Station of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is transmitted every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. To listen to a web stream or Echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links for details.

This, and previous bulletins, can be downloaded from the www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

This transmission is by Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, and 51,400 MHz as well as 438,825 and 1 297 MHz in the Pretoria area. (Other newsreaders please change to suit).

In the news today:

INTO SPACE WITH AMATEUR RADIO TO CELEBRATE INTERNATIONAL SPACE WEEK

PRESIDENT'S NET AND INTECNET FOR TONIGHT POSTPONED

TWO AMATEURS TO PROMOTE 6 METRE OPERATION

HANNES COETZEE WINS THE HF CONSTRUCTION COMPETITION

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

INTO SPACE WITH AMATEUR RADIO TO CELEBRATE INTERNATIONAL SPACE WEEK

Learners in South Africa under the age of 18 are invited to participate in a special project to celebrate 50 years of man's endeavours in space. In October it will be 50 years ago that the first satellite, Sputnik 1, was launched by the Russians.

To celebrate the event several joint activities have been planned by the SARL, SA AMSAT and the South African Amateur Radio Development Trust. The youth event is called "Into Space with Amateur Radio" and features the following:

. A state of the art laptop to be won; . 10 learners will win a SARL 40 Metre DC Receiver kit; . 30 Learners will get an opportunity to speak with South Africa's first astronaut, Mark Shuttleworth via Amateur

Radio on 10 October 2007 and ask questions about Mark's experiences in space. . Every participant will receive a certificate to commemorate the event

There are two categories of entry

. School Group entry . Individual entry

Both categories require the participant to write an essay about "The future of Space in support of mankind". The essay must be the original work of the learner and be between 400 and 600 words.

Full details are available on the sponsoring organisations' web pages : www.sarl.org.za, www.amsatsa.org.za and www.amateurradio.org.za

Only 10 schools will be able to participate and must be in reach of the following repeaters in Greater Cape Town, Port Elizabeth, Durban and Gauteng. Schools must send their requests to register before 5 September to youth@sarl.org.za. The closing date for essays entries is 25 September 2007

PRESIDENT'S NET AND INTECNET FOR TONIGHT POSTPONED

The President's Net and Intecnet will not take place this evening but will be on the air next Sunday 2 September. Join SARL President Graham Hartlett next Sunday at 19:00. Graham will discuss a major SARL propagation research project in which SARL members with access to a receiver capable of receiving the 7 MHz amateur band can participate. Intecnet follows at 20:00 with Tjerk Lammers, ZS6P, as the guest speaker. Tjerk will discuss SARL awards and QSL-ing. Both programmes promise to be of great interest.

Clubs wishing to link to the teleconference bridge should send an email to armi@sarl.org.za with the telephone number to be linked and details about the repeater to be used.

TWO AMATEURS TO PROMOTE 6 METRE OPERATION

Want a QSO on 6 metres FM or SSB? Join ZS4SM and ZS6DJD on the last Friday of the month at 20:00 CAT for a contact. The team will start on FM and later change over to SSB. The frequency to be used is 51,160 MHz. Give them a call this Friday 31 August.

HANNES COETZEE WINS THE HF CONSTRUCTION COMPETITION

Hannes Coetzee, ZS6BPZ, won the HF construction competition with his entry of a direct conversion receiver for 40 metres. The project is called the "SARL 40 Metre DC receiver" and is intended as a ZR to ZS upgrade project that has lasting value. After the paper design was selected by the South African Amateur Radio Development Trust, Hannes was awarded R1 000 to develop and build a prototype. The receiver, which is housed in a neatly engraved cabinet, was presented at the Radio Technology in Action day in Gauteng last weekend. Hannes was also awarded a YAESU dual band mobile VHF transceiver sponsored by Verstay.

PARTICIPATION IN THE SARL DIGITAL CONTEST WINS ZS4SS A DUAL BAND HAND-HELD TRANSCEIVER

Johan Steyn, ZS4SS, was the outright winner in the SARL Digital Contest and won a YAESU VX-2R 2 m/ 70 cm micro handheld transceiver.

The SARL Digital Contest took place on 24 June on the 40, 6 and 2 metre bands. The contest is sponsored by the Lichtenburg Amateur Radio Club and is aimed at promoting the use of the PSK mode in South Africa.

"PSK is an interesting mode". Piet Badenhorst, SARL VHF Manager, said. "In many circles it is regarded as successor to RTTY. Congratulations to Johan. He won the contest with 280 points, way ahead of his nearest rival". Another hand-held transceiver can be won in the VHF/UHF contest on 22-23 September. The transceivers were donated by Kobus Conradie, ZS1DC/ZS6UZ, of LetsPlayRadio.

AUGUST EDITION OF RADIO ZS BURSTING WITH INTERESTING ARTICLES

The July-August edition of Radio ZS is in the post and now available on the web. It is bursting full of interesting articles and features. In an ongoing series under the heading Ham Pride: Legacies and Traditions, Dave Ingram, K4TWJ, tackles the issue of Morse code: "now that it is no longer compulsory, is it becoming a more popular mode? "

Karl Canitz, ZS1KC, takes readers on an expedition to the Hell and shares the Boland Amateur Radio club's experiences in this unique valley of the Western Cape.

Learn more about Software Defined Radio with ZS6BUJ and get that PC listening to the world - a must read!

Mike Bosch, ZS2FM, in his canny way asks the question "Is there still a future for Amateur Radio in this Modern Space Age? Has Amateur Radio lost some of it's magic?".

Eddie Leighton writes about the Kenwood TH-D7, an APRS enthusiast's dream. He shows the way to get going on this APRS painlessly.

ZS4JAN takes us out with a field station and ZS6AAW gives new meaning to Radio Scouting.

The web version can be downloaded in PDF and is only available to SARL members.

This edition of Radio ZS alone is enough reason to join the SARL, if you have not already done so. Get a membership application form on the web or call the office Monday to Friday between 09:00 and 13:00 at 011 675 2393 or send a mail to admin@sarl.org.za.

SARL 40 m MOBILE SPRINT - SUBMISSION OF LOG SHEETS

Log sheets for this competition, that was held on the 12th of August, must be e-mailed to zs1bak@mailbox.co.za or sent by snail mail to BARK P.O. Box 2105, DENNESIG, 7601.

Due to a technical error with the submission address, the cut off date for submissions has now been extended until 3 September 2007.

CLUB NEWS

The Adventure Radio Club held their AGM at Cape Columbine over the Light House weekend.

The following members were elected to the committee: Chairman Koos, ZS1KWV; Vice chairman/webmaster Jan, ZS1VDV; Secretary/treasurer Martin,ZS1SM.

The Highway Amateur Radio Club(HARC) held its AGM on Tuesday 21 August, and the following members were elected to the committee:

Chairman: ZS5BBO, Edwin Musto; Vice/Chairman: ZS5GMW, Garth Wheeler; Secretary: ZS5GR, Tony Mayall; Treasurer: ZS5FAB, Anne Bean; Members: ZS5JO, Jo Boes, ZS5ARS, Rudi Smook, ZR5SEP, Sean Pritchard & ZR5SDB, Sheldon Brown

The meeting was followed by the traditional snacks table.

Congratulations to the new committee members and a big thanks to the old committee for all the hard work.

The EAST RAND FLEA MARKET will take place on Saturday 6 October 2007 at 08:00 - 12:00 at the club house in Springs. Members will be QRV on 145,675 MHz, the East Rand repeater. Tables are R 20-00.

The flea market will followed by the 60th AGM of the East Rand Radio Club (Est. 1947) from 12:00 - 13;00.

See you at the flea market.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at very low levels. The geomagnetic field is expected to be quiet in general while reaching minor storm levels on 3 September. The expected Effective Sun Spot number for the coming week will be less than 5.

20 m and 40 m will provide best opportunities for DX. There is a possibility of 20 m openings towards India from about 15:00 CAT. There may be weak 20 m openings to Australia from about 08:00. From 16:00 there may be 20 m openings towards Europe. For the early birds there is the possibility of weak 80 m openings towards the East Coast of the USA at about 04:00. Otherwise contacts to the USA are going to be very challenging.

For the CW and digital enthusiasts it will also be worth monitoring 10 MHz.

Locally conditions on 40 m is going to be good for this afternoon's SARL CW Contest. 80 m may be best for the shorter distances for example between Pretoria and Durban and Cape Town and Durban.

It is once again time to work towards your 80 m WAZS award in the evenings. Remember that this is only a prediction and that HF always has the capability to surprise you. You will never know what you are missing unless you switch your rig on, listen and also call CQ.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

1 September - SARL@HOME; 1 September - West Rand ARC Flea market; 2 September - President's Net and Intecnet (postponed from 26 August); 1 - 2 September - Midlands Amateur Radio Club operational at Underberg Farmers Association Annual Show; 3 September - Cut off date for submissions of logs for BARK Mobile Sprint 20 September - Closing date for registering for October RAE; 4 - 10 October - Special space programme; 5 October - Take your handheld to work day; 6 October - SA AMSAT Space Conference; 6 October East Rand Flea market and AGM; 18 October - Class A RAE.

SARL News invites clubs and individuals to submit news stories of interest to radio amateurs and shortwave listeners. Submit news stories if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to the programme Amateur Radio Mirror International, on the air every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 590 kHz. For the web stream and echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links. A repeat transmission can be heard Mondays at 21:00 CAT on 3 215 kHz. Sentech sponsor the ARMI transmissions on the non-amateur frequencies.

Today's South African Radio League news bulletin was compiled by Gustav,ZS6BWN, and transmitted by (your name and call sign)

Thank you for listening. 73

/EX

Only if you use a WiFi channel that falls completely within the ham
band, and that all other Part 97 rules (ID, content, control operator,
no-encryption-for-secrecy. etc) are followed. Otherwise Part 97 will
not shield you.

RADIO EXPERIMENTS: GERMANY IN 500 KHZ LF EXPERIMENT

Five experimental German stations are now on the air in the 600 Meter Band. While most of the operators are German hams, the experiment is not classified as Amateur Radio because there is no 500 KHz or 600 meter ham radio allocation in the Germany.

Rather they are considered as being experimental stations that operate under special permission and use the special DI prefix. All stations are allowed to transmit only on 505.1 kHz with a bandwidth not exceeding 100 Hertz. They are also limited to an effective radiated power no greater than 9 watts.

All operators welcome QSL cards. Send them to the addresses that they give you on the air. (Southgate)

Irish Radio Transmitters Society
Radio News Bulletin

Sunday August 26th 2007

Church Broadcasts

For some weeks we have been carrying an item about broadcasts of Mass from a Church in the north Dublin area on 28.105 MHz FM. Stations are reminded to listen out for these transmissions on weekdays at 1000 hrs and on Sundays at 0900, 1000, 1100 and 1200 local time to try to identify the Church concerned. Stations in the Dublin area are asked to take bearings on the transmissions or try to identify the general area from which the transmissions originate. We would appeal again to stations in the Dublin area to put a little effort into identifying the source of the transmissions so that details can be forwarded to ComReg. We are getting international reports on these transmissions and we have an obligation to do something about them.

We have also received reports of transmission of Mass on 28.285 MHz. We do not have any idea yet where this transmission is originating. We would ask stations countrywide to listen on 28.285 MHz FM at the appropriate times in their areas so that this station can also be identified. If you hear anything worth reporting you should send a report to Thos Caffrey EI2JD the IRTS Intruder Watch coordinator at QTHR or to ﷺthoscaffrey at hotmail dot com﷽ with a copy to Sean Nolan EI7CD at QTHR or to ﷺei7cd at gofree dot indigo dot ie﷽. The report should include date, time, frequency, signal strength, possible location of station if identified, beam heading in degrees from true north and any other relevant information. If the station is identified from an announcement of local events, details should be given. Should you hear anything, no action should be taken other than forwarding a report as requested.

MRG Experimenter Group

The MRG experimenter Radio Group VHF/UHF SSB Challenge 2007 will take place between 15:00 hrs and 18:00 hrs (local time) on Sunday the 9th of September.

The Fixed section will take place on 144 MHz and 432 MHz (SSB only) and the Portable section 144 MHz and 432 MHz (SSB only).

Any EI/GI operator holding an amateur/experimenter licence can participate. Closing date for logs is October the 9h 2007. Please forward completed logs to ei2mrg at yahoo dot com. Trophies will be presented to the winners of the fixed and portable sections later in the year. A full copy of the rules can be had by visiting www.geocities.com/ei2mrg.

Limerick Radio Club

Members of Limerick Radio Club took part in the recent International Lighthouse Weekend from Tarbert Island Lighthouse No. IRE 073. Two stations were in operation over the weekend and more than 300 contacts were made. Those taking part included Dermot EI2GT, Tony EI2AW, Mike EI2IX, John EI6IW, Simon EI7ALB and Alan EI8EM. Those requiring a QSL card should contact the QSL Manager, Alan EI8EM.

Limerick Radio Club wishes to advise repeater users that a new antenna has been installed on the 2-metre voice repeater. It is a Procom CXL2-3C 3db gain, vertically polarised omni-directional antenna. The club would appreciate signal reports from users. These can be sent to ei4lrc at eircom dot net.

The next meeting of the Club will be on the Thursday 11th of October at the usual venue, the Limerick Institute of Technology, Moylish at 19:30 local time. All those interested are welcome to attend.

EI0MAR

Last Friday week Fr. Finbarr Buckley, President of the IRTS paid a visit to EI0MAR at the vintage radio museum in Howth. It being a weekday, the club station was not QRV during Finbarr's visit. However, as it happened, a young student of opera, Caroline Cunningham, was visiting at the same time. Pat Herbert, the curator, played some old 78 records on one of the gramophones for the visitors including operatic arias by Margaret Burke-Sheridan the famous Irish opera singer. Not to be outdone, Caroline then proceeded to entertain Finbarr

and Pat by singing some operatic arias herself. Despite EI0MAR not being QRV, the group are sure that Finbarr enjoyed his visit and look forward to greeting him again in the future when the station is active. However, the best music EI0MAR can promise Finbarr next time is the music of Morse code.

EI0MAR will be celebrating the IRTS's 75th birthday by using the call sign EI75IRTS on the first two Sundays in September. CW will be the main mode of operation although some CQ calls will also be made on SSB as well. If conditions are favourable, the 7 MHz band will be the main focus, to allow as many EIs as possible to work the special call sign. The station may also be QRV on the Saturdays of the same weekends. EI0MAR is QRV most Sundays between 11 and 3. Telephone and email contact details for EI0MAR are available on the museum website which is www.qsl.net/ei5em/museum.html. A link on the museum web page will take you to EI0MAR's own web site.

HF SSB Field Day

The IRTS SSB field day will take place over the first weekend (1st and 2nd) of September from 13:00 UTC on Saturday to 13:00 UTC on the Sunday. Again the grounds of Garbally College, Ballinasloe, Co. Galway will be available, thanks to Niall EI4CF and once again the Shannon Basin Club will be hosting their now famous Barbeque.

This is a multi-operator contest for portable stations and provides an opportunity for clubs and groups to practice their portable operating and station set-up skills. The Paddy Daly Microphone is awarded to the station with the highest checked score in the open section and the IRTS HF Shield is awarded to the station with the highest checked score in the restricted section. Details and rules are available on the IRTS web site.

CQIR ? Ireland Calling Contest

The Society's 75th Anniversary Contest CQIR will take place on the last weekend in September from 12:00 UTC on Saturday the 29th to 12:00 UTC on Sunday the 30th. There is great interest world wide being expressed in this contest which is a celebration of Ireland and the Irish, throughout the world and with 40 million people in the United States alone claiming Irish forefathers;

we expect that CQIR will be one of the largest 'one off' contests ever aired on the Amateur Bands. It is a 24-hour single operator contest with the emphasis on participation rather than winning and to this end every participant gains an entry ticket for a spectacular draw for every 75 QSO's made during the Contest.

The ticket drawn out of the EI/GI drum will win an all expenses paid long weekend in New York City for two people. ARRL have confirmed that this will include a visit to their national headquarters hosted by ARRL. Kinnitty Castle in Offaly will host the international winners for a week with flights for two from anywhere in the world. The prizes have been fully sponsored at no cost to the Society and this is really an excellent opportunity to celebrate the Society and its 75 years of service to Irish experimenters. We would encourage all Irish operators to be active during the Contest. So ring fence the last weekend of September in your diary, make an effort to have that new antenna up for the event and lets ensure a good show from the local Irish operators to support the international Irish who will no doubt come on the bands in their thousands for the contest. Full rules are on the IRTS website.

South Eastern Amateur Radio Group

The next general meeting of South Eastern Amateur Radio Group will take place on Monday the 27th of August at 8.00 p.m. in the Roanmore Centre. All are welcome!

For up to date information, visit the groups' web site on www.searg.com.

Upcoming Rallies

Cork Radio Club Rally will take place on Sunday the 23rd of September in the Blarney Park Hotel. For information contact Con on 021-427136.

The Waterford Rally will take place on Sunday the 21st of October in the Woodlands Hotel, Waterford. For more information visit www.searg.com.

The Foyle and District Rally will take place on Sunday the 4th of November 2007 at the White Horse Hotel, Derry. For more information visit www.mn0aku.org.uk.

The Mayo Radio Rally will take place on Sunday the 18th of November in the Belmount Hotel, Knock, Co. Mayo. For more information contact Padraic Baynes, EI9JA @ QTHR.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to ﷺnews at irts dot ieﷺ for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday ﷺs bulletin.

1478. TVI in the digital age

Newsgroup: rec.radio.amateur.moderated

HDTV is inexorably moving across the country, even some XX.1, XX.2 channel leaking across from XE land.

Is this new digital product subject to the same TVI as analog, displaying the same "sound bars", "herringbone", etc., or do we need to decode new artifacts to know if our TVI is from radiated or conducted signals?

The Man in the Maze

The artifacts seen on digital TV, such as they are, are very different from TVI artifacts on an NTSC broadcast signal. You won't see (or hear) sound bars, hum bars, herringbone, buzz, at all (unless perhaps your TVI is so powerful that it's getting directly into the final, analog stages of the TV... not likely unless you're running a kilowatt right next door).

You'll tend to see one of two types of interference artifact on DTV signals:

(1) Macroblocking. Square or rectangular portions of the picture will freeze, "tear up" or become monochrome.

(2) "Looking for signal" - the whole digital signal "drops out" and the TV blanks the screen and complains.

The audio will exhibit analogous dropouts - momentary gaps in the sound, or complete silence when the signal is lost entirely.

The character of the artifacts probably won't be terribly useful in figuring out if a ham transmitter is involved... you'll have to depend on the timing (e.g. if macroblocking starts happening when you key-down, your transmitter may be involved).

I think there is some interpretation issues here. The use is not to look for pornography, and certainly the user would have MAC address restriction, so no one else should have access to that signal.

I'm talking about sending a signal to a remote site where Internet service is not available, and using that access to get to say a dx cluster or to a website set up to allow stations that are not in the same place communicate and log in a contest. Or to connect to Echolink for an emergency net.

2 items

1] I have since found that Hustler did not make a 160m coil, but Pro-Am/Valor makes this item (VAL PHF160 = VALOR 160M 8' 3/8-24 WHP/PHF 160B) that I might be able to substitute in its stead.

2] I live in a Antenna Restricted Retirement Community (NO I CAN'T MOVE), and I have a 40ft pine tree in my back yard. I thought that I might try the above mentioned item in conjunction with lets say a "LDG AT-200 Pro" auto-tuner or equivalent. (Note - I cannot run any wires from the house to the tree in the air - they have to be buried. Also I do not have any fencing and my rain gutters are grounded.)

My idea is to strap either a metal or pvc painted pole near the top of the tree, with a mount bracket for the whip (of course all painted to look like the tree). I will have to feed it with RG-8x (painted) run down the tree and buried in a trench to the house.

As far as radials go - They are out of the question. Instead - what do you think if I should just roll up say 250ft of 13ga or so of single conductor wire about a foot in diameter, attached at the base of the mounting bracket (hung in the tree) and use it as a counterpoise? I might be able to hang in the lower branches of the tree - a waterproof box with a loading coil and attach the counterpoise there instead?

If I could tune TX/RX with this configuration, then I could possibly use it to cover all of the HF bands.

Of course, I would like to work DX, but if not possible, then at least conus.

Comments and suggestions welcomed.

Whoa, quite a conundrum there, John. It seems to me that you're best bet would be to put up as much vertical wire as possible, (probably some 30 feet, and have a loading coil in the circuit, then have a tank circuit at the bottom to tune the wicked impedances you'll be looking at. You'd want at least the equivalent of 1/3 wave. On 80 meters, you'd be looking at around 70 feet or so. 160 meters is looking for more inductance yet. If you don't have a real pressing need for 160, it would be a good one to forgo.

The tank circuit will probably be needed even if you use an autotuner. It is a simple LC with variable cap and coupling transformer. Attach the lower part of tank to a ground rod, and give it a shot.

Here is a link from Cebik:

http://www.cebik.com/fdim/fdim4.html

You should be able to get fair performance out of this one - nothing great mind you, but it is after all a compromise antenna.

Well, I suppose anything would be better than nothing, but you are going to be very limited with this setup. The rules of thumb here are make the radiating part of your antenna as long as possible to increase the radiation resistance, make the tuning elements as efficient as possible to avoid losses due to circulating currents. For verticals, radials allow higher efficiency and although you may be able to bring the antenna into resonance at the desired operating frequency without them, your radiated signal will usually benefit from as many of them as you can manage. Any radials will help, but just one that is coiled at the bottom of the vertical is not going to make up for all the compromises you are making with this design. 40 feet will make a pretty good vertical perhaps down to the 30 Meters but as you get on 40 meters and below it's getting pretty short.

On the low frequency bands, your vertical will have very narrow bandwidth are horrid radiation efficiency as you describe it. It may very well be usable for you, but there may be other options that will be more effective on the lower frequency bands (40, 80, 160 Meters).

Have you considered transmitting loops for the lower frequency bands? They have the advantage of being directional which can help you on both transmit and receive. Their efficiency is pretty bad, but when matched against a vertical configured as yours, I'd bet they would be as good or better in most respects. You will likely be power limited with these antennas, but properly designed and tuned they can work quite well. Keep the resistance of your loop and the losses in the matching network as low as possible and you may discover that they are better solutions for you.

Usually transmitting loops (or magnetic loops as they are sometimes called) are home grown affairs. I know of a few products available

for this.. I believe that MFJ has some loop tuner products, and Bail Isotron makes some things that look like loops to me for various low frequency bands. (These Isotron antennas have very mixed reviews and I would figure that they work fairly well when tuned correctly, but they are difficult to tune properly.) Usually the two biggest issues facing loops is the voltages and currents produced with very low transmit powers can be very large and finding the matching components that can handle the currents and voltages while not introducing IR losses. Making low resistance loops is not that hard, but finding variable capacitors that can handle the current and voltages produced in a single turn loop with even 100 Watts can be difficult (and expensive.) Going for more than 100 watts is possible, but will almost assure you of having to home grow just about the whole thing.

Loop antennas also present some unique operating challenges as their operating bandwidth is VERY limited (approaching SSB Bandwidths at times) so any frequency changes will include a lengthy period of time to re-tune and because they are usually located very close to the operator they can be an RF exposure risk. However, if properly built they are easy to rotate and provide some directional gain which can be a HUGE benefit over your standard vertical. You may be putting less power out of the loop, but it is concentrated in some directions so your effective power towards the intended location can be much higher.

My advice is to concentrate on your 40 foot tree for 30 meters and up and for 40 meters on down look to other options. The vertical just isn't going to perform well as you get down to the lower frequency bands. I'd also pretty much forget 160 meters unless you will be happy with a very small bandwidth and very poor performance on either loops or your current vertical idea.

By the way, I am interested in the Isotron antennas because I live in a very limiting CC&R environment and I have pretty much zero in the way of trees to hide antennas in. I'm pretty much limited to what I can hide in my attic. My trap dipole is pretty much junk on anything over longer than 30 meters, but what can I expect considering that it's only about 20 feet up, surrounded by the whole house's worth of electrical wire and furnace ducting while pretty much limited to about 60 feet long. Oh to get the sunspots back soon!

I wonder if this workshop would be useful for some hams to attend (or at least plug into the audiocast and record it).

The Federal Communications Commission has announced the agenda topics and tentative speakers for the Digital Television Consumer Education Workshop to be held Wednesday, September 26, 2007, at FCC Headquarters, 445 12th St., SW, Washington, DC, in the Commission Meeting Room. The Workshop will begin at 8:00 AM and end at 3:45 PM.

A live audiocast of the hearing will be available at the FCC's website at http://www.fcc.gov/realaudio/#sep26 on a first-come, first-served basis. In addition, the hearing will be recorded, and the recording will be made available to the public.

For further information go to

1486. QRP and QRPp question

Newsgroup: rec.radio.amateur.moderated
Date: 2007-08-29 19:23:15 UTC
From: Jack VK2CJC <vk2cjc@look-me-up-at-qrz.com>
Message-ID: <fb4gj0$1kh$1@victor.killfile.org>
Source record: 3991

Hi all.

I've just decided to give QRP operation a serious go. I've bought myself a Oak Hills Research 100A 80m CW kit transceiver to get me started.

But my question is-

I have always believed that to qualify as QRP, the power level must be below 5 watts on CW, FM or PSK. And below 10 watts PEP on SSB.
AND.... that to qualify as QRPp, the power has to be below 1 watt on any mode.

Is this correct?

Thanks for reading

==> FCC ISSUES TWO CITATIONS IN LONGSTANDING POWER LINE NOISE CASE

The Federal Communications Commission's Dallas Field Office issued Citations on July 25 to two utilities in a longstanding power line noise case in Lubbock, Texas. Bryan Edwards, W5KFT, of Lubbock, first reported the interference concerning the two involved utilities, Lubbock Power & Light (LP&L) and Xcel Energy, as early as 1994. The record shows that the FCC Dallas Field Office clarified the FCC rules with regard to power line noise for LP&L as early as 1998, and issued three letters to LP&L in 2003 and 2004. Xcel Energy was first issued an FCC letter in 2004.

The Citations to the Lubbock utilities said that due to an investigation conducted by the FCC's Dallas office May 22-25, 2007, they found that both LP&L and Xcel "caused harmful

interference to the reception of amateur communications to amateur licensee W5KFT in Lubbock, Texas," and that "Section 15.209 sets the general radiated emission limits for intentional radiators. The limit for the band 30 to 88 MHz is 100 micro-volts per meter measured at 3 meters. The attached list of strong electrical arcing points appears to exceed the value allowed even for intentional radiators." The list, attached to each Citation, included 44 separate "strong electrical arcing points" that were found near Edwards' home.

The FCC directed both LP&L and Xcel, pursuant to the Commission's Rules, to provide documents and information within 10 days of their respective Citations. "Because the source of harmful interference is emanating from more than one power company and past attempts have not resolved the problem, you must submit a written plan describing the planned resolution of this case," including LP&L's coordination with Xcel Energy and Xcel's coordination with LP&L, according to the Citations. Also, each company is "directed to provide a report every sixty (60) days, of work completed to resolve the interference until your distribution system is in compliance."

Each Lubbock utility was warned that "[v]iolations of the Act or the Commission's Rules may subject the violator to substantial monetary forfeitures, seizure of equipment through in rem forfeiture action, and criminal sanctions, including imprisonment." In rem is a civil forfeiture proceeding as opposed to a criminal forfeiture proceeding.

In its undated Response to the FCC's Citation, LP&L stated that it "does not admit to and specifically denies any violation of the [Communications] Act [of 1934] or any rule pertaining thereto," but "in order to comply with the...Citation, the City of Lubbock files this response." As a result of the Citations issued by the FCC, LP&L's Response stated that representatives from "Lubbock Power & Light met with Paul Leonard, P.E., Area Engineer with Xcel Energy to discuss the alleged findings regarding harmful interference to the reception of amateur communications by amateur licensee W5KFT in Lubbock, Texas."

Xcel's Response pointed out that the Citation acknowledges "that the source of harmful interference to amateur licensee W5KFT is emanating from more than one power company." Xcel also alleges that it "has been working with amateur W5KFT for a number of years in an effort to identify the source of, and a possible resolution for, the harmful interference he is experiencing. Xcel Energy has a good working relationship with the licensee and has coordinated with him on numerous occasions in attempting to resolve his interference problems."

Xcel goes on to assure the FCC that it will "retain an outside technical consultant to provide an unbiased assessment of whether the harmful interference to W5KFT is attributable to Xcel Energy's power system and if so, what corrective measures would be required." Edwards reported that on Thursday, August 30, he received a phone call from Paul Leonard, head of Xcel Energy in West Texas. Edwards said he was told that Xcel has contracted with Mike Martin, K3RFI, to come out to Lubbock in October to work on the line noise. "Leonard said they tried to get LP&L to participate with them and Mike, but they refused to do so," Edwards said. Martin owns and operates RFI Services, a firm dedicated exclusively to RFI locating and training. He has been locating interference sources for more than 25 years, solving an average of 500 complaints a year, according to the ARRL Lab. Martin has also given power line interference workshops at ARRL Headquarters.

ARRL Lab Manager Ed Hare, W1RFI, said, "I am pleased to see the FCC taking a strong enforcement step in this case. It has gone on for a long time, and this Citation should serve to finally get things resolved. It is unfortunate that some of the power line cases

the ARRL is handling can't be resolved without the FCC taking formal action, but I expect that electric utilities across the country will now take notice of this case."

Most power line noise sources in fact can be located quickly and economically, Gruber said; many utilities in fact handle power line noise complaints as a matter of routine maintenance. "All it takes is a properly trained RFI investigator with modern noise locating equipment. By using noise signature techniques, the utilities would have had only to address those sources actually contributing to the problem. The message to utilities here is clear. Don't ignore power line noise complaints! Don't make the FCC get involved!"

For more information on this story, as well as links to the ARRL report, the FCC's Citations and the utilities' Responses, please see the ARRL Web site <http://www.arrl.org/news/stories/2007/08/30/100/?nc=1>.

==> TENNESSEE AMATEUR FINDS INNOVATIVE WAY TO PROMOTE HAM RADIO

About three years ago, Cliff Segar, KD4GT, and his wife Kati were looking for another place to live. After months of looking, they found their dream house in Rockwood, Tennessee. There was just one problem -- it was right on Interstate 40.

Two billboards were located within the Segar's new property. "They don't provide much in the way of income; basically just paying the annual property taxes in 'rural' Tennessee. Of the two billboards, Segar said the one "up front (from our house perspective)" is the prime space. It is larger and lighted and in use. The other billboard was not rented, and it was getting run down, with brush and trees overtaking its view from the Interstate.

This year, the ground lease for the two billboards came up for renewal. Segar said that this was his opportunity to do something useful. "Basically, the new lease for the previously unused billboard stipulated that the billboard company had the obligation to keep the brush and vegetation clear and, 'when the sign is not sold, lessee will agree to provide and install a vinyl face advertising Amateur Radio activities.'" Segar said that the only way the billboard company would agree to this stipulation was if they provided the vinyl facing at their expense. "This was even better than I thought it would be. Since the sign had not been sold at any time in the prior three years, I expect to see the sign for quite a long time," Segar said.

With the new lease signed, Segar sent an e-mail to ARRL Media and Public Relations Manager Allen Pitts, W1AGP, to let him know of this exciting development. "In case anyone is wondering if anyone in Newington reads e-mail, they do -- and frequently. In about an hour, Allen called me to work out the details," Segar said. Within two days, the ARRL graphics department had created the design for the vinyl facing.

"The only thing I requested," Segar said, "was to have a couple of 2 meter repeater frequencies listed for use by those of you driving past. The one repeater was basically a must since the Roane County Amateur Radio Club, in a moment of collective weakness, elected me president for the year. The only problem is that KE4RX/r is behind anyone who sees the sign. We needed a repeater that would continue to work with them for the next 30-plus miles." After a few discussions with Paul Drothler, WO4U, in Crossville, Tennessee, W4NSA/r was deemed the flagship repeater for use westbound. According to Segar, it is the primary repeater used by ARES during severe weather or other emergency situations. "If you are ever on I-40 between Cookville and Knoxville, dial in 146.895, pl 118.8 or 147.015+ and give a call. We will try to be listening, but please don't report that you caused an emergency slowing down to look at the sign!"

Segar says this billboard is not about him -- it is about Amateur Radio and the ways hams can promote it: "With the constant pressure from commercial interests on the spectrum allocated to the Amateur Radio Service, we all need to do something to promote the public benefit of the Amateur Radio Service. We are to be more than a hobby. It is part of our licensing agreement. It is even part of our name. We are to be a Service. I strongly urge everyone to think seriously about how they can be a service to their community through Amateur Radio. ARES is a good primary start and one that is most visible to the leaders of your community. Providing communication at public service events is another. But there are many more. To use an overworked clichï¿½, think outside the box. Become involved. Getting a DXCC or WAS award is great. A 5BDXCC shows even more dedication but it really doesn't help 'pay' for the spectrum we enjoy. Your city mayor or county supervisors really don't care that y!
ou managed to work Peter I Island on five bands at the bottom of the sunspot cycle -- there's nothing in it for them. Each of us needs to show our elected and appointed officials that Amateur Radio really is a high quality and vital Service to them. The sooner that happens, the easier it will be to put up that new antenna you've been wanting."

He continued: "Be innovative. The great folks in Newington are ready, willing and able to help you. Join the ARRL and get involved. Join a local club. Get active in ARES, RACES or a local CERT group. Spend a Saturday with a handheld radio at a parade. You and the thousands of other licensed operators in the Amateur Radio Service worldwide will continue to enjoy the challenges, joys and magic of Amateur Radio. This billboard is only part of my contribution. What's yours?"

==> MICHIGAN HAMS ACTIVATED DUE TO STORMS AND TORNADO

On Friday, August 24 at 5:15 PM (EDT), the National Weather Service issued a severe thunderstorm warning for Genesee County. This storm produced two tornados in the mid-Michigan area that caused severe damage to several towns. The greatest damage occurred in the City of Fenton located just south of Flint. The NWS confirmed that an EF2 tornado had touched down and had torn a path 26 miles long and up to 0.5 miles wide through Livingston, Oakland, Genesee and Lapeer County, damaging at least 250 homes and businesses. An EF2 tornado, using the Enhanced Fujita scale, is a wind estimate of 110-135 MPH in a three-second gust. More than 12,000 people lost power due to the storms.

Before the tornado hit, Michigan's Genesee County ARES and SKYWARN were activated due to a severe thunderstorm watch. The storm moved into the county with such heavy rain that visibility dropped down to zero at several points. Funnel clouds were seen in the western part of the county, but these could not be confirmed. The NWS issued a Tornado Warning based on confirmed sightings in the adjacent counties to the west, as well as reports from their Doppler radar.

As spotters continued to watch the storm, Randy Bond, N8VDS, spotted the funnel heading for Fenton and reported it to the NWS via his ham radio; Fred Moses Jr, W8FSM, confirmed the sighting. Moments later, the Genesee County 911 central dispatch center received a call that the roof on the brand new Tractor Supply Company store in Fenton had caved in and that the tornado had touched down. About half of the Fenton Community Center's roof was blown off, and debris from the building blew across the road to Fenton United Methodist Church.

Genesee County 911 called out the fire departments and activated their Fire Coordination Plan. Ham radio spotters have an agreement with Genesee County fire departments to provide supplemental communications for the departments. Hams were providing communications via the SKYWARN net and the Fire Coordination net.

As the county's fire departments started to move toward the building collapse in Fenton, hams were already on the scene. Bond and Mike Schafer, KB8RVP, shifted gears from weather spotters to Fire Coordination operators. At the request of the fire chief at the scene, Bond went to the Fenton City fire station and, using ham radio, assisted their dispatch center; the storm had damaged their radio fire communications tower, so Bond and Schafer started working dispatch for them using their ham radios until the dispatch center was able to resume normal fire communications.

Jerry Baker, KD8AYL, was next to arrive on the scene at the collapsed building and after meeting with the Incident Commander, Baker was assigned the task of setting up radio communications with more ARES volunteers in the Flint region.

As more reports of damage came in, the Fenton City and Township Fire Department became overloaded; their crippled communications tower did not help matters. ARES Emergency Coordinator for Genesee County Greg Ybarra, N8HXQ, coordinated the response during this incident and put out a call for help to District 3 Emergency Coordinator Greg Allinger, WA8OGJ. Allinger contacted other ARES units in the state, and Amateur Radio operators from nine Michigan counties responded to the Fenton area to help.

Evaluation of the damage started immediately after the storm. Baker was reassigned to a relief shelter to aid the Red Cross. What would normally have been a drive of less than 10 minutes took almost an hour due to trees and power lines down everywhere. "Trees as much as 36 inches in diameter and more than 100 years old had been ripped out of the ground by the storm; regular electric power was out and the damage reports just never seemed to end," he said.

The Genesee County Office of Emergency Management activated their Mobile Command Unit. The MCU has an Amateur Radio station in it, as well as radios for all public service organizations. The city set up a command post in the parking lot of the Fenton City fire department and began operations from there. Michigan State Police responded to the area and instituted an 8 PM curfew for everyone. State and local police set up road blocks. Access was restricted to police, fire, National Guard, Red Cross, Salvation Army or ARES.

ARES volunteers worked with all aspects of the incident. Damage reports and assessments continued until 1:30 AM Saturday when the Incident Commander determined everyone should break until 5:30 AM to get some rest.

==> ARRL ANNOUNCES NEW FALL PUBLICATIONS

The ARRL has announced its new fall publications lineup. ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R, said, "ARRL's fall lineup includes the biggest new publication introductions this year. These new books will keep you current with rapid advances in radio operating and experimentation."

The ARRL Handbook for Radio Communications - 2008 (Eighty-Fifth Edition) uniquely serves both amateur experimenters and industry practitioners, emphasizing connections between basic theory and application. This 85th edition is both a useful introduction to radio communication and a source for answers to questions about every aspect of the state-of-the-art. Topics include Amateur Radio licensing requirements and operating activities, fundamental and advanced electronics and communications concepts, radio propagation and antenna theory, practical projects, repair techniques, references and much more. The Handbook includes descriptions for new and emerging wireless technologies involving digital signal processing (DSP) innovations, and radio applications utilizing software and the Internet. The book is filled with valuable references, practical examples

and projects. The CD-ROM at the back of the book includes all of the fully searchable text and illustrations in the printed bo!
ok, as well as companion software, PC board templates and other support files.

Revisions to the 2008 Handbook include new filter theory and design examples, including a HF/6 meter high-power low-pass filter project, and revised and expanded RF safety content -- including new insights into RF safety regulations and research. New projects include: MKII updated universal QRP transmitter; MicroR2 receiver and MicroT2 transmitter; ID-O-Matic-10-minute ID timer for individual, repeater or beacon control; simple computer-to-transceiver serial port interface and USB interface; keying adapter to interface vintage radios with modern gear (CW keying or amplifier TR keying), and more.

The softcover edition of the Handbook sells for $44.95; the hardcover sells for $59.95. As an early bird bonus, the ARRL Software Library for Hams CD-ROM, v 2.0, will be included with each Handbook ordered before October 31, 2007; this is a $20 value. The CD includes quick access to utilities, applications, and information; software for contesting, digital voice, HF digital (PSK31, MFSK16, MT63, and RTTY), meteor scatter and moonbounce, book excerpts and more, as well as programs for APRS, Winlink 2000, packet radio and satellite tracking. Both editions will be available in early October.

ARRL's HF Digital Handbook -- Fourth Edition is your guide to understanding the most active HF digital communication modes in use today. There is something here for every radio operator -- beginners and more advanced operators alike. And, as this technology rapidly advances, your increased understanding of digital communication techniques will make certain that you stay in the race as new modes and methods unfold. This 4th edition book includes expanded station setup information, discussion of PSKMail and other varieties of PSK, new content on Olivia, DominoEX, HF digital voice and image modes, and Automatic Link Establishment. Are you just getting started with exploring digital communications? All it takes is your sound-card-equipped computer and your HF transceiver. ARRL's HF Digital Handbook will guide you through the rest. This softcover book will be available in early October for $19.95.

ARRL's Low Power Communication -- Third Edition shows how you can explore the excitement of low-power radio operating. Discover how to build and operate low-power radio gear - the QRP way, with sections on equipment and station accessories, antennas and operating strategies. There are new sections on Emergency Communication and surplus military equipment, including how to restore and use this classic radio hardware. This book can be purchased alone for $19.95 and includes the complete assembly manual for the MFJ Cub Transceiver Kit, or with the MFJ-9340K 40M QRP-Cub CW Transceiver Kit for $99.95. Both editions will be available in early October.

FCC Rules and Regulations for the Amateur Radio Service is now available for only $5.95. The new 8-1/2 x 11 reference contains the complete Part 97 rules from Title 47 of the Code of Federal Regulations, effective February 23, 2007.

Antenna Compendium Volume 4, the popular antenna book from 1995, is being reprinted due to increasing demand. This is the fourth in the popular ARRL Antenna Compendium series. You'll find 38 articles inside, covering a wide range of topics. There are simple, practical antenna projects, and there are heavy-duty, theoretical treatments of complex arrays. When the sunspots are low, head for the low-bands - seven articles are devoted to 80 and 160 meters, including some truly gargantuan arrays. There are articles for mobile work, too. A section on portable or temporary antennas that will get you thinking about Field Day in June, regardless of what time of year you read it. The Antenna Compendium Volume 4 will be

available in September for only $20.

AC Power Interference Handbook, 3rd edition, revised, looks at the causes, effects, locating and correction of power-line and electrical interference, and includes a new locating concept! "This easy-to-read, very practical book, is a must for anyone responsible for solving interference problems." -- Vern Chartier, past chairman, IEEE T&D Committee. AC Power Interference Handbook is written by Marv Loftness, KB7KK, and published by Percival Technology. ARRL is the worldwide distributor for this title.

These books, as well as the complete ARRL library, are available from the ARRL Online store <http://www.arrl.org/catalog/>.

==> LAB TESTING CHANGES DETAILED IN OCTOBER QST

In the upcoming October issue of QST, the ARRL Lab introduces a series of significant new receiver tests. These are the result of development work and discussions with professionals in the radio industry over a period of several years.

One new test concerns receiver blocking gain compression and reciprocal mixing. The ARRL Lab describes Blocking Dynamic Range (BDR) as "a condition in which the weak [desired] signal is 'blocked' or suppressed" by a strong interfering signal. This is also known as desense or overload. In some cases, the cause is a reduction in receiver gain. In other cases ("noise limited" measurements), the cause is an increase in the receiver's internal noise due to the noise sidebands of the local oscillator mixing together with the strong interferer (also known as "reciprocal mixing"). The level of the noise masks the gain reduction effect on the desired signal. Instead of reporting the BDR as a noise limited measurement, the Lab will now be using narrow-band measurement techniques to "dig out" the desired signal on noise-limited measurements and determine the point of gain reduction.

To distinguish from earlier measurements, the name will be changed to "Blocking Gain Compression." A separate reciprocal mixing test indicates the level of noise increase within the receiver caused by the interfering signal. Together, these two measurements provide more information about how the receiver behaves with a single strong interfering signal.

>From 1983 onward, ARRL Product Review published IP3 (third order intercept) figures for receivers based on a noise floor intermodulation distortion (IMD) response level. In 1993, the level was changed to a response that produced an S5 reading on the receiver's own S-meter. The decision was based largely on this being a more typical average of signals that would be found on the bands. The drawbacks to this approach are that there is a great variation in S-meters from receiver to receiver (see Product Review, April 2005) and it overlooks the significant change that can often be observed in receivers at higher signal levels.

With this in mind, the ARRL Lab has decided to measure and report IP3 at three levels. The lowest level measurement is made at the noise floor, as has been done in the past. The middle level is done at a standard level of -97 dBm, defined as S5 in the IARU Region 1 standard for S-meters. For the highest level, instead of selecting a particular receiver response, the maximum level of expected interferer will be set to 0 dBm (S9 + 73 dB by the IARU standard, a loud signal indeed!). These three levels taken together should present the best overall view of a receiver's total performance, with each level being most useful in a particular context. For example, someone doing SSB or CW work on VHF would care most about the receiver performance at the noise floor, while on HF, an S5 level would be more useful.

According to ARRL Lab Test Manager Mike Tracy, KC1SX, members frequently ask why manufacturers' sensitivity specifications are given in microvolts but Product Review measurements are reported in dBm (decibels relative to a milliwatt). He said, "The chief reason is that manufacturers typically do not include a bandwidth in their specification, and measurements in different bandwidths are not directly comparable. All other things being equal, there is more noise power in a 3 kHz bandwidth than a 2.4 kHz bandwidth. To overcome that limitation, the sensitivity testing is done with a 500 Hz bandwidth filter, or as close to that as is available. This permits reasonable comparisons of different receivers." Although the filters that a receiver has cannot be changed, the variation in actual bandwidth can be determined by calculating the Equivalent Rectangular Bandwidth (ERBW). This is the width that the filter would have if it passed the same noise power and possessed the "ideal" sha!
pe of vertical sides and a flat passband response.

For more on the changes coming in future Product Reviews, be sure to check out the October issue of QST.

==> ARRL CONTINUES EFFORTS ON INTERFERENCE TO PAVE PAWS RADAR SITES

On August 13, the ARRL began sending "specific mitigation reduction numbers" to 122 repeater owners, recommending that they reduce their signal anywhere from 7 dB to 56 dB, according to ARRL Regulatory Information Branch Manager Dan Henderson, N1ND. These reductions, requested by the US Air Force and the Department of Defense, only concern those repeaters identified by the DoD as affecting the PAVE PAWS radar system.

"Some reductions are going to be attainable," Henderson said. "You can do 7 dB, but 56?" He said such a reduction would "not be realistic to achieve. While many of the affected repeater owners may not be able to achieve the required reductions, but that doesn't mean they shouldn't try to meet the goal. Everyone involved needs to continue trying to meet the DoD's requirements. This gives us the best chance to keep as many of these machines as possible on the air."

Henderson stressed that any order to shut down a repeater will come from the Federal Communications Commission, at the request of the DoD. "This situation only affects those repeaters on the DoD's list in Massachusetts and California. It does not affect the everyday, casual user of 70 cm. This is not a wide-spread threat to the 70 cm band."

Citing an increasing number of interference complaints, the US Air Force has asked the FCC to order dozens of repeater systems to either mitigate interference to the PAVE PAWS radars or shut down. The ARRL has been working with the DoD to develop a plan to mitigate alleged interference from 70 cm ham radio repeaters to this military radar system on both coasts. According to the DoD, the in-band interference from Amateur Radio fixed FM voice repeaters has increased to an unacceptable level. PAVE PAWS radars are used for national security functions, including early detection of sea-launched missiles. They are critical to our national defense and are in use 24 hours per day, seven days per week.

The Amateur Radio Service is a secondary user in the 420-450 MHz (70 cm) band, both by the Table of Frequency Allocations and the FCC Part 97 regulations. As such, Amateur Radio licensees, jointly and individually, bear the responsibility of mitigating or eliminating any harmful interference to the primary user, which in this case is the Government Radiolocation Service that includes the DoD PAVE PAWS systems.

==>SOLAR UPDATE

Tad "I'm Melting in the Sun, and This Is What They Call the Life" Cook, K7RA, this week reports: Sunspot numbers pulled up from zero this week, but barely. Average daily sunspot numbers rose more than nine points to 12.9. Geomagnetic conditions were quiet. Conditions have been quiet for so long that we may not appreciate this, as many of us wish for more solar activity and sunspots. Geophysical Institute Prague predicted earlier that August 31 would be quiet to unsettled, September 1 unsettled to active, unsettled conditions September 2-3, quiet September 4-5 and unsettled to active again on September 6. Over the same period, the US Air Force predicts planetary A index of 15, 25, 12, 12, 8, 5 and 15 for August 31-September 6. From the same prediction, it looks like September 8-17 may see a return of zero sunspot days. Sunspot numbers for August 23 through 29 were 12, 12, 14, 13, 12, 14 and 13 with a mean of 12.9. The 10.7 cm flux was 70.8, 71.6, 71.5, 70.1, 69.2, 70.1 and 69!
.6 with a mean of 70.4. Estimated planetary A indices were 2, 2, 8, 10, 12, 11 and 4 with a mean of 7. Estimated mid-latitude A indices were 1, 1, 6, 10, 10, 9 and 4 with a mean of 5.9. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: This weekend, look for the NCCC Sprint (CW) on August 31. The Russian RTTY WW Contest and the Wake-Up! QRP Sprint are on September 1. On September 1-2, check out the All Asian DX Contest (Phone), RSGB Field Day (SSB) and IARU Region 1 Field Day (SSB). The DARC 10 Meter Digital Contest is September 2, while the MI QRP Labor Day CW Sprint is September 3-4 and the ARS Spartan Sprint is September 4. Next week, don't forget the ARRL September VHF QSO Party, scheduled for September 8-10. The NCCC Sprint (CW) and the AGCW Straight Key Party are September 7. Another NCCC Sprint (CW), the SOC Marathon Sprint and the Swiss HTC QRP Sprint are September 8. The WAE DX Contest (SSB) and the Arkansas QSO Party are scheduled for September 8-9. The North American Sprint (CW) and the ARCI End of Summer Digital Sprint are both September 9. The Tennessee QSO Party is September 9-10, while the YLRL Howdy Days are September 11-13. See the ARRL Contest Branch page <htt!
p://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education course registration: Registration remains open through Sunday, September 9, 2007, for these online courses beginning on Friday September 21: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARRL Headquarters Closed in Observance of Labor Day: ARRL Headquarters will be closed in observance of Labor Day on Monday, September 3. There will be no W1AW bulletin or code practice transmissions that day. ARRL Headquarters will reopen Tuesday, September 4 at 8 AM Eastern Daylight Time. We wish everyone a safe and fun Labor Day holiday.

* Upcoming Meteor Shower Can Be Boon for VHFers: VHFers, particularly those interested in meteor scatter, should be on the alert Saturday morning, September 1, for what could be a rare opportunity of excellent propagation. At 1137 UTC (+/- 20 minutes), the Earth's orbit

will cross through the dust trail of long-period comet C/1911 N1 (Kiess), which is expected to provide a short but active two hour outburst of bright (-2 to +3 magnitude) meteors radiating from the constellation Auriga. Predicted rates for this particular Aurigids vary from around 100 meteors per hour to up to 1000. If high rates are achieved, the meteors could provide "open-band" conditions during the peak times. It might certainly be worth a look on 2 meters (or higher) during the hour leading up to the peak and through the peak time period. The meteor radiant is ideally placed for North Americans, so the more stations that are active, the more people can take advantage of what might possibly happen in the ! sky on Saturday morning. If conditions turn out to be excellent, the best mode for information exchange will be on SSB, keeping calls and transmissions very short and exchanging minimal information, such as signal reports or grids. As usual, the best frequency on 2 meters will likely be 144.200 MHz, with stations spreading out from there if conditions warrant. -- Information provided by Steve McDonald, VE7SL

* ARRL/TAPR Digital Communications Conference Sunday Seminar Announced: Robert McGwier, N4HY, will present "A Stroll through Software Radio, Information Theory and Some Applications" at the ARRL/TAPR Digital Communications Conference Sunday Seminar in Hartford, Connecticut on September 30. The seminar will cover the basic building blocks of a simple software radio system, as well as a discussion of information theory and its practical use in communication systems. As time permits, McGwier plans to demonstrate several software radio systems ranging from the Softrock40 to the GnuRadio/USRP and the Flex5000. Attendees will receive packages containing tutorials and software. McGwier is the chairman of the ARRL Software Defined Radio Working Group, a member of the SDR Forum and a contributor to GnuRadio and vice president of engineering for AMSAT-NA. He is co-author with Frank Brickle, AB2KT, of DttSP, a software radio suite used in Flex Radio's PowerSDR to operate its SDR transc!
eivers. The ARRL/TAPR Digital Communications Conference will be held September 28-30 at the Doubletree Hotel in Windsor Locks, Connecticut, just north of Hartford. For more information and registration, see the conference's Web site <http://www.tapr.org/dcc>, or call the TAPR office at 972-671-8277. Tickets for the Sunday Seminar are $25 and are separate from the conference registration fee.

* Malaysia to Celebrate 50 Years of Independence with Amateur Radio Event: Radio amateurs in Malaysia will celebrate its 50 years of independence from Great Britain with a nationwide Field Day August 30-September 1 with 9M50Mx special event call signs. The Malaysian Amateur Radio Transmitter's Society (MARTS) <http://www.marts.org.my/> invites Amateur Radio operators from all over the world to celebrate with Malaysia on air. The Malaysian Communications and Multimedia Commission granted these 9M50Mx special event call signs for the first time in history of Malaysian Amateur Radio. To celebrate the occasion, the Merdeka Field Day (MFD) -- Merdeka means independence in the Malay language -- has a total of 16 stations operating simultaneously in different cities, as well as in the middle of the jungle. QSL to the Bureau at PO Box 10777, 50724 Kuala Lumpur, Malaysia. -- Information provided by Lance M. T. Lai, 9W2LAI, MARTS Honorary Secretary

* QEX -- In This Issue: The September/October issue of QEX is out, and it is full of theoretical and practical technical articles. In this issue, Maynard Wright, W6PAP, explains the impedance graphing capabilities of some powerful computer software in "Octave for Circle Diagrams." Dr George Steber, WB9LVI, describes some simple circuits that combine with a digital oscilloscope, signal generator and PC to create "An Unusual Vector Network Analyzer." Mateo Campanella, IZ2EEQ, used a direct digital synthesizer IC and PIC microcontroller to build "A DDS Based QRSS (and CW) Beacon." Paolo Antonizzi, IW2ACD and Marco Arecco, IK2WAQ, team up to describe the design and lab testing of "Very High Q

Microwave Cavities and Filters." J. R. Laughlin, KE5KSC, designed a circuit to reduce background noise pick-up and feedback squeal for a "Differential Leveling Microphone." Steve Gradijan, WB5KIA, shares the news about a free software development tool by Code Gear from Borland in "Turbo Del!
phi Explorer: Develop Amateur Radio Projects for Windows with a Free Compiler." Fred Glenn, K9SO, describes his system of using Excel spreadsheets to compare antenna performance and propagation predictions by "Using Gain-Probability Data to Compare Antenna Performances." Contributing Editor L.B. Cebik, W4RNL, compares some circularly polarized satellite antennas in "Antenna Options." QEX is edited by Larry Wolfgang, WR1B (lwolfgang@arrl.org), and is published six times a year. Subscribe to QEX today <http://www.arrl.org/qex>.

* Let Us Know: What's your favorite part of The ARRL Letter? What kind of stories would you like to see in the Letter? Would you prefer the Letter in an HTML format? This is your Letter and your chance to let your voice be heard. Please send your suggestions to ARRL News Editor S. Khrystyne Keane, K1SFA, at k1sfa@arrl.org, with the subject line "ARRL Letter Suggestions." All messages will be read and discussed, and we look forward to implementing positive suggestions into the ARRL Letter.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Hello,
I remember reading some years ago about a 160 mtr "snake" antenna made
from a piece of coax that laid on top of the ground. About like a garden
hose might. You could even roll it up on a garden hose reel when not in use.
Part of the theory as I remember, was that on 160 mtr band almost no hams
have their antennas at least a 1/4 wave above ground and that RF ground can
be several feet below ground level depending on soil characteristics,
moisture content etc.
The snake antenna is a length of coax with the braid open at the feed point
and the
center and shield shorted at the far end . High voltages can easily be
generated, so it is a good idea to insulate the coax at the feed point, and
at the
far end 100% silicon caulking moisture.
The coax should NOT be an integral number of 1/2 wavelengths long.
Keep in mind that the "Snake" is a compromise antenna , so don't expect to
set any records with it.

Thinking about the "Snake" antenna reminded me of the "Cobra" antenna

DXNL 1534 - Aug 29, 2007
DX Newsletter

a free and weekly service of
DARC Committee "DX and HF contesting"
(http://www.darcdxhf.de)

editor: Helmut Schlaffer, DL7MAE
(e-mail: dxnl@dxhf.darc.de)

translation by: Mike, DJ5AV
(e-mail: dj5av@darc.de)

A3 - Tonga, OC-169
Ron, ZL1AMO, will be on vacation August 27th through September 16th on Lifuka (OC-169). He renewed his licence as A35EA for this activation.

EA8 - Canary Islands, AF-004
Heinz-Peter, EA8/DH1PS, is visiting Fuerteventura (WLOTA 0883) August 25th through September 8th for vacations mainly and will use his IC-706 MKIIG and a wire vertical (1/2 lambda for 20 m resp. 5/8 lambda on 17 m) on SSB. He might also activate a lighthouse e. g. CAI-040, Punta de Jandia. QSL via bureau to his home call DH1PS.

HB0 - Liechtenstein
Giovanni, HB0/IZ2DPX, and Flavio, HB0/IW2NEF, will be in Malbun 1st through 3rd September on 2.600 m ASL using shortwave, 2 m and 70 cm. They will try to get a HB0-call. QSLs via direct or also via bureau via home call.

J2 - Djibouti
Darko, T95A, is on a work assingment in Djibouti for one year at least. he will set up his station soon and be active as J28OO. QSL via K2PF, also sure via bureau.

J3 - Grenada, NA-024, NA-147
Gerd, J3/DL7VOG, will be in Grenada/NA-024 August 27th through 31st. Then he will change to Carriacou (NA-147) in The Grenadines through September 16th. Gerd prefers CW and RTTY on 6 to 160 m but will switch to SSB on request. QSLs via homecall, bureau preferred, and also by e-mail-request to qsl@dl7vog.de for a bureau card.

JD1 - Minami Torishima, OC-073
August 27th through September 18th Masafumi, JA6GXK, will be running JD1BMM from OC-073 again on 10 through 80 m with CW, SSB, PSK, RTTY

and SSTV.

P4 - Aruba, SA-036
Bob, W3BTX (P49T), and Roy, W3TEF (P4/W3TEF), will be active on
160 through 6 m, WARC incl, Sep 1st through 15th as P41USA for
the anniversary of the events in New York on 11th September 2001.
QSLs direct or via bureau to W3TEF.

SV9 - Crete, EU-015
Dick, SV9/G3URA, will be on the air August 27th through September 4th
mostly on CW, but also in the Russian RTTY-Contest as J49XF.

VP5 - Turks & Caicos, NA-002
"J.C." VP5/W1AI will be on Providenciales (NA-002) with CW and SSB on
all bands 160 through 6 m September 1st through 8th. QSL via homecall.

VU - India
Members of the "National Institute of Amateur Radio" (NIAR) in
Hyderabad are using the special call AT60MY through November 17th
for the 60th anniversary of India's independence. QSL via VU2NRO.

YB - Indonesia, OC-022
Rich, YB9/PA0RRS, is on Bali (OC-022, LH 2589) August 26th through
September 24th on 80 through 10 m. QSL via homecall, also via bureau.

ZD9 - Tristan da Cunha & Gough, AF-030
Brian, ZD9BCB, is leaving the weatherstation on Gough Septmber 14,
some weeks later than planned. You find Brian this Sunday at 1730 UTC
on 14.315 MHz. QSL via SQ8AQD, direct only.

9X - Ruanda
Correct QSL route for 9X5SP is via DL8YA, NOT DL8YR (DXNL 1532).
Operator Peter A. Stabusch manages the Deutschen Welle in Ruanda.
Since he started with his work for DW Kigali one year ago he tried
for a restart of ham radio with the administration in Ruanda. The
necessary laws existed already since some time but they lacked any
means of official monitoring. During an official meeting of DW with
the local authorities monitoring became a task of the HAMs in Ruanda
and Peter A. Stabusch was asked to cooperate and to be president of
"Rwanda Amateur Radio Union" by the "RURA" Administratiom.

Pacific: As announced in DXNL #1531 Toshi, JA8BMK, will start for a Pacific
tour in September. He will leave Japan for Fiji and continue to Tarawa,
West-Kiribati (T30). In mid October he will go from Tarawa for Central-
Kiribati as T31XX for at least 1 week and also the CQWW SSB-Contest.
Toshi will use 160 through 6 m on CW, SSB and RTTY. Containers with
his equipment were already shipped to Tarawa in late July. There may
be activity from Rarawa (T33ZZ) befor or after operation from Canton.

Malaysia, special call
Aziz, 9M2AU, will use 9M50MB August 31st for 50 years of independence
of Malaysia.

Austria, special call
August 31st through September 9th OE16B will be active for the Pope's visit. You get a special QSL if you contribute for El Molo Mission and School in Kenia with your QSL at least 1 IRC or 1 US $ to: ORF/OE16B, A-1136 Wien, Austria. There will also be QSLing via OEVSV-Bureau.

Russia, special calls
Alexander Kamalagin, UA4IF, was born 100 years ago. He became a ham in 1929, was a radio pioneer for Russia, well known Contester and DXer. For the anniversary special stations R100AK and R100IF are active until the end of this year. QSL via RW4HB, bureau ok. There is also an "Alexander Kamalagin Memory Award" to be found in the Web: http://www.samaraham.ru/main.php?d=awards/ua4if_memory_eng .

Spain, special calls
During the European Basketball-Championship 2007, "EURO-Basket 2007", taking place in Spain in Sept members of "Radio Club Henares" (EA4RCH) will use the special calls AN0EB, AN4EB, AN5EB, AN6EB and AN7EB, Sept 1st through 16th - AN0EB only while members of the Royal Family are visiting a game. QSLs for all calls via EA4RCH, direct or via bureau. Get the "HAM EUROBASKET 2007 AWARD" for QSOs/SWL-reports about four different of their special stations. Read more on http://www.radioclubhenares.org .

Silent Key: Only two weeks ago we received informations for DXNL from Sigi Kleine, DL3AMA. Now we learned that he died unexpectedly on August 14th at the age of 66 years. RIP.
QSL managing for YW5AS (SA-051) was taken over by DM4TI.

Upcoming Contests
---
1. September: AGCW-DL Straight Key Party 40 m; www.agcw.de
1./2. September: JARL All-Asian DX-Contest, SSB;
1./2. September: IARU Region 1-Fieldday, SSB.

IOTA: collected by Fredy, DE0MST (e-mail: iota@dxhf.darc.de)

Island activities

EU-016, 9A, Dalmatia South Grp.: Mladen, 9A2NA, will be on the island of Korcula (CI-041) 01.-10.09. and intends to activate Cerin and Prznjak Mali (both IOCA-new).

EU-099, GJ, MJ, Les Minquiers Islands: A group of OPs of the Cambridge Wireless Society will activate Les Minquiers Islands 03.-07.09. as GH6UW/p. QSL via M0BLF (B/d).

EU-108, GM/MM, Treshnish Islands: Jim, MM0BQI/p will mainly use SSB (80-15m) 01.-03.09. from Lunga Island. QSL via HC (QRZ.com).

EU-110, 9A, Istra Group.: 9A/OK1JK, 9A/OK1UXH, and 9A/OK1JST, will be on Porer Island (CI-090) 24.08. through 02.09. QSL via OK1JST.

EU-170, 9A, Dalmatia North Grp.: OM Niko, 9A/DD1MAT, will activate Dugi Otok Island (CI-018) 01.-15.09, also in the WAE-Contest. QSL via HC.

EU-170, 9A, Dalmatia North Grp.: Lada, 9A5LO, (aka OK1LO) will stay on Pasman Island (CI-085) 03.09..

NA-029, VY2, Prince Edward Island: George, VY2/K3GV, will visit CIA PE-001 02. through 15.09., QSL via HC (B/d).

OC-138, VK4, QLD State (Torres Strait) Grp.: Nobi, JA1JCF, will be on Horn Island 31.08. - 02. 09. as VK4JCF. QSL via JARL (B/d).

Lighthouse activities (WLOTA/ARLHS):

9A/IK5WWA LH 2833 CRO-087 through 02.09.
ID9/IK8HJC LH 1001 through 01.09.
YB9/PA0RRS LH 2589 26.08.-24.09.

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 02 SEPTEMBER 2007

You are listening to ZS6SRL the official Radio Station of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is transmitted every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. To listen to a web stream or Echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links for details.

This, and previous bulletins, can be downloaded from the www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

Your news reader this morning is Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, and 51,400 MHz as well as 438,825 and 1 297 MHz in the Pretoria area. (Other newsreaders please change to suit).

SILENT KEY

It is with deep regret that we announce the passing of ZS1HM, Mark Hammond, on 18th September 2007 at the age of 85 years after a heart attack.. Mark has been very generous to the CTARC and bequeathed much of his shack equipment to the club. Our condolences go to his partner of many years, Dorothy, and his son, Brandon, who lives in Australia.

(PAUSE)

In the news today:

PROPAGATION RESEARCH AND AWARD HUNTING, TWO SUBJECTS FOR AN ENJOYABLE SUNDAY EVENING

22 NEW RADIO AMATEURS JOIN THE RANKS

DRAFT PLT REGULATIONS UNDER THE SPOTLIGHT

ICASA APPOINTS A NEW CEO

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

PROPAGATION RESEARCH AND AWARD HUNTING, TWO SUBJECTS FOR AN ENJOYABLE SUNDAY EVENING

Join Graham Hartlett this evening at 19:00 on the SARL President's net. Graham will discuss a major SARL propagation research project in which SARL members, with access to a receiver capable of receiving the 7 MHz amateur band, can participate.

Intecnet follows at 20:00 with Tjerk Lammers, ZS6P, as the guest speaker. Tjerk will discuss SARL awards and QSL-ing. He will be joined by award hunter Jan Botha, ZS4JAN, from Bloemfontein and DX-er Hans Kappetijn, ZS6KR, from Pretoria. Both are also keen contesters.

Clubs wishing to link their repeaters to the conference bridge should send an e-mail to armi@sarl.org.za before noon today giving details of repeater coverage and frequency and landline telephone number to be connected.

22 NEW RADIO AMATEURS JOIN THE RANKS

22 New Radio Amateurs joined the ranks this week after successfully passing the class B examination held 23 August at examination centres around the country. Unfortunately 2 of the 24 candidates did not make it this time. The highest marks were obtained by H J Coetzee who now holds the call sign ZU6H and H F Rolandi ZU5HR. Both achieved 97%.

The youngest candidate was J Ware, 13 years old, now holding the call sign ZU6SP. Congratulations and welcome to all the successful candidates. You are fortunate to have many years ahead of you in which to enjoy amateur radio.

The next ZU examination will be held at the same time on 18 October 2007. The closing date for registration is 20 September 2007.

The examiner, Graham Butler, thanks all who were involved in making the exams possible.

DRAFT PLT REGULATIONS UNDER THE SPOTLIGHT

ICASA has asked the EMC workgroup of the STANSA TC73 and TC80 committees to come up with draft regulations for type approval of PLT equipment as an interim measure. These interim standards will eventually be replaced by internationally accepted standards. There is however much debate amongst members of the International Special Committee on Radio Interference (CISPR) about international standards with an agreement seemingly some time off. CISPR meets in Australia later this month.

The Work group has held meetings over the past two weeks and hopes to complete a draft to be tabled at the TC80 meeting later this month. Once agreed at TC80, the draft will be forwarded to ICASA for further consideration and once agreed by the ICASA Council, the draft regulations will be published in the government gazette for comment.

The SARL is represented at the Workgroup and has made its input. There is much ongoing debate and unhappiness about the SARL's demands that all Amateur Radio HF frequencies be notched at the time of installation. In particular the vendors of PLT equipment would only

like to notch when an interference complaint is received. The SARL's view is that Radio Amateurs are licensed to operate on HF and that their rights should be protected.

There are many other issues on the table that still need resolving. There is a further meeting next week. Read more about PLT on the member's section of the SARL web.

ICASA APPOINTS A NEW CEO

ICASA has appointed Karabo Motlana as its new Chief Executive Officer. "Karabo Motlana has the experience, knowledge and respect of the industry necessary to lead ICASA in the right direction", ICASA Chairman Paris Mashile said.

Several other managerial posts had also been filled in the past few weeks and ICASA now has the right blend of engineers, lawyers, economists and public policy experts to get the job done. "We are now a team and a lot will be heard about the quantum difference we are going to make compared with the past. We are looking forward to a fruitful working relationship where we will be able to tackle some of the challenges facing us", Mashile said.

Motlana comes from Cell C where he was head of regulatory affairs and previously worked in Telkom's regulatory and government affairs department. He is joining ICASA as it tackles a massive workload, with a completely new licensing regime imposed on the telecoms sector, and a broadcasting sector undergoing a switch from analogue to digital technologies and new pay television players being licensed.

Motlana said he took the job because after 12 years of wrangling with ICASA from the other side, it was time to join up and see what he could do to help. "It's an ambitious agenda but one wants to find out what the issues are and whether they can be addressed through a rational process. We have a new legal framework and we are not operating in accordance with it. There is a whole raft of guidelines, directives and draft regulations and we need to take them seriously and apply them". He takes over from former CEO Jackie Manche, who resigned in December.

CONTEST NEWS

Results of previous competitions.

The Boland 40 metre competition.

21 logs were received. The final results are that Theunis, ZS2EC, came first with 97 points, Raoul, ZS1REC, occupies second position with 85 points and Jan, ZS4JAN, came third with 74 points.

Brad, ZS5BG, attained the highest score in Division 5 and Ruaan, ZS6RMS, attained the highest score in Division 6. No logs were received from Division 3. Die highest score from a neighbouring country is by Jack, V51KC, who is also in the overall fourth place. 21 logs were received.

The overall winner receives a 2007 ARRL Antenna Manual (21st edition) which was donated by Kobus, ZS1DC, a member of the Boland ARC. Certificates will soon be mailed.

SARL HF Phone contest.

24 log submissions were received for this contest, made up of 21 contest logs and 3 check logs and here are the provisional results:

Jan, ZS4JAN, takes first place with 201 points, closely followed by Andre, ZS2ACP, with 199 points and Gary, ZS5NK, in third place with 168 points. The best score on a single band was influenced by salt water. The 40 metre band provided the high scores with Andre, ZS2ACP, making 140 points, Theunis, ZS2EC, made 114 points, Barry, ZS2EZ, made 95 points and Allan, ZR1AAH, made 92 points. In the club competition, the Bloemfontein RAC takes first place with 428 points, followed by the Port Elizabeth ARS with 321 points and Pretoria ARC with 302 points. The complete results are available in HF Happenings 265.

Upcoming contests.

The Spring QRP Sprint will be run on Sunday 9 September from 14:00 to 16:00 CAT with phone, and CW activity on 40 metres.

The second leg of the SARL VHF/UHF Contest will be run in two sessions, the first from 18:00 CAT on Friday 21 September to 18:00 CAT on Saturday 22 September and from 18:01 CAT on Saturday to 12:00 CAT on Sunday 23 September. CW, FM, SSB and digital modes may be used on 6, 4 and 2 metres, 70 and 23 cm and higher allocations. Come and improve on your performance during the first leg.

The rules for both contests can be found in the 2007 SARL Contest Manual.

RAE COURSE

The Kempton Park Amateur Technical Society will be presenting a LADIES ONLY CLASS B (ZU) course on the 29th of September 2007. This class will be for one full day only.

Place: Kempton Park Amateur Radio Technical Society Club house at 58 Ysterhout Ave, Brichleigh, Kempton Park, Johannesburg. Date: Saturday, 29 September 2007. Time: 09:00 - 17:00. SARL Exam fee: R300 Adults & R200 under 25's. Course Fee: Free, if you bring your own manual.

Contact: Hannes, ZS6LW, to enroll for this course on 073 180 3506 or via email.

CLUB NEWS

Joint meeting by South Cape Radio Club and Garden Route Radio Club.

The South Cape Radio Club and Garden Route Radio Club invite their members and all other interested radio amateurs in their areas to a get together at Klein Brakrivier on Saturday 8 September. The purpose of the meeting is to strengthen the relationship between the two clubs

with the possibility of merging into one club in order to better represent the amateurs in the area concerned. The proceedings start at 12:00 at the Riverside Caravan Resort in Klein Brakrivier..

The meeting wil be in the form of a "bring-en-braai". For more information contact Chris, ZS1M, at 044 698 1154.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at very low levels. The geomagnetic field is expected to be quiet in general while reaching minor storm levels on 2 and 3 September. The expected Effective Sun Spot number for the coming week will be less than 5.

20 m and 40 m will provide best opportunities for DX. There is a possibility of 20 m openings towards India from about 15:00 CAT. There may be weak 20 m openings towards Australia from about 08:00. From 16:00 there may be 20 m openings towards Europe and 40 m openings from 20:00. Contacts to the USA are going to be very challenging.

For the CW and digital enthusiasts it will also be worth monitoring 10 MHz.

Locally conditions on 40 m is going to be good during the day.

It is once again time to work towards your 80 m WAZS award in the evenings. Remember that this is only a prediction and that HF always has the capability to surprise you. You will never know what you are missing unless you switch your rig on, listen and also call CQ.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

2 September, still today - Midlands Amateur Radio Club operational at Underberg Farmers Association Annual Show; 2 September, this evening - President's Net and Intecnet (postponed from 26 August); 3 September - Cut off date for submissions of logs for BARK Mobile Sprint; 8 September - Joint meeting of South Cape and Garden Route Radio Clubs at Klein Brakrivier; 9 September - The Spring QRP Sprint; 20 September - Closing date for registering for October RAE; 21 to 22 September - The second leg of the SARL VHF/UHF Contest; 29 September - Ladies Only ZU RAE course by Kempton Park RATS; 4 - 10 October - Special space programme; 5 October - Take your handheld to work day; 6 October - SA AMSAT Space Conference; 6 October East Rand Flea market and AGM; 18 October - Class A RAE.

SARL News invites clubs and individuals to submit news stories of interest to radio amateurs and shortwave listeners. Submit news stories if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to the programme Amateur Radio Mirror International, on the air every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 590 kHz. For the web stream and echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links. A repeat transmission can be heard Mondays at 21:00 CAT on 3 215 kHz. Sentech sponsors the ARMI transmissions on the non-amateur frequencies.

Today's South African Radio League news bulletin was compiled by George, ZS6NE, and transmitted by (your name and call sign).

Thank you for listening. 73.

/EX

1 GB2RS NEWS Sunday 2 September

The news headlines

* 3B7C preparations nearly complete

* Global emergency conference successful

* Radio amateurs raising money for hospice The 3B7C St Brandon Island DXpedition is getting closer. Following the advance party of Neville, G3NUG, Don, G3BJ and Don, G3XTT, the remainder of the team expect to arrive on Isle du Sud on 4 September. Due to the complexity of the stations being set up, operations are expected to commence at midnight UTC on 7 September. However, the 6m beacon on 50.090MHz will be activated at the earliest opportunity so that 6m DXers can start to monitor for possible openings.

Other than their radio gear, contact with the outside world is limited to an Iridium satphone which will be used primarily for uploading logs. For more information log onto www.3b7c.com/. The QSL Manager is Neville, G3NUG, and bureau cards can be requested via the webpage.

The Global Amateur Radio Emergency Communications Conference, GAREC-07, took place on 16 and 17 August in Huntsville, Alabama. It is the third event of its kind, and the first ever held in the United States, just prior to the 2007 ARRL National Convention and Huntsville Hamfest.

Almost 100 people from all over the world attended the global event. The prevailing theme, how to apply advanced technologies to emergency communications, was echoed throughout the two days. The conference also included presentations, discussion groups and emergency vehicle displays informing attendees about the latest in hardware.

Richard Ross, MI1RDR and Paul, MI3CXM, are coming to England from Northern Ireland on 10 September. The pair will be holding kite displays and talks on kite flying. They will also be using kites to raise HF aerials. They aim to raise money for the Children's Hospice in Northern Ireland. Richard will have HF, VHF and UHF to his Motability car. They are hoping fellow radio amateurs will contact them while driving on 10 September from Troon to Boston, Licolnshire.

The events are open to everyone and for more details on where they will be taking place log onto www.niChildrensHospice.piczo.com/. To make a donation log onto www.justgiven.com/mirdr.

Radio amateurs in Malaysia celebrated 50 years of independence with a nationwide field day on 30 August to 1 September. Known as the Merdeka Field Day, the celebration saw 16 stations operating in cities and jungle. All participating stations were issued with special 9M50Mx callsigns. More information is on the web at www.marts.org.my.

On Friday 24 August the public Ramblage restriction imposed on the Isle of Man as a result of the UK outbreak of Foot and Mouth disease was lifted. Therefore SOTA activity can once again commence on the Island. Thank you to all amateurs who observed the temporary restriction.

Manchester 24GHz beacon GB3MAN became operational on Sunday 26 August at 0900 GMT. For more information log onto www.microwavers.org.uk/.

2 And now for the details of rallies and events for the coming week

[Note to newsreaders: Please use your judgement on which of the September 2nd items to read out, based on your time slot and distance from the event.] On Sunday 2 September the Andover Radio Amateur Club Autumn Boot Sale takes place at Wildhern village hall, SP11 0JE. Details from Terry, G8ALR, on 01980 629346. On Sunday 2 September the Newhaven Fort Amateur Radio Group Rally takes place from 10.30 at Newhaven Fort, Newhaven. Details from Eddie, G0ECW, on 01273 300772, or by email to eddie@zamboodle.demon.co.uk. On Friday 7 and Saturday 8 September the Leicester Amateur Radio Show takes place from 9.30am at Donington Park, Leicester, close to M1 junction 23A. Details from Geoff, G4AFJ, on 01455 823 344 or on the web at www.lars.org.uk. More details of these and future events can be found on pages 88 and 89 of the September edition of RadCom. Now for the news of special events

The Radio club de Binche will activate the special call sign ON4WAR to pay tribute to the Belgian Resistance during WW II. It will take place on 2 September. Old rigs such as Paraset and TR6 will transmit in CW on the 7MHz band from the dropping area of the Refuge B40 in Waudrez, Binche, Belgium. Some transmissions in SSB are also scheduled on the 7 MHz band. A special QSL card will be issued for this event. More info on www.on7ry.be. The Orkney Wireless Museum will be active as GB2OWM until 5 September. Celebrating the 17th Orkney International Science Festival, the station will be at the Museum's premises at Kiln Corner, Kirkwall. Probable operating periods will be weekdays and Sunday afternoons between 1430 and 1630, and Saturday morning between 1000 and 1230. Activity will be primarily on HF SSB. For more information contact Bill, GM3IBU, QTHR or e-mail gm3ibu@orpheusmail.co.uk. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

Tomas, LY1F/VK2CCC, will be active as 3D2MT from the Fiji Islands until 4 September. He plans to operate mostly CW 80 to 17 metres, and to participate in the All Asian DX SSB Contest. QSL via VK2CCC direct or LY1F bureau. Dick, G3URA, will operate mostly CW as SV9/G3URA from Crete (EU-015) until 4 September. He will participate in the Russian RTTY Contest as J49X. QSL via G3URA, direct or bureau. Piero, IZ1CRA, reports he will be active mainly on 20 metres from Palau, Sardinia

(EU-024) until 6 September. QSL via home call, bureau preferred. DL5ME and DG3HWO will be active ss SD7ME from Oland Island (EU-037) on 6 to 11 September. They will operate CW and SSB on 40, 30, 20 and 17 metres. QSL route at qrz.com under SD7ME.

3 Geza, HA4XG, will be active on the HF bands plus 6 and 2 metres from Greece until 14 September. First he will operate as either J48XG or SV8/HA4XG from Corfu/Kerkyra Island (EU-052) until 6 September. QSL via home call, direct or bureau. Niko, DD1MAT, will operate holiday style as 9A/DD1MAT from Dugi Otok (EU-170, CI-018) until 15 September. QSL via home call. Ron, ZL1AMO, plans to operate holiday style from Lifuka (OC-169), Tonga until 16 September. He hopes to have his old call sign A35EA renewed. Five special call signs - namely AN0EB, AN4EB, AN5EB, AN6EB and AN7EB will be aired until 16 September for EuroBasket 2007, the Basketball European Championship that will be held in Granada, Sevilla, Palma de Mallorca (Balearic Islands), Alicante and Madrid. QSL for all call signs via EA4RCH, direct or bureau. Information on the relevant award can be found at www.radioclubhenares.org. Now the contest news The Irish Radio Transmitters Society's 75th Anniversary Contest CQIR will take place from 1200 UTC on 29 September. It is a 24 hour single operator contest with the emphasis on participation rather than winning. Every participant gains one entry ticket for a spectacular draw for every 75 QSO's made during the Contest. Full rules are on the IRTS website. The Worked All Europe Contest takes place on 8 September at 0000 to 2350 on 9 September on 3.5 to 28MHz SSB. The exchange takes the form of RS and serial number. The RSGB 144MHz Backpackers Contest takes place on 2 September between 1100 and 1500 on all modes. The exchange takes the form of RST, serial number and locator. The RSGB 144MHz Activity and Club Championship takes place on 4 September between 2000 and 2230 local on all modes. The exchange takes the form of RST, serial number and locator. Now the solar factual data for the period from 20 August to 26 August, compiled by Neil Clarke, G0CAS Solar activity was very low except for the 24th when a small C class solar flare took place and lifted activity to low. No effects on propagation were observed from this flare. Solar flux levels increased from 69 units on the 20th to 72 by the 24th and the 25th. The average was 70 units. The 90 day solar flux average on the 26th was 72, that's one unit up on last week. X-ray flux levels remained below the minimum A1 level everyday. Geomagnetic activity was quiet until around midday on the 26th, when a coronal hole disturbance commenced. Three days saw the Ap index at only 2 units. The most disturbed day was the 26th with an Ap of 10 units. The average was Ap 5 units. The ACE spacecraft saw solar wind speeds decline from 440 kilometres per second on the 20th to 290 by the 25th. Speeds increased to 520 kilometres per second the next day. Particle densities were low except for the 25th and the 26th, which increased to 37 and 71 particles per cubic centimetre respectively. Bz varied between minus and plus 3 nanoTeslas on the quiet days and between minus 12 and plus 16 nanoTeslas during the disturbance of the 26th. The higher HF bands have continued to provide few F-layer openings, though sporadic-E gave daily openings to

Europe and North Africa on 28MHz. There were also strong openings to the Continent on 50MHz, while 70MHz was open on several days. 14MHz remains the most consistent HF band for long-haul

4 propagation, being open from breakfast until late evening. And top-band, not usually a great performer at this time of year, has been open to South America during the dark hours. A sprinkling of auroral contacts took place late on the 26th from the more northerly stations. And finally the solar forecast. This week solar activity is expected to continue at very low levels. Solar flux levels should be around the 70 mark for most of the week. Due to 2 coronal holes geomagnetic activity should be unsettled to active levels for most of the week. This first disturbance should be in progress today. However, activity should decline tomorrow but only temporarily as the second disturbance is expected to start on Thursday or Friday. The first disturbance should be the stronger of the two. As with most coronal hole disturbances the strongest activity will take place right at the start of the disturbance. MUFs during daylight hours at equal latitudes should be around 17MHz for the south and 14MHz for the north. The darkness hour lows are expected to be about 8MHz. Paths this week to the Middle East should have a maximum usable frequency with a 50 per cent success rate of around 20MHz. The optimum working frequency with a 90 per cent success rate will be about 16MHz. The best time to try this path will be between 1000 and 1500 hours UTC. And that's all for this week from the propagation team.

Irish Radio Transmitters Society
Radio News Bulletin

Sunday September 2nd 2007

Silent Key Billy Cantwell EI7GO

The many friends of Billy EI7GO will be saddened to hear of his death. Billy had been ill for a relatively short period and died peacefully at his home in Mullinahone on Monday last. Billy was one of the most regular callers into the weekly HF news bulletins and prided himself on being mostly the first to be heard on the 80-metre news call in.

Billy was an active member of the Tipperary Amateur Radio Group and participated regularly in various HF and VHF nets. He was extremely popular with all with whom he came in contact. Billy was blessed with an infectious good humour and a ready wit, which we all enjoyed. The experimenter community was well represented both at the removal on Tuesday evening and at the funeral Mass on Wednesday. The 'voice of downtown Mullinahone' as Billy humourously described himself is now silent and will be sadly missed by us all.

To his wife Stella, his son Liam and to his daughters Anne, Noelle, Ailish and Michelle we extend our sincerest sympathy. May he rest in peace.

Counties Contest

The 2-metre Counties Contest took place last weekend. The weather was good, which encouraged a number of stations to operate portable, however the lure of the All-Ireland semi-final may have contributed to the absence of a number of regulars. Most counties were heard at one time or another during the day, with the midland counties certainly well represented.

The Slieve Blooms proved a popular spot for portable stations, with Trevor EI2GLB and Joe EI7GY operating a few hundred metres apart on Wolftrap Mountain, county

Laois, and John EI4HS nearby, but over the border in county Offaly. All who participated in the contest, even those who gave out just a few points, are encouraged to send in their logs to the Contest Manager. The latest date for log entry is the 25th of September.

CQIR

September has arrived and our premier international event for our Jubilee year, the CQIR Contest is just around the corner.

A quick internet search will demonstrate just how much interest there is in the event from the international radio community. We hope your plans for the event are well advanced and we have set ourselves an ambitious target to have 250 EI and GI stations on the bands for part or all of the weekend. This is more of a QSO party than a contest so we would encourage the non-contesters to get involved and fly the flag for Ireland and the Society on the 29th and 30th next.

EI75IRTS will be QRV for the event with the LF night time operation from the EI7M site in Cork and a HF station for the Press located in the Pheonix Park in Dublin. In respect of the Dublin station, we are anxious to have some young operators on the operating team. If you are between 15 and 25 years of age, licensed or not, and are interested in helping out, please contact Paul EI2CA on 087 2523908 or email &#65533;paul at comma dot ie&#65533;.

MRG Experimenter Group

The MRG experimenter Radio Group VHF/UHF SSB Challenge 2007 will take place between 15.00 hrs and 18.00 hrs (local time) on Sunday the 9th of September. The Fixed section takes place on 144 MHz & 432 MHz, SSB only and the Portable section on 144 MHz and 432 MHz, SSB only.

Any EI/GI operator holding an amateur/experimenter licence can participate. Closing date for logs is October 9h 2007. Please forward completed logs to &#65533;ei2mrg at yahoo dot com&#65533; Trophies will be presented to the winners of the fixed and portable sections later in the year. A full copy of the rules can be had by visiting www.geocities.com/ei2mrg.

Tipperary Amateur Radio Group

The next meeting of the Tipperary Amateur Radio Group will take place on Thursday next the 6th of September at 8.00pm in Raheen House Hotel Clonmel.

Limerick Radio Club

The next meeting of the Club will be on the Thursday 11th of October at the usual venue, the Limerick Institute of Technology, Moylish at 19:30 hrs local time. All those interested are welcome to attend.

EI0MAR

EI0MAR will be celebrating the 75th anniversary of the IRTS by using the call sign EI75IRTS on the first two Sundays in September. CW will be the main mode of operation although some CQ calls will also be made on SSB as well. If conditions are favourable, the 7 MHz band will be the main focus, to allow as many EIs as possible to work the special call sign. The station may also be QRV on the Saturdays of the same weekends. EI0MAR is QRV most Sundays between 11 and 3. Telephone and email contact details for EI0MAR are available on the museum website which is www.qsl.net/ei5em/museum.html. A link on the museum web page will take you to EI0MAR's own web site.

Upcoming Rallies

Cork Radio Club Rally will take place on Sunday the 23rd of September in the Blarney Park Hotel. For information contact Con on 021-427136.

The Waterford Rally will take place on Sunday the 21st of October in the Woodlands Hotel, Waterford. For more information visit www.searg.com.

The Foyle and District Rally will take place on Sunday the 4th of November 2007 at the White Horse Hotel, Derry. For more information visit www.mn0aku.org.uk.

The Mayo Radio Rally will take place on Sunday the 18th of November in the Belmount Hotel, Knock, Co. Mayo. For more information contact Padraic Baynes, EI9JA @ QTHR.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be

submitted via e-mail to ﷺnews at irts dot ieﷺ for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sundayﷺs bulletin.

1498. Re: 160m Stealth

> like the tree). I will have to feed it with RG-8x (painted) run down the
> tree and
buried in a trench to the house.
>
As far as radials go - They are out of the question. Instead - what do you
think if I should just roll up say 250ft of 13ga or so of single conductor
wire about a foot in diameter, attached at the base of the mounting bracket
(hung in the tree) and use it as a counterpoise? I might be able to hang in
the lower branches of the tree - a waterproof box with a loading coil and
attach the counterpoise there instead?
>
> If I could tune TX/RX with this configuration, then I could possibly use
> it to cover all of the HF bands.
>
> Of course, I would like to work DX, but if not possible, then at least
> conus.
>
> Comments and suggestions welcomed.
>
> 73's Howard, W3CQH
>
1] The 160m whip assy that I originally planned to use is CENTER-LOADED
which I think is better than a base loaded whip?

2] Someone suggested that I should run a length of bare wire up the tree
and use a TOPHAT. If I decide to go with a 30 or 40 foot length of bare

wire up the tree, How long should the TOPHAT wires be?

73's de Howard W3CQH

1499. [RAC-Bulletin] RAC Bulletin #14 - BC Section Manager elections

Newsgroup: rec.radio.amateur.moderated
Date: 2007-09-04 15:06:28 UTC
From: John Iliffe <john.iliffe@sympatico.ca>
Message-ID: <46DD7369.589294C9@sympatico.ca>
Source record: 3904
Cross-posted to: rec.radio.amateur.moderated,rec.radio.info

The deadline for receipt of returned ballots in the current British Columbia Section Manager election has been extended by ten (10) days to 1200 EDST, September 30, 2007.

This change has been made to address uncontrollable and unforeseen circumstances that caused a delay in the mailing of ballots to those RAC members who are qualified to vote in the election.

DXNL 1535 - Sep 5, 2007
DX Newsletter

a free and weekly service of
DARC Committee "DX and HF contesting"
(http://www.darcdxhf.de)

editor: Helmut Schlaffer, DL7MAE
(e-mail: dxnl@dxhf.darc.de)

translation by: Mike, DJ5AV
(e-mail: dj5av@darc.de)

GD - Isle of Man, EU-116
Lars, DF1LON, intends to be active from the Isle of Man September 6th through 10 as MD0LON on 80 through 10 m, possibly 6 m also, using SSB, CW and RTTY. QSL via home call, also via bureau. For the WAE-Contest (Sep 8/9th) he will be GD6IA (QSL for this call via CBA) or MD0LON.

SP - Poland
During an exhibition in the town of Kielce special call 3Z0MSPO is active September 3rd through 6th. QSL via SP7PKI, direct or via bureau.

VP8 - Falkland-Ilands, SA-002
Chris, GM0TQJ, will be on East Falkland Insel using the call VP8CXV September 8th through Januar 15th, 2008. He prefers SSB but will do also some RTTY and PSK31. QSLs will be answered after his return home.

VQ9 - Chagos-Archipel, AF-006
Jim, ND9M, finished his activity as VQ9JC with the end of August. He will be back on Diego Garcia in December 2007 after his leave for another 4 months.

VU - India
August 31st through September 30th, 2007 there is again a temporary authorization to use 30m band for Indian hams. NIAR special call AT60MY will be active on 10.106 MHz in this time frame.

YB - Indonesia, OC-022
Hans, PA0HOP, will be YB9AGH on Bali in September and October using CW, PSK31 and RTTY. QSL via PA0HOP, direct or via bureau.

ZD7 - St. Helena, AF-022
Tom, KC0W, went to St Helena September 5th for quite a time and is hoping to have is aerials erected by September 15th to start his radio adventure as ZD7X. Tom will take part in all great contests using SSB,

CW, RTTY and PSK on all bands 160 through 6 m. Favorite bands will be 30 m, 80 and 160 m. W0MM was selected to be his QSL manager, he will confirm direct as well es via bureau.

3B7 - St. Brandon, AF-015
Nearly 6 months ago we spread information on the DXpedition to St. Brandon (Isle du Sud, AF-015) by "FSDXA" in DXNL #1511. Now here the details about 3B7C: G3USR, GM3POI, N6HC, K3NA, G4TSH, G3XTT, G3SVL, G3NHL, G3IZD, G3BJ, G0OPB, EI5DI, DL7AKC, DK7YY, 9M6DXX, SM5GMZ, MD0CCE, G3NUG, as well as N6OX will be active September 7th (0000 UTC) through September 24th with twelve stations simultaneously. There will be monobanders for 30 through 6 m and verticals for the lowbands. August 12th the container arrived on Mauritius with six big (5 kVA) Diesel generators.
They also looked for a special authorization for 6 m, usually not available on Mauritius. Three fixed frequencies are authorised for them: 50.090 (CW), 50.102 (CW), and 50.145 MHz (USB).
After uploading of the logs on their web side www.3b7c.com a software will show those 30 top DXers with the biggest amount of bandpoints (= QSOs in CW, RTTY, PSK, SSB and FM per band).
Feedback messages can be sent by e-mail to 3b7c@g3wgv.com and will be made available to the team on a daily basis.
QSL via Neville, G3NUG, direct or via bureau or by LoTW. There will be an online QSL request on their web page too.
SWLs will have BRS32525 for a seperate QSL manager. They will use split frequence for nearly all QSOs on these frequencies:
MHz CW SSB RTTY FM PSK
1.8 1.822 1.842 - - -
3.5 3.502 3.795 3.570 - 3.580
7 7.002 7.052 7.035 - 7.037
10.1 10.102 - 10.137 - 10.140
14 14.022 14.145 14.085 - 14.071
18 18.072 18.145 18.100 - 18.100
21 21.022 21.295 21.085 - 21.071
24.9 24.892 24.945 24.920 - 24.920
28 28.022 28.495 28.075 29.580 28.071
50 50.102 50.145 - - -
50 MHz beacon transmitting on 50.090 MHz
They will produce a video about this DXpedition, you may order the DVD on the 3B7C homepage.

5H - Tansania: Scott, AC3A, will work in Tansania September 7th through 17th for "ORBIS International" (a humanitary organisation, protecting people from blindness). In his evening hours Scott intends to be active as 5H3EYE. QSL via AC3A.

5Z - Kenia: Chris, 5Z4/DL2MDU, is on vacation in Kenia September 10th through 24th and intends to be mainly active on CW "holiday style" with 100 wtts from an FT-897 with wire antennas for 10 through 80 m, prefering 17 m, 30 m and 40/80m. Chris prefers QSLing via DARC-Bureau.

9H - Malta, EU-023
A team from the Netherlands will have the 20th visit to Malta
September 8th through October 1st and will present the call 9H20
(nine hotel two zero) on 10 through 80 m. Team members will also be
on the air with their individual 9H3 calls. QSL for 9H20 via
PB9ZR/9H3ZR: Ruben van der Zwet, Barentzstraat 1, 2161 TJ Lisse,
The Netherlands. They do not like IRCs but will confirm automatically
via bureau for all QSOs without direct request until December 2007.

Finland, special call
Finland got its indepence December 6th 90 years ago. Due to this event
Finish stations may use the prefix OF instead of OH Sep 1st through
December 31st, 2007.

France, special call
This year's CDDXC-Conventio will be held by "Clipperton DX Club"
September 22nd in Puyloubier, Southern France. Special station TM8CDX
(QSL via F5CQ) will demonstrate this event September 8th through 22nd.

USA, special call
Robert, W2IK, will use special call W2IK/WTC911 September 11th 13:00Z
through 0300 UTC September 12th on 40, 20 and 15 m on SSB in memory of
the people that lost their lives in the attack to the World Trade
Center. QSL to W2IK, P.O. Box 6731, San Antonio, TX 78209, USA. More
information by http://hometown.aol.com/realhamradio/ .

Yes it is because the lower (below the load) portion of the antenna
would carry a higher current which increases the radiation
resistance. However, there is no free lunch here, because you must
then provide a larger reactance (More inductance in this case) to
bring the antenna into resonance which is likely to have more loss.
You can push this to extreme too, by doing what you suggest next only
in this case the inductive reactance turns to a capacitor as you pass
the end of the antenna...

> 2] Someone suggested that I should run a length of bare wire up the tree

> wire up the tree, How long should the TOPHAT wires be?
>

Yes, you can add capacitive loading by adding a top hat to the top of
your antenna, thereby reducing the inductance required in your loading
coil. If you can add enough capacitance to your hat, you can eliminate
the inductive loading below, but it can be difficult to get a hat that
large in some cases. Capacitive loading is usually a lot more
efficient than a loading coil and has the added benefit of moving more
of the current up the antenna where it can contribute to the radiation
resistance number (making the antenna more efficient). This "top-hat"
is a set of wires that are roughly horizontal and attached to the top
of your vertical. Make it as big as you can hide in your tree I
suppose and expect to have to add additional inductive loading at your
base to bring it into resonance. Capacitance hats can be hard to hide
though, and difficult to construct.

The ARRL Antenna book would be a very good investment for you I
think. It has a wealth of information about how to figure out how
much your "top-hat" design might lower the resonance of your planned
antenna and how much additional inductive loading you might need. It
also has some nice antenna modeling software that also would help you
with your design ideas. (Instead of having to build and rebuild
possible antennas to find the best performer for your site, you can
model them and weed them down to a few most promising designs to try).

==> FCC TO LOWER VANITY CALL SIGN FEES SEPTEMBER 17

The FCC will reduce the regulatory fee to obtain or renew an Amateur
Radio vanity call sign by more than 40 percent starting September 17.
In
a Report & Order (R&O) released August 6, "Assessment and Collection of
Regulatory Fees for Fiscal Year 2007," in MD Docket 07-81, the
Commission will cut the fee from its current $20.80 to $11.70. This
```

marks the lowest fee in the history of the current vanity call sign program. The FCC is authorized by the Communications Act of 1934 (as amended) to collect vanity call sign fees to recover the costs associated with that program. The vanity call sign fee has fluctuated over the 11 years of the current program -- from a low of $12 to a high of $50. The FCC says it anticipates some 14,700 Amateur Radio vanity call sign "payment units" or applications during the next fiscal year, collecting $171,990 in fees from the program.

The vanity call sign regulatory fee is payable not only when applying for a new vanity call sign, but also upon renewing a vanity call sign for a new term. The first vanity call sign licenses issued under the current Amateur Radio vanity call sign program that began in 1996 came up for renewal last year. Call signs issued prior to 1996 are not considered vanity call signs, even if the holder was able to request a specific call sign.

Amateur Radio licensees may file for renewal only within 90 days of their license expiration date. All radio amateurs must have an FCC Registration Number (FRN) before filing any application with the Commission. Applicants can obtain an FRN by going to the ULS <http://wireless.fcc.gov/uls/> and clicking on the "New Users Register" link. You must supply your Social Security Number to obtain an FRN.

The ARRL VEC will process license renewals for vanity call sign holders for a modest fee. The service is available to ARRL members and nonmembers, although League members pay less. Routine, non-vanity renewals continue to be free for ARRL members. Trustees of club stations
with vanity call signs may renew either via the ULS or through a Club Station Call Sign Administrator, such as ARRL VEC.
License application and renewal information and links to the required forms are available on the ARRL Amateur Application Filing FAQ Web page <http://www.arrl.org/FandES/field/regulations/application-filing-faq.ht
m
l>. The FCC's forms page <http://www.fcc.gov/formpage.html> also offers the required forms.

==> NATO GROUP RELEASES REPORT ON BPL

The Information Systems Technology group, part of the North Atlantic Treaty Organization's (NATO) Research and Technology Organization (RTO),
released their report, "HF Interference, Procedures and Tools" (RTO-TR-IST-050), in June. This report "address[es] the concerns raised by the potential for unintentional radio interference to be caused by the widespread operation of broadband wire-line telecommunications systems."

BPL, also called Power Line Telecommunications (PLT) in Europe, uses existing power lines for telecommunications with data rates higher than 1 MBit per second. NATO said that since existing power lines were not

designed for such transmissions, "they will cause unintentional RF emissions which may adversely affect the established radio noise floor directly, or by cumulative propagation from many such sources. The existing HF background noise possibly may be increased via ground wave and/or sky wave propagation."

Not only could this be a problem for Amateur Radio operators, but NATO said that military users would be affected as well: "Increase of the existing HF noise floor by widespread use of PLT...will bring up problems for Military Radio Users as well as for HF Communication Intelligence (COMINT) in all NATO countries. The signal-to-noise ratio thus may be reduced for tactical and strategic HF radio as well as for fixed sensitive COMINT sites."

Saying that "PLT will produce the most problems regarding HF interference,"the report makes the assertion that ambient noise levels in Europe have not increased in the last 30 years. This was proved using
measurements made by the ITU in the 1970s compared with noise levels today, with the report saying that the "ITU Recommendations for natural and man-made noise in the HF-range are still valid in Europe."

The NATO report said "[r]ecent measurements carried out in Germany and Great Britain indicated that there is no remarkable difference between these measurements, specifically no increase of the ambient noise in quiet rural zones within the last 30 years. Based on these measurement results, the cumulative interference field strengths far away from telecommunication networks should not be higher than -15 dBuV/m (9 kHz bandwidth) across the entire HF range, if no measurable increase in minimum noise levels are to be tolerated."

Conversely, some European PLT proponents "in presentations and discussions have argued (without being able to prove it) that ITU recommendations based on measurements carried out in the 1970s are no longer valid, as the man-made and the ambient noise levels have increased since that time to considerable higher values (by up to 30 dB)."

The NATO report also indicated the following: A high probability that PLT would cause increased noise levels at sensitive receiver sites given
the projected market penetration; and the percentages are highly influenced by assumptions on transmitter EIRP (equivalent, or effective,
isotropic radiated power), PLT market penetration and duty cycle.

ARRL Laboratory Manager Ed Hare, W1RFI, was pleased to see the report. "The findings described in this paper are based on good science. NATO has concluded that protection levels well below 0 dBuV/m are needed to prevent interference to sensitive HF operation. They studied distance extrapolation and concluded that 40 dB/decade is not the correct factor to use to make measurements at one distance, and related the measured

values to other distances. They also have advanced the state of the art and determined that the aggregate noise from large scale deployment of BPL will increase worldwide noise levels by skywave propagation."

Hare points out that NATO's report "pretty much echoes the ARRL's pleadings during the BPL rulemaking." The ARRL has constantly argued against the 40 dB/decade extrapolation factor that, while recommended by
the FCC, the report found, "was not confirmed by measurements carried out by other organizations."

The report acknowledges that there are no commonly accepted regulatory emission limits from PLT and recommends that countries work together to limit these emissions. "While it is highly desirable that the regulatory
limits on PLT emissions be harmonized throughout the NATO countries, the
RTG recognizes that NATO, by itself, has no regulatory authority over the emission limits. Therefore, it is recommended that NATO seek the implementation of this goal by working together with the national and international regulatory authorities."

The full report, "HF Interference, Procedures and Tools," can be downloaded in pdf format
<http://ftp.rta.nato.int/public/PubFullText/RTO/TR/RTO-TR-IST-050/$$TR-I
ST-050-ALL.pdf>.

==> HURRICANE FELIX DOWNGRADED; AMATEUR RADIO NETS STAND DOWN

As Hurricane Felix weakened rapidly over the mountains of Central America earlier this week, both the Hurricane Watch Net and VoIP Hurricane Net secured operations. According to the National Hurricane Center, Felix could produce total rainfall accumulations of 6-10 inches across northern Nicaragua and El Salvador, with 8-15 inches over much of
Honduras. Up to of 25 inches of rain was possible in mountainous areas, with these rains likely to have produced life-threatening flash floods and mud slides.

On Tuesday evening, September 4, the Hurricane Watch Net secured operations on 14.325 MHz after more than 20 hours of operation with Hurricane Felix. Initially commencing operation on Sunday evening, September 2, HWN gathered names, calls and specific locations of stations that would be able to report real-time weather conditions in the affected area and forwarded them to the National Hurricane Center in
Miami. Getting this information beforehand ensured accurate reporting of
a station's location when the storm actually arrived.

Two of the regular Net Control Stations -- Herman Cueva, HR1CP, in Tegucigalpa, Honduras, and Hector Godoy, HR3HGB, in La Ceiba, Honduras -- felt direct effects of the storm, but remained on the air available to help.

In addition to getting real-time reports of conditions in the affected area, the HWN also put out advisories in English and Spanish so that stations in the area of Felix's path could know what to expect. These reports were often relayed to the local authorities and media, since oftentimes HWN was the only source of information; all power, telephone and Internet were down. Butch Pieniek, NC4G (ex-WB4CKO), put in long hours sending out advisories in Spanish.

The Hurricane Watch Net normally commences operation when a hurricane comes within 300 miles of shore, or at the request of the NHC. It operates with designated Net Controllers who are experienced in taking these specific reports, net operations and especially working with the NHC in Miami. HWN provides the latest storm advisories in English and Spanish to those in the path of storms. The Hurricane Watch Net is a directed Net, and requests that non-member stations not in the affected area refrain from transmitting unless requested to do so by Net Control.
A clear frequency is appreciated, since reporting stations in the affected area(s) may be utilizing temporary or makeshift antennas, battery power or operating under conditions that don't allow the transmission of a reasonably strong signal.

The VoIP Hurricane Net was active from 0800 UTC, standing down at 0000 UTC Tuesday, September 4, to gather reports for WX4NHC, the Amateur Radio station at the National Hurricane Center.

The President of Honduras lauded Amateur Radio on the Voice of Honduras radio station: "The President of Honduras, Senor Manuel Zelaya Rosales, says thanks to the community of radio hams for the aid." Andoni Axpe Soto, EB1FGO, and a team of translators from the International Radio Emergency Support Coalition (IRESC) brought this news to the VoIP Hurricane Net.

IRESC also relayed a report to the VoIP Hurricane Net from Nicaragua TV that 5500 homes were destroyed, 13,000 people had officially been evacuated and 38,000 total people were affected by Hurricane Felix.

WX4NHC, the Amateur Radio Station at the National Hurricane Center, monitored the VoIP Net and other systems to gather reports and information. Julio Ripoll, WD4R, Assistant WX4NHC Coordinator, said, "Felix was the second Category 5 Atlantic hurricane to make landfall as a Category 5 this year. This has never happened before in recorded history. The ham radio reports will be part of this historic hurricane's
official NHC archives. WX4NHC extends its sincere thanks to all the ham radio operators from many countries and Nets for being the link between NHC and those in the path of this extremely powerful and dangerous hurricane. We hope that our continued efforts to spread the hurricane

warnings will help save lives. Our thoughts and prayers are with those people who were affected by Hurricane Felix, and hope that they can rebuild their lives quickly." -- Tnx to John Ellis, NP2B, HWN Liaison to ARRL, and Rob Macedo, KD1CY, Director of Operations, VoIP Hurricane Net

==> NEW ARRL CONTEST MANAGER TO BEGIN IN OCTOBER

The ARRL is pleased to announce that Sean Kutzko, KX9X, will be assuming the duties of ARRL Contest Manager beginning October 1. First licensed in 1982 as KA9NGH, Kutzko developed a taste for contesting after winning the Illinois section in the 1988 ARRL Novice Roundup. Since then, he has been active in both HF and VHF contesting, as well as HF DXing and VHF weak-signal communications.

A long-standing member of the Society of Midwest Contesters (SMC) and a strong advocate of mentoring new contesters, Kutzko has won several contest and DX awards, including several Top Ten finishes in the ARRL Sweepstakes SSB contest as a QRP entrant. He has been on two HF contest DXpeditions, including 6Y7M in the 1994 CQ WPX CW contest, and V26NA in the 1997 ARRL International DX CW Contest. Kutzko also enjoys activating rare grid squares by going on "Grid DXpeditions" in the continental US for the VHF/UHF community. In the late 1990s, Kutzko published a regular column in the National Contest Journal (NCJ) that focused on DX locations available for hams to rent for contests or DXpeditions.

Kutzko holds a BA in communications from the University of Illinois at Springfield and worked as an announcer and jazz host at National Public Radio (NPR) affiliates in Illinois and Indiana throughout the 1990s. Most recently, he was the Advertising and Marketing Director for Area Diesel Service, a diesel parts company based in Carlinville, Illinois. When he's not involved in Amateur Radio, Kutzko is an active musician, playing guitar, drums and ethnic percussion, and is working on his first solo CD. He enjoys studying music history and has a diverse musical appetite, ranging from classic rock, jazz, blues, bluegrass, West African highlife and even classical. He is a rabid baseball fan and follows the Chicago Cubs religiously.

ARRL Membership and Volunteer Programs Manager Dave Patton, NN1N, said, "I am very pleased to have Sean onboard. He is enthusiastic, bright, and an active contester, with VHF/UHF contesting and operating among his favorite activities." Kutzko replaces Tom Hogerty, KC1J, who resigned as ARRL Contest Manager in early August to pursue other opportunities.

==> ARRL DELTA DIVISION DIRECTOR RECEIVES LIFETIME ACHIEVEMENT AWARD

ARRL Delta Division Director Henry Leggette, WD4Q, received the Lifetime
Achievement Award from the Mississippi Valley State University National Alumni Association in June 2007. Leggette, a native of Kemper Springs, Mississippi, graduated from then-Mississippi Valley State College in 1967 with a BA in automobile mechanics. After graduation, he was the first MVSC graduate to receive an Amateur Radio license; there are only two other MVSU alumni amateurs in the country. Leggette completed all the undergraduate courses for a BSEE degree at Memphis State University (now University of Memphis), and in 1987, he earned an MSEE from that institution.

Leggette served three years in the US Army Signal Corps as a radio repairman. He was stationed at Fort Gordon, Georgia and Lenggries, Germany. Granted a Top Secret clearance, Leggette repaired radios and cryptographic electronic equipment.

Leggette had a distinguished US Civil Service career. He has served as an electronics technician for the Federal Aviation Administration at the
Memphis Air Traffic Control Tower and Memphis Air Route Traffic Center. He has received extensive training at the FAA Academy in Oklahoma City and at Rockwell Collins in Cedar Rapids, Iowa. He has held management positions, including managing flight data processing and supervising electronics technicians in charge of the Telecommunications and Communication Unit at the Memphis ARTCC.

First elected Vice Director of the ARRL Delta Division in 1989, he has served on Volunteer Resources, Membership Services, National Emergency Response Planning and Public Relations committees. In 2005, he chaired the ARRL Toy Drive. This nationwide project sent more than 5000 toys and
$10,000 to children in areas affected by hurricanes Rita and Katrina.

A Life Member of the ARRL, Leggette became Director in January 2006, succeeding Rick Roderick, K5UR, on his ascension to ARRL Vice President.
He serves on the Administration and Finance, and Ethics and Elections committees. An ARRL Volunteer Examiner and Certified Instructor, Leggette also holds many ARRL awards, including Worked All States (WAS),
5 Band Worked All States (5BWAS), DXCC, Worked All Continents (WAC), as well as CQ magazine's Worked All Zones (WAZ).

==> ARRL IN ACTION: WHAT HAVE WE BEEN UP TO LATELY?

The 2007 ARRL National Convention, held in conjunction with the Huntsville Hamfest, attracted thousands of visitors to its wide variety of activities, exhibits and presentations. The centerpiece of the Convention was ARRL EXPO. The 2007 Global Amateur Radio Emergency Communications Conference (GAREC-07), supported by the IARU, took place

just before the National Convention.

With graphics and public relations assistance from the ARRL staff, Cliff
Segar, KD4GT, has installed a ham radio message on an unused billboard on his property bordering Interstate 40 in Rockwood, Tennessee.

The ARRL is sending "specific mitigation reduction numbers" to 122 repeater owners in Massachusetts and California regarding the PAVE PAWS radar system, as requested by the US Air Force and Department of Defense.

Michigan's Genesee County ARES and SKYWARN were activated due to a severe thunderstorms and a tornado touchdown near Fenton. A command post
at the Seneca County (Ohio) Emergency Operations Center was activated after a week of heavy rains inundated several Northwest Ohio communities.

Editorial and production work has wrapped up on several new and revised ARRL publications: The 2008 Handbook, The HF Digital Handbook, Low Power
Communication, The ARRL Antenna Compendium Volume 4 and FCC Rules and Regulations. All are either available now or are expected by early October. The October issue of QST, and the September/October issues of NCJ and QEX, were released to the printer. In addition, the August edition of CONTACT! for public information volunteers was posted. The winner of the QST Cover Plaque Award for July is Jim DeLoach, WU0I, for his article "Balloon-Lifted Full-Wave Loop Antennas."

Robert McGwier, N4HY, will present "A Stroll through Software Radio, Information Theory and Some Applications" at the ARRL/TAPR Digital Communications Conference Sunday Seminar in Hartford, Connecticut on September 30.

In the only contested Section Manager race this summer, Bill Hillendahl,
KH6GJV, was re-elected as the ARRL San Francisco Section Manager.

The final two ARRL Teachers Institutes were held at ARRL Headquarters. In all, 48 teachers representing 45 schools from around the country attended the four 2007 Teachers Institutes.

ARRL President Joel Harrison, W5ZN, has appointed Brent Zitting, KB4SL, of Huntsville, Alabama, to serve on ARRL's ElectroMagnetic Compatibility
(EMC) Committee.

All 2007 Field Day logs have been received and posted to the Claimed Scores page on the ARRL Web site. A record number of logs were received this year.

Earlier this summer, FEMARA made a $5000 donation to the ARRL
Foundation
to fund their New England FEMARA scholarships.

Chuck Skolaut, K0BOG, compiled and forwarded the monthly ARRL
Monitoring
System report to the IARU Region 2 coordinator.

The ARRL UHF Contest and 10 GHz and Up Contest were held.

ARRL membership will exceed 152,000 at the end of August. The ARRL
Letter now distributes to more than 65,000 ARRL members each week. The
number of candidates who took ARRL VEC exams from January 1 through
July
30 nearly doubled between 2006 and 2007, from 16,954 to 32,373.

A number of ARRL staff, Board members, officers and volunteers traveled
to the Global Amateur Radio Emergency Communications Conference and the
ARRL National Convention in Huntsville, Alabama. Norm Fusaro, W3IZ,
traveled to Hamfair in Tokyo, while Ed Hare, W1RFI, attended the West
Virginia State Convention in Weston. In addition, Chuck Skolaut, K0BOG,
took part in the Kansas State Convention in Salina.

==>SOLAR UPDATE

Tad "Little Miss Sunspot" Cook, K7RA, this week reports: In little more
than two weeks the Northern Hemisphere will see the autumnal equinox,
marking the start of fall north of the equator and the beginning of
spring south of the equator. The exact time when both northern and
southern hemispheres are bathed in equal sunlight is 0951 UTC,
September
23, 2007. Even with few sunspots, this is the best time for long
distance communications between hemispheres. Sunspot numbers for August
30-September 5 were 15, 14, 26, 14, 15, 14 and 15 with a mean of 16.1.
The 10.7 cm flux was 71.6, 70.8, 70.8, 69.4, 68, 68.2 and 67.6 with a
mean of 69.5. Estimated planetary A indices were 6, 7, 11, 23, 12, 6
and
12 with a mean of 11. Estimated mid-latitude A indices were 4, 7, 9,
17,
8, 4 and 10 with a mean of 8.4. . For more information concerning radio
propagation, visit the ARRL Technical Information Service Propagation
page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: This weekend, don't forget the ARRL
September VHF QSO Party, scheduled for September 8-10. The NCCC Sprint
(CW) and the AGCW Straight Key Party are September 7. Another NCCC
Sprint (CW), the SOC Marathon Sprint and the Swiss HTC QRP Sprint are
September 8. The WAE DX Contest (SSB) and the Arkansas QSO Party are
scheduled for September 8-9. The North American Sprint (CW) and the
ARCI

End of Summer Digital Sprint are both September 9. The Tennessee QSO Party is September 9-10, while the YLRL Howdy Days are September 11-13. Next weekend, the ARRL 10 GHz and Up Contest is September 15-16. The NCCC Sprint (CW) is September 14 and 15. The SARL VHF/UHF Contest is September 14-16. QRP Afield is September 15. Look for these contests the
weekend of September 15-16: Scandinavian Activity Contest (CW), South Carolina QSO Party, Washington State Salmon Run and the QCWA Fall QSO Party. The North American Sprint (SSB) is September 16. The Run for the Bacon QRP Contest and the 144 MHz Fall Sprint are September 17. The NAQCC Straight Key/Bug Sprint is September 20. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education course registration: Registration remains open through Sunday, September 9, 2007, for these online courses beginning on Friday, September, 21: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications
(EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Pentagon ARC to Host Special Event Station Commemorating 9/11: On Sunday, September 9, the Pentagon Amateur Radio Club (PARC) will operate
a Special Event station commemorating the 6th anniversary of the attacks
that occurred on the Pentagon, the World Trade Center and over Pennsylvania in 2001. They will be operating on 10, 15, 20, 40 and 80 meters, both phone and CW where and when possible, with plans to operate
on a 12 hour basis (1200-2400 UTC). There will be a special QSL card available for stations that work K4AF. For more information, please contact Claude Hennessey, KG4TVN. QSL via PARC, PO Box 2322, Arlington, VA 22202. In addition, club members will operate from the station on Tuesday, September 11 as part of the commemoration

* The September/October NCJ Hits the Streets: The current issue of NCJ is loaded with everything today's contester needs. A review of Elecraft's new K3 transceiver is inside, as well as a look at the ergonomic tools contesters can use to make their time in the chair a bit
more comfortable. Take a look at the 80 and 160 meter antennas at the contest station of John Evans, N3HBX, and the SO2R set-up of Andrew Ross, ZS6AA. Stroll down NCJ-memory lane with a glimpse back to the beginnings of NCJ, as each of NCJ's editors talk about their stint and

the mark they left on both the magazine and the sport. All this and more
in the September/October issue of NCJ. NCJ is published by the ARRL and
is a bi-monthly publication; it is edited by Carl Luetzelschwab, K9LA.
Subscribe at <http://www.arrl.org/ncj/>.

* ARISS Update: ARRL's Nebraska Section Manager Matt Anderson, KA0BOJ,
was at the radio controls initiating an ARISS QSO on August 29 between
astronaut Clay Anderson, KD5PLA (no relation), and students of the
Ashland-Greenwood School District in Ashland, Nebraska. Matt Anderson, a
past president of the Ashland Amateur Radio Club, handled radio ops with
Jim Shorney, NU0C; Art Zygielbaum, K0AIZ, and Carl Morones, N0ORL; ARISS
Mentor Keith Pugh, W5IU, assisted in setting up the contact. The school
district formed a committee of teachers from grades K-12 to promote
technology and space science, and the AARC's educational talks fit in
perfectly. A half-dozen area TV and radio stations credited Amateur
Radio for the educational event with Matt being featured in a video from
KFAB 1110 news radio
<http://www.kfab.com/cc-common/news/sections/newsarticle.html?feed=15937
7&article=2577691>, as well as an article in Lincoln's Journal-Star newspaper
<http://journalstar.com/articles/2007/08/30/news/local/doc46d60ab04e8641
09929910.txt>. NASA, ARRL and AMSAT co-sponsor the Amateur Radio on the
International Space Station (ARISS) program in the US, giving students
an opportunity to experience the excitement of Amateur Radio by talking
real-time directly with ISS crew members. - Tnx Rosalie White, K1STO,
ARRL ARISS Program Manager

* From the ARRL DXCC Desk: When sending cards to confirm 1x1 call signs,
the ARRL QSL Service requests you note somewhere on the card the person
who requisitioned the call sign. This will expedite routing to the
proper station and may result in quicker processing of cards handled
through the ARRL US Incoming Bureaus. To locate the person responsible
for a 1x1 call sign, please visit the NCVEC's 1x1 Special Event Call
Sign Web page <http://www.ncvec.org/1x1.php> and enter the 1x1 call
sign. When the screen appears, select the 1x1 call sign based on the
event you worked. Click "Details" on the right-hand side of the page to
determine the person responsible for the operation (see "Requisitioned
By"). Remember, call signs may be issued more than once, so following
the above procedure will allow the QSL Service to direct it to the
proper person. For more information on frequently asked questions
concerning the ARRL DXCC program, please see the DXCC FAQ page
<http://www.arrl.org/awards/dxcc/faq/>.

* CONTACT! Is Out: Are you an ARRL Public Information Officer (PIO) in need of information? Check out the September issue of CONTACT!, the monthly online newsletter designed to be a resource for PIOs, Public Information Coordinators (PICs) and anyone with an interest in Amateur Radio public or media relations activities. Each issue contains helpful articles and tips to help you spread the good word about Amateur Radio. September's issue features articles on National Preparedness Month, Public Relations and Emergency Communications, ways to find out haw many
licensed amateurs are in your community, Information on Scouting's Jamboree on the Air, how to speak to your "internal" audience and press release sites. You can view this month's edition at the CONTACT! Web page <http://www.arrl.org/pio/contact/>.

* ARRL Employment Opportunity: The ARRL's Sales and Marketing Department
is currently seeking a Product Marketing Specialist. The successful candidate will play a key role in marketing ARRL books, CDs, supply items and services. Direct marketing background and/or experience required. Responsibilities include copywriting for products, sales literature, catalogs and e-store; conducting direct mail and e-mail campaigns; mailing list segmentation, and regular reporting and sales analysis. A more complete job description can be found on the ARRL Web site <http://www.arrl.org/announce/jobs/>. Resumes and related correspondence should be sent to LouAnn Campanello, ARRL, 225 Main St, Newington, CT 06111, FAX 860-594-0298, or via e-mail <lcampanello@arrl.org>.

* ARRL Introduces New Clothing Items for Women: Barker Specialties, the League's clothing supplier, and the ARRL have introduced new apparel items made especially for women. The ladies' line includes a yellow pima
polo with a navy blue banded cuffs and a feminine Johnny collar, and a slate blue ring-spun pima polo with a Y-collar and 2-button placket. There is also a women's colorblock jacket, featuring a polyester mesh lining and piping on inside seams, a zipper windguard, a hidden front zip pockets, adjustable cuffs, a drawcord hem and weather-stopping shell. All three of these items are embroidered with the ARRL logo. Check out these new items, as well as the new items in the men's line at
Barker Specialties ARRL Web page <http://www.barkerspecialty.com/arrl>.

* Let Us Know: What's your favorite part of The ARRL Letter? What kind of stories would you like to see in the Letter? Would you prefer the Letter in an HTML format? This is your Letter and your chance to let your voice be heard. Please send your suggestions to ARRL News Editor S.
Khrystyne Keane, K1SFA, at k1sfa@arrl.org, with the subject line "ARRL Letter Suggestions." All messages will be read and discussed, and we look forward to implementing positive suggestions into the ARRL Letter.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast"
compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 09 SEPTEMBER 2007

You are listening to ZS6SRL the official Radio Station of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is transmitted every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. To listen to a web stream or Echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links for details.

This, and previous bulletins, can be downloaded from the www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

Your news reader this morning is Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, and 51,400 MHz as well as 438,825 and 1 297 MHz in the Pretoria area. (Other newsreaders please change to suit).

SILENT KEYS

It is with deep regret that we have to announce the passing of one radio amateur some time ago and three recently:

Madelyn Greyling, ZS6LIE, a daughter of Ben, ZS6BEM, on 28 March 2007 after a serious motor accident.

Buck Taylor, G0OYH, ex-ZS1VP, passed away on 4 September 2007. Buck had been sick for some time.

Marthina Botha, ZS4MB, passed away on Friday 7 September 2007.

Frans Keulder, ZS6BXL, passed away yesterday morning 08 Sept 2007. He was the father of John, ZR6JWK.

We extend our sincerest condolences to the families and many friends of the deceased.

(PAUSE)

In the news today:

SARL AND HMO TO WORK ON A JOINT BEACON PROJECT

ZS6PTA TAKES TOP HONOURS IN VHF/UHF CONTEST

GET READY FOR THE FINAL LEG OF THE VHF/UHF CONTEST

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

SARL AND HMO TO WORK ON A JOINT BEACON PROJECT

The South African Radio League (SARL) and the Hermanus Magnetic Observatory (HMO) have agreed to work on a joint beacon and propagation research project which will involve participation by many SARL members.

The project was announced by SARL President Graham Hartlett, ZS6GJH, during last Sunday's President's net and will be known as the SARL 40 Metre Beacon Project.

The beacon service will be of great value in confirming actual propagation conditions in real time for research and prediction of the ionosphere. The Space Physics Group of the HMO includes an active ionospheric component, and provides ionospheric data for the purpose of Space Weather predictions, which includes HF propagation prediction. The HMO has recently become the Space Weather Regional Warning Centre for Africa, which includes amongst other parameters the provision of HF propagation predictions. Therefore, the current Space Weather provider and the HMO will now be working together to provide one Space Weather Centre for Africa.

The HMO will collect data from participating Radio Amateurs and Educational Institutions detailing the actual propagation paths between different areas in the country. This information will then be correlated with the HF propagation predictions that have been made for the given paths. In this way a validation procedure can be implemented and confidence levels placed on the predictions given out by the Space Weather Centre.

In addition, using information collected from the beacon service, student projects will be developed within the Space Physics group to improve the HF predictions over the South African region.

A number of volunteer Radio Amateurs will host beacons at their stations. A centralized database will be maintained that contains a record of each beacon, its host Amateur and its time slot.

Dr Bert von Rahden (ZS6LP) will coordinate the volunteer Amateurs and maintain the central beacon database, while John Williscroft (ZS6EF) will provide essential technical design and consideration and supply the 40 m beacons.

The 40 m beacon system has been modelled on the International Beacon Programme. Volunteer Amateur Stations situated in all areas of South Africa will be provided with a 40 mW automatic beacon that will transmit within a prescribed time slot. This time slot is unique to each transmitter. The transmission period will be 55 seconds.

The 40 mW level has been determined by on the air experiments between a station in the Division 6 area (ZS6LP) and a station in the Division 2 area (ZS2VJJ). This level has been found to give the best dynamic range

of varying propagation conditions. The 40 meter beacon, which will transmit in the CW mode for a short period, will send out the following message; "ZSXXXX", Locator data followed by a 6 second tuning period, giving the division that the station is located in. The repeat period is every 30 minutes for stage #1, with each beacon transmitting in turn to a maximum of 30 beacons. Each beacon will be internally clock synchronised before shipping the stations. In addition provision has been made for a stage #2 mode with 60 beacons transmitting in a 60 minute period. The stations receiving on the designated frequency will hear a sequence of beacons from around the country. A list of beacons and their times of transmissions will be published so that stations not hea

rd can be identified.

It is expected that the first 30 beacons will switch on in early October. More details will be posted on www.sarl.org.za and be included in future editions of SARLNEWS.

ZS6PTA TAKES TOP HONOURS IN VHF/UHF CONTEST

The Pretoria Amateur Radio Club has won the overall first leg of the 2007 SARL VHF/UHF contest with 841 811 points.

The divisional winners are:

ZS2: ZS2ACP, 3 508 points; ZS4: ZS4BFN, 41 445 points, Jan Botha 3 960 points; ZS6: ZS6PTA, 841 811 points, ZS6MRK 92 828 points.

No logs were received from ZS1, ZS3 and ZS5.

Congratulations to the winners.

CONTEST NEWS

GET READY FOR THE FINAL LEG OF THE VHF/UHF CONTEST

The second leg of the VHF contest takes place the weekend of 21 -23 September from 18:00 SAST on Friday to 12:00 CAT on the Sunday. This 42-hour contest has been divided into two sessions of 24 hours and 18 hours. This means that the same station can be worked in both sessions and thus increase the activity.

The contest is so designed to make it possible for any licensed Amateur to enter as a mobile or a fixed station and even a single or multi operator is acceptable during this time.

The following VHF and UHF frequencies can be used 50 to 51,5 MHz; 70 to 70,3 MHz; 144 to 145,55 MHz; 432 to 433,60 MHz; 1 296 to 1 296,50 MHz.

The following modes may be used: FM, SSB, CW and DIGITAL modes.

"It is a contest that can result in new DX records, but also provide fun and excitement", Piet Badenhorst, ZS6PJB, SARL VHF/UHF Manager, said. "Whether you have a hand-held and a Slim Jim antenna or a large

antenna array and base station, you will enjoy the contest".

The overall winner of the contest will become the owner of a YAESU VX-2R 2 m/ 70 cm micro handheld transceiver sponsored by Let's Play Radio.

Full details and the rules are posted on the home page of the SARL web at www.sarl.org.za.

The Spring QRP Sprint will be run this afternoon from 14:00 to 16:00 CAT. It is a phone and CW sprint on the 40 metre band. The exchange is a RS or RST report and the year you where first licenced. The rules are available in the 2007 SARL Contest Manual and were sent out on the HF Happenings mailing list.

ADHERENCE TO VHF AND UHF BAND PLANS IS IMPORTANT TO ACHIEVE MAXIMUM USE OF THE SPECTRUM

VHF and UHF band plans are devised to achieve maximum use of the spectrum allocated to Amateur Radio and adherence to the plans ensures interference free operation and ultimately that great satisfaction of hearing a weak or satellite signal and make a QSO.

Amateur satellites have a very broad footprint and to ensure world-wide interference free operation certain segments of the various frequency bands are set aside for this.

For instance, for FM voice communication with the International space station and other manned space vehicles, 145,200 MHz is set aside for simplex operation or 145,200/145,800 for transponder type operation. Please do not use these frequencies for ordinary ground based QSO's. The segment 145,800 - 146,000 MHz is set aside for satellite operation. Please do not use this segment for terrestrial operation. Similarly the segment 435,000 - 438,000 MHz is also set aside for the amateur satellite service.

Band plans are internationally coordinated by the International Amateur Radio Union by mutual agreement. Band plans are available on www.sarl.org.za, look in the left hand column for licences, open the page and then click on band plans.

CLUB NEWS

The AGM of the Bloemfontein Radio Amateur Club was held on Saturday 1 September 2007 and the following members were elected to serve on the committee:

Chairman: Jan Botha, ZS4JAN; Vice Chairman: Martin Schwella, ZS4MS; Secretary: Dennis Green, ZS4BS; Treasurer: Angeline van der Merwe, ZU4AN; Member: Philip Esterhuizen, ZU4PE.

Many thanks to the retiring committee members and strength to the new ones for the work that lies ahead.

PRETORIA AMATEUR RADIO CLUB FLEA MARKET AND AGM

The Pretoria Amateur Radio Club will hold their next Flea Market and AGM on 29 September 2007. The Flea market will take place between 08:00 and 11:00. Their AGM will start at 12:00. Both events will happen at the ZS6PTA clubhouse on the corner of Lynwood and University roads, Pretoria. Tables for the flea market may be booked with Almero, ZS6LDP, on 082 908 3359. People who would like to attent the AGM must please contact Johan, ZS6JHB, for catering purposes, on 082 492 3689.

PROPAGATION CONDITIONS

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at very low levels. The geomagnetic field is expected to be quiet in general. The expected Effective Sun Spot number for the coming week will be less than 5. Fortunately with the arrival of spring, DX conditions are also blooming a bit.

15 m and 20 m will provide best opportunities for DX. There is a possibility of 15 and 20 m openings towards India from about 14:00 CAT. There may be weak 20 m openings to Australia from about 06:30. From 15:00 there may be 15 and 20 m openings towards Europe and 40 m openings from 20:00. Contacts to the USA are going to be very challenging.

For the CW and digital enthusiasts it will also be worth monitoring 10 MHz.

Locally conditions on 40 m is going to be good during the day. It is once again time to work towards your 80 m WAZS award in the evenings.

Remember that this is only a prediction and that HF always has the capability to surprise you. You will never know what you are missing unless you switch your rig on, listen and also call CQ.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

9 September, this afternoon - The Spring QRP Sprint; 20 September - Closing date for registering for October RAE; 21 to 22 September - The second leg of the SARL VHF/UHF Contest; 29 September - Ladies Only ZU RAE course by Kempton Park RATS; 29 September - Pretoria ARC Flea Market and AGM; 4 - 10 October - Special space programme; 5 October - Take your handheld to work day; 6 October - SA AMSAT Space Conference; 6 October East Rand Flea market and AGM; 18 October - Class A RAE.

SARL News invites clubs and individuals to submit news stories of interest to radio amateurs and shortwave listeners. Submit news stories if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to the programme Amateur Radio Mirror International, on the air every Sunday morning at 10:00 CAT on

145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 590 kHz. For the web stream and echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links. A repeat transmission can be heard Mondays at 21:00 CAT on 3 215 kHz. Sentech sponsors the ARMI transmissions on the non-amateur frequencies.

Today's South African Radio League news bulletin was compiled by George, ZS6NE, and transmitted by (your name and call sign).

Thank you for listening. 73.

1 GB2RS NEWS Sunday 9 September

The news headlines

* 3B7C DXpedition fires up

* Historic callsign returns to air soon

* Guilty verdict in ham murder case

Following the successful arrival of the 3B7C advance party, the remainder of the team arrived on Isle de Sud by 5 September. The team immediately set to work putting together the 6m beacon on 50.090MHz. Work then commenced on creating the numerous other stations to meet the target start time of midnight on 7 September. Operation will be on all bands simultaneously, from Top Band to 6m. Details of the DXpedition, including operating frequencies, propagation forecasts and logs, are on their web site at www.3B7C.com.

GB2SM, the permanent callsign of the former Science Museum amateur radio station in London, will shortly be back on the air. It will be based at the Science Museum's Swindon site. A unique arrangement has been made between the Science Museum and the Swindon and District Amateur Radio Club. The Notice of Variation for the callsign will be held by the club on behalf of the Science Museum. GB2SM will be used in partnership with the Science Museum at events and activities that specifically promote the Science Museum and communications inspired projects. For this purpose the callsign will be treated as a Special Event Callsign rather than a permanent call. Should a permanent amateur radio station be re-established at the London site the callsign would automatically revert to the permanent station.

Courts in Gambia recently sentenced two men to life imprisonment for the murder of Ron Ford, G3NKO. Tourist Mr Ford was killed in by two Gambian nationals in September 2002 while on holiday in the region. Passing sentence on Dawda Bojang and Kawsu Jarju in the Kanifing Magistrates' court, magistrate Buba Jawo said the evidence before the court had clearly shown that the prosecution has proven their case.

Nominations are invited for the recipient of the 2007 RAYNET Trophy, presented at the Convention and AGM each year. The closing date for nominations is Friday 21 September. Nominations should be sent without delay to the Company Secretary, Ian Jackson, G8RWH, c/o Hunters Moon, Station Road, Newton-leWillows, BEDALE DL8 1SX, marking the envelope "Trophy nomination".

The first International Pumping Stations on the Air event was held over the August bank holiday weekend and was a huge success. It was organized by Burton Amateur Radio Club and operated from Claymills Pumping Station. 12 stations registered to get involved in this new event. 128 stations contacted the club over the weekend, 79 on 2m and 49 on HF (SSB and CW). Their greatest distance was WN3R, Richard, in Rockville MD, USA on 20m SSB. Everyone who took part will receive a special event QSL card via the bureau. Club Secretary, Steve Warren, 2E0KPO, commented that he was pleased by the amount of pumping stations that took part and the number of visitors to the event. Now the group know the event was a success they are going to make arrangements for awards next year. They are planning on operating on the August bank holiday again next year. Anyone interested should log onto www.burtonarc.co.uk.

2 South Notts Amateur Radio Club has been awarded nearly ₯2,000 from the National Lottery. The club bid for the funding under the Awards for All scheme. They have bought a laptop computer, PowerPoint software and a digital projector to use for training at all three licence levels. Details on how to apply for National Lottery awards can be found at www.awardsforall.org.uk.

Waters and Stanton plc have asked the RSGB to inform listeners that their Matlock branch open day will be on Saturday 15 September and not on the 30th as they advertised in the September RadCom.

Hospital Radio Reading at the Royal Berkshire Hospital will be celebrating its 50th anniversary by broadcasting on 87.7MHz FM around the Reading area. Transmissions will be under an RSL license valid until 12pm on 11 September. The studio can be contacted on 0118 322 8508. Amateur station GB4HRR will be operating as well until 9pm on Sunday 9 September. Activity will be 80, 40 and 20 meters only.

Steve Hartley, G0FUW, and Mike Coombs, G3VTO, will be starting another series of their licence training courses in Bath on Thursday 20 September. Classes run from 7 to 9pm every Thursday. This year's series will begin with the Foundation level with the exam in November. Classes continue to Intermediate level with the exam in February and on to Advanced, with the exam in July. The Foundation course is open to anyone and there is no requirement to progress through all three levels one after the other. Anyone wishing to join the course should contact Steve Hartley, G0FUW, on 01225 464394, weekday evenings, or via email at g0fuw@tiscali.co.uk

And now for the details of rallies and events for the coming week

On 8 and 9 September the Gatwick Vintage Radio and Military Vehicle Weekend Club is meeting at Hunters Moon on the A217, post code RH6 0HU. The call M0VOG will be in use, and all-day radio activities are planned on 51.7MHz and 70.375MHz, narrow band FM. Other activity, including nets, will be on mixed modes on 3.615MHz, 3.577MHz, 7.143MHz and 5.5035MHz over the weekend. Net controller is Alan, G4GEN. The organisers invite you to join them and 'bring something vintage'.

More details of these and future events can be found on pages 88 and 89 of the September edition of RadCom. Now for the news of special events The Orkney Wireless Museum will be active as GB2OWM until 11 September. Celebrating the 17th Orkney International Science Festival, the station will be at the Museum's premises at Kiln Corner, Kirkwall. Probable operating periods will be weekdays and Sunday afternoons between 1430 and 1630, and Saturday morning between 1000 and 1230. Activity will be primarily on HF SSB. For more information contact Bill, GM3IBU, QTHR or e-mail gm3ibu@orpheusmail.co.uk. The Scarborough Special Events Group will be on the air as GB2QE on 15 to 16 September to mark the 40th anniversary of the liner Queen Elizabeth 2. Activity will be on 80 and 40m SSB and CW, plus 2m and 70cm. Further details from Roy Clayton, e-mail g4ssh@tiscali.co.uk And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

Andre', GM3VLB, will be signing as VY2/GM3VLB from 9 to 17 September and as VE1/GM3VLB from 17 to 22 September. Operation will be holiday style, probably early morning or late afternoon local time, primarily 20m for DX and 40m for local contacts.

3 Chris, DL2MDU, will be active as 5Z4/DL2MDU from Kenya on 10 to 24 September. He plans to operate holiday style mainly CW. QSL via bureau to home call. George, K3GV, will be active as K3GV/VY2 from Prince Edward Island (NA-029) until 15 September. Activity will be on 15 and 20 metres around the usual IOTA frequencies. QSL via home call, direct or bureau. A group of operators from the Radio Club SP9PZU will be active as SN10IPA until 16 September to celebrate the 10th anniversary of the foundation of the International Police Association, IPA, Slesian Provincial Group. QSL via SP9PZU bureau or SQ9ZM direct. Gerd, DL7VOG, will be active as J3/DL7VOG from Carriacou Island in the Grenadines (NA-147) until 16 September. He plans to operate on 160 to 6 metres CW and RTTY, with some SSB upon request. QSL via home call, bureau preferred. Special event call TM8CDX will be aired until 22 September for the 29th Convention of the Clipperton DX Club, that this year will be held at Puyloubier on 21 to 22 September. All of the QSOs will be confirmed automatically via the bureau; Direct requests should be sent to F5CQ. Francois, ON4LO, will be active as 9A/ON4LO from Mali Losinj (EU-136) until 28 September. Expect activity on the HF bands as well as on 6 metres. ARI Frascati members will operate as II0ERN on 14 to 30 September. The special call sign is for the second edition of the European Researchers' Night, which will take place on the 28th. QSL via operators' instructions. Now the contest news The Worked all Britain 144MHz QRP Contest takes place on Sunday 9 September from 1000 UTC and 1400 UTC. All rules and paperwork can be downloaded from www.worked-all-britain.co.uk. Please send all logs to Brian Stocks, G0BFJ, QTHR or e-mail g0bfj@worked-all-britain.co.uk. The Scandinavian Activity Contest takes place on 15 September at 1200 until 1200 on 16 September on the 3.5 to 28MHz bands, CW. The exchange takes the form of RST and serial number. The RSGB 432MHz Activity Night takes place on 11 September between 2000 and 2230 local on all modes. The exchange takes the form of RST, serial number and locator. The RSGB 2nd 70MHz contest takes place on 16 September between 0900 and 1200 on all modes. The

exchange takes the form of RST, serial number and locator. The Irish Radio Transmitters Society's 75th Anniversary Contest CQIR will take place from 1200 UTC on 29 September. It is a 24 hour single operator contest with the emphasis on participation rather than winning. Every participant gains one entry ticket for a spectacular draw for every 75 QSO's made during the Contest. Full rules are on the IRTS website.

4 Now the solar factual data for the period from 27 August to 2 September, compiled by Neil Clarke, G0CAS Solar activity continued at very low levels, even though, on the 1st two sunspot groups were visible. Solar flux levels started at 69 units then increased to 72 by the 30th. Levels then declined back to 69 by the 2nd. The average was 70 units. The 90 day solar flux average on the 2nd was 71, that's one unit down on last week. X-ray flux levels remained below the minimum A1 level throughout. Geomagnetic activity was at quiet levels but due to a well positioned coronal hole activity increased on the 1st and the 2nd with an Ap index of 11 and 23 units respectively. The average was Ap 11 units. The ACE spacecraft saw solar wind speeds increase from 360 kilometres per second to 690 by the 2nd. Particle densities were low except for the 1st, which increased slightly. Bz on the quiet days varied between minus 2 and plus 4 nanoTeslas and between minus and plus 8 nanoTeslas on the 2nd. The HF bands remained much the same as the last few weeks. There as been some DX at times for those you are around at the right time. Likewise, sporadic-E took place occasionally. Stations in the far north had the best of any auroral propagation conditions last weekend. And finally the solar forecast. This week the quiet side of the Sun is expected to be looking our way. Solar activity is expected to be very low. Solar flux levels should be in the 60's for most of the week. Geomagnetic activity should be mostly quiet. Saying that, activity could increase due to a small coronal hole on Tuesday or Wednesday. On it's last rotation, the hole had almost disappeared. MUFs during daylight hours at equal latitudes should be around 18MHz for the south and 15MHz for the north. The darkness hour lows are expected to be about 8MHz. Paths this week to Australia should have a maximum usable frequency with a 50 per cent success rate of around 19MHz. The optimum working frequency with a 90 per cent success rate will be about 15MHz. The best time to try this path will be between 1000 and 1500 hours UTC. And that's all for this week from the propagation team.

5 Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies can be found on the RSGB website, including e-mail addresses

and website links where known.

[Note to newsreaders: Please read the local news items appropriate to the service area of your

transmission.]

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Monday 10 September Basingstoke Amateur Radio Club is having a club meeting. Contact Frank, M0AEU, by email to barc@2lo.info.

On Monday 10 September Coulsdon Amateur Transmitting Society is having a talk by Frank, G3ZMF. Contact Andy, G8JAC, on g8jac@btinternet.com.

On Monday 10 September Felixstowe and District Amateur Radio Society is having a rig clinic with Iain, G0OZS. Contact Paul, G4YQC, by email to paul.whiting@bt.com.

On Tuesday 11 September Harwell Amateur Radio Society is having a talk by Jan Verduyn, G0BBL, on his Trip to Tierra del Fuego and Antarctica - . Contact Martyn, G0THY, or by email to g0thy@btinternet.com.

On Wednesday 12 September Aylesbury Vale Radio Society is working on its club project, is on the air and having a discussion evening. Contact Roger, G3MEH, on 01442 826 651, or by email to roger@g3meh.com.

On Wednesday 12 September Chesham and District Amateur Radio Society is discussing technical topics on APRS. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 12 September Dover Radio Club is having a talk on the basics of amateur satellite operations by Brian, G8ZYZ. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 12 September Fareham and District Amateur Radio Club An evening with Andrew G0AMS. Contact Jim, M1JJN.

On Wednesday 12 September Harwich Amateur Radio Interest Group is having a lecture on solar propagation software by Carl Thomson, G3PEM. Contact James, M0ZZO, on 01255 242 746.

On Wednesday 12 September Havering and District Amateur Radio Club is having a prize quiz with Dave, M3KNL. Contact Dave, 2E0EBV, on 07956 594 514.

On Wednesday 12 September Norfolk Amateur Radio Club is having an informal evening. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Wednesday 12 September Worthing and District Amateur Radio Club is having a visit by Rob Mannion, G3XFD, Editor of Practical Wireless. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 13 September Echelford Amateur Radio Society is having a talk by Andrew Vine, M0GJH, on antenna modelling. Contact John Osborne, G4GSC, on 01784 451898.

On Thursday 13 September Reading and District Amateur Radio Club is having a talk by John Warburton, G4IRN, on one man DXpeditioning. Contact Pete, G8FRC, on 01189 695 697, or on the web at www.radarc.org.

6 On Thursday 13 September Shefford and District Amateur Radio Society is having five minute talks by members about their aerials. Contact

David, G8UOD, on 01234 742 757.

On Thursday 13 September Southgate Amateur Radio Club is staging "The Great Erg Race". Contact Erik, 2E0ECR, on 0208 444 3247.

On Friday 14 September Cambridge and District Amateur Radio Club is having a foxhunt. Contact David, G8JKV.

On Friday 14 September Itchen Valley Amateur Radio Club is having a talk on PIC microcontrollers by Brian, G0UKB. Contact Liz, M0ACL, on 02380 254599.

On Friday 14 September Loughton and Epping Forest Amateur Radio Society is having a talk by Brian, 2E0FHU and Marc, G0TOC, on the trailer-mast restoration project. Contact Marc, G0TOC, on 020 8502 1645, or by email to info@lefars.org.uk.

On Friday 14 September Mid-Sussex Amateur Radio Society is having a radio night. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 14 September Wimbledon and District Amateur Radio Society is on the air and having a construction evening. Contact Jim, M0CON, on 020 8874 7456.

On Sunday 9 September Norfolk Amateur Radio Club is having a bright sparks informal evening. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Sunday 9 September Southdown Amateur Radio Society is operating G1KAR at Beachy Head. Contact John, G3DQY, on 01424,424,319, or by email to vaughdqy@aol.com.

NEWS FOR THE SOUTH-WEST On Monday 10 September Cornish Radio Amateur Club is having a computer section meeting with a talk by Peter, G3WKP, on Perranwell yesterday and today. Contact Ian, 01872 561 058.

On Tuesday 11 September Flight Refuelling Amateur Radio Society is running its Full Licence course. Contact Tony, G3PFM, on 01202 622 262.

On Wednesday 12 September South Bristol Amateur Radio Club is looking at photographs from members archives. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 12 September Taunton and District Amateur Radio Club is operating the club station. Contact William, G3WNI, on 01823 666 234, or by email to g3wni@btinternet.com.

On Wednesday 12 September Thornbury and South Gloucestershire Amateur Radio Club is on the air. Contact Tony, G0WMB, by email to tonytsgarc@beeb.net.

On Thursday 13 September Yeovil Amateur Radio Club is having a talk on satellite communications by G4DCH. Contact Gary, 2E0BFJ (g.swain@tesco.net).

7 NEWS FOR THE MIDLANDS On Monday 10 September Gloucester Amateur Radio and Electronics Society is having a mini DF hunt. Contact Anne, 2E1GKY, on 01452 548478, daytime.

On Monday 10 September Stratford Upon Avon District Radio Society is having an open evening. Contact Jack, G3VYE, on 01926 641 988.

On Tuesday 11 September Eagle Radio Group is having a talk by Paul Boyd, MI3CXM, on building and flying kite antennas. Contact Terry, G0SWS, on 07979 733 640.

On Tuesday 11 September Loughborough and District Amateur Radio Club is having a computer night. Contact Chris, G1ETZ, on 01509 504 319.

On Wednesday 12 September Telford and District Amateur Radio Society is having a night of 'aerials and things'. Contact Mike, G3JKX, on 01952 299 677, or by email to mjstreetg3jkx@blueyonder.co.uk.

On Thursday 13 September Salop Amateur Radio Society is having its construction contest. Contact Glenda, G1YJB, on 01939 235 412.

On Thursday 13 September Tamworth Amateur Radio Society is having a construction night. Contact Colin Marks, G4ZPJ, on 01827 700 893, colin.marks2@ntlworld.com.

On Friday 14 September Coventry Amateur Radio Society is having a review of committee activities. Contact John, G8SEQ, on 02476 273 190, or by email to johng8seq@ntlworld.com.

On Friday 14 September Hucknall Rolls-Royce Amateur Radio Club is having a 2m VHF mobile fox hunt. Details on the web at www.hrrarc.com.

On Friday 14 September Tamworth Amateur Radio Society Foundation Course at St Francis' Church, Leyfields. Contact Colin Marks, G4ZPJ, on 01827 700 893, colin.marks2@ntlworld.com.

On Friday 14 September Wythall Radio Club will be operating a special event station at Hanbury Steam Rally. Contact Chris, G0EYO, on 07710 412 819, or by email to g0eyo@blueyonder.co.uk, or on the web at www.wythallradioclub.co.uk.

NEWS FOR THE NORTH OF ENGLAND

On Monday 10 September Sheffield Amateur Radio Club is having a talk and discussion on members' favourite websites and computer maintenance. Contact Trevor, M0TWS.

On Monday 10 September Thornton Cleveleys Amateur Radio Society is on the air. Contact Jack, G4BFH, by email to jack.duddington@btinternet.com.

On Monday 10 September the UK FM Group Western section is having its AGM at the Grappenhall Youth and Community Centre. Contact Steve, M0DFD, on 07830 354 914.

This is WIANEWS for week commencing SEPTEMBER 2 2007

LATE BREAKING NEWS

Jeff VK4XJJ who is walking across VK from Gulf to Gulf has met up with his Brother Bill who drove from VK2 into Normanton VK4

THEN THE "FUN" STARTED:- BILL PICKS UP THE DETAILS,

"At 3:15 a.m. while Jeff was asleep in his tent and I was in my swag alongside the front wheel of the retrace vehicle, someone took the keys from my shorts from under my pillow.

The car was pushed backwards and started at the second try and took off fast. (from 2 persons adjacent to us, who commented that "we" were noisy leaving).

I later thanked this couple for a loan of a pair of trousers!

Later Jeff woke me and asked "Where is the car?" I thought he was joking and asked "Where did you put it?".

So called TRIPLE 'ZERO' and reported to police who though off duty arrived in less than ten minutes.

After the usual descriptions of car etc, the police turned round to search the streets etc. Just round the corner the siren started and the chase was on. The police stopped chasing as it was too dangerous but kept following the tail lights. The offenders jumped out of the car while moving and took off. The car went through a barbed wire fence and came to a halt. The speed warning alarm in the police car was set at 180 Km!

Police drove our vehicle back to Normanton.

Some things were thrown out of the windows earlier and later collected by police. Most things seem intact including our amateur radios. An amount of cash was taken with some cash spilt loose in the back seat. Wallet later found under clothes etc on the front seat. Camera too, with some video footage taken by or new "friends". Police here in Normanton have downloaded the video for examination.

The police were very fast to respond, very kind and efficient.

Some damage to the car, dents, damaged bumper bar, paint scratches and windscreen rubber cut by the barbed wire.

All this without number plates as the car was half way through Queensland registration.

So Jeff is late leaving and will try to camp 20 Kms north of Normanton.

I will follow shortly later to his camp site and walk back a bit.

Regards to all,

Bill for Jeff".

VK Four or is that VK Pour(ing rain)?

As they say, it didn't rain, but it poured and poured and poured, then it rained a bit more.

With somewhere between 350 and 800 mm of rain recorded on the Sunshine Coast from Sunday 19th of August until Sunday 26th of August, it was going to be a wet week. Maybe VK4 Lovely Tewantin should change his catch phrase to VK4 Liquid Tewantin...

At 0815 on Friday 24 August 2007 North Coast WICEN/SES Specialist Communications Unit was activated by a
request from Emergency Management Queensland.

We activated the SCARC-WICEN caravan in its ideal position at Dulong which is up on the range behind Nambour.

Additional operators were sent to EMQ HQ at Caloundra and the Maroochydore and Tewantin SES Units. We were finally stood down at 1830 hrs that day, but requested to stay on alert.

Approximately 10 SCARC / WICEN personnel responded with Hervey Bay and Maryborough amateurs also on standby.

Thanks to Richard Philp VK4YRP WICEN Area Coordinator (North Coast Region) Chair - Wicen Queensland Secretariat for his effort and the efforts of the amateurs that helped.

This is Gordon VK4VP for WIA News

Fast net on power wire plan

A CONSORTIUM led by Optus is considering the use of powerlines to deliver broadband to homes, as it prepares to battle Telstra for rights to build a high-speed broadband network.

A story forwarded to us from VK6RO says G9, this OPTUS scheme was "not just confined to copper".

A spokesperson responding to questions raised at a broadband seminar last week said Optus was testing broadband over powerlines with several utility providers including Integral Energy, Energy Australia and CitiPower.

The story went on to say an Optus spokeswoman declined to comment on the trials when contacted, saying "Optus regularly conducts technology trials and we rarely comment on them."

Broadband over powerlines would provide the G9 with an alternative to fibre-based broadband technology that relied on Telstra's copper network.

Telstra has maintained that it would use all legal means at its disposal to block rivals gaining access to its copper to build the new network.

There are three main proposals to boost broadband speed in Australia and all rely on using Telstra's copper network for last-mile access to homes and premises.

Tim VK2ZTM, writing on the vk2 pages reminds us of the VK2WI Morse Practice Transmissions on 3699 KHz from VK2WI.

Originally this robot unit had storage of 1100 words which lasted a bit over 2 hours. This has now been extended to over 2700 words which will take almost 6 hours to cycle through allowing more variation in the transmissions.

These transmissions are continuous 24/7 except for during the Sunday broadcast periods.

The content of this transmission actually details the development of the WIA's Dural facility itself.

The West Australian State Government has launched a linked emergency service communication system that it believes will provide faster and better coverage for communities across WA.

Industry and Enterprise Minister Francis Logan launched the Emergency Connect WA project, which he said would use state-of-the-art technology to improve the communication capabilities of police, ambulance, fire and rescue services.

In a press release, Mr Logan said the communications network would also allow volunteer and government emergency services to directly communicate with each other and share real-time intelligence, which he believed would cut response times and improve coverage at remote communities.

"This network will use the latest and best technologies available, including internet protocol-based voice and data services and satellite technologies," Mr Logan said.

"Emergency organizations with bases in remote locations have little or no telecommunications infrastructure, making contact with command base very complicated," the Minister said.

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6FXYL/6MRS

Learners in South Africa under the age of 18 have been invited to participate in a special project to celebrate 50 years of man's endeavours in space.

In October it will be 50 years ago that the first satellite, Sputnik 1, was launched by the Russians. To celebrate this event several joint activities have been planned by the S.A.R.L, SA AMSAT and the South African Amateur Radio Development Trust.

The youth event is called "Into Space with Amateur Radio" and will give 30 Learners the opportunity to speak with South Africa's first astronaut, Mark Shuttleworth via Amateur Radio on 10 October 2007 and ask questions about Mark's experiences in space.

Now, how do these learners qualify?

They are required to write an essay about "The future of Space in support of mankind", and be between 400 and 600 words.

A GOOD SCIENCE EDUCATION HELPS

Amateur Radio Newsline report researchers saying students who had more math courses in high school did better in all types of science once they got to college.

On the other hand, while high school courses in biology, chemistry or physics improved college performance in each of the individual sciences, taking a high school course in one science didn't result in better college performance in the others.

One of the study authors says the most important thing for high school science teachers is to make sure there's lots of math in whatever science course they teach. The head of the National Science Teachers Association said while the "correlation with math makes sense" it's not the necessarily the same as a cause and effect.

The research, which is being reported in the journal Science, was supported by the National Science Foundation.

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or training in Amateur Radio go to wia.org.au and check out the club pages.

Next Foundation Licence course, and Standard / Advanced assessments .....

VK2BWI Morse Practice Group

Just a brief reminder about the VK2BWI slow Morse broadcasts.

These broadcasts are held on Tuesday evenings, with Alan VK2ADB from the Snowy Mountains, and on Thursday evenings, with Ross VK2ER from Orange.

The time is 1000 UTC, and the frequency, 3.550 MHz.

So, if you are interested in learning, or improving your CW, then VK2BWI broadcasts might be a good start.

HAM College - VK6

Next Foundation course is set for 15th/16th September at the Whaleback golf course scout hall - if you have nominated to attend this course then please ensure you have made the relative payments prior to attending in order to confirm your position. If you can not attend then please let me know so I can allot you a place on the November course.

Ask yourself what you have done to encourage new people into the world of Ham Radio.

I sit on the train on my way to work and read through my study notes for the Advanced licence - you would be surprised to know that in the time I have been doing this I have spoken to several people about Ham radio, and they were very interested.

Recognise the importance of bringing people to this hobby - have you extolled the virtues of Ham radio to anyone this week. How about making it your goal for the week - tell someone about Ham radio - and be responsible for making your hobby grow.

==========

NEWS FROM ARNEWSLINE

SOUTH AFRICA RADIO LEAGUE TO ISSUE RAE CERTIFICATES

Amateur Radio restructuring continues in South Africa. This with word that the South Africa Radio League will now issue the nations Radio Amateur Exam certificates following an agreement having been finalized with that nations telecommunications regulator.

Candidates who pass the South African Class A Amateur Examination will be issued an international certificate. This document allows operation in all CEPT countries and several others outside Europe who are complying with the conditions of the internationally accepted examination.

Those who pass the introductory level Class B examination will be issued a Radio Amateur Exam certificate only. The class B examination is not compliant and the license issued for passing it cannot be used for operation in other countries. (SARL)

RADIO BUSINESS: CHIP MAKING DOWN IN 2006

If you are finding some integrated circuit chips hard to find, threes a reason. According to an industry group, the utilization rate of the world's chip manufacturing plants stayed below 90 percent for the second straight quarter of 2006. The usage rate was only 86.4 percent in the quarter bending December 30th. That was down from 88.5 percent in the July to September 2006 time period

VIRGIN GALACTIC AND NASA PARTNER IN RESEARCH

NASA and Virgin Galactic have signed an agreement to explore the possibility of working together to develop new spacesuits, hybrid rocket motors and other space technology.

The pact will allow NASA and Virgin Galactic to explore possible avenues of technology research that would make use of NASA's Ames Research Centre facilities. Some of the possible collaborations include developing protective heat shields for spaceships and vehicles that can travel at least five times the speed of sound.

Virgin Galactic, was founded by British entrepreneur Richard Branson. It plans to test-fly a vehicle being built by famed aerospace designer Burt Rutan next year and operate it commercially by 2009

RADIO THEFT: GROUND SYSTEM TAKEN FROM CALIFORNIA STATION

The copper wire thefts at radio facilities continue. Broadcast engineer Bill Ruck, writing in the CGC Communicator writes that he recently received a call about transmitter problems at KDYA A.M. KDYA operates on 1190 kHz in Vallejo, California. Ruck says that when he arrived the transmitter looked okay but was seeing high reflected power. So he walked out to the tower to look for problems there. What he found was the entire the ground system was gone. The copper wire used for it had been stolen. Ruck says that he is now in the process of replacing it using barbed wire.

RSGB NEWS G4NJH

The Isle of Man Amateur Radio Society, in light of the current Foot and Mouth Disease problems, precautionary restrictions on rambling have been put in place on the Isle of Man.

This means that it is currently not possible to access or activate any summits for the Summits On The Air programme.

For more information please contact John, GD0NFN, by email to iomars@manx.net

Contesting University at the HF Convention

At this year's HF Convention on 13th October the RSGB will be running a Contest University.

This follows on from the hugely successful event held at Dayton in the USA earlier in the year. Sponsored by Icom, the Contest University will be a full day of lectures designed not only for newcomers but also for improving the skills of experienced contesters. You can learn about contesting, or improve your competitive edge. For more information go to www.rsgb.org/hfc.

Bumper participation in Lighthouses weekend

More than 380 lighthouses in over 48 countries were on the air for the 2007 International Lighthouse and Lightship Weekend on 18th and 19th August.

The event, now in its ninth year, is organised by the Ayr Amateur Radio Group. The weekend was more of a QSO party and amateur radio demonstration than a contest. Its aim was to raise public awareness of lighthouses and lightships, to promote amateur radio and foster international goodwill.

OPERATIONAL NEWS -

CONTEST COLUMN - D A T E L I N E

SEPTEMBER 22

The Second running of the Westlakes Cup is coming up on Saturday 22nd September commencing at 8.30 Eastern Australian Standard Time (10.30 Z).

Boat Anchor Sprints:
October (13).
Local ZL time: 2000 to 2100 hrs

Section 1: Old radios - all valves - i.e. ZC1, 19 set, Heathkits, any home brew set, but must have all valves.

Section 2: Any Hybrid transceiver (must have valve finals i.e. FT200, FTDX400/401, Drake, FT 101s, etc..

Amplitude Modulated signals only.

The overall winner shall be the entrant having the highest points score which will be published in the following New Zealand "Break-in".
(Jamie Pye ZL2NN, Editor NZART's InfoLine)

NOVEMBER 17/18 VK Spring VHF-UHF Field Day

In a moment we will here again from Peter Harding the 2007 RD contest manager but first to SPECIAL EVENTS, BEACON AND NET ADVICE.

Celebrating the 4th International Polar Year 2007/2008, Portugal has been represented by the Official Special Event Amateur Radio Station CQ4IPY.

The importance of this Celebration gave to all participants the chance to get a Special CERTIFICATE . The CQ4IPY Certificate is for all Amateur Radio Operators and SWL's who can demonstrate the interest on this celebration and justify the dedication working at least the CQ4IPY on 3 (three) different Bands or 2 (two) different modes.

To get the Award just send the log with fee to cover Mail Expenses to:

CQ4IPY F.a.o. Mr. Manuel Alberto C. Marques
Post Office Box 41
2780-901 OEIRAS Portugal (Europe).

CQ4IPY, during the 4th International Polar Year in SSB/CW/PSK31/RTTY/SSTV on 80-10m will be on-the-air again from Sep 8-14. QSL CARD ok via the Bureau (via CT1BWW)

Please visit:

http://cq4ipy.bravehost.com

RD CONTEST MANAGERS REPORT

And good morning listeners, this week sees another small mail bag of snail mail and Electronic logs arrive for this years RD,

I have found some errors this week, and I have personally spoken to the sender as to why I was correcting their logs, thus avoiding the gripes after the finals are made public.

Some operators either have not read or fully understood this years rules in relation to log layout, I will send a copy of the Rules and the preferred log sheet and cover sheet layouts for their use next year.

Please get your logs in as soon as possible before the cut-off date,

Remember logs must be received by last mail on Monday 10th September, 2007.

Late entries will not be returned..

QST to all radio amateurs and IARU members:

Radio amateurs in Malaysia celebrate 50 years of nationhood by organizing a nationwide field day from August 30 till September 1, 2007, using 9M50Mx special event call signs.

The Merdeka Field Day (MFD) has a total of 16 stations operating simultaneously in different cities and middle of jungle to celebrate this occasion.

The regulator, Malaysian Communications & Multimedia Commission (www.mcmc.gov.my) has granted these 9M50Mx special event call signs for the first time in history of amateur radio.

MARTS, which is the call signs custodian & national society, invites amateur radio operators from all over the world to celebrate with Malaysia on air.

The HAM (Radio Amateur) communities in Malaysia will be joining Malaysians all over the country celebrating the 50th year of nationhood by organising this Field Day to Sept 1.

all over the world are already catching this very rare callsign, which is a must for DX-Chaser. In Kota Kinabalu, the Borneo Amateur Radio Club has been given a rare privilege to operate the 9M50MS station to represent Sabah.

The BARC Clubhouse at Bukit Sierra, Bukit Padang, is the centre of the radio operation, as the clubhouse is fully equipped to operate on all bands.

Epitomising the solidarity of the nation, all 9M50M stations would be in constant contact with the other stations to symbolise unity.

Members of the public, amateur radio enthusiasts and club members throughout the State of Malaysia are joining in the celebration.

QSL Bureau is: PO Box 10777, 50724 Kuala Lumpur, Malaysia

For more information on MFD, please visit www.marts.org.my

* Note: Merdeka means independence in Malay language. Malaysia (then Malaya) obtained its independence from the Great Britain on August 31, 1957.

Lance M T Lai, 9W2LAI
Honorary Secretary 2007-2008
Malaysian Amateur Radio Transmitters' Society

IARU - QSL Bureau of Portugal, Azores and Madeira

Remember, the solely Portuguese IARU QSL Bureau representative, for any contact made with any station, using on the callsign, one of the following prefixes

CQ0 to CQ9, CR0 to CR9, CS0 to CS9, CT0 to CT9 and CU0 to CU9

Being like this, QSL cards of stations of Portugal, Azores and Madeira, send to following address:

REP - REDE DOS EMISSORES PORTUGUESES
Rua D. Pedro V, 7-4
1250-092 LISBOA
PORTUGAL

to whom, all the QSLs via Bureau must be send.

For other contacts please use:

Phone: +351 213461186
Fax: +351 213420448
e-mail: rep@rep.pt

Please receive our friendly regards and the best 73

Carlos Nora - CT1END
REP President

THE QNEWS WORK BENCH - EMERGING TECHNOLOGY: LIGHT WORX - WITH VK5MM

Last week Rex VK7MO and Justin VK7TW made some significant advances with light communication.

Previously Justin was able to get excellent WSJT copy from Rex over 5.3 km with cloud reflections.

Rex has now built an improved transmitter giving an additional 18 db performance and Justin has gained a further 4 dB on reception with a mirror reflector receiver that derives from an old X-ray machine.

Overall this 22 dB improvement in system performance is such that it is now un-necessary to have clouds to communicate and the weak scatter from particles in the atmosphere is sufficient to produce perfect copy on WSJT.

EMERGING TECHNOLOGY: MODERN DAY FANTASTIC VOYAGE

Shades of the 1960's science fiction classic Fantastic Voyage. A news medical telemetry capsule that when swallowed travels through the digestive system becomes a sort of mini transponder has won federal approval. The wireless device, about the size of a large vitamin pill, journeys along the gastrointestinal tract collecting data and transmitting it to a receiver worn on the patient's belt or around the neck.

Doctors like the telemetry capsule because it can be given at the office and is reliable and non-invasive. They say that it is a way to diagnose an uncomfortable stomach condition and other digestive track problems on a real time basis. The Food and Drug Administration approved the device on July 19th following clinical trials that wrapped up in November 2006.

Manufactured by a company called Smart Pill, each of these micro transponders will sell for about $500 each. And for those of you not familiar with the 1966 movie Fantastic Voyage, its plot involves a diplomat who is nearly assassinated. In order to save him, a submarine and its crew are shrunken to microscopic size and injected into his blood stream. Their job is to burn away a blood clot before the patient expires. For now, the Smart Pill is likely as close to that scenario as medical science is going to get.

Fortunately - I guess, no information was supplied on if, or how, the capsule is retrieved.

Leaving you With that pleasant thought ... that's the QNews work Bench from the VK1WIA News Hub in South Australia.

NOW ROBERT BROOMHEAD - VK3KRB.

WW SPECIAL INTEREST GROUPS --- FINAL FRONTIER

Twenty Chinese students talked directly to an astronaut in the International Space Station (ISS) via amateur radio in Nanjing on Sunday 26th.

The 20 students, aged 10 to 19 began talking to Clayton C. Anderson, a 48-year-old American astronaut at 18:50 p.m. at Nanjing No. 3 Middle School when the ISS was passing over Nanjing.

Tang Jiewen asked the first question: "Can you see our Great Wall from the ISS? "

"I'm sorry that I haven't seen it yet, but we hope to see it," Anderson's voice was clearly heard from the radio.

He also answered other questions popped out by students during the 10-minute conversation, telling students that ISS is very quiet with only sounds of astronauts' drinking water and air flowing, and robots are used to do simple work like fetching things.

"This is the first time for Chinese students to participate in the program of Amateur Radio on the International Space Station (ARISS) to speak directly to astronauts in the ISS," said Wang Long, a teacher in charge of the Amateur

Radio activities from Nanjing No. 3 Middle School.

And as an aside, the wall must be working well as no mention of seeing rabbits was made!

WW SPECIAL INTEREST GROUPS --- RADIO AMATEUR OLD-TIMERS

OLD TIMERS
Members and friends of the Radio Amateurs Old Timers Club Australia are reminded that the next news and information broadcast will take place on the first Monday of the Month.

using the RAOTC callsign of VK3OTN.

10.00 am Victorian time on 7.060 and 3.650 MHz plus 1.843 MHz AM, and 145.700.

On 14.150 MHz at 01.00 UTC beaming north and 02:00 UTC west from Melbourne

For those not yet retired, 8.30 PM Victorian time tune 80 mtrs 3.650 MHz.

In New Zealand, their Old Timers' Club net controllers have unanimously decided to change the time and frequency of the OTC (ZL) SSB weekly net.

>From Today, Sunday 2/9/07 onwards there will only be a net on 3.865 MHz at 1600 hrs.

WW SPECIAL INTEREST GROUPS --- RADIO SCOUTING

Tony VK7AX, President of N.W.T.A.R.I.G. is seeking help for JOTA 2007.

Regular amateurs assisting Scouts and Guides at each years' Jota located at Paton Park, being Susan VK7LUV and Alan VK7JAB, will not be available for this year's event.

NWTARIG is seeking help from local amateurs to fill this void.

If any amateurs (or Short Wave Listeners) can help out on Jota Weekend by providing assistance with communications at Paton Park, for just a short period or for the entire Jota weekend, please advise Tony VK7AX.

There is ample camping facilities for overnight stay if you so desire, and I know from experience that you will be well fed.

Again, if you can assist in any way, please contact Tony VK7AX, by telephone 64 25 29 23

nwtarig@spamex.com.

BB's DIARY ROOM - THE FUTURE, IN AMATEUR RADIO

2008

Sept 13 Alarameet 2008 will be held in Ulverstone Tasmania on Saturday 13th and Sunday 14th September 2008. Susan VK7LUV for details.

2009
International Telecommunication Union's Telecom World 2009.

14th IARU R3 Conference Christchurch 12 - 16 October, 2009.

SEPTEMBER 8
SUNSHINE COAST HAMFEST at Woombye School of Arts Hall.

SEPTEMBER 9 Shepparton and District Amateur Radio Club Hamfest
St. Augustine's Hall Orr St.

SEPTEMBER 21-23
North Queensland Amateur Radio Convention
Happening in twin cities of Thuringowa and Townsville.

OCTOBER 6
Gold Coast Amateur Radio Society Annual Hamfest at Albert Waterways Hall.

JANUARY 20 2008

The Mid North Coast Amateur Radio Group invite all amateurs to attend the 2008 Mid North Coast Radio Expo to be held in Coffs Harbour on Sunday 20th January.

The Expo is held at the St Johns Church Hall, Mc Lean Street, Coffs Harbour. Gary VK2ZKT is the Radio Expo Coordinator on 02 66 55 2 990 or visit the Groups comprehensive web site at www.mncarg.org

REWIND - A LOOK BACK IN HISTORY
(Will McGhie VK6UU is WIA National Historian)

THAT FINAL ITEM: THE ARTISTRY OF ANCIENT GREECE IS IN THE SOUND

And finally this week, another kind of communications. That of the human voice and the way it could be heard for thousands of feet long before microphones, amplifiers and loud speakers were invented. The story is from ancient Greece. A not so ancient Jim Meachen, ZL2BHF, takes us back in time to about the 3d Century BC:

Science Daily reports that researchers at the Georgia Institute of Technology have pinpointed the elusive factor that makes the ancient amphitheatre the ancient Greek amphitheatre at Epidaurus an acoustic marvel. It's the seats.

The scientists say that the rows of limestone seats at Epidaurus form an efficient acoustics filter that hushes low-frequency background noises like the murmur of a crowd. At the same time it reflects the high frequency noises of the performers on stage off the seats and back toward the seated audience member. This in turn carries the performers voice all the way to the back rows of the theatre.

While many experts speculated on the possible causes for Epidaurus' acoustics, few guessed that the seats themselves were the secret of its acoustics success. There were theories that the site's wind - which blows primarily from the stage to the audience - was the cause. Others credited masks that may have acted as primitive loudspeakers

or the rhythm of Greek speech. More technical theories took into account the slope of the seat rows.

The report appeared in the April issue of the Journal of the Acoustics Society of America.

>From Auckland, New Zealand. for the Amateur Radio Newsline, I'm Jim Meachen, ZL2BHF,

The theatre at Epidaurus permits almost perfect intelligibility of un-amplified spoken word from the stage to all 15,000 spectators, regardless of their seating. What's not known if whether or not those who designed it were aware of the science of acoustics or if it was all nothing more than a lucky guess.

More about Epidaurus and its famed theatre is on-line at http://en.wikipedia.org/wiki/Epidaurus and http://www.greeklandscapes.com/greece/epidaurus.html (Science Daily OnLine)

THE FINAL FINAL

WALKS

Jeff VK4XJJ is still going strong on his walk across Australia.

But he still wants to hear from YOU, and it is these calls in particular that keep him going!!

Every Day, from 5:30pm Eastern on 40 meters, 7045 put out a call to VK4XJJ

Good Afternoon Jeff's family and friends,

Met up with Jeff at Normanton on Tuesday at 1 p.m. Very warm but pleasant and a very friendly town.
Bill slept out under the stars last night, first time since age 15.

Sitting in the shade garden at Norman County Snacks and Supplies trying to keep cool. Very warm yesterday and today but lovely mornings and afternoons with the breeze. Jeff is attending to the car registration after my trip up from Stockton to Normanton.

Jeff has 72 Kms to walk to Karumba and finish his great walk and touch the waters of the Gulf of Carpenteria.

Since last Thursday Jeff walked 30 Kms for each of three days to arrive in Normanton early Sunday afternoon.

The Normanton Caravan Park allowed Jeff to erect his half wave 40m dipole semi-permantley during his three day stay.
His five watt radio once again performed well and has made many contacts while in Normanton.

Jeff is looking forward to using his 100 watt linear amplifier which will be delivered to Karumba.

Jeff and Bill have been invited and will fly to Sweers Island Resort for an overnight stay courtesy of Sweers Island Resort and Aero Tropics.

Special News: Jeff's regular sked on Thursday 6th September at 1730 hrs on 7.045 will be conducted from Sweers Island. VK4SWE Lyn has a 100 watt transmitter so many more contacts should be possible.

Jeff again thanks all the kind amateurs who have taken the time to talk to him. I have seen his long list of contacts in order, by state call sign.

Hornsby ARC have kindly offered to raise some money for DeafBlind through Jeff's walk. Thank you Secretary Dot.

Kind Regards,

Bill VK2FWGJ for Jeff VK4XJJ.

This is WIANEWS for week commencing SEPTEMBER 9 2007

AMATEUR RADIO - HOME OF THE GOOD GUYS

Pam, KF6VJR is searching for info on her Grandfather.

"Grandfather was a radio officer who helped to establish many wireless stations in Australia from 1912 Mt Gambier station til 1928, when he transferred to the Receiving Station of AWA at La Perouse.

He was also at the stations at Broome, Melbourne, Sydney, Thursday Island, Brisbane and Hobart.

This is stated in his obituary.

I live in the USA since my mother married (a Yank) at end of WW2 and moved here with my dad. I am trying to get more information on Henry (Harry) Freeman Coffey. He joined the Commonwealth Radio Service in 1912 after leaving the Marconi Company.

Any assistance or information you could share would be of great value to me.

Thank you,
Pamela Ferges KF6VJR"

Westlakes Amateur Radio Clubs Christmas Party will be held at the Eastern Tiger Restaurant, which is located in the Cardiff RSL building, December 2nd If you are interested get in touch with VK2FDNE Diane.

Brett Dawson VK2CBD down in the Orana Region ARC says the CSIRO Parkes Radio Telescope will be holding open days Saturday 22 and Sunday 23rd of September.

GET along and see one of the largest radio astronomy antennas in the world!

Tours will be taken by Observatory staff, and visitors will walk up through the control tower directly beneath the antenna structure, out onto the azimuth track, and back down through the centre of the tower.

Aside from seeing where "The Dish" movie was made, you'll also see the astronomers at work, and get an appreciation for what is done at this iconic facility.

The Orana Region Amateur Radio Club, the Orange & Districts Amateur Radio Club and the WIA will be on site with interesting demonstrations and they'll be talking to anyone who wants to know about how to get involved in amateur radio. There will be other attractions as well including helicopter rides, a jumping castle and face painting for the kids, as well as an outdoors screening of the movie "The Dish" on Saturday evening.

This will be quite spectacular with the real thing just meters behind the projection screen!

For more information please contact Brett Dawson by email vk2cbd@wia.org.au or go to the Parkes Observatory home page and follow the links to outreach and then 2007 Open days.

So GET along to Parkes The 22nd/ 23rd of September.

Friday 21st September the EMDRC will present their "Two Bob Show" hosted by Bob VK3XP & Bob VK3AIC will provide some training to other club members on the use of CRO's. The training will cover the many uses of the CRO with particular attention as to the connection of the test device to communication equipment.

The Ballarat Hamvention will be held this year on Sunday 4th, November at the Great Southern Woolshed located on the Western Highway on the Melbourne Side of Ballarat.

A location map will be found in the October edition of our A.R. magazine.

Traders tables are available at $15 each and includes admission for one person. Traders can commence set-up between 8am and 10am via a separate entrance.

General entry is from 10am with entry tickets being presold to avoid the rush when the doors open. The entry fee is $6 per person with free entry to persons under 15 years of age.

Make sure you attend this well organised function to purchase the goodies you've been saving for all the year. Good parking is provided for all together with catering facilities including tea, coffee and soft drinks.

If you wish to book a table please contact Ian - Vk3AXH via email igm@netconnect.com.au
or by phone on 03 534 13 0 12 or look up the details at the BARG website barg.org.au

Announcing Centre Victoria RadioFest No. 2.

They're still talking about this year's inaugural event and it's coming back in February 2008.

The organising committee met last weekend and decided on some minor changes for a repeat success.

Second-hand traders, club corner, short-talk lectures, displays and the popular dipole factory will all return, plus some new exciting activities to be announced later.

All major commercial traders have already made commitments to be there again in 2008. They would not miss it and neither should you.

Three groups - Amateur Radio Victoria, and the Central Goldfields and the Midland radio clubs are mounting this event for the entire amateur radio community and general public.

For second hand table bookings that cost only $12.50 please contact Nick Angelo VK3UCK 0488 653 201, or check out the website radiofest.amateurradio.com.au

The Centre Victoria RadioFest at the Kyneton Racecourse is within an hour's drive of metropolitan Melbourne, Ballarat and Bendigo.

The date, put it in your calendar now, is Sunday the 10th of February 2008.

I'm Bruce Lees VK3FFF and you're listening to VK1WIA.

In the top end we will be holding one of our famous Auctions and Baaarbecues on
Saturday 13th of October starting at 1600 at the clubrooms. Bring along your unwanted items any Tuesday night or at the next meeting on the first of October. See you there.

Terry VK8TA advises that the morse sessions continue on Tuesday nights on 3.550
starting at 730pm.

Jota of course is coming up and planning is underway. This year JOTA will be on the weekend of 20 - 21 October at the Nightcliff scout hall pandanus st nightcliff. Contact frank VK8FT if you can assist at any time over the weekend.

Seanet 2007 is being held at LAMPANG in Thailand over four days 8th to 11th of November. Seanet is a great gathering of amateurs from all over the world particularly south east asia. Lots of eyeball qso's a dinner or three together, a good look around, operate the Seanet station and grab a few bargains. Checkout the website www.sabah.net.my/seanet/seanet_2007.htm or put Seanet 2007 lampang into your search engine.

That's it for the top end for this week and now to vk2 news

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6FXYL

22 NEW RADIO AMATEURS JOIN THE RANKS

22 New Radio Amateurs joined the South African ranks last week after successfully passing the class B examination held 23 August at examination centres around the country.

Only 2 of 24 candidates did not make it.

The highest marks were obtained by H J Coetzee who now holds the call sign ZU6H and H F Rolandi ZU5HR. Both achieved 97%.

The youngest candidate was J Ware, 13 years old, now holding the call sign ZU6SP.

Congratulations and welcome to all the successful candidates from your friends here in VK.
(SARL)

Saturday 22nd September the EMDRC will be running their CRO familiarization day. Members and visitors are welcome to bring along their own test equipment and ask the experts for the correct method of operation. Over the course of the day members and friends will be able to learn how to connect test equipment and interpret values using various CRO's. Also, if there is a need, those attending can bring along communication equipment to test with the CRO.

This will be a full day activity with a break for a BYO BBQ lunch. The activity will be held at the EMDRC clubrooms 12 a McCubbin Street in East Burwood and kicking off around 10:00am. The EMDRC extends an open and warm invitation to visitors" To register for attendance or for further information contact vk3er@emdrc.com.au

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or training in Amateur Radio go to wia.org.au and check out the club pages.

BPL

Northern Tasmanian Amateur Radio Club's Next meeting at Alanvale TAFE is their "BPL SPECIAL"

The clubs special presenter, non other than a 'Pollie' who has shown an interest in BPL.

Mr Kerry Finch MLC will be giving as a talk on his times at the ABC through to his current position as a MLC. This is an opportunity for VK7 hams to "get in the ear" of a politician who has shown an interest in BPL.

Even if you only attend one meeting a year, this should be the one. 7:30pm Wednesday 12th September. Block B Alanvale TAFE.

NATO Report on BPL Interference

The following story come from Ed Hare W1RFI:

NATO (North Atlantic Treaty Organization) has issued a report of the expected effects that widespread BPL (a.k.a. PLC or PLT) application would have on the HF spectrum. Particular emphasis is placed on ambient noise in "quite rural" zones and the "Absolute Protection Requirement". The calculations assume ubiquitous installation of BPL. The report concludes:

"a) High probability that PLT would cause increased noise levels at sensitive receiver sites given the projected market penetration; and

b) The percentages are highly influenced by assumptions on transmitter EIRP, PLT market penetration, and duty cycle."

The report's title is "HF Interference, Procedures and Tools"

http://reast.asn.au/vk7bplwatch_links.php#ScientificBPLStudies
http://groups.yahoo.com/group/BPLandHamRadio/

(Ed Hare via the BPL and Ham Radio Mailing List)

Well the fight isn't over, our friends at the SARL in South Africa tell us DRAFT PLT REGULATIONS ARE UNDER THE SPOTLIGHT IN SOUTH AFRICA.

Their regulatory body, ICASA has been hard at work and has asked the EMC workgroup of the STANSA TC73 and TC80 committees to come up with draft regulations for type approval of PLT (BPL) equipment as an interim measure.

Well Done.

These interim standards will eventually be replaced by internationally accepted standards. There is however much debate amongst members of the International Special Committee on Radio Interference (CISPR) about international standards with an agreement seemingly some time off.

The SARL even tell us that this CISPR will meet here in Australia later this month!

The Work group has held meetings over the past two weeks and hopes to complete a draft to be tabled at the TC80 meeting later this month. Once agreed at TC80, the draft will be forwarded to ICASA for further consideration and once agreed by the ICASA Council, the draft regulations

will be published in the government gazette for comment.

The SARL is represented at the Workgroup and has made its input.

There is much ongoing debate and unhappiness about the SARL's demands that all Amateur Radio HF frequencies be notched at the time of installation.

In particular the vendors of PLT equipment would only like to notch when an interference complaint is received. The SARL's view is that Radio Amateurs are licensed to operate on HF and that their rights should be protected.

Here Here!!!

There are many other issues on the table that still need resolving, and as soon
as the South African Amateur Society let us know, we'll bring it to the VK Ham populations notice... BPL truly a world wide problem child!!

BPL Interference - Not a dead parrot yet

Listeners may have the impression that, because there haven't been too many BPL news items from the WIA lately, that the threat of BPL interference in Australia is receding.

Nothing could be further from the truth.

Phil Waite VK2DKN reports

"BPL remains a serious threat to amateur radio. Everybody now knows that BPL interference to radio communications services is a serious problem that must be addressed, not least BPL equipment manufacturers who are striving to find ways to reduce the interference profile of their products.

Because of this, the WIA's focus has shifted from publicising BPL interference to the international Standards arena where decisions concerning permitted BPL interference limits will be made.

Most industrialised countries base their EMC limits on international Standards developed by the International Special Committee on Radio Interference, IEC, otherwise known as CISPR.

A group within CISPR, CISPR 22, determines the limits and measuring methods for radiated emission (through the air) and conducted emission (through the connecting cables) for information technology equipment, such as BPL equipment.

However CISPR22 limits and methods were developed a long time ago, long before BPL and other new communications technologies were thought of, and need to be revisited.

The WIA is a member of several Australian Standards committees having input to CISPR. In particular we are a member of a BPL working group making recommendations on BPL technology Standards.

The WIA's work on Standards committees involves more than just attending meetings. Recently we have taken hundreds of measurements of BPL emissions and co-produced a major report in preparation for an international meeting of CISPR to be held in Sydney this month. We have also measured ambient noise levels in an area we believe is likely to be used for a BPL trial. This vitally important work has taken a considerable amount of time and is the focus of our present activity.

Listeners will understand that much of the work we are doing in Standards committees, and elsewhere, is confidential and cannot be publicly released at this time. To have influence in these forums, we must abide by their rules and respect confidentiality requirements. The WIA will release as much information as it can to members as soon as is possible.

INTERNATIONAL NEWS

VU2UKR Sunil from Delhi dropped us a line through the week to say that the 30 Meter band stretching from 10.100 to 10.150 MHz has been temporarily allocated to ALL Indian Hams to operate, The month of September only.

Also in India, Gopal VU2GMN in Chennai has just arrived home after attending the IARU Region 3 Directors meeting and posted this note to say "There are many items that will concern Indian amateurs".

Selecting a couple which will also interest us in VK (being part of region 3)

"the proposals that allocations be made to the amateur service to achieve a world wide exclusive band 7.0 to 7.3 MHz and a new secondary allocation around 5 MHz were not supported." The Directors agreed to report separately to member societies on these matters, making specific recommendations.

The Directors reviewed many other matters apart from preparation for WRC-07.

The Intruder report of B L Manohar "Arasu", VU2UR, the Regional MS Coordinator, was reviewed in depth, as were the concerns expressed by others. The need to provide better and more accessible information on this important service was identified and is being addressed. It was agreed to continue to seek action against certain intruders.

The difficulty reported by the Chairman of the Disaster Communications Committee, Jim Linton VK3PC to get responses from some societies was discussed. Also of concern was the potential barrier in national regulations that had not been up-dated to give effect to the changes to the international regulations following from WRC-03 to allow amateurs to practice the provision of emergency communications.

BE AWARE -- BE VERY AWARE

We tried to contact the folk involved in this next story, however it is an anonymous email and web address.

A station signing N6MRQ says he is giving free radios to hams in what he calls "3rd world countries!"

9 Ten Tec Radios away for free to deserving hams in poor nations. To win just submit a brief synopsis (about 300 words) of how you and your station serve your community!

A nice idea if true, and if you happen to win one, let us know so we may give credit where credits due... until then, just be aware!

Late news in say's "The Baker" was correct! HiHi.

VU2GMN again says, and I quote, "Ten Tec supports the STARS**** program in IARU
to promote amateur radio in developing countries and I was fooled into thinking
that this was an offshoot of that.

It has now been established that it is a hoax- one of our members contacted Ten Tec directly to verify and they do not know anything about it.

Obviously someone went to great length to fool us by sending to our e-mail ID's
and not as a general mail - So sorry if I led you all astray! Gopal."

==========
NEWS FROM ARNEWSLINE

GAREC-07 CELEBRATES EMERGENCY COMMUNICATIONS IN HUNTSVILLE

The third Global Amateur Radio Emergency Communications Conference took place August 16th and 17th in Huntsville, Alabama. This, just prior to the opening of the combined Huntsville Hamfest and 2007 ARRL National Convention. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

The ARRL Letter says that some 100 delegates from around the globe came to Huntsville, Alabama, for this global emergency communications gathering GAREC as it was called had a prevailing theme of how to apply advanced technologies to emergency communications. As such attendees were provided a sampling of just about everything pertaining to the Emergency Communications arena.

ARRL Alabama Section Manager Greg Sarratt, W4OZK, said many large and essential organizations that work with Emergency Communications sent representatives to Huntsville. This included representatives from the IARU, the ARRL, Army MARS, the American Red Cross, Southern Baptist Disaster Relief the Department of Homeland Security, The Salvation Army, industry and others. Also on hand were many Section Emergency Coordinators, District Emergency Coordinators and Emergency Coordinators from the ARRL field organization.

The League's Media and Public Relations Manager Allen Pitts, W1AGP, and its new Emergency Preparedness and Response Manager Dennis Dura, K2DCD, were among the presenters.. Pitts spoke about the need for a Public Information Officer to be in the Joint Information Centre at any ARES deployment.

Dura talked about using VoIP, EchoLink and IRLP for establishing and maintaining communications during hurricanes.

The session spent time discussing the methods of combining RF links to the Internet. This, to establish a cohesive network. The Voice over I P Hurricane Net is another tool that was discussed. Amateur Radio operators, the National Weather Service, the National Hurricane Centre and emergency managers use it jointly to gather detailed information on local conditions. Other presentations included the use of new technologies such as ALE, D-Star, Winlink 2000 and TSSG. TSSG is an advanced system being developed in Ireland.

The conference made a number of recommendation. Among this is to introduce the call sign suffix "/D." This would be used by those in the Amateur Radio Service who handle traffic related to emergency and disaster situations. This recommendation was made by Willem Visch, PG9W. He believes that it would let anyone listening immediately know there was emergency traffic and lessen the chances of someone unintentionally breaking in on an emergency net.

Another recommendation included the extension of "EmComm Party on-the-Air." These are Emergency Communications exercises already in place in ITU Region 1.

Seppo Sisatto, OH1VR, is the Region 1 representative. He proposed holding two annual international drills, lasting only 4 hours, beginning November 11. This, he said, recognizes that major calamities can and do cross international borders, and hams need to practice for such eventualities.

GAREC delegates also suggested that the IARU initiate studies in cooperation with its member societies and with specialized emergency communication groups These investigations would focus on the development and possible introduction of standard codes for use in international emergency communications. They would also look at the need for the development of a list of standard resource types.

They delegates also appealed to all of the IARU Member Societies, as well as specialized emergency communications groups, encouraging the acceptance to and ratification of the Tampere Convention on the Provision of Telecommunication Resources for Disaster Mitigation and Response Operations. That's a fancy way of saying that its time for all of the worlds radio oriented emergency communications providers to work hand in hand.

Other procedural issues were also covered at GAREC 2007. All attending consider the gathering to have been a major success.

For the Amateur Radio Newsline, I'm Bruce Tennent, K6PZW, in Los Angeles.

==========

WEIRD N WONDERFUL

APRS FOR HOOKERS JUSTIN VK7TW REPORTS

This story concerns the use of electronic over-the-air Automatic Position Reporting Systems (APRS) by prostitutes with radio equipment built right into specially designed platform shoes.

The GPS unit uses amateur radio frequencies to send data, which, ironically, was first developed at the United States Naval Academy (all the nice girls love a sailor...HIHI).

Note the mentioned use of Amateur Radio frequencies which, if true, would be an unauthorized use unless the hooker is a ham.

OPERATIONAL NEWS -

CONTEST COLUMN - D A T E L I N E

Good morning listeners, this is Peter Harding VK4OD this years RD manager.

This week sees a small trickle of mail and Electronic logs arrive for this years RD,

And again I picked up some errors, and I have contacted the sender and some of the software creators as to why the errors are occurring, again some operators not fully understanding the rules, concerning the bonus points system .

As this news goes to air on Sunday 9th Sept, you have less than 24 hours to get
your logs in. As from 18:00 tomorrow night Monday the 10th Sept, anything that is sent electronically will be rejected in the email dept. And snail mail will be returned unopened.

It was pleasing to see an operator from the very top of Cape York submit a log,
well done Lyn. (for those that know my XYL no it was not her). Our thanks go to
all those participated in this years RD contest, and now I am off to continue checking the entries.

NOVEMBER 17/18 VK Spring VHF-UHF Field Day

John Martin reports that this is a week later than in past years. The change of dates avoids clashes with some club activities that will taking place earlier in the month.

There are two minor changes in the rules:

1. Stations may enter both the 24 hour and 8 hour sections, but only if the station actually operates for more than 8 hours.
2. Changing locations: It is not in the spirit of the contest for grid-hoppers to set up more than one station and move between them. The rules now make it clear that not only the operator but also the station

must be moved when operating locations are changed.

Dates: Saturday and Sunday November 17 and 18, 2007.

Duration in all call areas other than VK6: 0100 UTC Saturday to 0100 UTC Sunday.

Duration in VK6 only: 0400 UTC Saturday to 0400 UTC Sunday.

The full contest details can be viewed here:

http://www.wia.org.au/contests/vu_fieldday/index.php

MEDIA WATCH

Also, importantly, when you send NATIONAL NEWS an item a couple of "must do's", and these have not changed over the years, just they seem to be forgotten or not passed on to club officers after elections etc.

1/ When you file audio always email us the script.

2/ When supplying script for someone else to read, PLEASE write as you'd expect to hear it! as an example always write in the 3rd person!! (Remember our readers are not you or your club so don't say things like "we are having a working bee... say 'club members' are having a working bee etc etc".)

3/ Don't send us links or photo's of stories , always write out the story in a manner in which it can be read and pasted to our text and audio services.

4/ If you want an item run 3 or more times, write different slants on the item, running the exact same item over and over would be dull/boring and lets face it, if you can't think of anything extra to say, that is probably a good sign that it will end up being a dull event!!

5/ WIA related material, eg BPL if Australian material will only be broadcast after clearance from the WIA unless said item is already in the public domain.

6/ Silent Keys are best sent to AR Magazine and your local state or club news rather than this WIA National News Service.

ARRL ANNOUNCES NEW FALL PUBLICATIONS

The ARRL has announced its new fall publications line-up. ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R, said, "ARRL's fall line-up includes the biggest new publication introductions this year. These new books will keep you current with rapid advances in radio operating and experimentation."

The ARRL Handbook for Radio Communications - 2008 (Eighty-Fifth Edition) uniquely serves both amateur experimenters and industry practitioners, emphasizing connections between basic theory and application. This 85th edition is both a useful introduction to radio communication and a source for answers to questions about every aspect of the state-of-the-art. Topics

include Amateur Radio licensing requirements and operating activities, fundamental and advanced electronics and communications concepts, radio propagation and antenna theory, practical projects, repair techniques, references and much more. The Handbook includes descriptions for new and emerging wireless technologies involving digital signal processing (DSP) innovations, and radio applications utilizing software and the Internet. The book is filled with valuable references, practical examples and projects. The CD-ROM at the back of the book includes all of the fully searchable text and illustrations in the printed book!

ok, as well as companion software, PC board templates and other support files.

Revisions to the 2008 Handbook include new filter theory and design examples, including a HF/6 meter high-power low-pass filter project, and revised and expanded RF safety content -- including new insights into RF safety regulations and research. New projects include: MKII updated universal QRP transmitter; MicroR2 receiver and MicroT2 transmitter; ID-O-Matic-10-minute ID timer for individual, repeater or beacon control; simple computer-to-transceiver serial port interface and USB interface; keying adapter to interface vintage radios with modern gear (CW keying or amplifier TR keying), and more.

The softcover edition of the Handbook sells for $44.95; the hardcover sells for $59.95. As an early bird bonus, the ARRL Software Library for Hams CD-ROM, v 2.0, will be included with each Handbook ordered before October 31, 2007; this is a $20 value. The CD includes quick access to utilities, applications, and information; software for contesting, digital voice, HF digital (PSK31, MFSK16, MT63, and RTTY), meteor scatter and moonbounce, book excerpts and more, as well as programs for APRS, Winlink 2000, packet radio and satellite tracking. Both editions will be available in early October.

ARRL's HF Digital Handbook -- Fourth Edition is your guide to understanding the most active HF digital communication modes in use today. There is something here for every radio operator -- beginners and more advanced operators alike. And, as this technology rapidly advances, your increased understanding of digital communication techniques will make certain that you stay in the race as new modes and methods unfold. This 4th edition book includes expanded station setup information, discussion of PSKMail and other varieties of PSK, new content on Olivia, DominoEX, HF digital voice and image modes, and Automatic Link Establishment. Are you just getting started with exploring digital communications? All it takes is your sound-card-equipped computer and your HF transceiver. ARRL's HF Digital Handbook will guide you through the rest. This softcover book will be available in early October for $19.95.

ARRL's Low Power Communication -- Third Edition shows how you can explore the excitement of low-power radio operating. Discover how to build and operate low-power radio gear - the QRP way, with sections on equipment and station accessories, antennas and operating strategies. There are new sections on Emergency Communication and surplus military equipment, including how to restore and use this classic radio hardware. This book can be purchased alone

for $19.95 and includes the complete assembly manual for the MFJ Cub Transceiver Kit, or with the MFJ-9340K 40M QRP-Cub CW Transceiver Kit for $99.95. Both editions will be available in early October.

FCC Rules and Regulations for the Amateur Radio Service is now available for only $5.95. The new 8-1/2 x 11 reference contains the complete Part 97 rules from Title 47 of the Code of Federal Regulations, effective February 23, 2007.

Antenna Compendium Volume 4, the popular antenna book from 1995, is being reprinted due to increasing demand. This is the fourth in the popular ARRL Antenna Compendium series. You'll find 38 articles inside, covering a wide range of topics. There are simple, practical antenna projects, and there are heavy-duty, theoretical treatments of complex arrays. When the sunspots are low, head for the low-bands - seven articles are devoted to 80 and 160 meters including some truly gargantuan arrays. There are articles for mobile work, too. A section on portable or temporary antennas that will get you thinking about Field Day in June, regardless of what time of year you read it. The Antenna Compendium Volume 4 will be available in September for only $20.

AC Power Interference Handbook, 3rd edition, revised, looks at the causes, effects, locating and correction of power-line and electrical interference, and includes a new locating concept! "This easy-to-read, very practical book, is a must for anyone responsible for solving interference problems." -- Vern Chartier, past chairman, IEEE T&D Committee. AC Power Interference Handbook is written by Marv Loftness, KB7KK, and published by Percival Technology. ARRL is the worldwide distributor for this title.

These books, as well as the complete ARRL library, are available from the ARRL Online store
www.arrl.org/catalog/>.

VHF AND ABOVE

Serious 2m DX

Queensland to Western Australia on 2-metres is the aim this summer of an active VHF operator John Bisgrove VK4KK who is looking for serious VK6 stations to run skeds.

Jim Linton VK3PC says John is located at Gympie in grid square QF62HT and he's well equipped including being able to run a legal limit manned beacon 12 hours a day.

If you're in VK6, and a VHF DXer, then John VK4KK wants to hear from you. His email address is rainy.day@bigpond.com

SWEDEN: NORDIC HF CONFERENCE
Posted by: "Ray (VU3ORN)" vu3orn@gmail.com vu3orn

The latest Nordic High Frequency Conference was held August 14th to the 17th.

The 3 day program covers Very Low Frequency, Low Frequency as well as High Frequency operations.

The conference was initially planned for a limited audience of Nordic countries now. It has since gone international with contributions of papers, exhibits and participants from around the globe.

The Nordic conferences on H-F communications began back in 1986 in Sweden. Since then the event has been held every 3 years at Faro Island off Sweden's south-eastern coast. More about the Nordic HF Conference is on-line at http://www.nordichf.org

BB's DIARY ROOM - THE FUTURE, IN AMATEUR RADIO

DECEMBER 2
Westlakes Amateur Radio Clubs Christmas Party will be held at the Eastern Tiger Restaurant, which is located in the Cardiff RSL building, interested? get in touch with VK2FDNE Diane.

JANUARY 20 2008

The Mid North Coast Amateur Radio Group invite all amateurs to attend the 2008 Mid North Coast Radio Expo to be held in Coffs Harbour on Sunday 20th January.

The Expo is held at the St Johns Church Hall, Mc Lean Street, Coffs Harbour. Gary VK2ZKT is the Radio Expo Coordinator on 02 66 55 2 990 or visit the Groups comprehensive web site at www.mncarg.org

FEBRUARY 10 2008

Announcing Centre Victoria RadioFest No. 2.
Second-hand traders, club corner, short-talk lectures, displays and the popular dipole factory will all return, plus some new exciting activities to be announced later.
All major commercial traders have already made commitments to be there again in 2008.
For second hand table bookings that cost only $12.50 please contact Nick Angelo VK3UCK 0488 653 201, or check out the website radiofest.amateurradio.com.au

THE FINAL FINAL

WALKS

Jeff VK4XJJ has finished his walk across Australia.

But he still wants to hear from YOU!

Every Day, from 5:30pm Eastern on 40 meters, 7045 put out a call to VK4XJJ

Though given so many people are on cable/satellite these days, I would suggest that post-demodulator pickup will probably be the more common type of interference...

Sound bars, hum bars, and herringbone are all a function of analog reception. You won't notice any of that on a DTV receiver.

As Dave says, macroblocking and complete dropouts will be the most common problem. I doubt you'll see any other type of interference to the picture.

Direct RF pickup on external audio wiring will probably be a bigger problem. It'll sound just like RFI on stereo equipment. (since that's essentially what it is...)

Irish Radio Transmitters Society
Radio News Bulletin

Sunday September 9th 2007

SSB Field Day

The SSB Field Day, held last weekend, seems to have attracted only one EI entry. Shannon Basin Club, using the call sign EI3Z/P, operated from the grounds of Garbally College. Propagation on the high bands during the weekend was generally poor the club had no QSO s on 10 metres and just a few on 15 metres. 20 metres produced some excellent DX at times, but suffered from deep fading at other times. Weather conditions were good for the field day station and the operators and visitors to the site enjoyed a barbecue on Saturday evening, prepared by Tony EI3HA.

Counties Contest

All who participated in the 2 metre counties contest, even those who gave out just a few points, are encouraged to send in their logs to the Contest Manager. The latest date for log entry is the 25th of September.

CQIR

September is well upon us and our premier international event for our Jubilee year, the CQIR Contest is just around the corner.

A quick Internet search will demonstrate just how much interest there is in the event from the international radio community. We hope your plans for the event are well advanced and we have set ourselves an ambitious target to have 250 EI and GI stations on the bands for part or all of the weekend. This is more of a QSO party than a contest so we would encourage the non-contesters to get involved and fly the flag for Ireland and the Society on the 29th and 30th next.

EI75IRTS will be QRV for the event with the LF nighttime operation from the EI7M site in Cork and a HF station for the Press located in the Phoenix Park in Dublin. In respect of the Dublin station, we are anxious to have some young operators on the operating team. If you are between 15 and 25 years of age, licensed or not, and are interested in helping out, please contact Paul EI2CA on 087 2523908 or email &#65533;paul at comma dot ie&#65533;.

EI0MAR

Tony, EI5EM, has updated and expanded the information booklet about the Vintage Radio Museum in Howth. As well as being a guide to the museum, the booklet is a potted history of the development of wireless technology. It details the 1903 and 1905 experiments carried out in Howth by Lee de Forestand the Marconi Company, and quotes from documents published at the time. A full page reproduction of the Dublin Penny Journal's report on de Forest's 1903 experiments is reproduced in the booklet.

This 22-page booklet is on sale in the museum for a small sum, but it can now be downloaded free from a link at the bottom of the museum website which is http://ei5em.110mb.com/museum.html . The website can also be easily located from the Google search engine with the keywords "museum, wireless, Howth."

EI75IRTS has been QRV from the museum for the last three weekends, mainly on 20-metres CW. The call-sign will also be QRV today (9 Sept.) and if conditions are favourable, the 40-metre band will be the main focus, SSB and CW.

Limerick Radio Club

The next meeting of the Club will be on the Thursday 11th of October at the usual venue, the Limerick Institute of Technology, Moylish at 19:30 hrs local time. All those interested are welcome to attend.

Theory Classes

There is a free course for the forthcoming radio theory exam running in the Ballyroan Community centre, Marian Rd, hosted by South Dublin Radio Club. It is held between eight and ten p.m. on Tuesday evenings. Also there will be a course held in Crossakiel, Kells held

on a Wednesday 8:30 to 10:30, hosted by the newly founded CARA club (Crossakiel Amateur Radio Association).

Also anyone interested in radio will find a visit to the clubs enjoyable. Call Michael (EI2GKB) on 0872481970 for details.

Upcoming Rallies

Cork Radio Club Rally will take place on Sunday the 23rd of September in the Blarney Park Hotel. For information contact Con on 021-427136.

The Waterford Rally will take place on Sunday the 21st of October in the Woodlands Hotel, Waterford. For more information visit www.searg.com.

The Foyle and District Rally will take place on Sunday the 4th of November 2007 at the White Horse Hotel, Derry. For more information visit www.mn0aku.org.uk.

The Mayo Radio Rally will take place on Sunday the 18th of November in the Belmount Hotel, Knock, Co. Mayo. For more information contact Padraic Baynes, EI9JA @ QTHR.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to &#65533;news at irts dot ie&#65533; for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday&#65533;s bulletin.

1511. What's a good Gel Cell battery to extend operating time with a HT?

Newsgroup: rec.radio.amateur.moderated
Date: 2007-09-10 16:49:33 UTC
From: Dick Grady AC7EL <rng@richbonnie.com>

Source record: 3916

I'm looking for a portable rechargeable 12-volt battery, probably a gel cell, to extend my operating time with a VHF/UHF hand-held to about 12 hours of use.
I envision that I could power my radio by connecting its cigarette lighter power adapter to the portable battery. The portable battery should be comfortable to carry with me, for example: attached to my belt, or with an over-the-shoulder strap. Any ideas?

Estimate the number of hours out of that 12 hours
that you would be transmitting. Multiply that by
the current consumption during transmit. Multiply
the rest of the hours by the current consumption
during receive. Add them together to get an
estimate of the necessary ampere*hour rating
for the gel cell. Be sure to take into account
the minimum operating voltage required by the
hand-held.

I suggest you start here:

http://www.batterystuff.com/tutorial_battery.html

Then "run the numbers" per Cecil's post above.

Then Google "Gel Cell Batteries".

http://www.batterystation.com/gelcell.htm

... but do consider the possible benefits of using a lower-voltage battery. A lot of popular 2-meter HTs will develop a watt or so of output power on 6 volts, and a couple of watts on 8 volts. You only need 10-12 volts into the radio if you absolutely insist on getting the full 5 watts out.

Such an HT, fed from a 6-volt SLA battery, and equipped with a full-length "spaghetti noodle" whip antenna and a rat-tail wire counterpoise, would probably outperform the same radio fed from 12 volts but using only the standard lossy "rubber duck" antenna... and it would do so on both receive and transmit. The battery would weight only about half as much... or, conversely, would allow for twice the amp-hour capacity at the same battery weight.

1515. RF in shack, GFCI issues

Newsgroup: rec.radio.amateur.moderated
Date: 2007-09-12 09:56:59 UTC
From: BNB Sound <jon@bnbsound.com>
Message-ID: <1189573998.886060.73400@y42g2000hsy.googlegroups.com>
Source record: 3920

I set up my Icom 735 in my shack, grounded the radio and tuner to a copper bus salvaged from an old fuse box with #12 wire. The bus is attached to a ground rod directly outside the window with six feet of #4 THHN. The antenna is a fan dipole cut for 40 and 20, 38 feet up on top of the house. Field strength numbers are from a Radio Shack SWR/FS meter and therefore completely arbitrary.

The GFCI outlet that protects the circuit the rig is on would sometimes operate fine for hours, and sometimes trip even with the rig power at the lowest setting. I finally got to taking some readings and found that I was having the most trouble on 40 meters. I changed my grounding several times until I finally arrived at the current configuration. The situation improved somewhat, and the thing rarely, if ever, trips on other bands. The readings from the FS meter seemed to be all over the place. Sometimes the GFCI would trip when the meter was reading 1 and sometimes it would work fine with the needle pegged.

I didn't take enough readings to generate a clear picture of what's happening, but it would appear that it was sensitive to very small segments of the 40 meter band. Power output and grounding factors seemed to have little if anything to do with it. I could have long QSOs, spin 20kc down the dial and pop the thing off. Another interesting issue is that since I swapped out the GFCI for a regular duplex outlet, there's less RF in the shack.

I assume the internal components were either part of, or reacting to, some ground loop issues. Anyway, I said all that just so I could ask if anyone else has had a similar experience, or if anyone has a better understanding of the physics/electrical engineering issues behind the problem.

Thanks in advance,
73

The fan dipole is a balanced antenna. Coax is an
unbalanced feedline. Did you follow good engineering
practice and install a balun at the BALanced to
UNbalanced junction? I suspect you have common-mode
current problems (on your outside coax braid) which
a 1:1 current-choke-balun (or two) could reduce.

Replace the GFCI with a new one of a different brand.

I solved my GFCI issues with small valued capacitors line to natural at the
GFCI. I don't think the GFCIs like RF. If you try this make sure you use
capacitors rated for line voltage use.

I just got through trying to get discharge curves for my station's 12V
Group 27 AGM batteries (for those not familiar with "group" ratings,
this is the size of the battery normally found in compact or larger
automobiles). The manufacturer is Trojan Batteries, a very reputable
battery manufacturer.

What I needed was discharge curves for the battery down to 11.5V which
I have found (the hard way) is the minimum voltage below which most of
my electronic equipment starts going flaky.

>From the data that they supplied, for a discharge down to 11.5 V the
AH capacity of a battery is to be derated to 68% of the "industry
standard" 10.5V AH rating.

Thanks for the tips. There is a balun installed at the feedpoint,
forgot to mention that. I also forgot to mention changing the GFCI,
eventually trying all of three brands available in town. The
interesting thing, I thought, was that there was less RF present in
the shack after I took the last one out.

DXNL 1536 - Sep 12, 2007
DX Newsletter

a free and weekly service of
DARC Committee "DX and HF contesting"
(http://www.darcdxhf.de)

editor: Helmut Schlaffer, DL7MAE
(e-mail: dxnl@dxhf.darc.de)

translation by: Bob, DL7VOA
(e-mail: dl7voa@darc.de)

C5 - GAMBIA
Andre,ON7YK, plans to hit the bands once again as C56YK from Sep 14-27.
He announces SSB operation on 10-80m running 100 watts into a FD4.
QSL cards should be sent to his homecall.
An online QSL exchange is possible via http://www.eQSL.cc

FH - MAYOTTE, AF-027
Alain,F4RPW, moved to Mayotte (AF-027) and is now licensed as FH1LE.
He intends to show up in SSB/CW/PSK/RTTY with 100 watts, vertical and
a KT-34 yagi antenna.

FP - ST PIERRE ET MIQUELON, NA-032
John,FP/W9ILY, and Bob,FP/K9MDO are working from NA-032 from Sep 12-18.
While Bob prefers working primarily in SSB John takes care of the
digital modes RTTY and PSK. They are QRV on all bands from 10-80m using
two TS-570D radios and verticals which they stored at the hotel since
their last DXpedition. The QSL manager for FP/K9MDO is W9NJB.
W9ILY handles his QSLs himself. QSL via bureau is ok for both calls and
the logs of FP/W9ILY will be uploaded to the LotW after the operation.

OH0 - ALAND ISLANDS, EU-002
OH0Z will take part in both parts of the Scandinavian Activity Contest.
OH1JT will be the OP during the SAC Contest in CW on Sep 15/16.
The SSB part one week later will be operated by OH1RX, OH9MM and maybe
also other OPs. QSL via W0MM.

OJ0 - MARKET REEF, EU-053
OJ0B logged some 13.000 QSOs during August and the team members were
very busy mounting newer and better antennas on the lighthouse. The
second activity will be operated by OH0RJ, OH2BH, OH2MM, OH2PM, OH7EA
and OH8NC from Sep 15-24. They plan to work with up to three stations
during both SAC Contests (CW/SSB). Outside of the contest check here:
CW: 3.523, 7.023, 10.113, 14.033, 18.083, 21.033, 24.903, 28.033 MHz;

SSB: 3.775, 7.075, 14.175, 18.135, 21.275, 24.960 and 28.475 MHz.
Martti,OH2BH, will be the QSL manager again. Stamp collectors may get
special stamps from the market reef for 7 EUR or 10 US-$.

TK - CORSICA, EU-014
Heinz,TK/DF6ZY, will be active from Corsica (EU-014) from Sep 15-28.
His preferred mode is RTTY on 80-10m but he works also in SSB or SSTV
upon request. QSLs via DARC bureau or direct to his homecall.

4O - MONTENEGRO
K6MYC, N6TQS, I2MQP, JA1BK and UT5UT are going to visit Gojko,YU6AO,
from Sep 17-21. They will use his shack signing 4O1AO and 4O1M in CW/
SSB/RTTY/PSK31/SSTV/EME on 2-160m. All together will go to the
World High Speed Telegraphy Championship (HST) which takes place in
Belgrad (http://www.hst2007.org) from Sep 21-23. Last not least they
are also planning a side trip to the station of Hrane,YT1AD, from where
they will be QRV as YT5A until Sep 26.

8Q - MALEDIVES, AS-013
Chris,M0AJT, is working as 8Q7CT mostly in CW and only little SSB from
Dhonveli Island (AS-013) from Sep 7-14. His holiday equipment includes
a FT-900 with 100 watts and a G-Whip vertical.

ENGLAND, SPECIAL EVENT STATIONS
The "Scarborough Special Events Group" will be active as GB2QE on
Sep 15/16 to celebrate the 40th birthday of the ocean liner
"Queen Elizabeth 2". All QSOs will be confirmed via buro automatically.
Direct cards should be sent to G4SSH.

SPAIN, SPECIAL EVENT STATIONS
The ITU was founded as the "International Telegraph Union" in Paris in
1865. The modern name "International Telecommunication Union" has been
determined at a conference in Madrid in 1932. To mark the 75th anniver-
sary of this date all stations in Spain may use special prefixes
(AO for EA, AN for EB, AM for EC) between Sep 3 and Dec 9.

SILENT KEY
Gilles Simeon,F5PVF, who passed away on September 7 was one of the
active members of the "Radio Club de Provins" (F6KOP). He was also
involved in the planning of the DXpeditions 5V7C, 5H1C, TO7C and XT2C.

PIRATE: The call OH0Z was heavily misused by a pirate especially on 10.1 MHz
during the past time. Before you send a QSL to OH0Z please use their
online logsearch at: http://www.oh0z.net

LINKS: Current SOTA activities (mountain summits) are announced at:
http://sotawatch.sota.org.uk/activations.php or
http://sotawatch.sota.org.uk/spots.php

UPCOMING CONTESTS

Sep 15/16: Scandinavian Activity Contest (SAC) in CW

IOTA collected by Fredy,DE0MST (e-mail: iota@dxhf.darc.de)

Island activities:
EU-001, SV5, Dodekanes: Drew,GM3YOR, is going to spend his holiday on
Symi Island (Simi) from Sep 16-29. QSL via homecall.

EU-072, SV8, Thessalia Region Grp: Zdenek,9A/OK1MBZ, and Jindrich,9A/OK1MKI,
are activating Skopelos Island in CW from Sep 10-20.QSLs via homecalls.

EU-165, IS0, Sardinia's Coastal Islands: A team of the Sardinia QRP Club
will activate Quirra Island (IIA CA-009) signing IM0/IQ0QP on Sep 16
from 1000-1600 UTC.
QSL direct via PO Box 81, 09047 Selargius (CA), Sardinia, Italy.

NA-010, VE1, NS Province Group: Andre,VE1/GM3VLB, is working from the island
Cape Breton from Sep 12-17 and from Isle Madame on Sep 17/18.
He was already active as VY2/GM3VLB from Prince Edward Island (NA-029)
from Sep 9-12. QSLs via homecall (direct).

Lighthouse activities (WLOTA/ARLHS)

==> CANDIDATE FOR ARRL SOUTHWESTERN DIVISION DIRECTOR DISQUALIFIED; NORTON DECLARED RE-ELECTED

Carl Gardenias, WU6D, the challenger seeking the position of ARRL Southwestern Division Director, was declared disqualified Thursday by the ARRL Ethics and Elections Committee. Gardenias was running against incumbent Richard "Dick" Norton, N6AA. Due to the disqualification, the Committee has declared Norton re-elected.

According to ARRL CEO David Sumner, K1ZZ, writing on behalf of the Committee, an e-mail signed by "Cathy K6VC, Newsletter editor" was sent on behalf of Orange Section Manager Carl Gardenias to ARRL Orange Section newsletter editors and Web masters, among others, on September 1 regarding the Southwestern Division election for Director and Vice Director. The e-mail encouraged "ARRL Full members to vote and vote wisely" in the upcoming election. Recipients were also asked to encourage clubs to "post to their websites and into their newsletter information regarding each candidate," and went on to list information, including e-mail addresses and campaign Web sites, for the two Director candidates and four candidates for Vice Director. Cathy Gardenias, K6VC, is Assistant Section Manager for the ARRL Orange Section and the wife of Carl Gardenias.

The information given in Cathy Gardenias' e-mail was incorrect, in that the e-mail address for Norton was wrong. The e-mail also stated that Norton and Vice Director candidate Marty Woll, N6VI, did not have campaign Web sites, when in fact they did.

Cathy Gardenias' e-mail went on to say that "Since all candidates are listed with e-mails and websites if they have one, there is no show of favoritism or bias. Please vote. Approved by the ARRL k1zz."

The ARRL Ethics and Elections Committee received a complaint regarding the misinformation and concluded that the email violated the standard of "truthful and not misleading" that applies to candidates' mailings. It instructed Sumner to notify Carl Gardenias that "a correction must be circulated to everyone who received the incorrect information, i.e. everyone on the above distribution list and anyone else to whom it may have been sent." Carl Gardenias was also told that should he "become aware of any postings of the original, uncorrected item, you should immediately endeavor to have them corrected or removed."

Specific language for the correction was supplied by the committee. It was to list correct e-mail addresses for each candidate, including Norton, and to supply the Web site addresses for Norton and Woll that had been missing from the original message. It was to further state, "Finally, the item was NOT approved by the ARRL or K1ZZ, as incorrectly stated," and that "The Orange Section regrets the errors and apologizes to those affected."

Carl Gardenias acknowledged receipt of Sumner's September 5 e-mail. On September 7, having seen no evidence of compliance with the Committee's directive, Sumner sent him another e-mail, asking for a copy of the correction that Gardenias was supposed to have sent out. Gardenias replied via e-mail, "OK on Monday we are at the convention," meaning the ARRL Southwestern Division Convention. Since that response, Gardenias has not communicated with Sumner, "nor has any evidence of your compliance with the committee's orders been received," according to an e-mail Sumner sent Gardenias September 13.

In that e-mail, Sumner reminded Gardenias that he was previously advised that "candidates' statements 'must be truthful and not misleading, which

matters will be conclusively determined by the Election Committee.' The standard of truth applies to all mailings by a candidate. The email that was sent on your behalf on September 1 violated this standard, as documented in my September 5 message. You failed to follow the instructions of the Ethics and Elections Committee to make a timely correction, although you had ample opportunity to do so."

Sumner advised Gardenias that he has "been disqualified as a candidate for the office of Director of the Southwestern Division. Your name will not appear on the ballot." Since Dick Norton is the only eligible candidate, Sumner said, the Committee has declared him re-elected.

==> HURRICANE HUMBERTO CAUSES HAVOC ON GULF COAST

Hurricane Humberto, a Category 1 hurricane and the first hurricane to make landfall in the US in two years, came ashore in Texas on Thursday, September 13 not even 50 miles from where Hurricane Rita hit in 2005. Stronger than initially expected, Humberto continued eastward toward Louisiana and Mississippi, where flood warnings were in effect.

In response to Humberto, several ARES groups were activated. According to Brazoria County Emergency Coordinator Terry Bowersmith, W5SRG, Brazoria County (Texas) ARES activated a complex Net at 6 PM Wednesday, involving repeaters in Freeport and Alvin. One member was dispatched to the Brazoria County Emergency Operations Center, and another to the Pearland EOC, while others remained in "standby ready condition. By 9 PM, Humberto had cleared Brazoria County with little rain and no damage, so we secured the operation," according to Bowersmith.

ARRL Louisiana Section Emergency Coordinator Gary Stratton, K5GLS, said Alan Levine, WA5LQZ, District Emergency Coordinator for Southwest Louisiana, reported minimal flood damage in his area, and little wind damage. "About three spans of power lines down in this area but should be repaired within a few hours. The weather has cleared that area and will continue along a projected path across central Louisiana and Northwest Mississippi today," Stratton said. "We were lucky that the system spawned offshore and moved inland quickly as a minimal hurricane."

Orange County (Texas) Emergency Coordinator Rocky Wilson, N5MTX, reported that as of Thursday, Orange County had a "massive power outage"; all schools are closed, as are most retail stores and businesses, until power can be restored, expected sometime on Saturday, September 15. "Most petrochemical facilities are shut down due to no power," Wilson said. Many oil refineries are located on the Texas Gulf Coast.

Humberto didn't even exist until Wednesday, only becoming a tropical storm that afternoon, strengthening from a tropical depression with 35 MPH winds, to a hurricane with 85 MPH winds in just 18 hours. Only three other storms have pulled off a similar feat, growing from depression to hurricane in 18 hours -- Blanche in 1969, Harvey in 1981 and Alberto in

1982 -- but all of them were out at sea at the time, not about to crash ashore like Humberto. A Bridge City, Texas man died when the carport at his home collapsed on him; Bridge City is between Port Arthur and Orange.

==> LOOK FOR THE OCTOBER ISSUE OF QST IN YOUR MAILBOX

The October issue of QST is jam-packed with all sorts of things today's Amateur Radio operator needs. From product reviews to experiments to contesting, the upcoming issue of QST has something for just about everyone.

This issue features the results of the 2007 QST Photo Contest. The ARRL Editorial and Production staff judged the nearly 50 entries and chose the best ones to be published in the magazine and in other ARRL products.

Norm Fusaro, W3IZ, Assistant Manager for ARRL's Membership and Volunteer Programs Department, reviewed the Yaesu FT-2000D HF and 6 meter transceiver. According to the ARRL Lab test results, "The FT-2000D offers 200 W of transmitter power or a cleaner 75 W in Class A mode. It's similar to the base model FT-2000 in other respects, with a lot of flexibility that rewards the operator who takes the time to learn about and test its many features and settings." There is also a report from the Lab describing the changes to the way ARRL conducts receiver testing.

Robert Conway, KA0VAN, tells of ways to put retired public service radios to use on 2 meters. Alan Applegate, K0BG, warns that using the wrong size fuse can damage your rig, and offers ways to make sure you have the correct fuse for the job. Kai Siwiak, KE4PT, finds a way to get around antenna restrictions by putting up an all-band attic antenna.

For all you contesters out there, the results of the 2007 ARRL International DX Phone Contest are in. Did you top your score from last year? How did your closest rival do? Find out all this and more in the recap by H. Ward Silver, N0AX. Also, find out about the upcoming School Club Roundup and 2007 ARRL November Sweepstakes Contest.

Look for your October issue of QST in your mailbox. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> NOMINATING PETITIONS FOR ARRL SECTION MANAGER CANDIDATES SOUGHT

The ARRL Membership and Volunteer Services Department has announced that nominating petitions for Section Managers are currently being accepted until December 7 for the following Sections: Eastern New York, Eastern Pennsylvania, Louisiana, North Carolina, Pacific, San Diego, South Dakota and Virginia.

To be considered a valid nominating petition, it must be signed by no fewer than five full ARRL members who live in the Section concerned; photocopied signatures are not acceptable. Any candidate for the office of Section Manager must be a resident of the Section, an Amateur Radio licensee of Technician class or higher and a full member of the League for a continuous term of at least two years immediately preceding receipt of a nominating petition.

If more than one member is nominated in a single Section, ballots will be mailed from Headquarters on or before January 2, 2008, to full members of record as of December 7, 2007, which is the closing date for nominations. Returns will be counted February 19, 2008. Section Managers elected as a result of the above procedure will take office April 1, 2008. If only one petition is received from a Section, that nominee shall be declared elected without opposition for a two-year term beginning April 1, 2008.

For more information on this election, please see page 76 in the October issue of QST.

==> ARRL/TAPR CONFERENCE LISTS SPEAKER SCHEDULE

The ARRL/TAPR Digital Communications Conference, scheduled for September 28-30 in Hartford, Connecticut, has released its slate of speakers. The three-day conference is an international forum for radio amateurs to meet, publish their work and present new ideas and techniques. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results and practical applications.

Registration for the DCC is still open and will be available at the door.

Friday's speakers include Bob Bruniga, WB4APR, speaking about "The APRS Local Voice Repeater Initiative"; Ev Tupin, W2EV, speaking about "Growing APRS' Value within the Emergency First Responder Community"; Paul D. Wiedemeier, PhD, KE5LKY, will talk about "Performance Modeling of TCP and UDP over Packet Radio Networks Using the ns-2 Network Simulator"; ARRL Chief Technology Officer Paul Rinaldo, W4RI, will speak about "Results of HF Digital Protocol Survey"; Mel Whitten, K0PFX, will speak about "DRMDV for HF"; Bob McGwire, N4HY, is talking about "NUE-PSK31: A Digital Modem for PSK31 Field Operation Without Using a PC," and Bill Tracy, KD5TFD, will give an HPSDR update.

Saturday's line-up starts off with Steven Bible, N7HPR, and Robert McGwier, N4HY, giving an update on SuitSat-2; McGwier will also speak on AMSAT's Phase IV and "On a Method for Automatic Image Balancing in IQ Mixer Based Software Defined Receivers," as well as sharing presenting duties with Gerald Youngblood, K5SDR, with "The Flex 5000 and SDR Software." Roderick D. Mitchell, KL1Y, will speak about "The Integration of Amateur Radio and 802.11"; Martin Ewing, AA6E, will present "SurgeForge, Hamlib and Rigserve: Free Beer, Free Speech and Rig Control"; Frank Brickle, PhD, AB2KT, will talk on "The FSM Virtual Radio

Kernel: Why, What and How (in that order)"; John A. Hansen, W2FS, will speak about "The Nordic nRF2401 Single Chip Data Transceiver," and Hank Javin and Jerry Newman will present "Transmission Lines, Parameters and Application in Communications Systems."

Two introductory forums are also scheduled on Saturday: Intro to Eagle CAD, given by Dan Welch, W6DFW, and Intro to HF Digital, given by Steve Ford, WB8IMY. The TAPR annual meeting is scheduled for Saturday afternoon.

Sunday's Seminar, a four-hour presentation led by McGwier on the topic of "A Stroll through Software Radio, Information Theory and Some Applications" will cover the basic building blocks of a simple software radio system, as well as a discussion of information theory and its practical use in communication systems. As time permits, McGwier plans to demonstrate several software radio systems ranging from the Softrock40 to the GnuRadio/USRP and the Flex5000. Attendees will receive packages containing tutorials and software.

For more information on the ARRL/TAPR Digital Communications Conference, please see the conference Web site <http://www.tapr.org/dcc>.

==> 1296 MHZ WAS #1 AWARDED TO TEXAS HAM

Al Ward, W5LUA, of Allen, Texas, is the first person to achieve the ARRL's Worked All States (WAS) on 1296 MHz, making him 1296 MHz WAS #1. Ward first started on his pursuit January 25, 1977, with his first 1296 MHz contact with Leroy May, W5HN (SK). His 30 year quest ended last week, with confirmed contacts with Wyoming, Utah and Idaho, giving Ward his last three needed states, thanks to Paul Perryman's, WA5WCP, EME DXpedition.

"I couldn't have done this without Paul," Ward said. "Also, thanks to Ron Roche, K0ALL, and Barry Malowanchuk, VE4MA, in North Dakota for number 47 in August. Without them, it just wouldn't have been possible." After collecting his 50th QSL card, Ward drove from his home in Texas to Little Rock, Arkansas so ARRL President Joel Harrison, W5ZN, could verify his cards and complete his WAS paperwork. "Verifying QSL cards from 30 years of activity brought back a lot of memories of several stations active on 1296, many who are Silent Keys now," Harrison said.

==>SOLAR UPDATE

Tad "Sunspots Cast a Glare in My Eyes" Cook, K7RA, this week reports: The sun has been blank, no visible sunspots, for the past seven days, September 7-13. We may not see another spot until September 22, just before the autumnal equinox. Thursday evening, September 13, Spaceweather.com mentioned a coronal wind hitting earth this evening, September 14. The Interplanetary Magnetic Field (IMF) points south, making the Earth vulnerable to solar wind, but other sources don't call for an increase in geomagnetic activity today. We might assume that a solar wind from 27 to 28 days ago could return at this time, based on the rotation of the Sun relative to Earth. But looking back four weeks

does not reveal any heightened activity. Of course, it could be that the IMF pointed north, protecting earth from the coronal wind. Sunspot numbers for September 6 through 12 were 12, 0, 0, 0, 0, 0 and 0 with a mean of 1.7. The 10.7 cm flux was 66.7, 67.1, 66.6, 66.7, 66.9, 66.1 and 65.9 with a mean of 66.6. Estimated planetary A indices were 13, 12, 6, 2, 2, 2 and 2 with a mean of 5.6. Estimated mid-latitude A indices were 8, 10, 3, 2, 2, 2 and 2 with a mean of 4.1. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: This weekend, the ARRL 10 GHz and Up Contest is September 15-16. The NCCC Sprint (CW) is September 14 and 15. The SARL VHF/UHF Contest is September 14-16. QRP Afield is September 15. Look for these contests the weekend of September 15-16: Scandinavian Activity Contest (CW), South Carolina QSO Party, Washington State Salmon Run and the QCWA Fall QSO Party. The North American Sprint (SSB) is September 16. The Run for the Bacon QRP Contest and the 144 MHz Fall Sprint are September 17. The NAQCC Straight Key/Bug Sprint is September 20. Next week, the NCCC Sprint (CW) is September 21, while the AGCW VHF/UHF Contest is September 22. The Scandinavian Activity Contest (SSB) and CIS DX Contest are September 22-23. The SKCC Weekend Sprint is September 23 and the 222 MHz Fall Sprint is September 25. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education course registration: Registration remains open through Sunday, September 23 for these online courses beginning on Friday, October 5: Technician License Course (EC-010); Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012), and Digital Electronics (EC-013). To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Radio Appreciation Day Is September 15: Amateur Radio operators around the country really don't need a special day to promote Amateur Radio, but Saturday, September 15 has been declared Amateur Radio Public Awareness Day. As part of the Department of Homeland Security's National Preparedness Month, ARRL Public Information Officers (PIOs) are using the day as a way to make the media more aware of our Service and especially its role in emergency communications. The purpose of Amateur Radio Public Awareness Day, held the third Saturday in September, is to make the public more aware of the existence, purposes and benefits of Amateur Radio. ARRL Media and Public Relations Manager Allen Pitts, W1AGP, said, "Through events such as Amateur Radio Public Awareness Day,

hams can take the opportunity to tell not only their friends and neighbors about the benefits of the Amateur Radio Service, they can take the opportunity to let the general public know, too. People willing to make face to face contacts are always the best ambassadors we have for Amateur Radio."

* Representative Ross (D-AR), WD5DVR, Attends ARRL Arkansas State Convention: Arkansas congressman Mike Ross, WD5DVR, was a featured speaker at the ARRL Arkansas State Convention on Saturday, September 8. Ross, who represents Arkansas' 4th District, spoke about the ham radio legislation he introduced in Congress, the "Emergency Amateur Radio Interference Protection Act of 2007" (HR 462). ARRL Lab Manager Ed Hare, W1RFI, was also at the convention, speaking about BPL. Held at Queen Wilhelmina State Park in Mena, the convention drew hams from several nearby states including Texas, Oklahoma, Louisiana and Mississippi. Ross is one of two licensed amateurs in congress; Greg Walden, W7EQI, of Oregon's 2nd District, is the other.

* ARRL Helps MFJ Celebrate 35 Year Anniversary: MFJ Enterprises observed their 35th anniversary with "A Day in the Park" open house September 7-8 at their Starkville, Mississippi headquarters. ARRL Chief Development Officer Mary Hobart, K1MMH, was on hand to help MFJ celebrate, as were Mississippi Section Manager Malcolm Keown, W5XX; ARRL Delta Division Director Henry Leggette, WD4Q, and Starkville Mayor R. Dan Camp. This two-day celebration was filled with tours of MFJ's facilities, a Friday evening bar-b-que and a Saturday fried chicken picnic. MFJ makes Amateur Radio equipment such as tuners, SWR wattmeters, antenna analyzers and power supplies. Martin Jue, K5FLU, founded the company in 1972 while he was still attending graduate school at Mississippi State University. A ham since high school, Jue decided to build products for hams -- his first products were active filters for CW and phone, selling for $9.95 and $12.95, respectively. Thirty-five years later, MFJ features more than 1000 products.

* ARISS Update: According to ARRL ARISS Program Manager Rosalie White, K1STO, Clay Anderson, KD5PLA, has started to make general QSOs with hams after signing off after making school QSOs, even turning on packet radio for a while. Anderson will continue making school QSOs until he returns to Earth, currently scheduled for late next month. Due to the schedule on the International Space Station, the crew will be "terribly busy" for the next six months; White said that ARISS QSO totals might be low during this time. The next contacts are scheduled for Monday, September 17 with Mitchell Elementary School in Ann Arbor, Michigan, and Friday, September 21 with Pueblo Magnet High School in Tucson, Arizona. To date, the ARISS program has had 315 Earth-to ISS QSOs. For more information on the Amateur Radio on the International Space Station program, please see the ARISS Web page <http://www.rac.ca/ariss/oindex.htm#ARISS%20Status>.

* FCC Job Announcement: The Federal Communications Commission has announced three job openings for Telecommunications Specialists in their Columbia, Maryland office. Starting salaries range from

$55,706-$103,220; relocation assistance is not available. Knowledge of high frequency propagation is a must. To be considered for these full-time, permanent positions, successful applicants must pass a background investigation, be eligible for a security clearance, have US citizenship, pass a drug test and be available for shift work. For more information, please send an e-mail to Diane Graham at the FCC <Diane.Graham@fcc.gov> and reference job number DEU-PSHS-2007-0006. The application deadline for these positions is Thursday, September 27. More about this opening can be found on the USAJOBS Web site <http://jobsearch.usajobs.opm.gov/getjob.asp?JobID=61989717&jbf574=FC00&brd=3876&AVSDM=2007%2D09%2D05+00%3A00%3A06&sort=rv&vw=d&Logo=0&FedPub=Y&caller=%2Fagency%5Fsearch%2Easp&FedEmp=N&SUBMIT1.x=51&SUBMIT1.y=2&ss=0&TabNum=1&rc=7>.

* Let Us Know: What's your favorite part of The ARRL Letter? What kind of stories would you like to see in the Letter? Would you prefer the Letter in an HTML format? This is your Letter and your chance to let your voice be heard. Please send your suggestions to ARRL News Editor S. Khrystyne Keane, K1SFA, at k1sfa@arrl.org, with the subject line "ARRL Letter Suggestions." All messages will be read and discussed, and we look forward to implementing positive suggestions into the ARRL Letter.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org
==>ARRL News on the Web: <http://www.arrl.org>
==>ARRL Audio News: <http://www.arrl.org/arrlletter/audio/> or call 860-594-0384

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

1524. rec.radio.amateur.moderated Posting Guidelines

Newsgroup: rec.radio.amateur.moderated
Date: 2007-09-15 06:00:10 UTC

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true."

"That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/about/whatis/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation | decisions in the newsgroup itself are also not permitted, as stated in | our original newsgroup charter. Please direct any such critical | feedback to our administrative contact address at the bottom of this | article, where it will be carefully considered by an appeals team of | moderators. This team is distinct from the initial team of moderators | that approves or disapproves article submissions, and thus can provide | independent oversight of moderation decisions. |

Similarly, if you see an obviously inappropriate article in our | newsgroup, please assume that it was a mistake or a direct forgery. The | moderation team makes every effort to protect the newsgroup from such | incidents, but they do happen, albeit rarely. You may also submit | feedback to the same address regarding such articles in our newsgroup, | but it is likely that our monitoring software and procedures have | already detected it, and we are actively handling the problem. Please | resist "piling on" with followups to the newsgroup when these incidents | occur, so that we don't have to reject such articles. |

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

(Adapted, with permission, from the misc.kids.moderated Posting Guidelines.)

1525. WIANEWS for week commencing SEPTEMBER 16 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-09-15 12:10:17 UTC
From: nationalnews@wia.org.au
Message-ID: <200709151000.l8FA09e11117@panix2.panix.com>
Source record: 3930
Cross-posted to: rec.radio.amateur.moderated,aus.radio.amateur.misc,rec.radio.info

This is WIANEWS for week commencing SEPTEMBER 16 2007

LET US REWIND 7 DAYS, back to the broadcast of September 9.

".......'portantly, when you send NATIONAL NEWS an item a couple of "must do's", and these have not changed over the years, just they seem to be forgotten or not passed on to club officers after elections etc.

1/ When you file audio always email us the script.

2/ When supplying script for someone else to read, PLEASE write as you'd expect to hear it! as an example always write in the 3rd person!! (Remember our readers are not you or your club so don't say things like "we are having a working bee... say 'club members' are having a working bee etc etc".)

3/ Don't send us links or photo's of stories , always write out the story in a manner in which it can be read and pasted to our text and audio services.

4/ If you want an item run 3 or more times, write different slants on the item, running the exact same item over and over would be dull/boring and lets face it, if you can't think of anything extra to say, that is probably a good sign that it will end up being a dull event!!

5/ WIA related material, eg BPL if Australian material will only be broadcast after clearance from the WIA unless said item is already in the public domain.

6/ Silent Keys are best sent to AR Magazine and your local state or club news rather than this WIA National News Service.

VK4 QSL Manager

Here is Ewan McLeod VK4ERM, Vice President of the WIA.

The WIA Board has approved the appointment of Ray Crawford VK4HDX as VK4 QSL Bureau manager. The Board acted on the recommendation of the Queensland Advisory Committee, the National QSL Coordinator Neil Penfold VK6NE and the immediate past VK4 QSL Manager Eddie de Young VK4AN.

QSL Bureau services are available free to WIA members.

Ray Crawford VK4HDX is a member of the WIA, resides at 53 Moore Street Kingaroy
QLD 4610 phone (07) 4163 6940. Email: hamdxer59@bigpond.com. Ray is an active Dxer and was active in NZART before coming to Australia.

His home address is the address which will be circulated as the point for delivery of VK4 Inwards QSL Cards from overseas. Neil Penfold, WIA QSL National Coordinator, has recommended that Ray's home address be the address in
future for VK4 QSL Inwards deliveries and hence eventually the present Brisbane
Post Office Box will be closed.

For outward Bureau Cards, that is cards being sent from WIA members to overseas
contacts, Members should send their cards sorted in DX CC country order to the WIA Outwards QSL Bureau at:

WIA Outwards QSL Bureau
P.O. Box 3073
Teralba
NSW 2284

The present VK4 QSL manager Eddie de Young VK4AN has resigned due to other commitments. Eddie brought a good business outlook to the task of managing the
VK4 QSL Bureau following the successful years of operation under the management
of Shirley and Dave Gulley. Eddie brought a strong interest to the concepts of
managing a QSL Bureau and was always ready to suggest ways by which the system could be improved. Eddie and his family are a feature of many hamfests with his QSL cards and displays of his other interests.

HAMS ACROSS AUSTRALIA.

The Canberra Region Amateur Radio Club has a busy schedule over the next four months.

WICEN will assisting with communications for the Fitz's Challenge bike ride,

The course of a million pines 2 day car rally both in September.

Other car rallies are scheduled for October, November and December.

The club will be supporting JOTA primarily from the site of the old NASA tracking station site Honeysuckle Creek and setting up a contest station for the VHF/UHF field day contest in November.

Also we have our regular monthly meetings with guest speakers,

This month Dik Elliot VK2KDE on Fibre Optic Networks,

October Phil Grimshaw VK4KVK on HF antennas and small back yards,

November our traditional Christmas party and trash 'N' treasure night.

Details of these activities can be found on the Canberra region Amateur Radio Club website.

Annual Inter-club BBQ in VK3

The Central Goldfields Amateur Radio Club of Maryborough, Midland Amateur Club from Bendigo, the Ballarat Amateur Radio Group and Amateur Radio Victoria are getting ready for the "all welcome" BBQ on Sunday the 14th of October at Laanacoorie.

Organiser Peter Rafferty VK3CC says it's a BYO meat and drinks affair, with bread, butter, tea, coffee provided. The venue is the Laanacoorie Hall and begins at 10am.

Laanacoorie is on the Loddon River on the Eddington side of Bendigo about one third of the way between Maryborough and Bendigo.

Peter, VK4TGV has reported about the recent floods on the Sunshine Coast and how their Emergency Caravan was deployed and Club members sent to State Emergency Services sites to assist with the relay messages.

The SES was so impressed with their efforts that the club will be assisting the
SES in the design of their new Radio set-up.

Well Done Sunshine Coast

VK5

RADAR - Roxby and District Amateur Radio Group Would like to publicly thank the following people, VK2DQ Ron, VK3DAC Fred, VK5ZFW Peter, VK5ATQ Trevor and finally VK5PW Paul. These operators went to tremendous effort to travel to Roxby Downs on the weekend of the first and second of September to assist with the first training and assessment for the foundation class licence. The weekend went flawlessly and resulted in a tremendous growth of amateurs for the town. In numerical terms it works out to be 900% growth with 12 people sitting assessments and 9 of them deemed to be competent. Further more, one of participants also sat the Standard Regulations and Theory with a successful result. A top effort all round! But it does not end there!

The RADAR Group was also formed with Michael Wright VK5ARD and Mike Worby finalising their Assessor and Learning Facilitator credentials respectively. This leaves the newly formed group independent and able to conduct

assessments and training without the need to travel up to 6 hours each way. RADAR has already made solid moves toward the future with a 2 meter repeater (VK5ROX) licensed and under construction and a further repeater also planned on the 70 centimetre band. Both of these repeaters will have IRLP and EchoLink on board enabling the new licence holders to experience as much as possible without excessive financial outlay. JOTA is also just around the corner and the hope is that most of the local scouts and recent course participants might get a real taste of the amateur radio spirit.
(Michael VK5ARD Roxby And Districts Amateur Radio Group).

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO

Roxby Downs visit 1 Sep 2007.

It is springtime and the Sturt Desert Pea is not all that is blooming in the arid North of South Australia. Amateur Radio is blossoming at Roxby Downs. Over 500 Km North of Adelaide and part of the Olympic Dam mine, Mike VK5ARD a resident of Roxby Downs motivated a dozen young potential amateurs.

A visit by Fred Swainston for overall guidance, and Ron Bertrand for training how could you go wrong. Assessors from Adelaide were Peter VK5ZFW, Paul VK5PH, and Trevor VK5ATQ.

Much hard work of training and assessing was balanced by celebrations as it was
a very successful weekend. To top it off a new radio Club was formed. The Roxby
and Districts Amateur Radio Club. Listen for calls from Roxby Downs and welcome
new amateurs, and a new club, to the world of Radio Experimenters.

Another success for the WIA training program.

This is Trevor Quick VK5ATQ for 1 WIA news

INTERNATIONAL NEWS

The Singapore Amateur Radio Transmitting Society (SARTS) is pleased to announce their forthcoming Field Day on 6 and 7 October 2007 will see radio activity using the special call S 61 FD from Changi, Singapore. Operation will be on the HF bands 80-10m running 500Watts to vertical antennas.
(Peter Cook, 9V1PC, President SARTS).

RSGB NEWS G4NJH

Historic callsign to return to the air

GB2SM, the permanent callsign of the former Science Museum amateur radio station in London, will shortly be back on the air.

It will be based at the Science Museum's Swindon site. A unique arrangement has been made between the Science Museum and the Swindon and District Amateur Radio Club. The Notice of Variation for the callsign will be held by the club on behalf of the Science Museum.

GB2SM will be used in partnership with the Science Museum at events and activities that specifically promote the Science Museum and communications inspired projects. For this purpose the callsign will be treated as a Special Event Callsign rather than a permanent call. Should a permanent amateur radio station be re-established at the London site the callsign would automatically revert to the permanent station.

Guilty verdict in ham murder case

Courts in Gambia recently sentenced two men to life imprisonment for the murder of Ron Ford, G3NKO.

Tourist Mr Ford was killed in by two Gambian nationals in September 2002 while on holiday in the region. Passing sentence on Dawda Bojang and Kawsu Jarju in the Kanifing Magistrates' court, magistrate Buba Jawo said the evidence before the court had clearly shown that the prosecution has proven their case.

WEIRD N WONDERFUL

The toothbrush with 'satnav'

As you clean your teeth, Oral-B's Triumph SmartGuide toothbrush transmits its exact location to a base unit.

The unit then shows you on an LCD screen which area of your mouth has been cleaned and a clock tells you how long you have left to brush.

The system uses technology similar to the Bluetooth system used with hands-free earpieces for mobile phones.

The LCD display can be mounted on the bathroom mirror or held in your free hand, picking up information as you brush.

The remote display also doubles up as a bathroom clock

Oral-B is hoping that the brush will be a stocking filler this Christmas and has planned its launch in Britain within weeks.

So for a whiter wider smile... at least for ORAL-B's shareholders, you know where to look!

OPERATIONAL NEWS - VK4FUQ AND VK5MM

MARKET REEF, OJ 0 B (ohjay zero bee) CHALLENGING THE ROUGH SEAS ONCE AGAIN

The August 2007 outing to Market Reef, OJ0B was designed to decorate the lighthouse with powerful antennas that can only be hoisted in good weather conditions. The group was successful, and in addition to making more than 13.000 QSOs a SteppIR beam plus an assortment of wire antennas were mounted at the light.

The newly composed group of OH0RJ, OH2BH, OH2MM, OH2PM, OH7EA and OH8NC plan to be operational from September 15 until, including both Scandinavian Activity Contests, with three stations. Now they have more flexibility since they have a resident helicopter at their disposal.

Outside of the contest their frequencies are as follows:

CW: 3523, 7023, 10113, 14033, 18083, 21033, 24903 and 28033 KHz
SSB: 3775, 7075, 14175, 18135, 21275, 24960 and 28475 KHz

Once again, if you are a stamp collector or wish to receive your QSL card with unique Market Reef stamps, you may send an SASE with 7 Euros

(10 USD) as your postage/donation to the Finnish Lighthouse Society via QSL manager OH2BH.

If you wish to tour the Reef in the spirit of adventure, you may follow in the footsteps of the August 2007 and November 2005 OJ0B activities:

http://sm0w.com and www.kolumbus.fi/oh2bn/pagemarket.htm

The Finnish Lighthouse Society has been active repairing the lighthouse this summer, and you may wish to follow their activities which include daily reporting and interesting general details.

Boat Anchor Sprints:
October (13).
Local ZL time: 2000 to 2100 hrs

Section 1: Old radios - all valves - i.e. ZC1, 19 set, Heathkits, any home brew set, but must have all valves.

Section 2: Any Hybrid transceiver (must have valve finals i.e. FT200, FTDX400/401, Drake, FT 101s, etc..

Amplitude Modulated signals only.

The overall winner shall be the entrant having the highest points score which will be published in the following New Zealand "Break-in".
(Jamie Pye ZL2NN, Editor NZART's InfoLine)

NOVEMBER 17/18 VK Spring VHF-UHF Field Day

The full details are on www.wia.org.au

Duration in all call areas other than VK6: 0100 UTC Saturday to 0100 UTC Sunday.

Duration in VK6 only: 0400 UTC Saturday to 0400 UTC Sunday.

The full contest details can be viewed here:

http://www.wia.org.au/contests/vu_fieldday/index.php

Sourced from the WIA Website.

CONTEST STORIES

Good morning listeners, this is Peter Harding VK4OD this years RD manager.

This week after the official closing times, some of the late comers tried to sneak in their late mail and Electronic logs for this years RD. In accordance with the Rules I have rejected and returned these late logs.

In the next couple of weeks it is anticipated that I will have all the logs listed on a website for you to peruse, and if your callsign along with what type of log you submitted IS NOT THERE, I will have a link to send me a message before we close the books off and declare the winners. PLEASE NOTE there will NOT be any scores listed, it is purely to make sure your logs are there. Listen to future broadcasts for the RD Logs location, and URL.

Until next week, this is Peter Harding VK4OD. 73s..

MEDIA WATCH

Greg VK5ZBD reporting on the Callbacks for the Adelaide 147Mhz Repeater for Sunday 9th of September says they " have finally cracked the Ton

in S.A. on the one Repeater with the one news broadcast.

VK5RAD with 102 Calls!

Congrats all round!!

LAB TESTING CHANGES DETAILED IN OCTOBER QST

In the upcoming October issue of QST, the ARRL Lab introduces a series of significant new receiver tests. These are the result of development work and discussions with professionals in the radio industry over a period of several years.

One new test concerns receiver blocking gain compression and reciprocal mixing. The ARRL Lab describes Blocking Dynamic Range (BDR) as "a condition in which the weak [desired] signal is 'blocked' or suppressed" by a strong interfering signal. This is also known as desense or overload. In some cases, the cause is a reduction in receiver gain. In other cases ("noise limited" measurements), the cause is an increase in the receiver's internal noise due to the noise sidebands of the local oscillator mixing together with the strong interferer (also known as "reciprocal mixing"). The level of the noise masks the gain reduction effect on the desired signal. Instead of reporting the BDR as a noise limited measurement, the Lab will now be using narrow-band measurement techniques to "dig out" the desired signal on noise-limited measurements and determine the point of gain reduction.

To distinguish from earlier measurements, the name will be changed to "Blocking Gain Compression." A separate reciprocal mixing test indicates the level of noise increase within the receiver caused by the interfering signal. Together, these two measurements provide more information about how the receiver behaves with a single strong interfering signal.

>From 1983 onward, ARRL Product Review published IP3 (third order intercept) figures for receivers based on a noise floor intermodulation distortion (IMD) response level. In 1993, the level was changed to a response that produced an S5 reading on the receiver's own S-meter. The decision was based largely on this being a more typical average of signals that would be found on the bands. The drawbacks to this approach are that there is a great variation in S-meters from receiver to receiver (see Product Review, April 2005) and it overlooks the significant change that can often be observed in receivers at higher signal levels.

With this in mind, the ARRL Lab has decided to measure and report IP3 at three levels. The lowest level measurement is made at the noise floor, as has been done in the past. The middle level is done at a standard level of -97 dBm, defined as S5 in the IARU Region 1 standard for S-meters. For the highest level, instead of selecting a particular receiver response, the maximum level of expected interferer will be set to 0 dBm (S9 + 73 dB by the IARU standard, a loud signal indeed!). These three levels taken together should present the best overall view of a receiver's total performance, with each level being most useful in a particular context. For example, someone doing SSB or CW work on VHF would care most about the receiver performance at the noise floor, while on HF, an S5 level would be more useful.

According to ARRL Lab Test Manager Mike Tracy, KC1SX, members frequently ask why manufacturers' sensitivity specifications are given in microvolts but Product Review measurements are reported in dBm (decibels relative to a milliwatt). He said, "The chief reason is that manufacturers typically do not include a bandwidth in their specification, and measurements in different bandwidths are not directly comparable. All other things being equal, there is more noise power in a 3 kHz bandwidth than a 2.4 kHz bandwidth. To overcome that limitation, the sensitivity testing is done with a 500 Hz bandwidth filter, or as close to that as is available. This permits reasonable comparisons of different receivers." Although the filters that a receiver has cannot be changed, the variation in actual bandwidth can be determined by calculating the Equivalent Rectangular Bandwidth (ERBW). This is the width that the filter would have if it passed the same noise power and possessed the "ideal" shape of vertical sides and a flat passband response.

For more on the changes coming in future Product Reviews, be sure to check out the October issue of QST.

BB's DIARY ROOM - THE FUTURE, IN AMATEUR RADIO

2008

Sept 13 Alarameet 2008 will be held in Ulverstone Tasmania on Saturday 13th and Sunday 14th September 2008. Susan VK7LUV for details.

2009
International Telecommunication Union's Telecom World 2009.

14th IARU R3 Conference Christchurch 12 - 16 October, 2009.

SOCIAL SCENE

SEPTEMBER 21-23
North Queensland Amateur Radio Convention
Happening in twin cities of Thuringowa and Townsville.

SEPTEMBER 22-23

Brett Dawson VK2CBD down in the Orana Region ARC says the CSIRO Parkes Radio Telescope will be holding open days Saturday 22 and Sunday 23rd of September. The Orana Region Amateur Radio Club, the Orange & Districts Amateur Radio Club and the WIA will be on site with interesting demonstrations and they'll be talking to anyone who wants to know about how to get involved in amateur radio. There will be other attractions as well including helicopter rides, a jumping castle and face painting for the kids, as well as an outdoors screening of the movie "The Dish" on Saturday evening.

OCTOBER 6
Gold Coast Amateur Radio Society Annual Hamfest at Albert Waterways Hall.

NOVEMBER 4
The Ballarat Hamvention at the Great Southern Woolshed located on the Western Highway on the Melbourne Side of Ballarat. General entry for $6:00 is from 10am. details at the BARG website

www.barg.org.au

DECEMBER 2
Westlakes Amateur Radio Clubs Christmas Party will be held at the Eastern Tiger Restaurant, which is located in the Cardiff RSL building, interested? get in touch with VK2FDNE Diane.

JANUARY 20 2008

The Mid North Coast Amateur Radio Group invite all amateurs to attend the 2008 Mid North Coast Radio Expo to be held in Coffs Harbour on Sunday 20th January.

The Expo is held at the St Johns Church Hall, Mc Lean Street, Coffs Harbour. Gary VK2ZKT is the Radio Expo Coordinator on 02 66 55 2 990 or visit the Groups comprehensive web site at www.mncarg.org

FEBRUARY 10

Announcing Centre Victoria RadioFest No. 2.
Second-hand traders, club corner, short-talk lectures, displays and the popular dipole factory will all return, plus some new exciting activities to be announced later.
All major commercial traders have already made commitments to be there again in 2008.
For second hand table bookings that cost only $12.50 please contact Nick Angelo VK3UCK 0488 653 201, or check out the website radiofest.amateurradio.com.au

THE FINAL FINAL

(Audio Grab from TWIAR - Story of "JoeBubbles")

TONY VK7AX CONTINUES WITH STORY.

There is further irony to this story.
Tony VK7AX was possibly one of the last persons to speak with JoyBubbles...

WHY!!!

"JoyBubbles was speaking to yours truly (via the phone of course) arranging to have his 5 year Licence for VK4WBO renewed with the ACMA.

JoyBubbles had given his credit card details to me on Saturday 4th. August.

He agreed to check back 1 hour later to verify whether I was able to complete the payment.

THAT CALL NEVER CAME!!!!

JoyBubbles did complain about feeling very dizzy during our phone conversation.

During our conversation I asked him about the Minneapolis Bridge Collapse which had recently occurred. He told me he was located approximately 4Km from the bridge.

I must say this was a unique experience for me and certainly an honour to have been associated with this Blind Operator... all brought about by Amateur Radio.

I'm Tony VK7AX for the WIA National News from VK1WIA.

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 16 SEPTEMBER 2007

You are listening to ZS6SRL the official Radio Station of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is transmitted every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. To listen to a web stream or Echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links for details.

This, and previous bulletins, can be downloaded from the www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

Your news reader this morning is Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, and 51,400 MHz as well as 438,825 and 1 297 MHz in the Pretoria area. (Other newsreaders please change to suit).

SILENT KEY

It is with deep regret that we have to announce the passing of Yvonne Vercueil, ZS6WV, on 1 September. We extend our sincerest condolences to her family and friends.

(PAUSE)

In the news today:

SARL WEBSITE COMPROMISED

EMC WORKGROUP OF STANSA SUBMITTED PLT STANDARD RECOMMENDATION TO ICASA

ICASA HAS GIVEN NOTICE TO MAKE REGULATIONS IN RESPECT OF LICENCE EXEMPTION

DST SPEAKER WILL REVIEW DEVELOPMENTS IN THE SOUTH AFRICAN SPACE ARENA AT SA AMSAT SPACE SYMPOSIUM

WEEKLY NET FROM SCI-BONO SCIENCE DISCOVERY CENTRE

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

SARL WEBSITE COMPROMISED

During this past week hackers managed to compromise the Forum section of the SARL web site and posted some undesirable content. Swift action was taken to remove the offending postings and as an interim measure the forum update on the home page has been removed. The Forum section was disabled and after some corrective action by the web administrators and the ISP it was returned to service. The forum update on the home page will remain blocked until a full investigation on how hackers managed to compromise the security systems that are in place have been concluded.

EMC WORKGROUP OF STANSA SUBMITTED PLT STANDARD RECOMMENDATION TO ICASA

The workgroup 6 of the STANSA's TC73 and TC80 technical committees have submitted their PLT draft regulations to ICASA for further consideration. There are a number of issues on which the workgroup could not reach census and on which ICASA will have to make a ruling. ICASA will discuss the proposal for an interim standard at the CISPR meeting to be held in Australia later this month. After finalising the interim standard, ICASA will publish the document for public comment before finally turning the draft into a regulation.

The regulations will fall away and be replaced by an international CISPR standard once the world body can agree on such a standard. It has been a long way in coming and current indications are that it could be quite some time away.

Perhaps the most significant inclusion in the document is the complaint procedure. This compels the operator of an interfering system to resolve the interference issue within a reasonable period. Further more there will be a public data base of PLT systems.

The SARL is still pursuing the compulsory inclusion of notching of the HF amateur bands.

ICASA HAS GIVEN NOTICE TO MAKE REGULATIONS IN RESPECT OF LICENCE EXEMPTION

ICASA has given notice of its intention to make regulations in respect of licence exemption for a host of low power devices. Comments on the proposals are invited and must reach the regulatory agency by 2 October.

The SARL is reviewing the extensive list to ensure that no amateur allocations are adversely affected. More details can be found on www.icasa.org.

DST SPEAKER WILL REVIEW DEVELOPMENTS IN THE SOUTH AFRICAN SPACE ARENA AT SA AMSAT SPACE SYMPOSIUM

Dr Valanathan Munsami of the Department of Science and Technology will review developments in the South African Space arena at the SA AMSAT Space Symposium to be held at the NARC on Saturday 6 October. He will focus on the DST's 10 year implementation plans and the drafting of a National Space Science Technology Strategy.

The full programme is available on www.amsatsa.org.za. Registration details are also available on the web site. To take advantage of the early registration opportunities, book as soon as possible. There are differentiated rates for SA AMSAT and SARL members.

WEEKLY NET FROM SCI-BONO SCIENCE DISCOVERY CENTRE

Here is exciting news for all school radio clubs and interested radio amateurs.

A new net, Sci-Net will start operations on the 2nd October from the amateur radio station, with call sign ZS6SCI, which is located in the Sci-Bono Science Discovery Centre, Gauteng. It is aimed to involve school stations from all over South Africa. This initiative is endorsed by the Gauteng Department of Education: Curriculum Devlopment. All radio amateurs are requested to are requested to inform their local school clubs and youth nets of this initiative, and to render assistance where needed. Remember to register your station beforehand with the SARL as an educational station because then the unlicenced youngsters may use your equipment to talk to others, but under your supervision.

Sci-Net will start daily at 11:00 CAT and the following frequencies will be used: 80 m - 3,650 MHz LSB; 40 m - 7,065 MHz LSB; 30 m - 10,130 MHz USB; 20 m - 14,265 MHz USB; 2 m - 145,650 and 145,750 MHz FM - Depending on the availability of the repeaters.

Youths will also be introduced to Amateur Radio at the Sci-Bono Science Discovery Centre Educational Station.

SUBSCRIBE TO HF HAPPPENINGS (Item compiled from HF Happenings 267)

HF Happenings is published weekly by Dennis, ZS4BS, and it contains HF and contesting news which is a must for DXers and contesters.

At present, the newsletter is mailed to 13 different e-mail groups because the ISP of Dennis only allows 25 e-mail addresses per group.

About two weeks ago, Dennis created a mailing list via GoogleGroups hoping to have it up and running very soon. Negotiations with this group were unsuccessful and Dennis asks that you PLEASE IGNORE the invitation from GoogleGroups to join the HF Happenings mailing list.

Last week Dennis went to YahooGroups and successfully created a mailing list there. PLEASE accept the invitation to join the HF Happenings mailing list from Yahoo. You can also join by using the e-mail address HF_Happenings-subscribe@yahoogroups.com.

As soon as the membership of this group is up and running, Dennis will distribute HF Happenings via this mailing list. Dennis is looking forward to having you join the HF Happenings mailing list on YahooGroups!

PROPAGATION CONDITIONS

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at very low levels. The geomagnetic field is expected to be quiet in general, increasing to minor storm levels on 29 and 30 September. The expected Effective Sun Spot number for the coming week will be less than 5. Fortunately with the arrival of summer, DX conditions are also warming up a bit.

15 m and 20 m will provide best opportunities for DX. There is a possibility of 15 and 20 m openings towards India from about 13:00 CAT. There may be 20 m openings to Australia from about 06:00. From 16:00 there may be 15 and 20 m openings towards Europe and 40 m openings from 22:00. Contacts to the USA are going to be very challenging.

For the CW and digital enthusiasts it will also be worth monitoring 10 MHz.

Locally conditions on 40 m is going to be good during the day. It is once again time to work towards your 80 m WAZS award in the evenings.

Remember that this is only a prediction and that HF always has the capability to surprise you. You will never know what you are missing unless you switch your rig on, listen and also call CQ.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

9 September, this afternoon - The Spring QRP Sprint; 20 September - Closing date for registering for October RAE; 21 to 22 September - The second leg of the SARL VHF/UHF Contest; 29 September - Ladies Only ZU RAE course by Kempton Park RATS; 29 September - Pretoria ARC Flea Market and AGM; 4 - 10 October - Special space programme; 5 October - Take your handheld to work day; 6 October - SA AMSAT Space Conference; 6 October East Rand Flea market and AGM; 18 October - Class A RAE.

SARL News invites clubs and individuals to submit news stories of interest to radio amateurs and shortwave listeners. Submit news stories if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to the programme Amateur Radio Mirror International, on the air every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 590 kHz. For the web stream and echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links. A repeat transmission can be heard Mondays at 21:00 CAT on 3 215 kHz. Sentech sponsors the ARMI transmissions on the non-amateur frequencies.

Today's South African Radio League news bulletin was compiled by George, ZS6NE, and transmitted by (your name and call sign).

Thank you for listening. 73.

1 GB2RS NEWS Sunday 16 September

The news headlines

* Worked All Britain group donates to GB4FUN

* 3B7C DXpedition now on the air

* Transmission 2007 draws closer

The 36th Leicester Amateur Radio Show took place on 7 and 8 September. At the show the Worked All Britain Group donated #1000 to the Radio Communications Foundation. The Foundation will be using the money to help fund the mobile classroom, GB4FUN, which was at the show. The cheque was presented to RSGB President Angus Annan, MM1CCR, by WAB President Brian Stocks, G0BFJ. More information on the WAB group is available online at www.worked-all-britain.co.uk.

Large numbers of enthusiasts braved severe traffic disruption and noise to attend the Leicester rally. The rally organisers have promised to ensure that next year's show does not again clash with a major motor racing event.

The Five Star DXers 3B7C St Brandon DXpedition started operating precisely on time at 8pm on 7 September. As of 4am on 14 September the team had completed over 55,000 QSOs. Despite some early teething problems, operations are continuing as planned. Early propagation favoured Europe over Japan. However, amateurs all over the world have been making successful contacts. Details of the DXpedition, including latest news, are on the web at www.3B7C.com.

The weekend of 22 and 23 September brings Transmission 2007, the fund raising event for the British Wireless for the Blind Fund. Many clubs and individuals are taking part, and trophies are on offer for both clubs and individuals for the most funds raised and the most contacts achieved. Details of how to take part, including sponsorship forms, can be found at www.blind.org.uk.

Recently Ofcom published an update on the proposed introduction of the licence exempt use of Digital PMR446 compliant private mobile radio (PMR) equipment in the 446.1 to 446.2MHz band. The document clarifies that this band will not become licence exempt, rather a band in which equipment that meets certain technical requirements may be operated on a licence exempt basis. The update can be found at www.ofcom.org.uk.

Tony, EI5EM, has updated and expanded the information booklet about the Vintage Radio Museum in Howth. As well as being a guide to the museum, the booklet is a potted history of the development of wireless technology. It details the 1903 and 1905 experiments carried out in Howth by Lee de Forest and the Marconi Company, and quotes from documents published at the time. A full page reproduction of the Dublin Penny Journal's report on de Forest's 1903 experiments is reproduced in the booklet. The RSGB web site contains a link where you can find more information.

Ofcom recently announced that over 200 new Foundation, Intermediate and Advanced licences were issued during August. New licensees are the lifeblood of our hobby and the RSGB congratulates all the new licensees on their exam successes.

2 A new publication has been announced to celebrate 50 years of Jamboree On The Air. The book is co-authored by Les Mitchell, G3BHK, Len Jarrett, VE3MYF and Richard Middelkoop, PA3BAR. A limited edition of The JOTA Story will be available shortly after the 50th JOTA on 20 and 21 October. The RSGB web site gives details of how to pre-order a copy from the authors.

And now for the details of rallies and events for the coming week On Sunday 23 September the Hornsea Amateur Radio Club Rally takes place at Floral Hall, Hornsea, East Yorkshire. More details of this and future events can be found on pages 88 and 89 of the September edition of RadCom. Now for the news of special events The Scarborough Special Events Group will be on the air as GB2QE on 16 September to mark the 40th anniversary of the liner Queen Elizabeth 2. Activity will be on 80 and 40m SSB and CW, plus 2m and 70cm. Further details from Roy Clayton, e-mail g4ssh@tiscali.co.uk. Celebrating the 4th International Polar Year 2007/2008, Portugal has been represented by the official special event amateur radio station CQ4IPY. The celebration gave all participants the chance to get a special certificate. The CQ4IPY certificate was for all amateur radio operators and SWL who worked CQ4IPY on three different bands or two different modes. For more information visit www.cq4ipy.bravehost.com/.

And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

Scott, AC3A, will be in Tanzania until 17 September. He plans to be active as 5H3EYE during his local evening hours. QSL via AC3A. Andre', GM3VLB, will be signing as VY2/GM3VLB until 17 September and as VE1/GM3VLB from 17 to 22 September. Operation will be holiday style, probably early morning or late afternoon local time, primarily 20m for DX and 40m for local contacts. John, W9ILY and Bob, K9MDO, will be active as FP/W9ILY and FP/K9MDO from Miquelon Island (NA-032) until 18 September. They plan to operate on 80 to 10 metres and to concentrate on SSB primarily FP/K9MDO and RTTY/PSK primarily FP/W9ILY. QSL FP/W9ILY via home call, direct or bureau logs will be uploaded to Log of The World. QSL FP/K9MDO via W9NJB, direct or bureau.

Special event call TM8CDX will be aired until 22 September for the 29th Convention of the Clipperton DX Club, which will be held at Puyloubier on 21 to 22 September. All of the QSOs will be confirmed automatically via the bureau; direct requests should be sent to F5CQ.

Bernardo, HB9ASZ, will be active holiday style as F/HB9ASZ/P from Brehat Island (EU-074) until 22 September. He will operate CW only with 100 watts into a multiband dipole. His favourite band is 30m. The Bittern DX Group will be active on 22 to 23 September as GB2TX as part of Transmission 2007.

Dani, EB1BOA and Javier, EC1KV, plan to be active as F/EB1BOA/P from several French lighthouses until 24 September. Further information at www.ea1cs.blogspot.com/. QSL via home call, direct or bureau.

3 Chris, DL2MDU, will be active as 5Z4/DL2MDU from Kenya until 24 September. He plans to operate holiday style mainly CW. QSL via bureau to home call. Now the contest news The Scandinavian Activity Contest takes place on 22 September at 1200 to 1200 on 23 September on the 3.5 to 28MHz bands, SSB. The exchange takes the form of RS and serial number. The RSGB 1.3GHz/2.3GHz Activity Evening takes place on 18 September at 2000 to 2230 on all modes. The exchange takes the form of RST, serial number and locator. The Irish Radio Transmitters Society's 75th Anniversary Contest CQIR will take place from 1200 UTC on 29 September. Now the solar factual data for the period from 3 September to 9 September, compiled by Neil Clarke, G0CAS

As a small sunspot group rotated out of view the sun became spotless on the 7th. Solar activity was very low with no solar flares taking place. Solar flux levels declined from 68 units to 67. The average was 67 units. The 90 day solar flux average on the 9th was 70 units, that's one unit down on last week and the lowest level so far for this minimum. X-ray flux levels remained well below the minimum A1 level throughout the period. For the first half of the period geomagnetic activity was unsettled due to a recurring coronal hole. The most disturbed day was the 6th with an Ap of 13 units. Activity then declined and by the 9th the Ap index was only 2 units. The average was 9 units. The ACE spacecraft saw solar wind speeds decline from 680 kilometres per second on the 4th to 310 by the 9th. Particle densities were mostly low, however, an increase to 12 particles per cubic centimetre took place on the 6th and the 9th. Bz varied between minus 9 and plus 4 nanoTeslas on the most disturbed day and between minus 2 and plus 3 on the 9th. The more unsettled ionosphere meant that HF propagation was slightly below expected levels for much of the week, with the higher bands particularly quiet. However, 14MHz produced some good openings to Asia and Australia and, on the 8th, the attraction of a major contest and the 3B7C expedition brought activity even up to 28MHz. There was occasional sporadic-E on 28 and 50MHz and even one or two reports on 70MHz. VHF aurora was reported on the afternoon of the 2nd, but the disturbance was not substantial enough for it to reach mid-latitudes. And finally the solar forecast. This week the slightly more active side of the Sun is expected to be looking our way. Solar

activity should continue at very low levels, however, the occasional small C class solar flare cannot be ruled out. Solar flux levels are expected to increase to the low 70's for most of the week. Geomagnetic activity should be mostly quiet, at least till next Friday, when an arrival of a coronal hole disturbance is expected to commence and last over the weekend. MUFs during daylight hours at equal latitudes should be around 19MHz for the south and 16MHz for the north. The darkness hour lows should be about 8MHz. Paths this week to South America should have a maximum usable frequency with a 50 per cent success rate of about 24MHz. The optimum working frequency with a 90 per cent success arte of around 17MHz. The best time to try this path will be between 1100 to 2000 hours UTC. And that's all for this week from the propagation team.

4 Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies can be found on the RSGB website, including e-mail addresses

and website links where known.

[Note to newsreaders: Please read the local news items appropriate to the service area of your

transmission.]

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Monday 17 September Braintree and District Amateur Radio Society is organising their entry for Transmission 2007. Contact John, M5AJB, on 01787 460 947.

On Monday 17 September Burnham Beeches Radio Club is having a talk entitled Digit on a PDA. Contact G4XDU, on 01628625720.

On Monday 17 September Surrey Radio Contact Club is having a talk by Andy, G8JAC, on the evolution of British Army Radio from WW11 to Clansman. Contact Ray, G4FFY, on 020 8644 7589.

On Monday 17 September Wey Valley Amateur Radio Group is having a club night and talk by Walter Blanchard, G3JKV, entitled transponders, here, there and everywhere. Details on the web at www.weyvalleyarg.org.uk.

On Tuesday 18 September Bromley Adult Education College starts its Advanced Licence Course. Contact 020 460 0020, or on the web at www.bromleyadulteducation.ac.uk.

On Wednesday 19 September Chesham and District Amateur Radio Society is having an antenna testing evening. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 19 September Dover Radio Club is having an operating and natter night. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 19 September Fareham and District Amateur Radio Club is having a talk by Chris, G8JFJ, on receiver noise, how to measure it, and does it really matter? Contact Jim, M1JJN.

On Wednesday 19 September Havering and District Amateur Radio Club is having an informal evening. Contact Dave, 2E0EBV, on 07956 594 514.

On Wednesday 19 September Norfolk Amateur Radio Club is running Team Radio Active with Peter, G3ASQ. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Wednesday 19 September Southdown Amateur Radio Society is operating SSTV and other modes from the Halisham shack. Contact John, G3DQY, on 01424,424,319, or by email to vaughdqy@aol.com.

On Wednesday 19 September Worthing and District Amateur Radio Club is having a construction contest. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 20 September Cray Valley Radio Society is having a construction and small project evening - G0FDZ. Contact Bob, BRS32525, on 020 8265 7735 after 8pm.

On Thursday 20 September Horsham Amateur Radio Club is having a social evening at The Jolly Tanners, Staplefield. Details on the web at www.harc.org.uk.

5 On Thursday 20 September Shefford and District Amateur Radio Society is having a talk on Enigma by John Alexander, G7GCK. Contact David, G8UOD, on 01234 742 757.

On Thursday 20 September Sutton and Cheam Radio Society is having a talk on software defined radio by Stan Rudcenko, G0KBL. Contact John, G0BWV, on 020 8644 9945, or by email to info@scrs.org.uk.

On Friday 21 September Cambridge and District Amateur Radio Club is having a junk sale. Contact David, G8JKV.

On Friday 21 September Mid-Sussex Amateur Radio Society is having a radio night and table top sale. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Sunday 23 September Southdown Amateur Radio Society is operating G1KAR at Beachy Head. Contact John, G3DQY, on 01424,424,319, or by email to vaughdqy@aol.com.

NEWS FOR THE SOUTH-WEST Weston Super Mare Radio Society is organising an Intermediate licence course to commence on 16 October. If you are interested in joining the course please contact Dave, G4OKO, on 01934 823 628 by 1 October to book a place.

On Monday 17 September Appledore and District Amateur Radio Club is having a talk on life under the Waves by Laurence, G4XHK. Contact Beryl, G1SVP.

On Wednesday 19 September Exmouth Amateur Radio Club is having an operating night. Contact g0uil@eclipse.co.uk.

On Wednesday 19 September South Bristol Amateur Radio Club is having a display of working old domestic radios. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 19 September Taunton and District Amateur Radio Club is discussing arrangements for GB0THW on Saturday. Contact William, G3WNI, on 01823 666 234, or by email to g3wni@btinternet.com.

On Wednesday 19 September Thornbury and South Gloucestershire Amateur Radio Club is having a video night. Contact Tony, G0WMB, by email to tonytsgarc@beeb.net.

On Thursday 20 September Swindon and District Amateur Radio Club is having a talk on the Mode S ADS-B air traffic control system by Colin Irvin. Contact Mike, M5CBS, on 01793 826 465.

On Thursday 20 September Yeovil Amateur Radio Club is watching the FT5XO Kerguelen DXpedition DVD. Contact Gary, 2E0BFJ (g.swain@tesco.net).

On Saturday 22 September Taunton and District Amateur Radio Club is running special event station GB0THW to celebrate 100 Years of Scouting at The Huish Wood camp site. Contact William, G3WNI, on 01823 666 234, or by email to g3wni@btinternet.com.

6 NEWS FOR THE MIDLANDS A vacancy has arisen for a Deputy Regional Manager covering South Derbyshire & South Nottinghamshire. If you live in the area and would like to help the RSGB's Regional Team to strengthen relationships between the Society and its membership, please contact Regional Manager Jim Stevenson, G0EJQ, on 0789 172 1081 or by email to g0ejq@rsgb.org.uk.

On Monday 17 September Gloucester Amateur Radio and Electronics Society will be operating with contacts to Lundy Island. Contact Anne, 2E1GKY, on 01452 548478, daytime.

On Tuesday 18 September Loughborough and District Amateur Radio Club will be having a vintage amateur radio night. Contact Chris, G1ETZ, on 01509 504 319.

On Tuesday 18 September Wythall Radio Club is having a talk by Callum, M0MCX, on Antenna Modelling. Contact Chris, G0EYO, on 07710 412 819, or by email to g0eyo@blueyonder.co.uk, or on the web at www.wythallradioclub.co.uk.

On Wednesday 19 September Melton Mowbray Amateur Radio Society is having its AGM. Contact Phil, G4LWB, on phil@croxtonkerr.fsnet.co.uk.

On Wednesday 19 September Telford and District Amateur Radio Society is preparing for Hamfest. Contact Mike, G3JKX, on 01952 299 677, or by email to mjstreetg3jkx@blueyonder.co.uk.

On Thursday 20 September Salop Amateur Radio Society is having a slide show about Friedrichshafen by G8VZT. Contact Glenda, G1YJB, on 01939 235 412.

On Thursday 20 September Tamworth Amateur Radio Society is putting the club station on the air. Contact Colin Marks, G4ZPJ, on 01827 700 893, colin.marks2@ntlworld.com.

On Friday 21 September Coventry Amateur Radio Society is having its 75th Anniversary Dinner. Contact John, G8SEQ, on 02476 273 190, or by email to johng8seq@ntlworld.com.

On Friday 21 September Hucknall Rolls-Royce Amateur Radio Club is having a members forum. Details on the web at www.hrrarc.com.

On Saturday 22 September Melton Mowbray Amateur Radio Society is running a Foundation Licence training course at the new HQ in Dalby Road. Contact Geoff, G3STG, on 01664 480 733, g3stg@btinternet.com.

NEWS FOR THE NORTH OF ENGLAND

On Monday 17 September Thornton Cleveleys Amateur Radio Society is having part one of a talk on radar by Dr A G Llewellyn. Contact Jack, G4BFH, by email to jack.duddington@btinternet.com.

On Tuesday 18 September Chester and District Radio Society is having a project night to build a crystal set, hosted by Alan Hopkinson. Details on the web at www.chesterdars.org.uk, info@chesterdars.org.uk.

On Tuesday 18 September Pontefract District Amateur Radio Society will be constructing an ATU for the HF doublet antenna. Contact Colin, G0NQE, on 01977 677 006, info@pontefractradioclub.org.

On Tuesday 18 September Stockport Radio Society is having an evening devoted to data modes. Contact David, M1ANT, on 0161 456 7832.

On Wednesday 19 September Great Lumley Amateur Radio and Electronics Society is having a talk by Nick Packett on the work he does in Afghanistan. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

7 On Wednesday 19 September Halifax and District Amateur Radio Society is having its AGM at Royal Oak, Halifax. Contact Brenda, 2E0YKS, by email to wrenuk10@yahoo.com.

On Friday 21 September South Manchester Radio and Computer Club is having a surplus equipment sale. Contact Ron on 0161 969 3999.

On Friday 21 September Tynemouth Radio Club is having a talk on making printed circuit boards by Bob, G0EDQ. Contact Tony, G8YFA, by email to tonyregnart@blueyonder.co.uk.

NEWS FOR SCOTLAND

On Wednesday 19 September Paisley (YMCA) Amateur Radio Club is having a bring and buy sale. Contact Jim, GM3UWX.

On Thursday 20 September Aberdeen Amateur Radio Society is having an inventory and equipment check. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

NEWS FOR WALES On Tuesday 18 September Carmarthen Amateur Radio Society is having a talk and demo of radio operation. Contact Les, GW8PSJ, on 01239 811 922.

NEWS FOR NORTHERN IRELAND

No news items have been received for Northern Ireland this week. And that's the end of this week's GB2RS news broadcast,

prepared by the Radio Society of Great Britain.

1528. [RAC-Bulletin] RAC Bulletin #16 - Report of the election committee - SEPTEMBER 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-09-16 20:04:04 UTC
From: John Iliffe <john.iliffe@sympatico.ca>
Message-ID: <46ED8B76.72E9847D@sympatico.ca>
Source record: 3933
Cross-posted to: rec.radio.amateur.moderated,rec.radio.info

On Friday, 7 September 2007 the RAC election committee met in Orillia ON. Susan Cooke, RAC Secretary, acted as chair of the meeting. The members of the committee were:

- Mrs Susan Cooke, VE3SUH, chair
- Mr Doug Campbell, VA3DC
- Mr Charles Doubrough, VA3SD
- Mr Peter Schuyffel, VE3JPP

Following a call for nominations in the Juyy/August issue of TCA the committee reviewed the nominations received for the position of Director in each of the following regions:

Quebec
Ontario South
Alberta/NWT/Nunavut

Results were as follows:

Quebec Regional Director

Only one nomination was received from the Quebec region. Based on the documents submitted and the RAC constitutional requirements, this nomination was found to be correct and complete. Since there were no other candidates, Mr Noel Marcil, VE2BR, has been acclaimed to this post for a term of 2007 and 2008.

Ontario South Director

Only one nomination was received from the Ontario South region. Based on the documents submitted and the RAC constitutional requirements, this nomination was found to be correct and complete. Since there were no other candidates, Mr Geoff Smith, VA3GS, has been acclaimed to this post for a term of 2007 and 2008.

Alberta/NWT/Nunavut Director

Having received no nominations for this position, the committee recommends that the board of directors proceed to make a seond call for nominations in accordance with the constitution, Article 6 i).

Irish Radio Transmitters Society
Radio News Bulletin

Sunday September 16th 2007

CQIR

With the CQIR Contest only two weeks away the sub committee are working hard to promote the event worldwide. There is excellent coverage on the various contest reflectors but we believe this event will also attract a lot of interest from non-contesters. It is more difficult to get the message out to these operators and we would ask our own DXers to actively promote the event on the bands over the next two weeks. You can stress the point that 75 QSO's with any stations in the contest will get them into the draw for the trip to Ireland, and then simply refer them to the IRTS website, www.irts.ie.

EI75IRTS will be very active before and during the event and we will have more details of these activities next week. If any members have contacts with local press or local radio stations, who are interested in covering the event, the Society can assist you with Press Releases and other support documentation. If you need assistance contact Paul EI2CA by email, 'paul at comma dot ie', or phone 087 2523908.

Short Range Devices (SRDs) on 10 GHz

ComReg is proposing to open the segment 10.4 to 10.42 GHz to licence-exempt Short Range Devices or SRDs. These will be mainly for movement detection in the context of traffic control and will have a power level of 500 milliwatts. There is an experimenter secondary allocation at 10.0 to 10.5 GHz. The EU notification procedure and the standstill period for observations means that a final position on this will not be adopted until early October at the soonest. The relevant document is ComReg 07/37 and is available on the ComReg website at www.comreg.ie. Any experimenter having concerns about this proposal can write to Jim Connolly

at ComReg.

Logs

Logs for EI7IRTS activity on CW and SSB are required by the QSL Manager, Denis, EI6HB immediately. There are a lot of direct QSL cards after arriving and QSO details must be checked before confirmation is sent out. Logs (preferably in ADIF format) should be sent to ei6hb at eircom dot net.

All who participated in the 2 metre counties contest, even those who gave out just a few points, are encouraged to send in their logs to the Contest Manager. The latest date for log entry is the 25th of September.

DXpedition to St Brandon

A group of mainly European amateurs are currently operating from Isle du Sud, one of about 16 small islands known as the Saint Brandon Rocks on an extended reef in the Indian Ocean northeast of Mauritius. The call sign being used is 3B7C, and well-known EI contester Paul O'Kane EI5DI is one of the operators. In their first 5 days of operation, the group clocked up 50,000 QSOs, of which almost 60% were on CW. Their signals have been heard on all HF bands in EI, and to date there are more than 100 QSOs with EI stations in the log. There is still plenty of time to work them, as the plan is to continue operating until Monday the 24th of September.

Galway Radio Experimenters Club

The Galway Radio Experimenters club (GREC) held its AGM in the Menlo Park Hotel on Tuesday last the 11th of September 2007. The agenda for the night was to discuss club issues, elect a new committee and to discuss the upcoming Marconi field day which is of course the 100th anniversary of the first commercial radio link between Europe and the United States. The new committee members elected are as follows:- Tom Frawley (EI3ER) as chairman. Damian Commins (EI2HG) as treasurer And Adrian Jackson (EI7DMB) Club secretary. Two ordinary committee members were also elected and these were Larry MCGriskin (EI9CN) and Tom McNamara (EI8DD).

It is the aim of the club to Run Classes in the New Year and to participate in most if not all of the upcoming field days and events. There was an excellent turn out for the meeting and the committee would like to thank the 24 members who took time out to attend.

EI0MAR

EI0MAR will be QRV on Saturday and Sunday the 29th and 30th of September for the CQIR event. On Saturday the station will be active between 1100 and 2200 UTC and also on the following morning. On Saturday evening, the North Dublin Radio Club's weekly meeting will take place at the station. The vintage radio museum in Howth, which houses EI0MAR, is located in the Martello tower in Howth. Access is up a steep pathway opposite the Abbey Tavern. Visitors are welcome and may operate the station using their own or the club's call sign. Further information on EI0MAR is available on the club's website. This is easily found by googling the words EI0MAR, Martello and Howth. A link to the museum web page will allow downloading of a free 22-page booklet about the tower and the history of wireless.

Marconi Clifden Celebrations

On the 17th of October 1907 Guglielmo Marconi sent his first commercial message from the then new station at Clifden, Ireland. This October in celebration of this historic event member of the Galway Radio Experimenters Club will be running a special event station from Saturday 13th to Wednesday 17th from Clifden. The club has been issued the call sign EI100MFT for the event, MFT been the last call sign used on the original station.

On the Wednesday they will be making a special linkup with the Marconi sister station in Glace Bay, Nova Scotia. Part of this linkup will be an exchange of greetings between President Mary McAleese and Lieutenant Governor of Nova Scotia the Honourable Mayann E. Francis. The group will also be honoured to have Princess Electra Marconi present as she is coming to Clifden for the festival along with an Exhibit from the Marconi Foundation in Bologna. The Galway Radio Experimenters Club will also be presenting a display of vintage equipment. More details on the festival can be found at www.clifden.ie. Visitors to the station are more than welcome and if you would like to participate this can also be arranged. For further information

please contact Enda Broderick (II2II) on 086-8676410 or
email: &#65533;enda dot Broderick at lightnet dot ie&#65533;.

Winlink Experiment

John, EI7IG, is experimenting/testing a Winlink Telpac Node in the Waterford area, if anyone is interested in participating, please contact him directly at 086-8167310.

Limerick Radio Club

The next meeting of the Club will be on the Thursday 11th of October at the usual venue, the Limerick Institute of Technology, Moylish at 19:30 hrs local time. All those interested are welcome to attend.

Theory Classes

There is a free course for the forthcoming radio theory exam running in the Ballyroan Community centre, Marian Rd, hosted by South Dublin Radio Club. It is held between eight and ten p.m. on Tuesday evenings. Also there will be a course held in Crossakiel, Kells held on a Wednesday 8:30 to 10:30, hosted by the newly founded CARA club (Crossakiel Amateur Radio Association).

Also anyone interested in radio will find a visit to the clubs enjoyable. Call Michael (EI2GKB) on 0872481970 for details.

Blarney Rally

The Cork Radio Clubs 16th Radio Rally will take plane on Sunday the 23rd of September at the Blarney Park Hotel. The rally will feature all the usual traders including club stands and the IRTS. The bring-and-buy will also feature and there is ample car parking.

Doors open at 11 a.m. For details, contact Con on 021-4270136 or 086-1071312.

Other Upcoming Rallies

The Waterford Rally will take place on Sunday the 21st of October in the Woodlands Hotel, Waterford. For more information visit www.searg.com.

The Foyle and District Rally will take place on Sunday the 4th of November 2007 at the White Horse Hotel, Derry. For more information visit www.mn0aku.org.uk.

The Mayo Radio Rally will take place on Sunday the 18th of November in the Belmount Hotel, Knock, Co. Mayo. For more information contact Padraic Baynes, EI9JA @ QTHR.

DX News

A team of 9 Greek amateur radio operators are going to activate the Syrian island of Arwad (AS-186) for the first time in the IOTA program, between the 1st and 13th of November. The callsign for this station will be YK9SV.

Activity is on all HF bands with at least 2 stations operating around the clock, including 6 meters and using CW, SSB, RTTY and PSK. QSL is via SV1JG. For latest info visit www.raag.org/arwad.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to news at irts dot ie for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday's bulletin.

1530. The "Diamond Terrace"

Newsgroup: rec.radio.amateur.moderated
Date: 2007-09-17 14:23:52 UTC
From: David Stinson <arc5@ix.netcom.com>

First- Let me thank whomever had the courage (and patience)
to set up a moderated amateur radio group.
I just discovered it.
Thanks again.

Re: The ARRL "Diamond Terrace:"
There are several people I'd like to commemorate,
but the idea of putting their names under foot,
where teenagers spit their gum
and people wipe excrement off their shoes
is appalling beyond words.
I don't know who created this revolting national fad
of building "memorials" that people walk all over,
nor do I understand people who buy into this disgrace,
but I won't spend a cent
to put the memory of anyone for whom I care
under people's feet.

1531. VLF 9 KHz

Newsgroup: rec.radio.amateur.moderated
Date: 2007-09-17 14:24:47 UTC
From: Richard Crowley <rcrowley@xp7rt.net>
Message-ID: <13et3746nodnj95@corp.supernews.com>
Source record: 3936

I've been following a conversation over on news:rec.audio.pro
originated by a guy who is getting what appears to be CW
RFI on his microphone(s) at 9 KHz. He also reported hearing
similar "whistling" on the AM BCB.

At first I thought of those submarine communication transmiters
in the Great Lakes area (the problem is in Michigan). But, although
they run megawatts, they appear to use either higher (14-60 KHz)
or lower (40-80Hz) frequencies. And the ones in upper Michigan
and Wisconsin appear to be shut down, anyway.

http://www.fas.org/man/dod-101/navy/docs/scmp/part07.htm

So is there anything at 9 KHz that could be an intermittent
source of CW? Some Googling around the inter-web didn't
turn up as much as I expected.

Dave,

I understand the feelings, but I think that there is more to the "Diamond Terrace" than just a bunch of bricks that folks walk on. I believe that the point of this idea is to help fund the ARRL and not just to put bricks on the ground. There are a number of ways to donate to the ARRL, this diamond terrace thing is just the latest fundraising idea. (Which by the way doesn't originate with the ARRL. I've seen this, get a special brick made thing, used for a number of years.)

I really don't think the intent was to offend anybody, only to provide a means of raising money for the ARRL. To that end I'm OK with it, though I am unlikely to participate for many of the same reasons you don't like the idea.

There are some cultures in which to show another person the bottom of your feet is about as bad an insult as one make!

It is a pretty pervasive thing though, from the walk of the stars in Hollywood, to fishing piers to local theater fund raising projects.

OTOH, many of us could think of someone (or something)
that would give us a satisfying feeling to think that people
were walking all over it. And to raise $$ for the ARRL is just
an additional bennefit! :-)

Do you think they would put "BPL" on a brick? (Or "FCC"? :-)

9 KHz is in the audio spectrum so it is probably
the product of mixing. What frequency is the
receiver tuned to? What are the IF frequencies?
What are the intermod possibilities?

It is being picked up directly by two Royer ribbon
microphones which contain an active impedance-
matching circuit implemented with a tube ("valve").
No IF involved there.

On his AM BCB receiver, he was complaining about
790KHz. We likely have no way of discovering his IF
frequency.

"Non profit" doesn't mean "zero-budget" or
"no-income" or "can't raise money by selling
bricks". Does it?

Cecil,

If you mean 501C 3 "non-profit" organization like the Red Cross,
United Way and the like, then the answer is "yes".

But you don't really think that selling these bricks for "profit" to
raise funds is a problem do you? Donations to the ARRL necessary to
get a 'brick" on the terrace are tax deductible. Just like buying
hymnals or seats with your choice of inscriptions for your local
church would be too. The University I graduated from has a similar
program where alumni can "donate" sums of money and get their choice
of inscriptions put on various things around the campus. Donate
enough and they will name a building after you, while you get the tax
write off. I don't see any problem with the ARRL doing their diamond
terrace thing from a tax law perspective.

Well,

Having thumbed through the articles on the other news group (Some 300 of them), I'm almost certain that this problem is with his equipment, the grounding and shielding of that ribbon microphone and associated preamp and is likely to originate with some kind of local unintentional radiator located within his house (A switching power supply, plasma TV, Cable tuner etc.) Listening to the audio provided really makes me think there is some very noisy switching power supply in this mix somewhere.

I would start by verifying that the shield on that "special" 7 pin cable between the preamp and the mic is not damaged and I would invest in some of the clip on RFI cores that you can loop the microphone cable though a few times as close to the preamp as possible. He needs to be 100% sure that he has eliminated all the possible grounding problems (which it seems that he has a number based upon his posts) by lifting power and signal grounds where necessary to make sure there is only ONE path to ground from ANY piece of equipment.

In the end, I'll bet that it's the microphone/preamp that is to blame and getting that fixed can be something way beyond the scope of what can be discussed on Usenet effectively.

This tube is likely the thing that's rectifying stray RF that happens to come along for the ride so I suspect that the problem this guy is having is more likely to be shielding or grounding issues. The source of the RF is an open question, but I think it's a moot point because he seems to be getting a lot of RF from a number of sources which tells me there are some serious issues with his wiring. I would entertain the theory that this tube is needing some neutralization and may be doing some serious oscillation under certain external conditions, but I wouldn't undertake a technical discussion of how to fix that on Usenet given there is likely some 900 volts involved here and somebody could get killed.

Non-Profit institutions raise money in many ways. Bake sales, hoagie sales, donate a vehicle and have it auctioned off with the proceeds going to the nonprofit. Volunteer Fire companies do it a lot, so do many other non-profits. It's actually a pretty good thing.

Once upon a time, the ARRL was able to pay its bills with dues
income, magazine sales and book sales. The fact that is must now resort
to such "creative" fundraising simply underlines the fact that it is
gradually but inexorably moving toward extinction.

1553. Pennsylvania QSO Party Announcement

Newsgroup: rec.radio.amateur.moderated
Date: 2007-09-19 21:39:48 UTC
From: Michael Coslo <mjc5@psu.edu>
Message-ID: <fcrpee$172e$1@f04n12.cac.psu.edu>
Source record: 3858
Cross-posted to: rec.radio.amateur.moderated,rec.radio.info

Good day all

The Pennsylvania QSO Party is being held October 13 and 14, 2007.

The Pennsylvania QSO Party is celebrating it's 50th anniversary as the Friendly QSO Party.

A number of changes have been made to the party this year.

As usual Pennsylvania Ops work PA Counties, ARRL and VE sections, and DX. Out of state Ops work PA Counties. Counties and sections earn multipliers. Available modes are CW, SSB and FM, PSK 31 and RTTY.

CW Contacts are worth 2 points per QSO on 80 meters and 160 meters, and 1.5 points on 40 and above.

RTTY and PSK contacts are worth 2 points each.

SSB and FM contacts are worth 1 point each.

Contact with the Special Event station is worth 200 points.

Double score for QRP.

Mobile stations earn 500 point bonus for each county.
see rules for details.

Rover Stations earn 500 point bonus for each Operating position
see rules for details.

Certificates for all county and section winners, plaques for class winners.

For those not familiar with the PAQSO Party, a lot more info can be found at:

http://www.nittany-arc.net/paqso.html

Changes:

The PSK31 and RTTY classes tried as an experiment last year, are now included as a regular part of the party.

The rules have been greatly expanded due to popular demand. Instead of a one page rule sheet, we have added definitions and clarifications where needed. While the rules of the party are more or less the same as last year, the bands of operation have been defined, classes have been defined, and a few other tweaks have been added. County line station qualifications have been defined.

We have added a few new plaque classes.

A 20 meter "Good Neighbor" plaque has been added to encourage PA operators to get on 20 meters and operate more Out of State Ops.

An SSB only plaque has been added to complement the CW only plaque

A new class has been added - Multi Op Multi Transmitter Portable. This corrects a weird rule situation in which people who wanted to operate at say a camp with several friends and a couple transmitters had to either operate as a one location rover or could operate as a portable, but not compete Since MM portable sounds like one major lot of fun, it was the least we could do.

The club award has been reinstated. Sum the scores from OPs in your club and highest count wins. Trophy for first place, second through fifth get certificates.

The extension of the rules prompted another change.

Since the rules changes brought the rules to 8 pages, and that would double the size of the party mailings, it was decided to eliminate the mailings. Results and announcements are taking place via PDF file. In addition, this will enable the party results to come out much sooner than before. Given the universality of Adobe Reader these days, this should end up as a very positive change. The pdf's will be emailed out to recent party participants, or they can be downloaded from the Web site at:

http://www.nittany-arc.net/paqso.html

Certificates will still be printed and mailed by the party committee.

In order to ensure more rapid and accurate delivery of party promotional items, a T-Shirt Czar is being appointed so that that part of the post party work is accomplished in tandem with the scoring. There will be a special and new design 50th anniversary T-Shirt this year, as well as new design Coffee Mugs.

We are having a different special event station this year. There will be 5 stations distributed in the state operating under the W3P special event call sign. One of the stations will be in mobile operation, and the others will be in fixed position.

A 50th Anniversary certificate will be sent to stations who make contact with all 5 Special event stations. To qualify, work all 5 stations, and send a SASE to:

PAQSO Party 2007 c/o NARC
P.O. Box 614
State College PA 16804-0614

For the future.....

In 2009, the 1.5 point CW QSOs are going away. At that point, all CW QSOs will be worth 2 points.

County line stations point value will be revisited in the off season. We will possibly be giving out 1 QSO point per claimed county, instead of 1 QSO for the entire communication.

FO - FRENCH POLYNESIA, OC-046
Freddy,F5IRO, has left Paris on Sep 12 and arrived in Papeete (OC-046)
meanwhile from where he is going to hit the airwaves as FO5RU until
Jan 15, 2008. If he does not get is licence instantly, he will be QRV
as FO/F5IRO temporarily. Activity takes place in CW/SSB/RTTY on all
bands. He may also make a short trip to a nearby IOTA Island.
His QSL manager Rafik,F5CQ, confirms QSOs either direct or via bureau.
An online log can be accessed at:
http://www.f5cq.net/dxp/2007-FO5RU/fo5ru-en.htm

HC - ECUADOR
The city of Cotacachi will be the QTH of Marcos,HC1/EA1APV, between
Sep 21 and Oct 20. Marcos is working there so the radio hobby occupies
only very little of his spare time. QSL via homecall.

HR - HONDURAS
A team of the Radio Club Honduras will be QRV from Swan Island (NA-035)
signing HQ8R from Sep 23-28. Swan was an own DXCC counter (KS4) until
Aug 31,1972, and was last activated in 2001. The team members HR2J,
K2BB, KB2PDW, K8LEE and W8GEX will work with three stations and two
amplifiers. QSL via the operator's address in the USA.

HS - THAILAND, AS-053
Eric,SM1TDE, is now living on the Thai resort island Phuket (AS-053)
and already applied for the callsign HS0ZHR.
Eric prefers the QSLs to be sent via the bureau to SM1TDE,
all mail to his address in Shweden (PO Box 94, S-62321 Ljugarn, Sweden)
will be forwarded to Thailand by Eric's father so expect some delays.

KP2 - AMERICAN VIRGIN ISLANDS, NA-106
Andrei,NP3D, Palmer,K4FO, and Dmytro,AK2P, will stay on the island of
St. Croix (NA-106) from Sep 23-30. They will sign KP2/NP3D in the
multi OP category of the CQWW RTTY Contest on Sep 29/30.

QSLs for KP2/NP3D via W3HNK (direct or LoTW).
NP2/K4FO (QSL via K4FO) and WP2/AK2P (QSL via AK2P) are working in CW/SSB/RTTY on all bands before the CQWW RTTY contest weekend.

P29 - PAPUA-NEW GUINEA
Hans,SM6CVX, Derek,G3KHZ, Steve,G4EDG, and Luis,CT1AGF, are visiting several islands belonging to Papua-New Guinea. The first activities will take place on Sep 22 from Buka Island which will also be the last stop of their trip. They can use four stations with two amplifiers, verticals and multi-band dipoles. Emphasis will be put especially on 80m and 160m during the nights but all other bands will be served as well. They are not sure if they have time for a trip to Kilinalau and which call they may use. More information about this DXpedition can be found at: http://www.rep.pt/P29-PapuaNewGuinea
This is their travelling schedule as of today:
Date Call Island /IOTA QSL via
Sep 24-29 P29VCX Nukumanu /OC-284 SM6CVX
Oct 2-6 P29NI Takuu /OC-283 G3KHZ
Oct 8-10 P29VLR Kilinalau/OC-256 SM6CVX

SU - EGYPT
SU8BHI will be the callsign of Gab,HA3JB, between Sep 21 and Nov 30. He plans to work in CW/RTTY/SSTV/PSK (only little SSB) on all bands and also during the CQWW RTTY and CW Contests.
Unfortunately QSLs only direct via HA3JB.
Please check out his homepage at: http://www.qsl.net/ha3jb

TF - ICELAND, EU-021
TF/G3SXW and TF/G4IRN will stay in Icelands (EU-021) capital city Reykjavik over the weekend. They will be QRV only in CW on 40-12m from Sep 21-23. QSLs via their homecalls or paperless via LoTW.

VK9W - WILLIS ISLAND, OC-007
Tomi,HA7RY, and George,AA7JV, will conduct a mini DXpedition with 500 watts and verticals signing VK9WWI from Willis (OC-007) between Sep 25 and Oct 5. George will go diving while Tomi spends the time on the high bands during the day and then AA7JV will shorten the nights on 80m/160m.

3A - MONACO
Ghis,ON5NT, is going to spend his holidays in Monaco from Sep 24-28. All activities as 3A/ON5NT (QSLs via homecall) will be sporadically.

5R - MADAGASCAR, AF-057
Manfred,DJ7RJ, will show up again as 5R8RJ from Sep 26 until Oct 26. Manfred will work in CW/SSB on 10-160m from Nosy Be Island (AF-057) using a K2 transceiver and a small amplifier with 500 watts output. His antenna will be an inverted L (15m vertically, 19m horizontally) with elevated radials and emphasis will be put on the lowbands.
QSL cards via bureau to DJ7RJ.

7Q - MALAWI
Harry,7Q7HB (G0JMU), is back again in Malawi and will stay there
for the next two months.
QSLs via his QSL manager G0IAS, unfortunately only direct.
Another stay is planned for January 2008 including operation on 160m.

9U - BURUNDI
When Sigi,DL7DF, and his DX experienced team are going on tour this
means not only a guaranteed QSL card but also a DX operation at its
best on all bands. Their next trip leads them to Burundi from where
they will be active as 9U0A from Sep 26 until Oct 9. They will work
in all modes (including SSTV) on all bands (160-6m) emphasizing the
lowbands and digital modes. They also have an extra station exclusively
for the digital modes because they expect the highest demand there.
Their equipment consists of four radios, three amplifiers, a Titanex
V80E Lowband vertical, another 18m high vertical, two 4-square-arrays
for 40m and 30m, two Hexbeams for 20-10m, a 5ele yagi for 6m and
beverages for receiving. The operators will be DK1BT (Manfred),
DL4WK (Wolf), DL7DF (Sigi) and his XYL Sabine, DL7UFN (Jan),
DL7UFR (Frank) and SP3DOI (Leszek). They will try to provide an online
log during the DXpedition on the website: http://www.dl7df.com
QSLs should be sent to DL7DF either direct or via bureau. His address:
DL7DF, Sigi Presch, Wilhelmsmuehlenweg 123, 12621 Berlin, Germany.
One US $ is not sufficient return postage for a letter outside Europe.

SOUTH PACIFIC - T30/T31 (update to DXNL 1534)
Toshi,JA8BMK, will leave Sapporo on Sep 23 stopping only one day on
Fiji and is expected to arrive in Western Kiribati (T30) on Sep 25.
He plans to hit the airwaves as T30XX for at least ten days from there.
His ship to Central Kiribati (T31) will leave on Oct 4 and is scheduled
to arrive five or six days later. Toshi intends to work as T31XX for
about two weeks and plans to work also in RTTY and PSK (besides the
usual modes CW and SSB). Not mentioned in his last press bulletin was
an eventual operation as T33ZZ. This is a list of his equipment:
IC-7000, TS-480HX, 650 W output, 4ele HB9CV, dipole for the lowbands,
a 160m vertical, 6m: 4ele HB9CV (100 W), 80/40m: dipole and vertical,
20/15/10m: 4ele HB9CV, 30/17/12m: rotary dipole. There will be no
online logs and your QSLs should be sent ("direct only") to JA8UWT.

SPAIN, SPECIAL EVENT STATION
Ramon,EA3EJI, and other OMs are going to put up a station in the famous
monastery Montserrat and will be QRV as AM3MM in all modes on all bands
from Sep 22-24. QSL via EA3MM, direct or via bureau.

SILENT KEYS
Very surprisingly Osten,SM5DQC, passed away on Sep 6 at the age of 66.
He was one of the most active Swedish DXers and the QSL manager of
9Q1EK and 9Q1TB. Osten phoned with 9Q1TB only one day earlier telling
him about his plans to maintain his antennas.

Laimonis Stepans,YL2PQ, was also a very active DXer and contester from
Latvia and passed away on Sep 8 at the age of 63.

LINKS: Pictures and an online log of 7U5CI on Grand Cavallo Island (AF-104)
can be found on the homepage: http://www.om1kw.com/7u5ci

Once again the "DX MAGAZINE" started a survey to find out the "Most
Wanted" DXCC entities. DXers from all over the world are encouraged
to vote until Oct 15 on: http://www.dxpub.com/dx_survey2007.html
---
Current SOTA activities (mountain summits) are announced at:
http://sotawatch.sota.org.uk/activations.php or
http://sotawatch.sota.org.uk/spots.php

UPCOMING CONTESTS

September 22/23: Scandinavian Activity Contest (SAC) in SSB

IOTA collected by Fredy,DE0MST (e-mail: iota@dxhf.darc.de)

Island activities:
EU-088, OZ, Kattegat Group: Bernd,OZ/DL8AAV, is working from the island
Laesoe (DIA NK-003) from Sep 17-29. QSL via homecall, bureau ok.

EU-172, OZ, Jylland East & Fyn Group: Lutz,OZ/DL3ARK, and Peter,OZ/DL4AMK,
will activate Langeland Island (DIA FY-019) from Sep 22-29.
QSLs via homecalls.

NA-110, W4, SC State Group: Several US HAMs will show up as N4R from
Folly Island (USI SC-015S) from Sep 22-29. QSL via K4KWK (B/d).

NA-128, VE2, QC Province Group: Igor,VE3ZF, and other HAMs from Canada and
the US will be QRV as VE2IDX Oerleans Island (CIsA QC-007) during the
ucoming W/VE Islands QSO Party. QSL via VE3ZF (B/d).

OC-019, KH6/7, Hawaiian Islands: Hans,KH6/SM3TLG, will be QRV from Maui
from Sep 19-22. QSL via homecall (B).

SA-044, YV5, La Tortuga Island: The 4M5DX crew with 14 operators will be
active as YX5IOTA from Tortuga Island (Cayo Herradura) from Sep 24-30.
QSL geht via IT9DAA (B/d).

Lighthouse activities (WLOTA/ARLHS):

I'm just curious about the rationale for this point structure, as I've never seen this kind of scoring. Is the idea to encourage activity on 80 and 160?

> QSOs will be worth 2 points.

This seems much more reasonable to me.

That is a possible conclusion, but I'm not reading it that way.

As an example of a similar experience, when our club needed to raise money for a new repeater, it was something outside of regular dues, as well as being expensive and a pretty good way of emptying the treasury.

So we had a special fund raising project. People were asked to donate money to the repeater fund. Those who donated something like 100 dollars or more were given a coffee mug with a nice club logo on it. We got a new repeater.

The really interesting thing is that the repeater was open to all, even those who didn't contribute a penny to it, or thought it was a bad idea that the club should own a repeater, or that the old repeater that took so much maintenance - not by them of course - was still usable.

That was the rationale. I guess at some point in the dark past, there wasn't much CW activity on 80 or 160. So they made that 2 points. Then apparently someone must have thought that 2 points was too much for the upper bands, and they settled on 1.5 points.

It is a nuisance I'd been working on getting rid of since I took over the party.

<Relay from QCWA - Wildrose Chapter>

==========

It is with deep regret to inform you of the passing of Tom Atkins, VE3CDM yesterday at the age of 82.

Tom was a QCWA Life Member as well a member of Wild Rose Chapter 151. He was the President of the Fred Hammond Chapter 73.

Amateur radio has lost a great Ambassador and advocate for amateur radio. He served as President of the former Canadian Radio Relay League (CRRL). As well Tom served as Secretary, Treasurer and President of the International Amateur Radio Union - Region 2 (IARU-R2) before retiring at the end of 2001.

Those who knew Tom will miss his great enthusiasm for his love of amateur radio and the many Amateur Radio friends he met over the course of many years.

RIP

BREAKING NEWS FROM THE AMATEUR RADIO NEWSLINE

NATIONAL FREQUENCY COORDINATORS COUNCIL (NFCC) VOTES TO RECOMMEND FCC TREAT ALL REPEATERS AS REPEATERS

This arrived after our production deadline. We are issuing it as a special bulletin because it will affect the introduction of digital voice repeaters and restrict them to current repeater sub-bands as a method of protecting all other spectrum users from encroachment outside these subbands by digital voice repeating systems:

NFCC votes to recommend FCC treat all repeaters as repeaters

The membership of the National Frequency Coordinators' Council has voted to ask the FCC to treat all repeaters as repeaters, regardless of mode or transmission protocol. The following motion was adopted:

That the NFCC send a letter to the FCC that states that the NFCC believes that any amateur station, other than a message forwarding system, that automatically retransmits a signal sent by another amateur station on a different frequency while it is being received, regardless of any delays in processing that signal or its format or content, is a repeater station within the meaning of paragraph 97.3(a)(39) of the rules of the Federal Communications Commission, and should be treated as such.

Under the NFCC's proportional voting system, 93 votes were cast in favor of the motion by 19 members, and 54 against by 11 members.

The letter will be sent to the FCC's Bill Cross today.

1561. Suggestion for an HF starter rig

Newsgroup: rec.radio.amateur.moderated
Date: 2007-09-21 19:50:58 UTC
From: jimnlacy@pacbell.net
Message-ID: <XUTIi.796$6p6.319@newssvr25.news.prodigy.net>
Source record: 3866

I am a newly licensed technician, study for the general exam. I plan to purchase an HF rig soon and would appreciate suggestions on a good starter rig. I am budgeting $800 for a rig and antenna. I would be happy with a good used rig but I am not sure where to start looking for information.

Thanks,

Jim KI6ISQ

1562. Re: Suggestion for an HF starter rig

Source record: 3867

Jim,

Congratulations on the new ticket!

Well I would suggest that you look at some of the late 1970's and 80's vintage rigs to start. Much of this gear is very capable for basic station use (CW and SSB) and may even serve you well on some of the sound card based digital modes. I found a very nice Yaesu FT-101zd at an estate sale for $75 that covers 160-10 meters (sans 60 Meters) that only required some minor repairs that I could do myself. Attend your local radio club meetings and ask around, check E-bay and the local news papers for possible sources. Be patient and you should be able to get a very nice fully working rig for $300 or even less if you don't mind fixing it.

On the antenna budget I wouldn't know what to say except that the a good antenna can make a modest rig great and a bad antenna can make even the best rig worthless. Buying expensive antennas usually isn't "you get what you pay for" in terms of performance either so be careful here. Generally speaking, the larger and longer the antenna is, the more performance it will have. If you have the space and are allowed to put up antennas outside, I would suggest you build some wire antennas to start. If you can put up a G5RV or some other multi-band antenna you might be able to have a lot of fun at a pretty low cost. I think you can buy prebuilt versions of this antenna for under $200 or build your own for somewhat less. By all means, spend the time and money necessary to get an antenna system that performs well, or no amount of money spent on the rig will help you.

I'll warn you that with the sun spot cycle being at the low end, it will be a number of years before HF will be as active as it's been on the higher frequency bands for long haul communications. This means that you may want to concentrate on the 80-40 meter bands from an antenna perspective right now as the higher frequency bands may be limited to mostly local communications for the time being. (You don't have privileges as a Tech on 160 Meters if I recall correctly so we can forget that band for now.)

Other items you may want to consider in your budgeted items include:

1. Ground rods and ground wiring to get the best RF station ground possible.
2. Antenna "tuner" (If one is not included in the rig you buy)
3. 12 V DC power supply (if your purchased rig is DC powered)
4. Coax and connectors (For making up jumpers and antennas)

Most of this stuff can be liberated from hamfests and junk sales
fairly cheaply, or purchased online from a number of places.

-= bob =-

==> CANDIDATE FOR ARRL SOUTHWESTERN DIVISION DIRECTOR DISQUALIFIED; NORTON DECLARED RE-ELECTED

Carl Gardenias, WU6D, the challenger seeking the position of ARRL Southwestern Division Director, was declared disqualified Thursday by the ARRL Ethics and Elections Committee. Gardenias was running against incumbent Richard "Dick" Norton, N6AA. Due to the disqualification, the Committee has declared Norton re-elected.

According to ARRL CEO David Sumner, K1ZZ, writing on behalf of the Committee, an e-mail signed by "Cathy K6VC, Newsletter editor" was sent on behalf of Orange Section Manager Carl Gardenias to ARRL Orange Section newsletter editors and Web masters, among others, on September 1 regarding the Southwestern Division election for Director and Vice Director. The e-mail encouraged "ARRL Full members to vote and vote wisely" in the upcoming election. Recipients were also asked to encourage clubs to "post to their websites and into their newsletter information regarding each candidate," and went on to list information, including e-mail addresses and campaign Web sites, for the two Director candidates and four candidates for Vice Director. Cathy Gardenias, K6VC, is Assistant Section Manager for the ARRL Orange Section and the wife of Carl Gardenias.

The information given in Cathy Gardenias' e-mail was incorrect, in that the e-mail address for Norton was wrong. The e-mail also stated that Norton and Vice Director candidate Marty Woll, N6VI, did not have campaign Web sites, when in fact they did.

Cathy Gardenias' e-mail went on to say that "Since all candidates are listed with e-mails and websites if they have one, there is no show of favoritism or bias. Please vote. Approved by the ARRL k1zz."

The ARRL Ethics and Elections Committee received a complaint regarding the misinformation and concluded that the email violated the standard of "truthful and not misleading" that applies to candidates' mailings. It instructed Sumner to notify Carl Gardenias that "a correction must be circulated to everyone who received the incorrect information, i.e. everyone on the above distribution list and anyone else to whom it may have been sent." Carl Gardenias was also told that should he "become aware of any postings of the original, uncorrected item, you should immediately endeavor to have them corrected or removed."

Specific language for the correction was supplied by the committee. It was to list correct e-mail addresses for each candidate, including Norton, and to supply the Web site addresses for Norton and Woll that had been missing from the original message. It was to further state, "Finally, the item was NOT approved by the ARRL or K1ZZ, as incorrectly stated," and that "The Orange Section regrets the errors and apologizes to those affected."

Carl Gardenias acknowledged receipt of Sumner's September 5 e-mail. On September 7, having seen no evidence of compliance with the Committee's directive, Sumner sent him another e-mail, asking for a copy of the correction that Gardenias was supposed to have sent out. Gardenias replied via e-mail, "OK on Monday we are at the convention," meaning the ARRL Southwestern Division Convention. Since that response, Gardenias has not communicated with Sumner, "nor has any evidence of your compliance with the committee's orders been received," according to an e-mail Sumner sent Gardenias September 13.

In that e-mail, Sumner reminded Gardenias that he was previously advised that "candidates' statements 'must be truthful and not misleading, which

matters will be conclusively determined by the Election Committee.' The standard of truth applies to all mailings by a candidate. The email that was sent on your behalf on September 1 violated this standard, as documented in my September 5 message. You failed to follow the instructions of the Ethics and Elections Committee to make a timely correction, although you had ample opportunity to do so."

Sumner advised Gardenias that he has "been disqualified as a candidate for the office of Director of the Southwestern Division. Your name will not appear on the ballot." Since Dick Norton is the only eligible candidate, Sumner said, the Committee has declared him re-elected.

==> HURRICANE HUMBERTO CAUSES HAVOC ON GULF COAST

Hurricane Humberto, a Category 1 hurricane and the first hurricane to make landfall in the US in two years, came ashore in Texas on Thursday, September 13 not even 50 miles from where Hurricane Rita hit in 2005. Stronger than initially expected, Humberto continued eastward toward Louisiana and Mississippi, where flood warnings were in effect.

In response to Humberto, several ARES groups were activated. According to Brazoria County Emergency Coordinator Terry Bowersmith, W5SRG, Brazoria County (Texas) ARES activated a complex Net at 6 PM Wednesday, involving repeaters in Freeport and Alvin. One member was dispatched to the Brazoria County Emergency Operations Center, and another to the Pearland EOC, while others remained in "standby ready condition. By 9 PM, Humberto had cleared Brazoria County with little rain and no damage, so we secured the operation," according to Bowersmith.

ARRL Louisiana Section Emergency Coordinator Gary Stratton, K5GLS, said Alan Levine, WA5LQZ, District Emergency Coordinator for Southwest Louisiana, reported minimal flood damage in his area, and little wind damage. "About three spans of power lines down in this area but should be repaired within a few hours. The weather has cleared that area and will continue along a projected path across central Louisiana and Northwest Mississippi today," Stratton said. "We were lucky that the system spawned offshore and moved inland quickly as a minimal hurricane."

Orange County (Texas) Emergency Coordinator Rocky Wilson, N5MTX, reported that as of Thursday, Orange County had a "massive power outage"; all schools are closed, as are most retail stores and businesses, until power can be restored, expected sometime on Saturday, September 15. "Most petrochemical facilities are shut down due to no power," Wilson said. Many oil refineries are located on the Texas Gulf Coast.

Humberto didn't even exist until Wednesday, only becoming a tropical storm that afternoon, strengthening from a tropical depression with 35 MPH winds, to a hurricane with 85 MPH winds in just 18 hours. Only three other storms have pulled off a similar feat, growing from depression to hurricane in 18 hours -- Blanche in 1969, Harvey in 1981 and Alberto in

1982 -- but all of them were out at sea at the time, not about to crash ashore like Humberto. A Bridge City, Texas man died when the carport at his home collapsed on him; Bridge City is between Port Arthur and Orange.

==> LOOK FOR THE OCTOBER ISSUE OF QST IN YOUR MAILBOX

The October issue of QST is jam-packed with all sorts of things today's Amateur Radio operator needs. From product reviews to experiments to contesting, the upcoming issue of QST has something for just about everyone.

This issue features the results of the 2007 QST Photo Contest. The ARRL Editorial and Production staff judged the nearly 50 entries and chose the best ones to be published in the magazine and in other ARRL products.

Norm Fusaro, W3IZ, Assistant Manager for ARRL's Membership and Volunteer Programs Department, reviewed the Yaesu FT-2000D HF and 6 meter transceiver. According to the ARRL Lab test results, "The FT-2000D offers 200 W of transmitter power or a cleaner 75 W in Class A mode. It's similar to the base model FT-2000 in other respects, with a lot of flexibility that rewards the operator who takes the time to learn about and test its many features and settings." There is also a report from the Lab describing the changes to the way ARRL conducts receiver testing.

Robert Conway, KA0VAN, tells of ways to put retired public service radios to use on 2 meters. Alan Applegate, K0BG, warns that using the wrong size fuse can damage your rig, and offers ways to make sure you have the correct fuse for the job. Kai Siwiak, KE4PT, finds a way to get around antenna restrictions by putting up an all-band attic antenna.

For all you contesters out there, the results of the 2007 ARRL International DX Phone Contest are in. Did you top your score from last year? How did your closest rival do? Find out all this and more in the recap by H. Ward Silver, N0AX. Also, find out about the upcoming School Club Roundup and 2007 ARRL November Sweepstakes Contest.

Look for your October issue of QST in your mailbox. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> NOMINATING PETITIONS FOR ARRL SECTION MANAGER CANDIDATES SOUGHT

The ARRL Membership and Volunteer Services Department has announced that nominating petitions for Section Managers are currently being accepted until December 7 for the following Sections: Eastern New York, Eastern Pennsylvania, Louisiana, North Carolina, Pacific, San Diego, South Dakota and Virginia.

To be considered a valid nominating petition, it must be signed by no fewer than five full ARRL members who live in the Section concerned; photocopied signatures are not acceptable. Any candidate for the office of Section Manager must be a resident of the Section, an Amateur Radio licensee of Technician class or higher and a full member of the League for a continuous term of at least two years immediately preceding receipt of a nominating petition.

If more than one member is nominated in a single Section, ballots will be mailed from Headquarters on or before January 2, 2008, to full members of record as of December 7, 2007, which is the closing date for nominations. Returns will be counted February 19, 2008. Section Managers elected as a result of the above procedure will take office April 1, 2008. If only one petition is received from a Section, that nominee shall be declared elected without opposition for a two-year term beginning April 1, 2008.

For more information on this election, please see page 76 in the October issue of QST.

==> ARRL/TAPR CONFERENCE LISTS SPEAKER SCHEDULE

The ARRL/TAPR Digital Communications Conference, scheduled for September 28-30 in Hartford, Connecticut, has released its slate of speakers. The three-day conference is an international forum for radio amateurs to meet, publish their work and present new ideas and techniques. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results and practical applications.

Registration for the DCC is still open and will be available at the door.

Friday's speakers include Bob Bruniga, WB4APR, speaking about "The APRS Local Voice Repeater Initiative"; Ev Tupin, W2EV, speaking about "Growing APRS' Value within the Emergency First Responder Community"; Paul D. Wiedemeier, PhD, KE5LKY, will talk about "Performance Modeling of TCP and UDP over Packet Radio Networks Using the ns-2 Network Simulator"; ARRL Chief Technology Officer Paul Rinaldo, W4RI, will speak about "Results of HF Digital Protocol Survey"; Mel Whitten, K0PFX, will speak about "DRMDV for HF"; Bob McGwire, N4HY, is talking about "NUE-PSK31: A Digital Modem for PSK31 Field Operation Without Using a PC," and Bill Tracy, KD5TFD, will give an HPSDR update.

Saturday's line-up starts off with Steven Bible, N7HPR, and Robert McGwier, N4HY, giving an update on SuitSat-2; McGwier will also speak on AMSAT's Phase IV and "On a Method for Automatic Image Balancing in IQ Mixer Based Software Defined Receivers," as well as sharing presenting duties with Gerald Youngblood, K5SDR, with "The Flex 5000 and SDR Software." Roderick D. Mitchell, KL1Y, will speak about "The Integration of Amateur Radio and 802.11"; Martin Ewing, AA6E, will present "SurgeForge, Hamlib and Rigserve: Free Beer, Free Speech and Rig Control"; Frank Brickle, PhD, AB2KT, will talk on "The FSM Virtual Radio

Kernel: Why, What and How (in that order)"; John A. Hansen, W2FS, will speak about "The Nordic nRF2401 Single Chip Data Transceiver," and Hank Javin and Jerry Newman will present "Transmission Lines, Parameters and Application in Communications Systems."

Two introductory forums are also scheduled on Saturday: Intro to Eagle CAD, given by Dan Welch, W6DFW, and Intro to HF Digital, given by Steve Ford, WB8IMY. The TAPR annual meeting is scheduled for Saturday afternoon.

Sunday's Seminar, a four-hour presentation led by McGwier on the topic of "A Stroll through Software Radio, Information Theory and Some Applications" will cover the basic building blocks of a simple software radio system, as well as a discussion of information theory and its practical use in communication systems. As time permits, McGwier plans to demonstrate several software radio systems ranging from the Softrock40 to the GnuRadio/USRP and the Flex5000. Attendees will receive packages containing tutorials and software.

For more information on the ARRL/TAPR Digital Communications Conference, please see the conference Web site <http://www.tapr.org/dcc>.

==> 1296 MHZ WAS #1 AWARDED TO TEXAS HAM
